So our problem is not the atom, but the quality of man behind the atom. Our problem is not Government, but the kind of men we have behind the Government. Our problem is not education, but the kind of men we have running education. Our problem is not the church, but the kind and quality of men we have in the church. Brooks Hays represents the kind of man we need in Government, society, education, and the church.

Sometimes, to be God's man in an hour of crisis, results in controversy and temporary setbacks. We can retire from the battle as some men do and be content with cultivating our own inner life. There is what Milton calls a fugitive and cloistered virtue that slinks out of the race where that immortal garland is to be run for, not without destiny. He might have been content, especially after his blindness, to retire within himself and write his great poems. But he flung himself into the battle and helped to build an England where men were free to think and to speak.

I am convinced that this temporary defeat has already been turned into a triumphant victory for Brooks Hays because of his exceptionally outstanding ability, Christian character, and qualifications. I feel he is destined to play an important role in the future as we face the many problems that trouble the South and harass the entire world. In these days of baffling world problems and domestic problems that seem, at times, unsurmountable, let us pray that God may give us a double portion of Brooks Hays' good humor, common sense, and spiritual integrity, and that the spiritual ideal of one Nation under God, with liberty and justice toward all, may not just be something we say, but something we live, across the length and breadth of our Nation.

PRESENTATION OF SCROLL

The National Committee To Honor Brooks Hays presents to you, Brooks Hays, this scroll to honor you:

We salute you first as a human being, a very human being, whose gift of laughter has spread its clean, homely wit far and wide among all who know you.

We salute you as an educator, an expositor of truth, a clarifier of the complex, an inspiration to youth.

We salute you as a lawyer, who sees clearly what the rule of law can mean to a people, an apostle of constitutionalism sensitive to its new meanings in a changing age.

We salute you as a statesman. Your many terms in Congress have combined the wisdom of conciliation, and a gallant greatness in devotion to principle. A party man on appropriate occasions, at heart you have been greater than party.

We salute you as a man of courage, never more than in this day, a day which some may count a day of defeat, but which to us is a day of victory.

We salute you as a man of faith. We count this the greatest of all, because we know that it is to you of all things most precious. The love of others for you, as your love for them, knows no boundaries of creed in the consciousness of the common fatherhood of God.

EXCERPTS FROM REMARKS OF BROOKS HAYS, DECEMBER 18, 1958

On this occasion I believe I will be forgiven for speaking intimately of the most significant experience of my political life, my defeat on November 4. One of our great Americans, Walter Hines Page, said "the world is infinitely cruel but the world is also infinitely kind." It has certainly been kind to us, particularly since that election. My misfortune tapped the sources of sympathy in 48 States, for that is exactly the number we have heard from.

It has led some of my friends to the discouraging conclusion that the cause of moderation is hopeless, but I do not agree, since so much of my mail is from the South and virtually all of it is favorable. Moreover, while I am stuck with the label and will not renounce it, I am starting no new cult under that name. Moderation is not invariably a virtue. Truth is often highly partisan. And anyway, there are more precise ways of describing what we are about.

For assuming the risk of displeasing certain political powers, I have drawn occasional compliments for courage. I am reminded by them of the Cabinet member in the Norwegian Government who was commended for courage in opposing Hitler's regime. His reply was: "It wasn't courage. We just decided that a certain course of action was necessary and when the logic of the situation called for such action, the steps in that course just came in natural sequence." So I would prefer to speak in terms of the values we are defending. I presume from what is being said that my defeat might add something to that defense; if so, I would be happy. While I honor the office of Representative, I am convinced that under the circumstances the loss of my seat in Congress is not too big a price to pay.

Is there a standard to which the just and prudent may repair? There is. First, it seems to me, is an appreciation of what the rule of law means in sustaining our liberties and our property. The point does not need laboring, but the times do call for reminders that the Constitution provides a method for change and that until changed, unpopular as well as popular laws must be respected. Odium does not attach to lawful protests against statutes or decisions. Defiance is another matter.

The Federal system presents difficulties, but it is the American way and it can be made to work. The greater and stronger power in the hands of the National Government must be responsibly and patiently exercised, and the corollary is that grievances of groups or regions must be so phrased that love of country is not obscured. The patriot and the dissenter may inhabit the same heart. In spite of strains upon it, I believe we are on our way to recovering the strong sense of national community which has maintained us through wars and depressions. It is indispensable.

Secondly, we must have a firm commitment to the democratic tradition as expressed in our procedures and institutions. Our public school system must be preserved. Without it, the freedom that flowers from an educated citizenry would perish. James Madison put it succinctly: "Without popular education, popular government will be a farce or a tragedy, perhaps both." We know that there can be no government of and for the people without government by the people. Citizens of a racial minority who meet the qualifications prescribed for electors should not be denied a vote because of race. This, too, is basic.

There are procedural standards to be rigidly defended in attaining government by consent of the governed. I have cheerfully accepted several defeats because I acknowledge the principle of majority rule. That rule will be frustrated, however, unless the people are given an opportunity to secure and deliberate upon the facts and the issues. That is the reason we have filing dates that give candidates time to defend themselves and legal restrictions regarding the use of money and libelous material in campaigns. And throughout the structure of popular government there must be such respect for the minority that public policy is built on wisdom and justice in representative functions, not on the sophistry that the majority's judgment is always wise and best for the people. Congressional rules devised long ago have protected minority rights of every kind. I might add that if we moderates are a minority we are still conforming to our region's cherished tradition in asking that majorities not be indifferent to this principle. In the 1958 campaigning I was not trying to ride a popular idea. I was trying to popularize an idea that had become so much a part of me I could not rid myself of it if I had tried.

The third imperative is disciplined freedom. This embraces the right to maintain private schools at private expense, not as a substitute for public education but as a privilege in American life that not only adds to our cultural enrichment but helps to preserve the independence of viewpoint that makes freedom possible. This principle grants to both the proponents and opponents of proposed changes the right to organize, and their rights are not forfeited by methods and manners that are not admirable so long as they are not illegal.

Finally, there must be a due concern for the preservation of our common faith—the faith which sustains our position of world leadership. If there were not other and

higher motivations we would still be inspired to bind up the Nation's wounds by the knowledge that a ruthless force is loose in the world and that our failure at this point would be exploited. The door that religion alone can open leads to a sure passageway of peace and justice.

We are really not disunited; we are merely enjoying our freedoms. One of the enigmas of modern life is that ill will looks so deceptively strong while the conquering power of compassion appears so frail. Any sectional cleavages should merely spur us on to greater exertions in building bridges of understanding and dispelling fears of antagonism. We cannot exalt a common faith without acknowledging our common humanity and resolving to attack common enemies—disease, ignorance, intolerance, juvenile delinquency, and poverty.

There are lessons in American history to support the course of moderation, notably the careers of two beloved Americans, Abraham Lincoln, and Robert E. Lee. The North understands better, perhaps, in the present perspective the adulation which the South has evidenced for General Lee, and happily we have come to the place where one can point to the sentiment which Lincoln entertained for the South without a question as to its relevancy. You may have heard of the incident recorded of General Lee during the time that he served as president of Washington College at Lexington. It is said that he was sitting on the front porch of the president's home with a neighbor one afternoon when an old man stopped at the gate. He was shabbily dressed, and when the general walked down to the gate to hand him something and returned to his chair, the visitor looked curious, so the great man merely said, "One of the boys needing a little help." "What outfit did he fight with?" the neighbor asked. "I wouldn't know," replied the general, "you see, he was on the other side."

I cannot help thinking that Abraham Lincoln intended to include southern sorrows when he spoke of the mystic cords of memory stretching from every patriot grave and battlefield to every living heart and hearthstone. He said to a friend, George Floyd, in the Quincy Hotel lobby, "I have not suffered from the South, I have suffered with the South." But the moderates of that period were not strong enough to hold the middle ground occupied by these two men who, though enemies in war, must have respected each other and were congenial in the philosophy of mediation.

I know from what I have seen and heard since November 4 that healing hands are being laid upon the bruises of ill will and human conflict and that the task of educating both sides and all sides to the alternative solutions of the problem can be accomplished. My hope is strong now that compassion will be matched by imagination in the arts of government so that our lives that are so interlocked and interrelated may be blessed and may be made secure in God's love.

ADJOURNMENT TO MONDAY

Mr. BYRD of West Virginia. Mr. President, I move that the Senate adjourn until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 4 o'clock and 53 minutes p.m.) the Senate adjourned until Monday, March 16, 1959, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 12, 1959:

Subject to qualifications provided by law, the following for permanent appointment to the grades indicated in the Coast and Geodetic Survey:

To be captains

Edward B. Brown
John C. Ellerbe
James C. Tison, Jr.
Edmund L. Jones
Kenneth S. Ulm

To be commanders

Francis X. Popper
Howard S. Cole
Raymond M. Stone
Lorin F. Woodcock
Marvin T. Paulson
V. Ralph Sobieralski
Lorne G. Taylor

To be lieutenant commanders

Arthur R. Benton, Jr.
Eugene A. Taylor
William D. Barbee
Herbert R. Lippold, Jr.
Roger F. Lanier
John B. Watkins, Jr.
Jack E. Guth
Robert E. Williams

To be lieutenant

Lavon L. Posey

To be lieutenants (junior grade)

John J. McCoy
Vello Kiisk
Loyd D. Thurman
Philip L. Rotondo
Roy W. Entz
Robert W. Franklin
Ben Frank Worsham III
Bobby S. Woodruff
Sidney C. Miller
Duane L. Georgeson
Gerald D. Bradford
Wesley P. James
Mart Kask
Ronald M. Buffington
Morris J. Rothenberg
Bobby W. Jester

To be ensigns

Richard F. Dudley
Thomas B. Fox
Renworth R. Floyd
William L. Hart
Robert L. Sandquist
Raymond L. Speer
Larry L. Wilkerson

CONFIRMATIONS

Executive nominations confirmed by the Senate March 12, 1959:

THE FEDERAL RESERVE SYSTEM

George Harold King, Jr., of Mississippi, to be a member of the Board of Governors of the Federal Reserve System for the unexpired term of 14 years from February 1, 1946.

THE COUNCIL OF ECONOMIC ADVISERS

Karl Brandt, of California, to be a member of the Council of Economic Advisers.

HOUSE OF REPRESENTATIVES

THURSDAY, MARCH 12, 1959

The House met at 11 o'clock a.m.

Rev. Alan J. Davis, North Royalton Methodist Church, North Royalton, Ohio, offered the following prayer:

Eternal God, Father of us all, to whom with confidence we turn for guidance and for strength, we thank Thee now for the countless blessings Thou hast bestowed upon us. Grant, O God, that we be not wasteful of them.

May we waste not the precious days Thou hast given us. Help us to do this day what needs most to be done.

May we in our deliberations waste not words. Enable us to use the gift of speech with truth and compassion.

May we in our work waste not the moneys entrusted to our care. Guide us with wisdom and justice in their allocation.

And may we waste not the opportunities for leadership and service with which Thou hast honored us. May we have the moral courage to ever defend and work for that which is most pleasing to Thee.

Dear God, hear us as we pray, and be with us in our assemblies, for the sake of our Lord Jesus Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. McGown, one of its clerks, announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 2260. An act to extend until July 1, 1963, the induction provision of the Universal Military Training and Service Act; the provisions of the act of August 3, 1950, suspending personnel strengths of the Armed Forces; and the Dependents Assistance Act of 1950.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 50. An act to provide for the admission of the State of Hawaii into the Union.

EXTENDING UNIVERSAL MILITARY TRAINING ACT

Mr. VINSON. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill H.R. 2260, an act to extend until July 1, 1963, the induction provisions of the Universal Military Training and Service Act; the provisions of the act of August 3, 1950, suspending personnel strengths of the Armed Forces; and the Dependents Assistance Act of 1950, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 2, after line 10, insert:

"SEC. 5. Section 203 of the Career Compensation Act of 1949, as amended, is amended by striking out 'July 1, 1959' wherever such date appears therein and inserting 'July 1, 1963' in lieu thereof."

Amend the title so as to read: "An act to extend the induction provisions of the Universal Military Training and Service Act, and for other purposes."

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

Mr. ARENDS. Mr. Speaker, reserving the right to object, and I shall not object, I wish the chairman would just explain what this amendment does.

Mr. VINSON. Mr. Speaker, the Senate amended the bill by adding to it a legislative proposal by the Department of Defense that continues eligibility for special pay for physicians, dentists, and veterinarians entering on active duty after July 1, 1959.

In an attempt to procure more physicians and dentists, and to make military medical compensation more competitive with civilian incomes by persons with similar experience, there has been in effect for several years a system of special pay for physicians, dentists, and veterinarians. The amount of this special pay is graduated in accordance with length of service. Medical and dental

officers with less than 2 years of active duty are eligible for special pay of $100 a month. Those with more than 2, but less than 6 years of service, are eligible for $150. Those with more than 6, but less than 10 years of such service are eligible for $200 a month. Those with more than 10 years may receive $250 a month. Veterinarians are eligible for $100 a month in special pay, regardless of length of service.

Physicians, dentists, and veterinarians already on active duty, or entering on active duty before July 1, 1959, would continue to receive this special pay, even if this amendment were not adopted. The amendment permits officers in these categories who enter on active duty between July 1, 1959, and July 1, 1963, to be eligible for these special payments in the same manner and amount that officers already on active duty are now receiving.

Mr. ARENDS. Mr. Speaker, I heartily am in accord with that, and I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

ORDER OF BUSINESS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that it may be in order in connection with the Hawaiian statehood bill to consider the Senate bill in lieu of the bill H.R. 4221 and under the same terms and conditions of the special rule adopted yesterday in relation to the Hawaiian statehood bill.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

Mr. PILLION. Mr. Speaker, I object.

The SPEAKER. Objection is heard.

JOINT MEETING ON WEDNESDAY, MARCH 18, 1959, TO RECEIVE THE PRESIDENT OF IRELAND

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that it may be in order at any time on Wednesday, March 18, 1959, for the Speaker to declare a recess for the purpose of receiving in joint meeting the President of Ireland.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

PERMISSION TO SIT DURING GENERAL DEBATE

Mr. ANFUSO. Mr. Speaker, I ask unanimous consent that the Committee on Science and Astronautics may be permitted to sit during general debate on the bill H.R. 4221.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

TRADE BARRIERS AGAINST FREE FLOW OF MILK

Mr. QUIE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. If it does not exceed 300 words. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. QUIE. Mr. Speaker, news that the Maryland-Virginia Milk Producers Association is asking the Governor of Maryland to further erect trade barriers in his State against the free flow of milk from throughout the Nation is fresh evidence of the need of a National Sanitation Standards Act for milk.

For a long time, an effective blockade has been in force in the District of Columbia under the guise of arbitrary sanitation inspections. This action by the association shows that it wants to use every means at hand to further prevent distribution of milk which can qualify under any reasonable health inspection.

Many times in the past, Mr. Speaker, I have urged passage of the National Sanitation Standards Act—but this action by the association only reinforces the argument.

Passage of this act would put the distribution of milk on a fair basis—and would insure that the only barrier to entry of outside milk would be on an economic basis.

Considering present Washington, D.C., milk prices, it is evident that Minnesota milk can favorably compete on this basis. The class 1 price for milk delivered to plants in the Twin Cities of Minnesota is $3.73 per hundred pounds in March. Any increased handling costs in preparing the milk for transportation to the District of Columbia would not be greater than 10 cents per hundred pounds. This fact was established conclusively by researchers at the University of Minnesota. Transportation costs to the District of Columbia would be $1.80 per hundred pounds. This means that Minnesota milk can be delivered to Washington, D.C., from a Twin City Milk Producers Association plant for $5.63 per hundred or 99 cents less than the present Washington price, a saving of better than 2 cents a quart to the consumer.

The need for a National Sanitation Standards Act was never more evident now that the Virginia-Maryland Milk Producers Association has decided on this step.

HAWAII STATEHOOD

Mr. O'BRIEN of New York. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 4221) to provide for the admission of the State of Hawaii into the Union.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 4221) with Mr. KILDAY in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. The Chair will state that when the Committee rose on yesterday the gentleman from New York [Mr. O'BRIEN] had 1 hour and 44 minutes remaining, the gentleman from Washington [Mr. WESTLAND] 1 hour and 47 minutes.

The Chair recognizes the gentleman from New York [Mr. O'BRIEN].

Mr. O'BRIEN of New York. Mr. Chairman, I yield 10 minutes to the gentleman from Florida [Mr. HALEY].

Mr. HALEY. Mr. Chairman, I am sorry I find myself somewhat in disagreement not only with my own committee chairman but with others on the committee reporting this bill. May I say in passing that we have a very fine chairman, and I would like to commend the gentleman from New York [Mr. O'BRIEN] for the splendid job he is doing.

Mr. Chairman, I am realistic enough to realize that certain facts of life are very evident here and that this bill is going to pass.

I have opposed Hawaii statehood bills ever since I have been in Congress for a number of reasons, and I might state that at this time sitting in this Congress today are 165 Members who at one time or another have opposed statehood for Hawaii. The vote on yesterday indicated that not that many are opposed to statehood today. I merely say to those gentlemen either that they were wrong a few years ago or they are wrong now.

I take this time, Mr. Chairman, to direct a question or two to the gentleman from Colorado in order to satisfy the mind of the gentleman from Florida who has many misgivings about this bill. I direct the following question to the gentleman from Colorado: One of the things that is very disturbing to me in this proposed bill for statehood for Hawaii is the fact that the bill itself continues what I think has been a very inefficient organization or committee in the Hawaiian Islands, namely the Hawaiian Home Commission. If the gentleman would enlighten me on that particular thing I would appreciate it. It is my understanding that the present bill under consideration will extend the life of the Hawaiian Home Commission for a period at least of 99 years, is that correct?

Mr. ASPINALL. I will try to answer the gentleman's question as logically and as directly as I possibly can. I know the gentleman's feeling about this particular question and I have some sympathy with his position. On the other hand, I do not consider that it is a problem which we should resolve in deciding on the question of statehood.

Let me state that I cannot find myself in agreement with his statement in reference to the longevity of the Hawaiian Home Commission which my colleague has just mentioned. It might be 99 years, it might be longer than 99 years. But it is provided in the act which created the Hawaiian Home Commission

that loans granted shall be for a term of 99 years.

The purpose back of this originally was, of course, to give to the Hawaiian people of 50 percent or more Hawaiian blood the right to ownership and use of some of the land that was taken away from them when the treaty was originally made. It was taken away from them even though they had no ownership individually in the lands. The land was held by the Crown and the Crown having held the land at the time of Hawaii's inclusion into the United States it then became Territorial land. When it came into the Union it was then the responsibility of the Federal Government and the Territorial government to administer the area.

What was attempted with the creation of the commission was to provide for individual ownership of homes rather than the commercial approach which we have provided for the Indian tribes of the United States.

Mr. HALEY. Of course, the gentleman is well aware of the fact that the census of native Hawaiians in 1940 showed there were only 14,375 or 3.4 percent native Hawaiians.

Let me ask the gentleman this question: Are we here going to create another situation similar to the situation we have created in regard to the American Indian, and what is going to be the responsibility of the people of America and this Congress to those people?

Mr. ASPINALL. It is my opinion that we are not creating a similar condition to that which has brought about our Indian tribal communal ownership. It is my opinion also that as the years come and go, whether for 10, 50, or 100 years, this number which is slowly dwindling will become so negligible that this land will no longer be used for the purposes for which it is now administered by the Hawaiian Home Commission. When that time comes, then it will be up to the government of the State of Hawaii, providing the bill passes, with the consent of the Congress of the United States, to make such disposition of this land as is in the best interest of the people of Hawaii.

Mr. HALEY. Of course, the gentleman is well aware of the fact that under the original organic act or the original act, approximately 400,000 acres of land was set aside to be used for the establishment of the people of Hawaii on their native land. Now, will it be the responsibility of the State of Hawaii to continue to hold that land, make it available for the settlement of the people of Hawaii?

Mr. ASPINALL. If I understand the gentleman correctly, it will be the authority and the obligation of the State of Hawaii to hold this land for the people of Hawaii.

Mr. HALEY. I thank the gentleman.

Mr. ASPINALL. May I make one more statement, if my colleague will yield?

Mr. HALEY. I yield.

Mr. ASPINALL. In a measure I agree with his statement about the discharge of their duties by the members of the Hawaiian Home Commission. On the other hand, the law provides for a leasehold interest. It has been impossible for the Hawaiian people who are entitled to benefits under the provisions of the act to borrow money from any public agency, and that is one reason why the project has not worked any better than it has. It is expected that when the new State comes into existence they will make available funds which the Hawaiian people can obtain on long-term loans so that they can take advantage of the provisions of the Hawaiian Home Commission statute.

Mr. HALEY. Will the gentleman be kind enough to answer one additional question?

Mr. ASPINALL. I will do my best.

Mr. HALEY. I am somewhat disturbed about the tremendous powers that we are turning over to the executive department in Hawaii. As the gentleman is well aware, there are only two elected executive officers, namely, the Governor and the Lieutenant Governor. Of course, the Governor can then appoint members to carry out the various functions of government in similar positions that, I might say, obtain in his own State as cabinet officers and, as I have in my State of Florida. We have cabinet officers to carry out those responsibilities. In this particular instance you are going to allow the Governor of Hawaii to nominate these men who will hold their responsible positions and positions of great power, with the concurrence, of course, of the senate, which in this particular case would be approximately 14 men. Now, does not the gentleman think, first, that that is a tremendous amount of power and, second, will it be possible under the present bill, if the people of Hawaii later find it desirable, to change their constitution to provide for constitutional officers to carry out these functions?

Mr. ASPINALL. Let me advise my colleagues of this committee to this effect: My colleague, the gentleman from Florida, has taken his chairman into his confidence and has asked him these questions before coming on the floor. And, I am most appreciative of that approach. First, I also share somewhat his views on this new departure from ordinary control of executive and administrative departments of government. On the other hand, as I answered our colleague, the gentleman from Iowa [Mr. GROSS], relative to his question about 18-year-olds voting, I suggest that this is an obligation and a responsibility of the State. Now, may I say, as I also advised my colleague from Florida, that I opposed in Colorado the question of the cabinet form of government, and we only have it partially at the present time. I am not so sure that it is so good. But, I think it is a State responsibility and a decision for the citizens of a State. As this bill is drawn, if the new State of Hawaii through its legislative processes desires to change then to a form of government which is perhaps more adaptable to our wishes, then it has the power under this bill to do so.

Mr. HALEY. I thank the gentleman from Colorado.

Mr. SAYLOR. Mr. Chairman, will the gentleman yield?

Mr. HALEY. I yield to the gentleman from Pennsylvania.

Mr. SAYLOR. I want to commend the gentleman from Florida for his forthright raising of these questions. As a member of the House Interior Committee, he has always been opposed to statehood for both Alaska and Hawaii. But in his approach he has always been objective; and while we may disagree on the outcome, the approach of the gentleman from Florida [Mr. HALEY] is one that everyone must respect and admire. I commend him for raising these questions with regard to the bill which is before us at the present time.

Mr. HALEY. I thank the gentleman.

Mr. O'BRIEN of New York. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. KILDAY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 4221) to provide for the admission of the State of Hawaii into the Union, had come to no resolution thereon.

Mr. MCCORMACK. Mr. Speaker, I renew my unanimous-consent request, heretofore made, that it may be in order for the House to consider the bill S. 50, in lieu of the bill H.R. 4221, under the terms and provisions of House Resolution 205 adopted yesterday by the House in relation to the Hawaiian statehood bill.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

Mr. PILLION. Mr. Speaker, I do not renew my previous objection.

There was no objection.

TREASURY-POST OFFICE APPROPRIATION BILL, FISCAL YEAR 1960

Mr. GARY. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations have until midnight Wednesday, March 18, to file its report on the Treasury-Post Office appropriation bill for the fiscal year 1960, and that it may be taken up on the floor of the House on Thursday, March 19.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

Mr. HALLECK. Mr. Speaker, reserving the right to object—and I shall not object—I understand that this matter has been cleared with the membership of the Committee on Appropriations on our side of the aisle.

Mr. GARY. It has been cleared with everybody with whom I know it should be cleared; the gentleman from New York [Mr. TABER], the gentleman from New Jersey [Mr. CANFIELD], and also the leadership on this side of the aisle.

Mr. HALLECK. Mr. Speaker, I reserve all points of order on the bill, and withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

HAWAII STATEHOOD

Mr. O'BRIEN of New York. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 50) to provide for the admission of the State of Hawaii into the Union, in lieu of the bill H.R. 4221.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill S. 50, with Mr. KILDAY in the chair.

The Clerk read the title of the bill.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from Minnesota [Mr. ANDERSEN].

Mr. ANDERSEN of Minnesota. Mr. Chairman, it is gratifying to note that support for Hawaiian statehood here today is coming from both sides of the aisle. That is as it should be. The question of admitting a new State to the Union should not be a political one. Nevertheless, I should not want it to go unnoticed that the first Hawaiian statehood bill introduced in this body was authored in 1919, during the 65th Congress, by the then Republican Delegate from the Territory, Prince Jonah Kuhio Kalanianaole, who served with distinction in the House for over 20 years.

As most of us know, this body has approved Hawaiian statehood bills on three previous occasions. The first time was by the Republican 80th Congress by a vote of 196 to 133. The next time was by the Democratic 81st Congress by a vote of 262 to 110. The last time was by the Republican 83d Congress by a vote of 274 to 138. If the Members on our side of the aisle had had our way, and the bill had been brought up for consideration last summer after Alaska was admitted, I am sure Hawaii would have been admitted to the Union at that time.

Mr. Chairman, those who have opposed Hawaiian statehood in the past now have exhausted all their arguments. After countless hearings and debates, all their arguments have been tried and found wanting. Last year we disposed of the point of noncontiguity by admitting Alaska to the Union. The matter of Hawaii's distance from the mainland has been debated and found to be pointless with the advent of the jet age. The loyalty of the people of Hawaii has been questioned time and time again but has been completely disposed of by reams of evidence testifying to the fact that the people of Hawaii are no less loyal to the United States than are those anywhere here on the mainland.

The argument can no longer be advanced that the economy of Hawaii cannot support statehood. Hawaii has a sound financial base. Her dynamic development continues to attract industry. Sugar and pineapples, the foundation of Hawaii's economy, annually are produced in increasing quantities and values.

In 1957 Hawaii's 28 independent sugar plantations produced 1,085,000 tons of raw sugar on their 220,000 acres with a crop value of $148 million.

Hawaii's 9 pineapple canneries processed 30,787,000 cases of fruit and juice grown on 77,000 acres of 13 plantations. The total value of the crop was $117 million.

A notable expansion and diversification of industry is taking place. The most dramatic of recent developments was the selection of a site several miles from Honolulu for a $40 million refinery by the Standard Oil Co. of California. Construction was begun in October 1958 for this first oil refinery in Hawaii.

The islands' first steel mill, for production of reinforcing bars for the flourishing construction business, will be completed and in operation early this year.

For the fiscal year ended June 30, 1958, the Territory paid a record high of $166,306,000 in Federal taxes, more than any of 10 States, including Alaska.

Hawaii has paid more than $2,300 million in Federal taxes since becoming a Territory.

Per capita personal income in Hawaii in 1957 was $1,821, putting Hawaii in 25th place nationally, or ahead of 24 States.

Tourism is Hawaii's third basic industry, and is challenging sugar and pineapples in dollar value. Every year sees new highs in the number of visitors, which reached a record figure of 168,000 in 1957. In dollar volume this has meant a jump from $6 million in 1946 to $77 million in 1957, or an increase of 1,183 percent.

A projection by the Hawaii Visitors Bureau indicates Hawaii will be host to 280,000 tourists by 1965.

Mr. Chairman, by every yardstick Hawaii has long since passed the test of qualifying for statehood. And let there be no question that the people of Hawaii want statehood.

In the National Archives here in Washington, not far from the Declaration of Independence and the Constitution, there is a dramatic testimonial to the statehood hopes of the citizens of Hawaii.

It is the statehood honor roll, a historic petition to Congress from Hawaii's citizens, asking for immediate statehood. It was delivered to Vice President NIXON as President of the Senate, on February 26, 1954, after 116,000 signatures had been affixed in Hawaii in a few days.

The giant roll of newsprint containing the signatures is 6 feet wide, about a mile long, and is the second largest petition received in the history of the United States Congress.

Perhaps better than more formal resolutions and bills, it transmits the emotion-filled desire of Hawaii's citizens to be granted the statehood status they have so demonstrably earned.

For over half a century, the residents of the Territory have lived as Americans, worked as Americans, fought as Americans.

Only statehood can raise Hawaii's people to the dignity of Americans, first class, with the accompanying rights and privileges.

That is why Hawaii's people want statehood—now.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from Washington [Mr. MACK].

Mr. MACK of Washington. Mr. Chairman, Hawaii has been preparing for statehood for the past 50 years and the results are available for all to study. In late years more than a dozen congressional committees have investigated this proposition.

Many Members of Congress have studied the Hawaii situation at close range, and from over 100 days of congressional hearings we have nearly 5,000 pages of testimony on the subject. They have established many reasons why Hawaii should be admitted to statehood.

The reasons why Hawaii should be admitted into the Union as its 50th State, to me, are clear, convincing, and compelling.

The Congress, during many statehood debates, has established a list of traditional qualifications which a Territory should or ought to have to be considered eligible for statehood.

Among these qualifications are, first, the Territory should possess adequate area; second, it should have sufficient population; third, its economic situation should be such as to permit its people to assume and to carry their proportionate share of the Federal Government's financial responsibilities; fourth, the people of the Territory must have manifest a sincere desire for statehood; and, fifth, finally and most important, the people of the Territory must believe in the American republican form of government and be qualified by education and experience for self-government according to American traditions.

All of these five qualifications, I am convinced, the people of Hawaii now abundantly possess.

In area, the Territory of Hawaii covers more than 6,600 square miles of land. Hawaii, therefore, is larger in area than Connecticut, Rhode Island, or Delaware. Since these three now are States, an argument cannot effectively be made that Hawaii is too small in area for statehood.

In population, Hawaii now has more than half a million inhabitants. This is more people than any Territory, except Oklahoma, in all the history of the country possessed when it was admitted to statehood. Furthermore, Hawaii's present population is larger than that now possessed by six of our States. Surely, Hawaii cannot be denied statehood on the ground she has too few people.

Is the economy of Hawaii such as to permit her to assume her full share of support of the Nation's financial responsibilities? As to that qualification we also must answer in the affirmative. During recent years the people of Hawaii have paid more than $90 million a year in Federal income taxes. There are many present States which do not pay that much. To deny statehood to a people who pay so much toward the support of the Federal Government is to practice what our forefathers denounced, "taxation without representation."

Then, there is the question of whether the half million people of Hawaii want statehood. They have said they do again, again, and again. In 1940, in a plebiscite held on the issue of statehood, the people of the Territory voted 2 to 1 for statehood. The Hawaiian Territorial Legislature, composed of duly elected representatives of the Hawaiian people, have petitioned the Congress in the past half century almost a score of times for statehood. These representatives or similarly minded ones, have been elected and reelected time after time indicating they were, in petitioning statehood, expressing the will of the people.

And lastly, are the people of Hawaii qualified by training and experience for statehood? Few can doubt that they are. Their educational system is of the best. Their rate of literacy is high. For more than 50 years they have lived under and been faithful to an American system of representative form of government.

When Hawaii was admitted to the status of a Territory, the United States made her people an implied promise that, someday, when qualified, Hawaii would be admitted to statehood. The conventions of both political parties in their platforms declared that they favored statehood. We, of both parties, should keep those promises.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from Washington [Mr. HORAN].

Mr. HORAN. Mr. Chairman, in voting to admit Hawaii to statehood, as I am confident we shall do, we are admitting to equal partnership a State which is exceptionally well qualified to share the rights and responsibilities of our Nation with the older States. In fact, I believe that Hawaii's case for statehood is stronger than that of almost any of the other 36 States which have previously been admitted to the Union, since the Original Thirteen.

First, Hawaii has served an apprenticeship as an organized, incorporated Territory for 59 years, since passage of the Organic Act in 1900. Most of the present States served similar appenticeships of only 5, 10, or 20 years.

Hawaii's population today is well over 600,000, more than the population of any of the 36 States previously admitted since the founding of the Union, with the single exception of Oklahoma. Hawaii's population, in fact, is already larger than that of six of the present States, and is still growing.

Hawaii's economy is strong and progressive. Some people speak of statehood as if it were a question whether a new State could help in bearing the financial burdens of the Nation, but discussion along those lines is completely out of order when we are speaking of Hawaii, because the people of Hawaii already pay all the same Federal taxes at exactly the same rates as the rest of us on the continent do. Of course Hawaii is able to help share in those burdens; she is already doing that as a Territory. The Federal tax revenues from Hawaii are already very substantial—$166 million in 1958—greater than the Federal tax receipts collected from 10 of the present States.

In fact, statehood will make little difference to Hawaii financially, or to the rest of us either. Hawaii has never asked for nor received special favors in a financial way. The only expenses in Hawaii now paid by the Federal Government which the State will have to assume are the salaries of the Governor, his administrative assistant, the government secretary, and the members of the legislature, and part of the salaries of the territorial judiciary. Hawaii also of course receives most of the general Federal grants-in-aid, but on the same basis as the States, without special consideration or favoritism. The special Federal costs that I mentioned—the salaries of the Governor, legislators, and judges—amount to less than one-quarter of a million dollars per year on the average. These additional costs the taxpayers of Hawaii will have to pay, but they can do so easily since the current budgetary surplus of the Territory is many times that figure.

The achievement of statehood is not a matter of economic or financial gain for Hawaii. To them, it is a matter of equal political rights, of being accepted as of equal status with the rest of us. Although they have not suffered under territorial status, they want the right to govern themselves, to select their own Governor and other executive officials, to determine fully their own policies, and to participate with the rest of us in the formation of national policies. They have shown that they are well fitted to exercise those rights, and they have earned the right to exercise them.

Mr. Chairman, I am proud of the opportunity which has been given me to participate in this great event, to cast my vote for this historic action. I am gratified that my vote will be one of those which finally brings to completion a historic process which has already been too long delayed. I welcome Hawaii as a sister State with my own. I welcome her people—of various races and creeds—to equality of rights with myself because the diversity of her racial backgrounds adds variety to our citizenship. I do not think we need apologize for the large percentage of persons of Polynesian and Oriental background who make up Hawaii's population. There is also a large percentage of persons whose ancestry and race go back to the continental United States, and they have succeeded in extending American ideals and culture into the Pacific, and in indoctrinating the orientals and others with our ideals and our outlook.

I look forward to celebrating the final admission of Hawaii as our 50th State before the end of this year. The admission of Hawaii will make our Union complete, and will announce to the world that we practice what we preach.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from New Jersey [Mr. CANFIELD].

Mr. CANFIELD. Mr. Chairman, on this day I shall cast my fourth vote for Hawaiian statehood. I supported the statehood bills passed by our body in 1947, 1950, and 1953.

It now appears that the hope expressed by President Eisenhower in his state of the Union message last January will be realized. The President then said:

> May I voice the hope that before my term of office is ended I shall have the opportunity and the great satisfaction of seeing the 50th star in our national flag.

As long as 1,000 years ago, Polynesians from the South Pacific were attracted to the volcanic mountain tops known as the Hawaiian Islands. Over the years traders, adventurers, missionaries, and settlers from the east and west made their homes in Hawaii in the melting-pot tradition so dear to Americans. Nearly 120 years ago the kingdom adopted its first constitution, one modeled along American lines. Since 1900 the Hawaiian Islands have been a strategic territory. Can we ever forget Pearl Harbor? Or the valor of Hawaii's Japanese-Americans on battlefields? The saga of self-sacrifice which the Nisei wrote in Europe and Korea has been matched, perhaps, but not exceeded.

It is abundantly evident that Hawaii has met all the traditional requirements for admission to statehood. Her people have demonstrated an abiding faith in the principles of democracy, and her electorate has made clear its earnest desire for statehood. Hawaiian people and resources alike are recognized to be more than capable of supporting a State government.

I acknowledge that Hawaii would enjoy disproportionate representation in the U.S. Senate. But there is precedent here. The Connecticut compromise, whereby representation in the Senate was to be equal for all States while House representation was to be based on population, was a practical solution to a very real problem. Hawaii's lone voice in the House would be all but muted when competing with, say, the 43 distinguished Representatives from the sovereign State of New York.

I am not among those who are horrified by the prospective transfer of a portion of each State's rightful voting power in the Senate to the State of Hawaii. Perhaps I should be if the people of these United States took more seriously their own voting obligations. Two-fifths of the eligible citizens in this country never bother to vote. And this figure, representing the national ratio, is very high compared to the percentages in some of our States. In one State, in the presidential election of 1956, only 22.1 percent of the potential voters condescended to show up at the polls. I doubt rather seriously that the people of this State would be concerned over any transfer of voting power.

And it is fairly obvious that mere size has never guaranteed greatness. The long roll of distinguished Senators in our history contains, I suggest, as many names from the smaller States as from the larger.

Hawaii is too small? It has more land area than Rhode Island, Delaware, or Connecticut, and more people than Vermont, Wyoming, Delaware, or Neveda. It would make as much sense to say that these States should be abolished.

A frequently mentioned fear is that Hawaii the State would become a Communist outpost. Only last month the

House Interior and Insular Affairs Committee concluded that—

> Statehood will provide a suitable and effective political structure through which the people of Hawaii can and will hasten the destruction of the last vestiges of Communist influence.

Mr. Chairman, by making Alaska our 49th State and now following through with Hawaii our 50th State, bringing to their people the full privileges of citizenship, we are engaging in an act which can only have wholesome repercussions throughout the world, especially in those lands where real freedom is still only a hope far from reality.

Mr. WESTLAND. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. SMITH].

Mr. SMITH of California. Mr. Chairman, it is not my intention to try to convince anybody to vote for or against this particular bill, because in all fairness, in all honesty, I cannot say that I know exactly how to vote on this particular bill. It is a unique situation indeed. For the first time in our history we are now faced with the possibility, and undoubtedly it will pass, of adding some islands and making them a State of the United States of America.

I wish I had a crystal ball so I could look into it and see what would happen a year, 5 years, or 10 years from now if Hawaii is made a State, or what would happen if it is not made a State. I voted against statehood for Alaska. As of now, I do not know whether I was correct in voting against Alaska. Only time will tell, but certainly as time goes on, if we have to subsidize Alaska and give them special benefits that the other States in the United States do not have, then my vote was right. If they go ahead and take their place as the 49th State equal with the other 48 States, then my vote was wrong.

When we talk about H.R. 3, H.R. 10, and such measures as that, I have little difficulty, because I am for those measures; but in this one I find myself in a little bit of confusion. One of the reasons happens to be that I, too, went to Honolulu this year along with the committee, not as a member of the committee but strictly for pleasure. I talked to a lot of people over there and did not find any tremendous desire among the people to become a State. Some thought they should, some thought they should not, some thought they should wait. But I did not find any overwhelming opinion among all the people that they should become the 50th State.

A number of years ago I was a special agent of the FBI and, along with other agents, was selected to conduct a special investigation to determine whether or not Harry Bridges was a member of the Communist Party. Many of us spent several months in determining that fact, and found out that he actually had been a member of the Communist Party. Another agent and myself were the ones who obtained the statement from the individual who took Harry Bridges into the Communist Party and gave him his card and attended meetings with him. Subsequent thereto, hearings were held, as you know, and Bridges was ordered deported. But later changes were made. I well realize as a matter of history, should he go back to his associations with Hall and follow the same principles we know he had some years ago, we may be faced with some problems. I hope he does not do that if we make Hawaii a State.

I rather anticipate this bill will be passed and Hawaii will be made a State. The 86th Congress will probably be long remembered for this action rather than any other action that is taken in this session. So I say that in casting our vote, I hope that I for one will vote so that the people of Hawaii will best be helped and the people of the United States will best be helped in this historic vote here today.

Mr. O'BRIEN of New York. Mr. Chairman, I yield 15 minutes to the gentleman from Texas [Mr. ROGERS].

Mr. ROGERS of Texas. Mr. Chairman, I am not laboring under any delusions. I realize this is nothing more than a delaying action, and I want you to know I am not doing it for the purpose of delaying these proceedings. Of course, we could have objected to the substitution of the Senate bill for the House bill. But, we are doing this for the purpose of making a record on an issue which I think will be called to the attention of the Members of the Congress and to the attention of the people of the United States within the confines of the 48 States—mind you, I did not say 49 States, for a number of years not today. Now, as you know, last year we took in Alaska. I opposed that as did some other members of the Committee on Interior and Insular Affairs. When we convened this time, as we had anticipated, Hawaii was waiting on the line. No hearings were held before the subcommittee. We went right into the full committee and started hearings in order to speed the matter up. Actually, it was because the ice had been broken in a new political era or area—whichever you want to call it—and we moved forward to bring Hawaii in. What will be up next February or next January or the following January no one knows. But, I think in all fairness to the Members of the Congress who are moving forward in that direction, they ought to recognize the fact that we should anticipate that other territories will be coming in in the next few years. Where we are going to stop, I do not know. It must be somewhere.

But, Mr. Chairman, I want to talk to you about just a few of the things that I think are important as we move into this new so-called political area. First, I want to say this. There have been attempts all during the hearings and in the previous discussions and debate on statehood bills to bring personalities into it. I have been in Congress since 1951 and we have had the Hawaiian bill and the Alaskan bill up so many times that I cannot remember the exact number. Much has been said in an effort to bring personalities and inject personalities and hatred into this thing, and I want to make the record clear on that right now that so far as I am concerned and the others with whom I have been associated in opposition to this bill, that we have had no ill feeling toward anyone in Alaska or Hawaii. As a matter of fact, if you will permit me to say it now, I think the Alaskan people probably can claim the right to a pioneer status that is probably unequaled in the history of the world. They are fine people and certainly none of us have anything against them, and I think the Hawaiian people and all the people who make up the citizenry of the Hawaiian Islands so far as I know have been wonderful people. They have never mistreated me and I have looked upon them as fine human beings as I do upon all other people, and I do not think we ought to get this debate off on anything like personalities or hatred or any such thing.

Mrs. BLITCH. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield.

Mrs. BLITCH. Would the gentleman be inclined to agree with the gentlewoman from Georgia that the real danger in this legislation is that really we are not sowing the seeds, but rather we are laying the foundation for a philosophy that is entirely foreign to the original concept of these United States—a philosophy that really embodies that concept of one worldism that was promulgated not in recent years, but as we have been told and has been pointed out to us, was advocated by certain individuals as long ago as fifty or sixty or one hundred years. Does that not express the gentleman's objections to this bill?

Mr. ROGERS of Texas. May I say to the gentlewoman, I think if the concept that is being followed in bringing in these Territories and these far-flung lands is carried out to its logical conclusion, I do not see how anyone can successfully argue against a man who accuses us of indulging in one worldism. I think that is exactly right.

Mrs. BLITCH. I thank the gentleman. I wish to state, since he has given me the opportunity to do so, that that is my greatest objection to the granting of statehood to Hawaii.

Mr. ROGERS of Texas. I thank the gentlewoman from Georgia.

Mr. SAYLOR. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield to the gentleman from Pennsylvania.

Mr. SAYLOR. I would like to say at this point that it has been my pleasure to serve with the gentleman from Texas on the Interior Committee for as long as he has been in Congress. While he has been an avid opponent of statehood for Hawaii no one who has been a member of that committee or a Member of Congress during that time could ever accuse the gentleman of not being forthright in his position, and there has never been any hatred or enmity motivating him. The only reason he opposes it is because of his philosophy of government. Much as I disagree with him, I can do nothing but respect and admire the gentleman for maintaining his position.

Mr. ROGERS of Texas. I thank the gentleman. I appreciate having served with him. There are so many nice things I can say about him, that my limited time will not permit me to begin. I will tell him personally later on.

I want to speak for a moment on this question of contiguity. Many people, who criticize the opposition which is based on the question of contiguity, will admit they do not know what the word really means when applied to these circumstances; but the matter of contiguity without any question is seriously involved in this thing; it is the serious objection that I think ought to be weighed very carefully by everyone who is interested in doing what is best for this Government. I do not challenge anyone in his sincere belief as to what philosophy of government should be pursued, but I do think that you ought to use history and precedent to reach a conclusion, and know what certain actions might create.

A small committee went to Hawaii last year to report further on this matter. They went into the question of contiguity. As a matter of fact so did the entire committee, and the committee report deals with the question of contiguity, but they base the entire concept of contiguity on the question of travel, how fast and how far, how long it would take to get from New York or Washington to Honolulu. That, however, is not the point at all.

The point is simply this, that we have devoted ourselves, since the Thirteen Original States, to the preservation of the Union, a Union of the States that make up the United States. What did we do? We moved out and took in Alaska, and prior to that there had not been any State attached to the United States, the Union that made up the United States, that was not attached by land over which we had exclusive jurisdiction. When we admitted Alaska into this Union of States we broke that precedent. We not only took in a Territory which was separated from the rest of the States by the high seas over which we have at most joint jurisdiction, or, one might say, sufferance to travel, but also we did this, we placed between us and that Territory in the words of the subcommittee that reported on this, in the case of Alaska, miles and miles of foreign territory, foreign territory, mind you, over which we have no jurisdiction whatever unless we get it by the will of the people of that sovereignty, by treaty, or by Executive agreement. But the fact of the matter is that if Canada, which is a friendly nation and we expect will always continue to be, but if the time should come when this Communist menace of which so much has been said—and I think a great deal of attention should be paid to it—and they should decide to attack the Hawaiian Islands economically and they said, "We will strike your ports," and men like Harry Bridges, Jack Hall—names do not mean anything—issue the edict, "We will strike your ports and we will strike your ports in Alaska, too, we are going to attack you economically."

Well, we say: We will go through Alaska, we have a corridor, we can get there, we do not have to resort to an airlift.

So Canada says, Wait a minute, before you do that let us find out what is going to happen.

This same group of people that has this international union will say to Canada: If you permit the United States to use Canadian soil as a corridor to get to Alaska we will strike your ports, too.

What would be the reaction of Canada under those circumstances? It is something we do not know. I know that Canada would take a long and hard look at permitting this country to use their soil as a corridor in order to break a strike brought about by this international union if those facts were present. I can anticipate just such a situation arising, and it is not something that you have to reach up in the air to get.

This so-called internaticnal union, whether it be that union or some other union dominated by anyone, by one single edict can completely isolate Hawaii because Hawaii is wholly dependent on the sealanes, her economy rests upon what traffic she can maintain via the sea.

Not only that, but each one of those islands is separated by the high seas, the high seas over which we do not have exclusive jurisdiction, we do not claim exclusive jurisdiction, waters over which every other foreign nation in the world has the same identical right to travel as do we.

As I said a minute ago, those people who talk about transportation and travel and nearness by virtue of the fact we have jet planes have missed the entire point. The question is resolved to the issue of preservation of the Union. When you have 1 solid made up of 48 or 49 integral parts, or 50 integral parts represented by a flag that has 50 stars, and somebody comes along, because one of those parts is isolated, and takes one of those parts away from you, which is conceivable from experience in our own history, your solid dissolves. You either have the whole or you have not preserved the Union. I think that is the risk that the people of this country ought to think about when we move into this new political area. That is going to bring problem after problem up for consideration, not only of conflict as we have had between the State laws but it is going to bring about conflict in the application of our maritime laws, the interstate commerce laws and other matters we have never been confronted with before, in addition to conflict of State laws.

The committee asks, because they are separated from this country, does that mean they will never become a State? I have never said that and I do not say it now, but every time you pick up a daily newspaper or periodical you see headlines that this country, our philosophy and our way of government, is now facing the greatest challenge it has ever faced in our history. The question is: "Can we safely embark at this time on uncharted political seas, heretofore untraveled by any country?"

If we admit Hawaii, why should not others be allowed to come in? Yes; they have said in answer to that argument, and I refer to the proponents of this legislation, that is not true at all because you have to meet certain requirements before you are eligible for statehood, and under the situation as it exists Hawaii is the last incorporated Territory, therefore it is a long way before we will have to recognize any other Territory or any other place that might want to make application for statehood.

Now, we asked the question in the hearings as to what the requirements might be for statehood, and here is what we were told. The three standards which are said to be traditional are these: First, that the inhabitants of the new State are imbued with and sympathetic toward the principles of democracy as exemplified in the American form of government. That was the Secretary of the Interior testifying; second, that a majority of the electorate desires statehood; and, third, that the proposed new State has sufficient population and resources to support State government and to provide its share of the cost of the Federal Government.

Now, I asked the Secretary of the Interior at that time if actually the first two measures were not the ones that ought to be applied and the ones that would be applied, unless we were willing to apply a means test and to say to the people, in the language of the proponents, mind you, that if you do not have so much money, then you cannot come in. Now, that is what their arguments amounted to on that. Take Cuba, for instance, which we have been reading about so much lately, suppose they had a plebiscite and voted 4 to 1 to join this country and they adopted a constitution and said that they were firm believers in a democratic form of government and imbued with the ideals of democracy, they could even go so far as to say "We can trade with you and show you we are rich enough to be citizens." Now, what are you going to say to that? How can you say to them that "No, we are not going to take you in." Well, they will say, "You took in the Hawaiian Islands; they were a Territory. Why did you take them in?" "Because we did not want anybody to think we were for colonialism. That is why we took them in, but we do not want you."

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield to the gentleman from Colorado.

Mr. ASPINALL. Before I ask the question, I wish to state that the gentleman now in the well is one of the most valuable and able members on the Committee on Interior and Insular Affairs. This bill today is better because of the contribution which he has made in opposing certain sections which we have changed in order to meet some of his objections. We do disagree on fundamentals of the bill. The only question that I have to ask at this time of my colleague is this: It will be true as long as the United States of America remains an independent nation that we can, if both parties are willing, add to our jurisdiction new areas, just in the same way as we added the great State of Texas, coming from an independent status, and the great Territory of California from a conquered area, is that not right? That is what the gentleman from Colorado now speaking stated yesterday in his statement to the committee.

Mr. ROGERS of Texas. I think that is exactly right. The gentleman from Colorado, as you all know, is one of the greatest chairmen that the Committee on Interior and Insular Affairs ever had, and one of the most valuable Members of Congress, a man whose integrity has never been questioned. As he pointed out, we disagree basically on the philosophy that is represented by this piece of legislation. Now, back to the contiguity situation for just a minute. Some person says "What difference does it make whether they are attached, in the final analysis?" It makes this difference. Under international law sovereignties are separated by land masses and inland waters. That is the main difference when you get right down to the analysis. Now, if that is changed and we could go on and get exclusive jurisdiction in the Pacific Ocean to the Hawaiian Islands, maybe this problem could be answered. But we better take another look at this thing, and we ought to wait until that time before doing anything.

The CHAIRMAN. The time of the gentleman from Texas [Mr. ROGERS] has again expired.

Mr. WESTLAND. Mr. Chairman, I yield 5 minutes to the gentleman from Texas.

Mr. ROGERS of Texas. I thank the gentleman for his kindness.

Mr. Chairman, it was argued for a long time that unless statehood were granted to Hawaii we would have a situation whereby we would be making second-class citizens out of all the people of Hawaii. Nobody answered that, and it went along that way for a long time and finally someone expressed the thought that if they were second-class citizens out there, maybe the District of Columbia has some second-class citizens. That created a question, and as this thing moved along, they began to drop that—I do not want to say propaganda, but I will say that advertising—they dropped that because they saw that it did not really mean anything. They were not second-class citizens at all. They are just as fine people as there are anywhere, and because of the philosophy of government that we follow, they have many rights that we do not have in this country because they are a Territory, and I suppose we could say vice versa; but these rights are all pretty well balanced. The funny thing about it is that this same group of people at that same time were claiming that they were entitled to statehood because they had been promised statehood by somebody—I do not know who it was. Someone said that it was a gentleman from the other body who had gotten over to Hawaii and promised them statehood. What the circumstances were that brought out that promise I do not know. We were never able to find out.

But let us assume that he did that and let us assume that somebody else did it, and so on, from time to time. And let us assume, as the platforms of both parties reflect, statehood was promised to Hawaii. What they forgot was this, that if such a promise was made, it was made to all of the islands that constituted the Hawaiian Archipelago when it was annexed to the United States.

What have the people of Hawaii done in this situation? According to their own standards they have created some second-class citizens, because they have taken the eight islands that they think might be economically sound to operate as a State, but they cut off the other islands in the Hawaiian Archipelago, I suppose because they thought it was not economically feasible, let us say, for those islands to be included in the operations of a State.

After all is said and done, that just does not make sense, to approach a problem in that manner. And some day, as was pointed out by the distinguished gentleman from Texas [Mr. POAGE], when he appeared before the Committee on Interior, we are going to be called upon to create a State of the Pacific, or a State of something out there, to take in a bunch of loose ends in these islands, if we continue the philosophy that we are pursuing at the present time with respect to taking in these other Territories. Whether or not that will be sound government, I do not know. But, as I said before, I think that what we ought to do is to weigh this situation fairly and squarely from the point of view of the type of government we have and what we are moving into so that in the future we can avoid these embarrassing situations that are bound to arise.

I have just been informed that I have only 1 minute of my time remaining, which is not sufficient time to treat communism properly. But in that minute, if you will bear with me, and I wish you would, I will try to do so.

Mr. O'BRIEN of New York. Mr. Chairman, I yield 1 additional minute to the gentleman from Texas.

Mr. ROGERS of Texas. That will give me just about time, as was said on the floor one time by the distinguished father of one of our colleagues, to wish you all a Merry Christmas and a Happy New Year.

I refer you, and I hope you will read it, to the report that was filed by the distinguished gentleman from New York [Mr. O'BRIEN], the gentleman from California [Mr. SISK], and the gentleman from South Dakota [Mr. BERRY], very distinguished members of our committee, who went over to Hawaii. I think it will be very revealing. That is the report of a committee that went over there, and it actually admits the control that the ILWU has over the economics of the Hawaiian Islands. It is not a matter of debate, it is a matter of complete admission on the part of those people who want Hawaiian statehood worse than any group I have ever seen.

Mr. COLMER. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I am happy to yield to my distinguished colleague from Mississippi.

Mr. COLMER. I hope the distinguished chairman, the affable gentleman in charge of this bill, will yield some additional time to the gentleman from Texas. After all, there is very little opposition. Very few opponents have spoken against this bill. Before we finally bury the United States of America as such, I think we ought to have some fitting eulogies on it. I hope the gentleman will yield the gentleman from Texas a little time.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

Mr. O'BRIEN of New York. Mr. Chairman, I yield 5 minutes to the gentleman from Texas.

Mr. ROGERS of Texas. I thank the gentleman from New York.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I am happy to yield to my distinguished colleague from Oklahoma.

Mr. EDMONDSON. I have been listening with great interest to the gentleman's remarks, and particularly would appreciate his directing my attention to the place in the report where it states that the economy of Hawaii is controlled by the ILWU.

Mr. ROGERS of Texas. It is on page 4 of the report, that is, the small report. The gentleman has the wrong report. This is the supplemental report.

Mr. EDMONDSON. Which report is it, now?

Mr. ROGERS of Texas. It is on page 4. This is the supplemental report, Committee Print No. 39. I will be happy to read it to the gentleman. It is very short. It states:

> The economic control of the islands by the ILWU, some leaders of which have been identified in the past as home-grown or mainland-imported Communists, goes without saying.

That is the language of the report, it is not my language. I was reading that.

This was all brought out in connection with what the ILWU could do or could not do in an effort to get this Communist situation out of this picture, because it was a terrible indictment, and it is something that all of us are worried about, and something that we rightfully should be worried about.

I want here and now to say that it is not my purpose to accuse any Hawaiian or anyone else of being a Communist. I do not know whether or not they are Communists. But I think before we move into a situation such as we are moving into right now, that, in my opinion, is going to completely do away with whatever rights the sovereign States have left, and they have been whittled down to where they are not many, we should realize that this trend is going to create a situation where it is not going to be long until you are going to have a completely concentrated Government in Washington or Denver or Chicago or wherever the national capitol might be, and this Communist menace in that sort of situation would be much worse than if we maintain the status quo.

Mr. EDMONDSON. Just to get the record absolutely straight about this report, the gentleman has referred to this as a committee report. I think the document to which the gentleman is referring is a report of a special subcommittee consisting of three men on the committee.

Mr. ROGERS of Texas. Yes.

Mr. EDMONDSON. I know that as a member of the committee I have never subscribed my name to a report which

states that the ILWU controls the Hawaiian Islands.

Mr. ROGERS of Texas. I do not know, but I have the greatest respect for these three fine men that went over there and found this. I was reading their words.

Mr. EDMONDSON. The gentleman does agree, however, that that is not a committee report but rather a special subcommittee's language that he is referring to; is that not correct?

Mr. ROGERS of Texas. Well, I think that would make it more binding because the special subcommittee consisting of three such fine gentlemen could go into this thing and they could dig much deeper into it than the whole committee could because of the time element involved, and they were right there on the ground.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I am happy to yield.

Mr. PILLION. Talking about reports, perhaps, I might call the attention of the Members of the House to this report issued on February 28, 1959, about two weeks ago, by the Hawaiian Commission on Subversive Activities. Here is what that report says on page 11:

> Since 1945 day-to-day ILWU operations in Hawaii have been directed by a regional director and several other paid officials, all selected by the ILWU international organization, not by ILWU members in Hawaii. During that period two-thirds of these officials have been identified as having been Communist Party members.

Now, I might also turn to page 23 of that report and here is what that report said. This is just about two weeks ago, about the UPW that has all been referred to the Legislature of Hawaii. It said:

> The United Public Workers in Hawaii is controlled by the Communist Party through the instrument of Henry Epstein, Stephen Murin, Max Roffman, Jeanette Nakama Rohrbough and other paid employees of the union.
>
> The Communist Party has exploited the UPW and its membership primarily for Communist purposes.
>
> The elected officials of the union and the rank and file cannot or will not recognize that their union is Communist dominated.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

Mr. ROGERS of Texas. Mr. Chairman, that 5 minutes went awful fast. Could I ask for just a minute or two more?

Mr. O'BRIEN of New York. If the gentleman from Washington would yield some time, it would be appreciated. We have very little time left.

Mr. WESTLAND. Mr. Chairman, I yield an additional 5 minutes to the gentleman from Texas. Will the gentleman yield to me for just a moment?

Mr. ROGERS of Texas. I am happy to yield to the gentleman from Washington.

Mr. WESTLAND. We are hearing a great deal of talk about the ILWU and the UP—what is it?

Mr. PILLION. The UPW.

Mr. WESTLAND. Yes, the UPW or something like that. We are not talking here about statehood for the ILWU or the UPW because if we are, I am going to change my vote.

Mr. ROGERS of Texas. There. That is the point, and I am glad the gentleman from Washington brought that out because that is one of the fears about this situation when you are voting statehood out there, if these unions have control of this situation from an economic standpoint, then you are voting the powers of statehood into the hands of these people that run the unions. That is the thing we have to look into thoroughly before we move into this new political area.

Mr. UDALL. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield.

Mr. UDALL. All of us on the committee respect not only the sense of humor of the gentleman from Texas but his sense of fair play as well. Is it not likely that the type of officials who will be sent here to Washington and the type of State officials who will be elected will be the same type of people who have been elected in Hawaii in the past? In all likelihood is that not what will happen?

Mr. ROGERS of Texas. That depends on how much pressure can be brought to bear. I can anticipate the situation where those who want to take over economic control and control of State powers would be more than happy to go along with the crowd or lie behind the log so to speak, until those powers may possibly be grabbed and then walk in and grab them. If that is what Jack Hall and Harry Bridges have in mind, which is entirely possible, I think we ought to look into it thoroughly.

Mr. UDALL. The gentleman has served, as I have served, with a Democratic delegate as well as a Republican delegate from the territory and certainly they will elect the same type who are here now.

Mr. ROGERS of Texas. They are wonderful and that is one reason I am opposing this bill—because I think we will lose our good delegate from Hawaii to the other body.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield.

Mr. PILLION. It is not true that the gentlemen who have been sent here to represent Hawaii were sent here with the backing primarily of the ILWU and that when the ILWU withdrew—and that "the" was the Communist dominated ILWU—withdrew its support of Joe Farington, his plurality just went down to nothing and when they transferred their endorsement to his opponent, then the votes and the plurality went on up and that in the past two or three elections, the ILWU had a considerable and a deciding influence on who came to the House of Representatives as a delegate from Hawaii, and will in the future have a deciding influence on who will come to this House as Members of this House and as Members of the United States Senate?

Mr. ROGERS of Texas. I think this, I will say to the gentleman from New York, I think it is a matter that only the future can determine, because I think that if those fellows do have in their minds doing what I said a moment ago of trying to take over the State government through the election of the Governor and Lieutenant Governor—and they can do it that way—that is what I pointed out was the danger of a cabinet-type of government. It is a step moving in the wrong direction if you are going to perpetuate democracy, to take away the right of the people to vote for their local officers.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield to the gentleman from Iowa.

Mr. GROSS. I see on page 47 of the report, article 14 of the constitution and the provision relating to the oath omitted, and there is not recognized, a Supreme Being or Deity in the oath that is prescribed for their officials under the constitution of Hawaii. Can the gentleman tell me why?

Mr. ROGERS of Texas. No, sir, I cannot. I was interested in the bill. If we can defeat the bill, we won't have to worry about the constitution of Hawaii.

Mr. GROSS. I am not a preacher either, but the gentleman well knows that we take an oath of office that recognizes the Supreme Being.

Mr. ROGERS of Texas. Summing up briefly in the last minute at my disposal, one could talk on this bill for several days, but I am not going to be allowed to do that, and I can only close as fast as I can, but this whole thing goes to the proposition of our walking into an entirely new situation, actually on hearsay evidence. The committee that went out to Hawaii came back with statements like this: "We were told certain things." When asked: "Who told you?" we did not get an answer, we never have found out. That is all the information we could get. I do not know whether that ought to be classified or not, but as a lawyer I know that you cannot convict anybody on testimony like that. If we are going to have to rely on hearsay testimony at least we should know who did the talking.

Again, if we are going to go on hearsay testimony I think we ought to give the same weight to hearsay testimony on the other side. I have been told only recently that some of the Reds—in the unions controlling the economy of Hawaii have been to Russia and Moscow attending extensive conferences—and I will be glad to identify the man who told me if requested.

In conclusion, may I say that I am sorry the pleas of myself and others will fall on deaf ears. I sincerely hope that, if this Congress does pass this legislation, we will not be confronted with the tragedies anticipated. But the facts indicate otherwise, and I must oppose statehood for Hawaii.

Mr. WESTLAND. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. HOSMER].

Mr. HOSMER. Mr. Chairman, my colleague the gentleman from California

[Mr. SMITH] a moment ago well expressed the difficulty with which conscientious legislators face the question of the entrance of a new State into our Union.

During the past 6 years we often have had considerable difficulty in considering Alaskan and Hawaiian statehood because we were not given the opportunity to decide upon them individually in accordance with their respective merits, but had to accept them as a package or not at all. If you opposed one you had to oppose both. That was the difficult situation which many others as well as myself faced.

Today I want to record the fact that I now, and have always, supported statehood for Hawaii. I am sure that the majority of this body is like minded. We do have the various doubts expressed, for example, with respect to the contiguity question, the one-world argument and the argument on matters concerning the ILWU and the UPW, as well as the matter of Communist difficulties. But I think those latter difficulties can be at least as well, and possibly better, handled under statehood than under territorial status.

I feel that on careful analysis the arguments with respect to contiguity, one-worldism, and so forth, have failed to challenge the wisdom of making Hawaii a State. For that reason I say, as I did when I previously cast my vote against Alaska, that the real decision we make on admitting a new State is that concerned with whether or not there are sufficient people and whether or not there is a sufficiently broad economy for the Territory involved to support State government and to bear its share of the cost of the U.S. Government. I did not feel this condition existed in connection with Alaska and so stated. When that bill was passed I expressed the hope that I was wrong in my opinion. I feel this condition does exist with respect to Hawaii and that it is fully qualified for statehood. I will so cast my vote today.

Mr. JACKSON. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from California.

Mr. JACKSON. I want to associate myself with the statement made by the gentleman from California. I had some question in my mind with reference to the Alaska matter. That question does not exist with respect to statehood for Hawaii, which I support.

Mr. HOSMER. That statement is particularly significant coming from a colleague who, as an outstanding member of the Committee on Un-American Activities, has been consistently zealous in his insistence that there be not the slightest weakening of our defense against the insidious subversive activities of the international Communist conspiracy.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from Iowa.

Mr. JENSEN. I appreciate the statement the gentleman has made relative to un-American activities which we have heard about as existing in Hawaii. I have been rather undecided as to just how I should vote on this bill, but I have come to the conclusion that we will be in a better position to control any un-American activities that might exist in Hawaii if we make that Territory a State. So I shall cast my vote in favor of statehood for Hawaii.

Mr. HOSMER. I thank the gentleman.

Mr. O'BRIEN of New York. Mr. Chairman, I yield such time as he may desire to the gentleman from Illinois [Mr. O'HARA].

Mr. O'HARA of Illinois. Mr. Chairman, I am voting for statehood for Hawaii as I have done since March 1950. Sure, this is setting a pattern for the United States of the world, but I am young enough in spirit to be thrilled by the vision.

This is a day in history. Today by an overwhelming vote this body will place its stamp of approval on legislation bringing an island in the Pacific, far from continental United States, into the sisterhood of American States. I have voted for statehood for Alaska and for Hawaii in every Congress of which I have been a Member.

The Honolulu Star Bulletin of March 17, 1950, March 20, 1950, and March 21, 1950, carried in three installments my remarks in this Chamber in support of the Hawaiian statehood bill in the 81st Congress. Because what I said at that time is as true as it was at the time of those remarks almost a decade ago I am repeating to my colleagues in the 86th Congress a portion of my remarks in the 81st Congress and which the Honolulu Star Bulletin graciously stated "was a fine exposition of the historic action being taken and dealt with statehood in its broadest aspects."

What I then said was that in the admission of Hawaii, far out in the Pacific, we were setting the pattern for what, without intention on our part, might prove in the working out of the destiny of this changing world in the development of the United States of America into the United States of the world. In travel time we are closer today to the most remote lands of the world than the original States of the Union were to Illinois.

Today as I shall vote for statehood for Hawaii I shall be thinking especially of the young men of Japanese blood who went from Hawaii to the battlelines on the western front with the 100th Infantry Battalion and proved by their heroism the intense love for the United States of Hawaiians, including those whose family roots had been in Japan. The 100th Infantry Battalion covered itself with glory, and I am very happy that one of its survivors, Harry Ono, is the husband of Mary Ono, of my congressional staff, and the first Japanese-American congressional secretary in the history of this body.

MAKING OF A NEW PATTERN

Mr. Chairman, I am quoting from my remarks in this Chamber on March 6, 1950:

In the statehood bill for Alaska which we have passed and the statehood bill for Hawaii which I anticipate we will pass, a new pattern is being laid for that association of sovereign States formed at the beginning of the Republic to attain through union highest measure of welfare for the citizen and of security for the Nation.

For the first time we are accepting into the family of sister States those Territories that are outside of continental United States and not contiguous thereto. Where this will end, to what extent conceivably the pattern may be carried in the realization of the dream of our generation of a permanent peace through a world union of States, only the future can tell.

I think it is proper here to place emphasis on the fact that the step we are taking has not been decided upon hastily. It is altogether too important a step to be left for decision alone to the Members of this body. However able and conscientious they may be, nevertheless in common with all humankind their judgment cannot be infallible. What we are doing is merely making effective the decision arrived at by the American people. That is the way democracy functions with us. The question of statehood for an island in the Pacific and for a mainland not contiguous to continental United States, with a long stretch of islands running into the Orient, has been discussed for a long time in every city, hamlet, and crossroads in the country.

My colleagues and I must accept it as the judgment of the American people as a whole—or that substantial majority which under our democratic system controls—that this step should be taken and in a New World, bound much closer by radio transmission of the thoughts of men and aerial transportation of persons and products, the pattern of the Old World of the horse and buggy should be modernized even in the matter of selecting Territories to be taken into the Union as States. I say we must accept this as the judgment of the American people because when the delegates met at the national conventions of the two major political parties, with scarcely a dissenting note, they pledged the support of their respective parties to Alaska-Hawaii statehood. We Democrats and Republicans may differ in our interpretation of how far the majority vote in a closely contested election is to be constructed as a mandate. There can be no question, however, about the validity of the mandate when it emanates from the voters of the two major parties.

BINDING THE WORLD IN PEACE

I respectfully suggest to my colleagues, with no desire to pose as a prophet, that the new pattern we are setting up may prove a more vital factor than we imagine in bringing the world closer together in peace and the common pursuit of human happiness. Many in this Chamber, in their ardent desire to advance the cause of understanding and of permanent peace, have sponsored the World Federation resolution. It at least is worthy of note that what we are now doing, although certainly it is not in the minds of any of us here, may furnish in the future the basis for a United States of America expanded, on the petition of other peoples, into a United States of the World.

I am not advancing this thought with the idea that having moved in the direction of taking in territory far from continental United States we actually may, as the world grows closer and closer together, add to our sisterhood of States territories still farther removed. For one thing there is the difference in languages and in customs, which even if distances were annihilated would still present a formidable barrier. But there is no escaping the import of the departure we are approaching. Considered in connection with the development of the backward areas of the world under point 4 of President Truman's plan—an undertaking the success of which hangs on the removal of trade barriers—it at least should furnish the subject

for intriguing speculation and lively discussion in the way the American people have of thinking and talking things over even when such things are still in the realm of the improbable and the unexpected.

That we are making history today I think there can be no doubt. The CONGRESSIONAL RECORD of these days of the Alaska-Hawaii statehood debates very likely will be consulted by historical researchers long after the last of those participating in these debates has had his hour in the traditional memorial services in this Chamber. For that reason I am putting in the record, with especial emphasis, that the pattern for the future admission of States, when no longer required to be of contiguous territory or a part of continental United States, came to us from the sound judgment of the American people arrived at after long discussion and deliberation and so wholly on a bipartisan level that both major political parties incorporated in their respective platforms expression of that judgment arrived at by the American people.

On the occasion of the *Maine* memorial anniversary, I called attention to the fact, sometimes overlooked, that the explosion in Havana Harbor on February 15, 1898, started the United States of America on the road to world leadership. I ventured the suggestion that future historians would term the period of the Spanish-American War, World War I, and World War II—the half century or so from the destruction of the *Maine* to the bomb of Hiroshima—as the 50-year war that ushered in the golden era of American world influence.

Now that Hawaii is on the threshold of statehood and a new pattern is being adopted in conformance with the unquestioned mandate of the American people, I think my colleagues will be interested in the remarks of Senator Teller in the U.S. Senate on February 16, 1898, the day following the sinking of the *Maine*. I am quoting from the CONGRESSIONAL RECORD of that day:

REMARKS IN CONGRESS IN 1898

"Mr. TELLER. Mr. President, there has been some interest manifested throughout the world over the question whether or not this Government was about to take the Hawaiian Islands and make them part of the United States * * *. The people of all the world have been looking to see what we are about to do. I picked up the other day a copy of the London Globe of last June * * *. The article was commenting on our desire to annex the Hawaiian Islands, if they should become ours: * * * it was very apparent that the Globe was not friendly to that movement on our part. This is what the Globe said, and it is so truthful that I think it may be worthwhile to read it:

" 'The American Navy is absolutely unfit to protect the islands (Hawaiian) which lie at the mercy of any Spanish ships appearing at Honolulu while Japan's sea power is so immeasurably superior to that of the United States that a Japanese naval demonstration would place President McKinley in a difficult and perilous position * * *.

" 'Viewing the great strategic value of the group to England, it is a matter of regret that the islands were not added to the British Empire long ago. Lord Salisbury should stiffen his back and tell McKinley plainly that Great Britain claims the right to be consulted before the matter of annexation is decided.'

"Mr. President, Japan is a small power. Small, I mean, when compared to the United States, small in resources compared with the United States, though it is strong in its navy when you consider the results it might accomplish as a nation. Yet, when there was a note of protest from Japan against the annexation of Hawaii, it was urged by a great many people in this country as a bar to annexation that we were not free to exercise our own judgment because it would not do to get into a quarrel with Japan."

JOINED IN WORLD OF BROTHERHOOD

Mr. Chairman, I am voting for statehood for Hawaii as I voted for statehood for Alaska. With every new State that joins up with us, to share under free government, the benefits and the responsibilities of joint effort in advancing human welfare, greater strength is given us to carry on. My faith is in my country and the purity of its purpose to ask nothing for its own people that it does not seek to make possible for all men to attain in a world of brotherhood. My faith is in the people of the United States and when after discussion and deliberation they have reached a judgment, by that judgment I will abide.

Mr. O'BRIEN of New York. Mr. Chairman, I yield such time as he may desire to the gentleman from Montana [Mr. ANDERSON].

Mr. ANDERSON of Montana. Mr. Chariman, I am particularly happy because Montanans have played an important role in this drama of Hawaiian statehood over the years. Montana's distinguished senior Senator, JAMES E. MURRAY, as chairman of the Senate Interior Committee, has worked hard and effectively for Hawaiian statehood for many years. Last night Senator MURRAY enjoyed the unique distinction of being the only legislator ever to have piloted two statehood bills to a successful conclusion. This distinction will probably never be attained by any other legislator, excepting only our own distinguished subcommittee chairman, the gentleman from New York [Mr. O'BRIEN]

Montana's junior Senator, MIKE MANSFIELD, as assistant leader of the Senate, has given freely of his talents and abilities in pushing Senate action to such a prompt and happy conclusion.

The senior Congressman from Montana [Mr. METCALF], for years a member of the House Interior Committee, has lent his brilliant legal talents and his energy and drive to the accomplishment of statehood for Hawaii. As a member of the Interior Committee, I myself have followed carefully the progress of Hawaii toward statehood, and I feel that this is the time to bring this long march to its glorious conclusion.

It may come as a surprise to some of the members of this committee that there is a fifth Montanan even more directly concerned with the current and successful campaign to make Hawaii a State. That fifth Montanan is our beloved colleague, Delegate JACK BURNS. JACK BURNS was born in my district, in Havre, Mont. Delegate BURNS is certainly entitled to major credit for the strategy which has finally broken the deadlock of many years, and leads to the admission of Alaska and Hawaii as the 49th and 50th States of the Union in this year of our Lord nineteen hundred and fifty-nine.

Those who attacked and vilified Delegate BURNS for supporting Alaskan statehood ahead of Hawaiian statehood now stand confounded, convicted themselves of a shortsightedness which, had it prevailed, might well have simply perpetuated the stalemate which dogged both States for so many years.

The resounding note by which we pass this bill will be an exoneration of Delegate BURNS' strategy, and at the same time will demonstrate the love and affection and respect in which we hold our beloved colleague.

Mr. O'BRIEN of New York. Mr. Chairman, I ask unanimous consent that the gentleman from Connecticut [Mr. KOWALSKI] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. KOWALSKI. Mr. Chairman, from 4½ years of experience in Japan and Korea, I feel I know something of the great importance which the people of the Orient attach to the admission of Hawaii to full membership in the United States. No single act by the Congress could give our Nation more prestige among the teeming millions in Asia than the granting of statehood to Hawaii.

The leadership of the new free nations in Asia from Korea around the Pacific Basin even to Ceylon have their eyes on Hawaii and this Congress. They are watching our handling of the Hawaiian statehood issue, not because they have an economic stake in the outcome, but because they have a great emotional involvement in the granting of statehood to our outer bastion in the Pacific.

This emotional involvement is based on questions now unanswered in their minds:

First. Are the non-Caucasian, chiefly oriental peoples of Hawaii, acceptable to this Congress for full and complete citizenship in the United States of America?

Second. Are the Members of this Congress open to the acceptance of men whose forefathers came to our shores from Asia as their colleagues in the great American legislative process?

Third. Are the United States ready to symbolize the noble concept of the equality of men by the admission of Hawaii to statehood, thus giving reality to a term that will otherwise be an empty abstraction where Asians are concerned?

Who are these Asian leaders, what manner of men are they? Our experiences of them, widely reported, confirm that these leaders possess certain common characteristics.

First. They are men of intelligence, well informed on the affairs of the world and keenly aware of the nature and intensity of the relations between the free world and those nations in the Communist orbit.

Second. They are intensely nationalistic and hold a dim view of relationships between peoples that so much as border on colonialism.

Third. They are culture-bound to each other in the vast panoply of the Asian complex.

Fourth. They are akin to and sympathetic to that large segment of the Hawaiian public of oriental ancestry.

To them, the granting of statehood to Hawaii will be a convincing evidence of our acceptance of free men of their own antecedents.

The case for Hawaiian statehood on merit is conclusive. The significance of Hawaiian statehood as it will symbolize freedom and equality to free Asian leadership is even more conclusive.

If we want to demonstrate to Asian leaders in the free world that we mean what we say when we seek their friendship and support in the struggle to keep people free, there can be no more convincing act than to grant statehood to Hawaii now.

Mr. O'BRIEN of New York. Mr. Chairman, I ask unanimous consent that all Members may be permitted to extend their remarks in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from California [Mr. BALDWIN].

Mr. BALDWIN. Mr. Chairman, I rise in support of H.R. 4221, which would provide statehood for Hawaii.

I supported statehood for Alaska last year, and feel that the citizens of Hawaii are equally entitled to statehood. Many of the present residents of the Hawaiian Islands formerly resided in the United States, and particularly in the Pacific Coast States. These residents have had experience in carrying out their responsibilities as voters in their former State governments, and also as voters for President and for Representatives in the House of Representatives and for U.S. Senators.

It is evident to me that the citizens of Hawaii are fully qualified to assume the responsibilities of statehood. In fact, I feel it would be a serious discrimination against them if they were not granted statehood at this time. The citizens of Hawaii are governed by Federal laws. Their taxes are established by the U.S. Congress. Certainly they are entitled to participate in these decisions through electing their chosen representatives to serve in the House of Representatives and in the Senate. Likewise, they should be entitled to participate in the selection of their President. I urge approval of this measure.

Mr. WESTLAND. Mr. Chairman, I yield 10 minutes to the gentleman from Michigan [Mr. JOHANSEN].

Mr. JOHANSEN. Mr. Chairman, for all practical purposes we are going through motions today. All of us know that there is no question as to the outcome of this issue. For all practical purposes the question of statehood for Hawaii was decided last year when Alaska was made the 49th State.

I voted against statehood for Alaska. I shall vote against statehood for Hawaii.

Among a number of reasons, I shall do so as a matter of consistency. I do not believe that it is a course of wisdom to bestow statehood on a noncontiguous Territory, particularly one 2,000 miles beyond the continental United States.

While our fellow citizens in Hawaii have a testament to their loyalty heroically written in World War II and the Korean war, I am not satisfied that adequate progress has been achieved in Hawaii in coping with the very real fact and threat of Communist infiltration and of domination by Communist leadership in organized labor in that Territory.

I am frank to say that my vote against statehood is cast with some reluctance. I recognize that if it was a mistake to grant Hawaii the status of an incorporated Territory—historically always a prelude to statehood—rather than Commonwealth status, that mistake was made 59 years ago. I suppose that there are some sort of practical statutes of limitations so far as trying to remake history or undo past mistakes are concerned.

My greatest concern in opposing statehood is the possibility that we might undercut the efforts of our fellow citizens in Hawaii in combating communism. I am deeply impressed by the arguments on this score advanced by the distinguished chairman of the House Committee on Un-American Activities [Mr. WALTER], a committee on which I am privileged to serve. I am likewise impressed by the statement in the same vein offered by the distinguished former ranking minority member of that committee, former Congressman Kearney, of New York.

But I note that the gentleman from Pennsylvania [Mr. WALTER], with characteristic frankness and modesty, seemed to acknowledge in his testimony before the Committee on Interior and Insular Affairs that it is a matter of hope and faith rather than demonstrable proof that statehood will improve conditions in Hawaii so far as the Communist problem is concerned.

I earnestly hope and pray that this will prove to be the case. I hope that statehood for Hawaii can never become a device of the evil forces of communism for the injury of the United States, the State of Hawaii, or its loyal citizens. I pledge that, as long as I am privileged to be a Member of Congress, I will work in every way within my power to support our fellow citizens in Hawaii, as elsewhere in these United States, in their fight against internal subversion and betrayal by the enemies of our country.

So much then for the issue of Hawaiian statehood and the reasons for my stand on this issue.

Now, Mr. Chairman, I wish to address myself briefly to a bitter irony and an intolerable paradox which confronts the people and the Congress of the United States at the very moment we take the historic step with respect to statehood for Hawaii.

The simple and shocking truth is that statehood today means less than it has ever meant in the history of our Republic.

In my judgment, the simple and shocking truth is that a great deal more of statehood was conferred upon the first State admitted to the Union, after the Original Thirteen, than we are conferring in this year 1959 upon the new State of Hawaii.

In my judgment, we would be much more realistic, and we would be addressing ourselves to a far more timely issue, if we were concerned with the problem of restoring statehood to the 49 so-called States of the Union—soon to become 50. I am sure that my colleagues do not need to have my meaning spelled out in great detail.

By action and inaction on a dozen fronts, the status and role of the sovereign States in our Federal system of government is being obscured, weakened, and destroyed.

Not so long ago, a U.S. district judge—he does not happen to sit in my own State of Michigan—acknowledged to me that the practical meaning and import of the 10th amendment and of the reserve powers of the States is, at best, obscure and, at worst, no longer capable of definition.

We have among supposedly responsible leaders of our Nation, including Members of Congress, open advocacy of the federalization and centralization of the tax-levying and revenue-dispensing functions of government, necessarily at the expense and sacrifice of State prerogatives and responsibilities in this field.

We have numerous excursions of the Federal Government, both by legislative and judicial act, into areas of responsibility and authority historically and constitutionally belonging to the States.

We have the judicial decree of the doctrine of Federal pre-emption, a situation which the Congress has thus far failed to set right.

And here is the supreme irony: The very statehood which we are now bestowing upon Hawaii, the very statehood which the citizens of that Territory so deeply covet, as matters now stand, involves impairment of the powers and efforts of Hawaii to cope with its own direst problems as a State.

For example: It is extremely doubtful whether, under existing decisions of the U.S. Supreme Court, the provision against office holding or employment in the State government by a person "who advocates, or who aids or belongs to any party, organization, or association which advocates the overthrow by force or violence of the Government of this State or of the United States" will have any validity or effect.

Under existing decisions of the U.S. Supreme Court, it is questionable whether Hawaiian efforts to investigate and expose Communist activity will have—or even now has—any legal validity.

I earnestly suggest that it would be much more in order and much more timely for the Congress of the United States to be devoting its time and efforts to the repair of the status of statehood rather than to the bestowal of a statehood, which in the words of one eminent authority, has become or threatens to become a hollow shell.

Certainly once this business of statehood for Hawaii is disposed of, I earnestly hope that the Congress will direct its attention to this far broader and more fundamental problem.

And since I am discussing the impaired status and standing of statehood, I must direct my attention for a moment to testimony given by the distinguished gentleman from Texas [Mr. POAGE], when he appeared before the Committee on Interior and Insular Affairs during the hearings on statehood for Hawaii.

What I have to say about this testimony of the gentleman from Texas is said with all respect and, I think, with some understanding of the provocation under which he spoke.

I have long believed that we could not continue indefinitely the negating and nullifying of the 10th amendment and the reserved powers of the States without ultimately precipitating the sentiments voiced by the gentleman from Texas.

In his testimony on January 28 of this year, the gentleman from Texas, obviously referring to the fact that the Confederacy lost the war fought between the States on the issue of secession, said this:

> We always believed, and still believe, if anyone wants out, let them get out and go on their own.
>
> I would gladly say to anybody, in or out of the continental United States, "Go your own way, if you do not like the Union you are in."

Needless to say, these are words that distress and alarm me. I am sure that there is no serious proposal to revive the issue of secession. I do not believe these words were intended to suggest, in connection with the granting of statehood to Hawaii, that there is a future right to demit membership in the Federal Union.

Yet it is profoundly disturbing to have these words spoken in any circumstance and doubly so to have them spoken in conjunction with the consideration of the creation of a new State. It strikes me as being as incongruous as the insertion in the marriage service of a declaration of the right of divorce.

As Members of Congress and as American citizens, we have every right in advance of the decision to differ on the question of statehood for any new Territory, but once that decision is made, there must be a full understanding that the new State becomes a permanent member of an indissoluble Union.

To me the real import of the words spoken by the gentleman from Texas is that here is one more solemn and somber warning that we must address ourselves to repairing the status of the States and restoring them to their rightful place in our scheme of government.

One final word: I have no wish to prejudge the caliber or the political philosophy of those who will take their place in this House and in the other body as the duly elected representatives of the State of Hawaii.

I would be less than frank, however, if I did not admit to a fear that the prevailing political ideology of a majority of the citizens of Hawaii may be such as to add new membership in the Congress schooled in a philosophy, or responsive to the pressures of organizations and philosophies, which would weaken, if not destroy, the meaningfulness of the very statehood we are about to bestow.

I am frank to say that this is the most compelling reason for my vote against statehood. I earnestly hope and pray that I shall be proven completely wrong.

Mr. O'BRIEN of New York. Mr. Chairman, I yield 15 minutes to the gentleman from Georgia [Mr. DAVIS].

Mr. DAVIS of Georgia. Mr. Chairman, I should like to compliment the distinguished gentleman who has just left the well on the splendid presentation he has made. I refer to the gentleman from Michigan [Mr. JOHANSEN]. I should like to associate myself with his remarks on this subject, and also associate myself with the remarks of the distinguished gentleman from Texas [Mr. ROGERS], who spoke just a short time ago.

I think on a subject as grave as this under discussion today the people of the United States should have an opportunity to vote on whether or not the new State should be admitted. In the last Congress I introduced an amendment to our Constitution to provide that any State hereafter to be admitted must be voted upon by the States already in the Union. I think this method now in vogue, now legal under our Constitution, of having a new State voted in by a mere majority vote of the membership of the two Houses of Congress, does not approach it with the seriousness the question really deserves.

During the debate here this morning in discussing the very serious question of communism involved in this legislation, the question was raised as to the activities of this notorious Harry Bridges within recent months. I have investigated that to a considerable extent myself.

The information I have obtained is that this Harry Bridges who, on at least two occasions that I know of, has been the losing party in litigation in lower courts on such matters as deportation and perjury, but who has always been successful in having his convictions and the decisions in the lower courts set aside when he comes up here to the Supreme Court. This man, with an assistant named William Glaser, left this country on January 21 and went to Rome, where he was met by Italian Communists. He was taken to the CGIL, which is the general confederation of Italian labor, the Communist labor federation which has stirred riots against the United States in Italy. It constitutes a part of the underground of the Italian Communist Party. He engaged there in considerable negotiation with the Communists of that country. He appeared later in Prague, Czechoslovakia, which is the munitions capital of the Iron Curtain countries, on February 7.

There in Prague, he said he would come back to the United States to explain the views of the Iron Curtain countries and he said further that we get nonsensical propaganda from our press and radio about the Soviet Union and the Iron Curtain countries in the United States.

I understand he was a guest of the Union of Workers of Transport and Tele-Communications, which I am also advised is a Communist union. I am further advised he arrived in Moscow on February 8 of this year and that in an interview there, he declared and I quote what is said to be his language:

> That unions in the U.S.S.R. are more democratic than many of the unions in the United States.

He said also that the system of elections in the U.S.S.R. is more democratic than many American ones.

He further is quoted as saying he wants United States workers to visit Russia because everything United States workers have heard about the U.S.S.R. is nothing but slanderous propaganda.

I am advised also that he arrived back in this country on February 24 and that he is to appear under subpena before the House Committee on Un-American Activities on March 24 of this year.

The question of the population in Hawaii, I think, is a very serious one. The population is predominantly Asiatic. That is something which I do not know how many of us here in America realize.

Mr. Chairman, in the revision of my remarks, because I will not take the time to do it here, I will insert the figures as to the number of Japanese, Caucasians, Filipinos, and mixed bloods and Chinese, and Hawaiian who were in the Hawaiian Islands on the basis of the 1950 census.

The official 1950 census figures show that Asiatics and nonwhites account for more than 70 percent of the islands' population. Less than 25 percent of the people are white and fewer than 5 percent are Hawaiian, that is, descendants of the original natives or Polynesian stock. Here is the breakdown from the 1950 census:

Japanese	184,611
White Americans	114,793
Filipino	61,071
Mixed bloods	66,806
Chinese	32,376
Miscellaneous nonwhites (Negro, Puerto Ricans, etc.)	20,852
Hawaiian	19,285

(Mixed bloods and Hawaiians are estimated on the basis of the 1940 census, as the 1950 census combines Hawaiian and part-Hawaiian into one category.)

With a population so radically different from the rest of the United States, this Territory cannot possibly qualify as one of the United States. Its background is radically different from ours. Its history is very different from our own and that of our forefathers. The 65 percent nonwhite influx has been almost exclusively a labor force imported from other Asian countries to work the pineapple and sugar plantations of the few white immigrants. In any case, it is quite clear that the historical and ethnic backgrounds of Hawaii and the United States and even between the various Hawaiian peoples are radically different from each other. The language and the dialects are also different. There are really no shared experiences that extend substantially into the past among its people. Hawaii is essentially rootless. Its closest link with the mainland was during World War II when it served as a base for operations of our Armed Forces. Now that is no reflection on the nonwhite population, but the cross currents of racial feeling do create political and administrative whirlpools too dangerous to yet be allowed the authoritative voice in the American Government that goes with full statehood. Furthermore, I have in my files a breakdown of the nationalities of candidates who were elected in Hawaii in the general election in November 1954. This breakdown and report was compiled by an election inspector in Honolulu who stated that a check through the ballots disclosed that the Japanese in that country do engage in block voting.

This breakdown of the election results in the 1954 general election shows that of the 15 members of the Hawaiian Senate, 7 are of Japanese ancestry; and of the 30 members in the Hawaiian House of Representatives, 15 are of Japanese ancestry. I would say that the results of the election clearly confirm the statement of the election inspector that the Japanese do engage in block voting. The Japanese people certainly constitute the largest nationality group in Hawaii. It is contrary to our traditions in this country, and I think that in any country where democratic principles are adhered to it is contrary to such principles to engage in block voting.

The point of noncontiguity has been referred to many times in this debate. It comes into both the area of national defense and that of economic self-sufficiency.

World history shows that the growth of the most dangerous enemy of the free world today—Soviet Russia and its satellites—has been based on expansion only on her perimeter for the last 700 years. Soviet Russia has never included territory that could not be reached by direct land route. Her lines of communication for war or peace have been interior lines of communication and supply. The great powers of the past which depended upon oversea communication between areas of empire have steadily receded through the centuries. Spain's dual hemisphere power crumbled. The flight from colonialism has taken its toll from Great Britain, France, Italy, the Netherlands—most of that toll being in direct chronological parallel with the growth of Soviet and Communist power.

There is great doubt in the minds of many of us in Congress that the present war-threatened age is the time to abandon our historical position of contiguous territory in favor of a similar geographical alinement to that which has proved disastrous to all nations which have tried it in the past.

There is also the question of territorial waters. The distances between the eight major islands included in the statehood bill range anywhere from 15 miles to 121 miles. Each of these little islands is separated from the other by international waters, under our 3-mile offshore limit. This means that to get from one part of the State to another, one would have to cross the high seas and could run into foreign shipping. This also means that the enemy could sail in and out of the area of one of our States without our being able to do anything about it. It would be difficult to think of a more untenable or dangerous position to be in.

The point of producing unbalanced representation in the Congress certainly applies to Hawaii.

Four States of our Union—Delaware, Nevada, Vermont, and Wyoming—have smaller populations than Hawaii. This fact is sometimes used by proponents of statehood as an argument for granting statehood to Hawaii as a matter of course. The cases are different, however. Delaware was one of the Original Colonies signing the Declaration of Independence, with ratification of the Constitution in 1787. Vermont has been a State since 1791, Nevada since 1864, and Wyoming since 1890. None is affected by the threat of Communist infiltration, non-Caucasian majorities of population, or noncontiguity to the degree of the present candidate for statehood. Certainly their acceptance in the Union for periods ranging from 69 years, in the case of Wyoming, to 172 years in the case of Delaware, overrides any question of present population in determining their right to their representation in Congress.

All of the Colonies and Territories admitted to statehood have been located on the North American Continent. Each Territory before admission adjoined either a State or a Territory and when admitted became a part of the unbroken contiguity area which makes up our country.

To avoid the evils of a multitudinous, unwieldy House of Representatives, the membership was fixed at 435 in the year 1911. It has remained at that figure since. The 1929 Apportionment Act made the reapportionment of House seats for each State automatic, with a permanent limitation of 435 seats.

Statehood will entitle not only the 49th State of Alaska but Hawaii also, if it is admitted, to either 2 or 3 seats, depending on which number is finally decided upon. These seats will displace those presently held by some Representatives in this House. The average increase of our population, according to the U.S. census estimate, is 13 percent between 1950 and 1957. The loss of membership in the House of Representatives will necessarily be borne by those States that have failed to keep pace with the 13 percent average increase in population.

A listing of these candidates for loss of representation discloses a list of some of the most distinguished and history-laden States in our Union. At least these States would be affected: West Virginia, Mississippi, and Arkansas.

In any case, the vote of the individual American would be diluted by the admission of Hawaii. If we vote to admit Hawaii, we would be voting in effect to reduce our representation.

Now, Hawaii is not a part of America—either North or South. If Hawaii were to be admitted as a State, the term "United States of America" would be a misnomer. It would become the United States of America and the Pacific. We could no longer write, talk, or say "the good old U.S.A." We would have to refer to it as the "good U.S.A.P.," from that time on.

In the Hawaiian Statehood Commission booklet, there are such phrases as "its rightful place as a State of the Union," its "inherent right to statehood," the "demand for statehood," and many others.

I do not concede that any State which was ever admitted had any "inherent right" to such admission. They were admitted because they wanted to come in and because our Government was willing to let them in. There was no question of "inherent right" involved. There is no such right involved in this instance. There is no such thing as a right to statehood; there is only the privilege of statehood.

Last, but by no means least, of the objections to Hawaiian statehood is the fact that not all the islands in the Hawaiian chain or Archipelago have been included in the statehood bill, H.R. 4221. This is a glaring inconsistency.

It palpably demonstrates the fact that what are generally known as the Hawaiian Islands are so far flung and disconnected that they could not possibly make up a proper State as we have understood the term. H.R. 4221 specifically excludes from the chain of nine major islands the island of Palmyra. Yet, the Territory of Hawaii includes Palmyra as one of its nine major islands. Why is Palmyra "together with its appurtenant reefs and territorial waters" left out?

Because, the office of the Hawaiian Delegate informs us, it is too far away from the nearest major island, Kauai, which is about 950 miles away.

Also, I am informed, because it is owned by only one family.

To take each point at a time, if distance is to be a criterion for disqualification, would not the entire Hawaiian chain, which is some 2,500 miles from the nearest point on the U.S. mainland, be unqualified for inclusion in the family of States? This is clearly an a fortiori case.

If Palmyra—which is 950 miles from the rest of Hawaii—is too far to be included as part of the new State, then the Hawaiian Islands as a whole—which are 2,500 miles from the U.S. coast—are too far to become a part of our country.

Besides the remote distance, there is also the matter of small population. Included in the group of eight major islands proposed for statehood are two islands, Kahoolawe and Niihau, which between them, have a population reaching the grand total of 75. The thriving metropolis of Kahoolawe—or whichever way it is pronounced—has no known population at all. According to the Delegate's office "only goats" live there. The size of the island, or atoll, or whatever one would call this thing that protrudes out of the water, is exactly 45 square miles.

The island of Niihau, which is included, is 72 square miles small and has a population of from 50 to 75—people, that is, not goats this time. All these people are members of the household of one, Mr. Robinson, a planter and sole owner of the island.

If the second reason for excluding Palmyra from statehood was the fact that it is owned by one family, the same argument could be raised for excluding Niihau also, for it, too, belongs to only one family.

The height of inconsistency and the double standard has been reached in this matter.

I fear that, really, the main argument for statehood of the proponents is a sentimental one and one which should have no place in serious consideration. They probably feel that because Alaska

was granted statehood last year, it would be only fair to extend the same privilege to our other great Territory. If that argument were accepted, just think of the possibilities.

What about Puerto Rico, for example? And the Virgin and Samoan Islands? The Panama Canal Zone? Wake, Midway, and Guam? Johnston and Sand Islands? Canton and Enderbury Islands? The Carolines, Marianas, and Marshall Islands? What of Okinawa? And how about little Kingman Reef?

The possibilities of such a fallacious argument stagger the imagination.

As to Alaska, many Members opposed its admission to statehood last year and before then. Some of the grounds for opposition to Alaska were similar to those against Hawaii, although the case against statehood for Hawaii, I believe, is much stronger.

We were not successful in regard to Alaska. But not for that reason will we give up the effort to prevent yet another mistake from being made. Two wrongs do not make a right, as the old adage so wisely said. They only constitute two wrongs. Let us not compound our first error with another error such a short time later. Let us rather try to make amends for the error by rejecting the proposal to admit Hawaii into the Union.

To those who keep arguing that it is important to look over our shoulder at what foreigners might think about our internal actions, I say that by not incorporating Hawaii into the Union of States we would be showing the world that we are not an imperialistic nation. In effect, we would be saying that people abroad need have no fear about being engulfed by mighty Uncle Sam. We respect even the Territorial status of our good friends the Hawaiians.

Mr. WESTLAND. Mr. Chairman, I yield such time as she may desire to the gentlewoman from Massachusetts [Mrs. ROGERS].

Mrs. ROGERS of Massachusetts. Mr. Chairman, I want to congratulate first of all the majority and minority members of the committee for presenting the case of statehood for Hawaii so ably. I am delighted to vote again for statehood, for Hawaii, as I always have. I am very sure when Hawaii becomes a State she will be loyal to the United States, her foster mother. She has always been extremely loyal to us, and her sons have fought in great numbers to preserve their freedom and ours. Many gave their lives for us and many have gotten terribly sick and wounded for us. I wish for Hawaii and her people great happiness and great success always. She will be a great addition to our United States.

I remind the House that New England missionaries played a very important part in the development of Hawaii. Hawaii is one of the garden spots of the world, and I have many friends there.

Mr. ASPINALL. Mr. Chairman, I yield 10 minutes to the distinguished gentleman from Pennsylvania [Mr. WALTER].

Mr. WALTER. Mr. Chairman, the sole question, as I see it, with respect to the charges made about communism in Hawaii is how to best deal with the situation.

It so happens that the Committee on Un-American Activities, of which I am for the moment chairman, conducted rather extensive inquiries into this question several years ago. The hearings took upward of 2 weeks, following nearly 3 months of intensive investigation by a competent staff of investigators.

There is no question but that Communist unions have a very strong hold on the economy of Hawaii. There is no question but that the Bridges union, under the control of Jack Hall, exercises influence far beyond the usual and normal influence and legitimate activities of labor leaders. In politics their pressures have been felt. And, in that connection let me say to you that it has not only been the Democrats that this group has endorsed. We have in our files complete and irrefutable evidence of the exercise of influence on behalf of members of the other party. But, my friends, again here are we going to wash our hands of this situation? Are we going to say to the good people in Hawaii, of which there are no better people anywhere on the mainland, "We are not going to permit you to become a part of this great family of States because in your midst are those who are members of organizations that are dedicated to the overthrow of the Government of the United States?"

Now, in answering that question let me call your attention to something very, very significant and very serious. Not too long ago the base of our naval activities in the Pacific was moved from Japan to Hawaii. Now, that means that this is our extreme western bastion of defense. Are we going to permit a left-wing, Communist-dominated labor union to cripple the activities of our fleet, or are we going to take a chance that the people in Hawaii, awakening to their new responsibilities as citizens, will attempt to do something about this intolerable situation? I say to you that this situation is not going to improve so long as Hawaii does not have a chance to demonstrate that it is proud of the fact that it is a voting member of this beloved Republic of ours. Given that chance, I am certain that the hold that Mr. Hall and his associates have on the Hawaiian economy will be broken for all time to come. During the course of the time I spent in Hawaii—and unlike many people, in a few weeks' time I did not learn all about the economy of Hawaii, but I did learn much—I associated with people in all walks of life. I met the leaders in every strata of society, and I am thoroughly convinced that the patriotism of these people, as demonstrated by the 442d Combat Battalion, is not exceeded anywhere in these United States. And, I ask you, as a security move, to enact this legislation to the end that these people will throw off the yoke of those who are so strong and so powerful.

In that connection I would like to call your attention to the fact that just recently the employers in Hawaii were forced to sit down and bargain across the table with a man who was under sentence of 5 years in the penitentiary because of his advocacy and his connection with the movement that advocates the overthrow of the Government of the United States. It is inconceivable to me that those people, who were forced into that position, will not take the kind of strong, positive and drastic action necessary to place in positions of authority those people who do not subscribe to this foreign ideology. It is indeed unfortunate that the Supreme Court saw fit to so interpret the Smith Act as to permit these people, who had been properly convicted, to escape going to the penitentiary. But it seems to me that if this bill is adopted, and I am sure it will be, we will find a completely different attitude on the part of the people in Hawaii and a complete change in the entire structure of the labor movement in Hawaii.

Mr. O'BRIEN of New York. Mr. Chairman, will the gentleman yield?

Mr. WALTER. I yield to the gentleman from New York.

Mr. O'BRIEN of New York. Mr. Chairman, first I should like to commend the distinguished gentleman, the Chairman of the House Committee on Un-American Activities, for a very factual statement. I think he came to about the same conclusions that our small committee, which went there last fall, arrived at. Our report has been criticized by some, but in our report we faced up, as the distinguished gentleman from Pennsylvania has faced up, to the fact that there is communism in Hawaii is something that is to be deplored; and it is too extensive. But we also looked, as did the gentleman, at the other side of the coin, and we saw what the people there wanted to do and were trying to do about it.

May I ask the gentleman if it is not true that the people who were convicted as Communists, as advocates of the violent overthrow of our Government, were tried and convicted by the people of Hawaii, and their going free was the result of an action over which they had no control?

Mr. WALTER. Oh, yes; there is no question about that. The jury was selected in Hawaii, an all-Hawaiian jury, which found those people guilty; that is correct.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. WALTER. I yield to the gentleman.

Mr. PILLION. Is it not true that the frightening increase of communism and its influences throughout the world, in Africa, in Hawaii, in Asia, is not dependent upon the form of government in any of these areas; that, no matter what the form of government may be, communism continues its advances in South America, in Cuba, in all these places; and the mere fact that statehood would give Hawaii two Representatives and two Senators and an elected Governor would not in any particular way be a cause for the lessening of Communist influences in Hawaii?

Mr. WALTER. I shall try to answer the gentleman's numerous questions by

saying that it is true that the form of government makes no difference. But if given the feeling of belonging, if given the feeling of being a part of this great sisterhood of States, I am sure they will do more than is being done now. Now nothing is being done.

The CHAIRMAN. The time of the gentleman from Pennsylvania [Mr. WALTER] has expired.

Mr. WESTLAND. Mr. Chairman, I yield 10 minutes to the gentleman from Minnesota [Mr. JUDD].

Mr. JUDD. Mr. Chairman, during this historic debate there is only one regret I have had, and that is that the Honorable Joseph Farrington, my dear friend, who was Delegate to this Congress from the Territory of Hawaii for many years, is not here today to see the culmination of that for which he worked so long and intelligently and valiantly, as did his wife, Betty, following him as Delegate, and as has the present Delegate from Hawaii, Mr. BURNS. Actually, Joe Farrington burnt himself out and hastened his own death by the dedicated zeal with which he worked for this cause. He did it not only as something desired by his constituents but as of the greatest importance in that crucial part of the world from the standpoint of the total well-being of the United States.

Mr. Chairman, as my speech today I should like to read, if I may, an extemporaneous statement I made before the House Committee on Public Lands when the first statehood for Hawaii bill, and I was one of those privileged to introduce it, came up for hearing on March 10, 1947. I do not know anything that is substantially different now from the situation existing then, except that the urgency it is, is even more acute now than it was then; and the need is more visible to more people.

The original statement begins on page 85 of the published committee hearings on statehood for Hawaii, 1947.

No one can be blind to the fact that there is a life death struggle going on in the world today between the only two basic forms of government there have ever been. One form is essentially dictatorship, government from the top down. And nobody can deny that that form of government once more is making tremendous strides in the world, encroaching steadily on the other form which is basically democratic and can perhaps best be described by the word "federation"; federation of classes or of blocs or of races or of people or States. Either the democracy principle will extend and grow and expand; or the dictatorship principle will grow and extend and expand. At this particular juncture in the world's history—this was 1947—when we witness this struggle all about us, I can think of few things more important than for the United States to demonstrate by action which way it really believes in.

This bill affords us an opportunity to recognize in Hawaii one of the most distinguished achievements of American democracy as contrasted with the other type of government. Nowhere else in the world, including our own 48 States on the mainland, has there been a more successful demonstration than in the Hawaiian Islands of the ability of people of different races and national origins and tongues and cultural and social and intellectual background to work together in mutual respect and teamwork for the good of all, as the true way to promote the good of each.

It is no longer just an experiment for us to argue about. It is an accomplished fact.

Granting statehood to the people of Hawaii at this time will be more than just fulfillment of their aspirations as citizens of the United States. It will focus attention throughout the whole vast Pacific Basin on the capacity of our form of government to inspire the loyalty and the cooperation of people of many racial and national origins. I am sure that such an example will have an immeasurable value in strengthening our relations with every people of the Pacific Ocean area.

Hawaii's heritage has been very fortunate for the development of an enlightened democracy. Its aboriginal race, the Hawaiians, whose character and culture have left a marked influence on the modern community, were a friendly, tolerant, intelligent, and gracious people.

The early missionaries from New England, and if I may pause to interject a personal note, having been a medical missionary myself for 10 years in China, I have always been interested in the fact that the first doctor to the Sandwich Islands, as they were called then, was a distant relative of mine, Dr. Garrett Parmalee Judd, who went out in 1828, as I recall, under the mission board which I was privileged to serve later. He was the first to serve the people of these islands as a physician.

There were four other families, the Cooks, the Castles, the Bishops, and one other family—you see their names on the stores, the banks, the streets and parks all over Hawaii today. The five families went out from New England in a sailing vessel around Cape Horn, a 6 or 7 months' journey to the Sandwich Islands. The families now have descendants all through the islands.

The early missionaries from New England brought with them a strong faith in public education, in the worth of the individual human being, and in the strictest political democracy.

The plantation owners, also, who carried on a strong missionary tradition, were on the whole zealous in the promotion of public health and education without discrimination among the workers of many racial backgrounds who came to the islands. Consequently, Hawaii's standards of rural health and rural education are an example to the whole country.

The high moral and physical standards which have resulted from these influences are the foundation of Hawaii's success as a democratic American community.

It is fortunate that this is the case, because, from a mainland point of view, we must place a stronger national reliance upon the people of Hawaii. Their position is one of key importance in the Pacific world. They are on the life lines of trade and cultural intercourse between all peoples of the area, and the diversity of their own racial background gives them an intense and broad interest in Pacific affairs. Can anyone doubt that representatives in Congress from this thoroughly American mid-Pacific State will broaden our horizons, enrich our congressional debates, and contribute in many ways to the national welfare?

No Americans are more alert to our problems of national defense than those who live on our frontiers, especially those in Hawaii who, in 1941, suffered the severest enemy attack ever inflicted on American territory and were compelled for many months to toil unceasingly and unwaveringly in their own and the Nation's defense.

I am sure, therefore, that one of the advantages which we as a united Nation will derive from having the State of Hawaii fully represented in Washington will be an increasing alertness to all problems of national security in that part of the world and an added ability to meet those problems effectively. A loyal island people, firmly united with the rest of the American people, will have a high strategic value for the entire Nation.

Above all, I am convinced that our national policies will be judged in no small measure by the decisions we make with respect to the people of Hawaii, and other island peoples of the Pacific. We should continue to demonstrate the reality of our belief that every people should have a government of its own choosing. It will be a great advantage to the United States to have one of our great States in the mid-Pacific as a conspicuous example of our American way of life.

In summary, I believe statehood should be granted to the people of Hawaii, first, for security reasons.

There is bound to be uncertainty and instability in the Pacific for years. Forces are at work there which have destroyed the old patterns and nobody can predict with certainty what the new pattern is to be.

It seems to me incontrovertible that our situation would be far better, and that Hawaii would be a much firmer bastion of American security as a full State than it would as a Territory of restless, unhappy half-citizens.

Under their present status, they have to make the same contribution to the national welfare as other citizens but without the same rewards, the same standing as citizens on the mainland.

The question of physical separation from the mainland seems to me inconsequential because, of course, Hawaii today is so very much nearer the rest of the Nation than our Western States were when they were admitted to statehood.

The second reason is commercial considerations. The undeveloped areas of the world are largely in Asia. I am willing to hazard the prediction that eventually historians will agree that World War II all along was a war more than anything else to determine who is going to control the development of Asia and the other undeveloped areas of the world.

There are three areas of great undeveloped natural resources: Africa, South America, and Asia, but only one has also vast human resources. Africa and South America do not have comparable populations.

Asia has half the population of the world. Hitler understood its importance. Certainly the Russians have demonstrated for 25 years that they understand its importance. The British, the Dutch, the French understand it. The Japanese understood it. That is why they fought so long and hard to get control of the manpower and the resources and the potential markets in China.

Only we Americans, with Asia right in our front door, so to speak, seem seldom to sense the importance to our future of who is to control or what ideas are to dominate in the development of Asia. So, for security reasons and for commercial reasons, we need every possible advantage in the gigantic struggle ahead. Making Hawaii a State would give us a very great advantage.

The third basic reason is the moral consideration. How can we, with any decency or hope of success, talk about people having the right to governments of their own choosing, for example in Eastern Europe, unless we show by our deeds that we believe in it in the Pacific as well.

And the fourth reason I would call ideological considerations, which to my mind are really synonymous with our ultimate security.

Actually our own survival is at stake. Democracy is under attack today. The belief that free man is capable of self-government for sustained periods is under systematic organized assault in the world as it has not been since the American and the French Revolutions succeeded. And democracy is losing ground. We can see it on every hand.

The people of Asia, up until the middle 1920's or a little later, were definitely moving in the direction of greater freedom and self-government and the democratic pattern. Now they are uncertain. Some are wondering whether they might not have been better off to adopt the racial pattern, which is what Japan tried to force on them—Asia for the Asiatics. Some believe there is no hope for decent treatment from white men; that when white men get in a jam, they will promise everything to get help until they get out of their difficulty—but then they forget their promises.

Some are wondering whether they should not adopt totalitarianism of the Communist pattern. That is the one making the greatest advance both in Europe and in Asia and, in my judgment, we cannot successfully combat totalitarianism of the Communist pattern just by calling it names and fighting it defensively.

We have to overcome evil with good. We have to have a better policy, and then we have to do a better job of selling it to the people of the world.

In most parts of the world today the trend is from the status of citizen to the status of subject. We have to reverse that trend and widen the areas where the direction is from subject to citizen.

Hawaii is almost the only place I find right now where we have a chance to give new life to our fundamental faith and beliefs.

I repeat, either democracy will spread or totalitarianism will spread and I hope very much that the Congress will act favorably upon these bills to give this concrete object lesson, this vivid demonstration before the world of the vitality of our democratic faith, the strength of our federation principle of government, by extending to these people who have proved themselves worthy in every reasonable sense the right to become full citizens on the same basis as all the rest of us.

We ought to do this because it is right; but if we do not consider that factor, we ought to do it out of a decent concern for our own well-being in the future.

I do not know of anything to add to the above which I said in 1947. I can see nothing important to lose by granting statehood. I can see a great deal to gain. I am happy that after 12 years of effort the objective is about to be achieved. It will prove to be a good and a wise act.

The CHAIRMAN. The Chair at this time will call attention to the time remaining. The gentleman from New York [Mr. O'BRIEN] has 39 minutes remaining, the gentleman from Washington [Mr. WESTLAND] an hour and 2 minutes.

Mr. WESTLAND. Mr. Chairman, I have only one remaining request for time.

Mr. O'BRIEN of New York. Would the gentleman prefer that I yield now?

Mr. WESTLAND. I would prefer that.

Mr. O'BRIEN of New York. Mr. Chairman, I yield 17 minutes to the gentleman from Louisiana [Mr. PASSMAN].

Mr. PASSMAN. Mr. Chairman, it is my earnest hope that the Members of this House will vote favorably, by large majority, on the momentous question of admitting Hawaii as the 50th member of our Union of States. As a Member of this body from the Deep South—the Fifth District of the great State of Louisiana—I feel that I should avail myself of this opportunity to express my unqualified personal support of statehood for Hawaii and also, I am fully confident, the approval of the people whom it is my honor and privilege to represent in the Congress.

I say to you, that contrary to impressions which are held by some people, both in and out of public life, the majority of the people of the Southland—along with the majority of the citizenship of our entire Nation—are unquestionably for statehood for Hawaii. These same people, notwithstanding the erroneous public assertions that were made otherwise, also were supporters of statehood for Alaska. Our people of the South, where good American citizenship and patriotism are ingrained as a way of life, have warmly welcomed Alaska into our Union of States; and there is no doubt whatsoever in my mind that the welcome to Hawaii will be equally as sincere and complete.

The people of our Southland are vitally interested, and justly so, Mr. Chairman, in the preservation of the constitutional rights of the States of our Union. The thoughtful citizen, not only of the South but of every section of our Nation, realizes full well that the citizens of the new State of Hawaii would also be keenly conscious of the tremendous importance of safeguarding the rights of the States, a status for which they have worked so long and hard.

Mr. Chairman, we hear the same arguments in opposition to admission of Hawaii to the Union as were used against Alaska. The same type of objections were also raised against admitting many of our other great States. But none of these arguments has proved valid, for in every instance of the admission of a new State to the Union, our country has been strengthened immeasurably.

I wish to note that our fellow Americans of the Territory of Hawaii have given their children more years of schooling, have a lower crime rate in every category, pay a higher per capita tax to our Federal Treasury, and have sacrificed proportionately more of their sons and husbands in the last three American wars, than has, for example, the population of my own great State of Louisiana, or many other of the States within the Union.

Furthermore, Mr. Chairman, I believe it is worth while to mention that under its constitution, overwhelmingly ratified in 1950, the people of Hawaii have taken this move as a strong protection against communism:

> No person who advocates, or who aids or belongs to any party, organization or association which advocate, the overthrow by force or violence of the government of this State, or of the United States, shall be qualified to hold any public office or employment. (Sec. 3, article 14, constitution of the State of Hawaii.)

May I add, Mr. Chairman, that no other American State constitution contains such a protective provision against communism.

Let us recall also that thus far our Nation has fought only one shooting war against Communists—the war in Korea. When that conflict suddenly erupted our Hawaiian troops were geographically closer to Korea and were among the first to see action. All told, more than 12,000 of Hawaii's young men—many of them dock and field workers—enlisted, or were drafted, to fight for the country that denied them representation in the Government that conscripted them.

In the Korean conflict, not one case of cowardice, or of desertion to the enemy, was recorded on the part of a Hawaiian; instead, 426 of them were killed in action, a death toll which was four times as high as the killed-in-action average for the United States as a whole. Almost one thousand other Hawaiians were severely wounded, or captured; yet not one of them was successfully brainwashed by the enemy.

And surely we have not forgotten the valiant record of Hawaii's men at arms in World War II. No fighting men from anywhere ever conducted themselves more valiantly.

Fair play demands, Mr. Chairman, that we admit Hawaii to our Union of States. Enlightened self-interest also demands it.

Is it not unrealistic for Uncle Sam to use one of his hands to lavishly pass out billions of dollars in gifts and guns to other nations of the world in an effort to obtain their loyalties, while he uses the other hand to reject a half million of his own loyal citizens who ask nothing but to be bound more closely to him that they may share, in common with other Americans, all of the privileges and duties and perils of full citizenship?

As it is, even if Hawaii is to be awarded full statehood this year—and I firmly believe that such is to be—historians of the future doubtless will shake their heads in puzzlement over a United States that has wantonly delayed the grant until now. A United States which has permitted 14 golden post-World War II years to slip by without such action, which—had it occurred in 1946 or earlier—would surely have helped retard the spread of communism in the Orient.

But despite the delay, it is heartening to realize that today we are finally awakening to our responsibilities to act with justice toward our fellow Americans in Hawaii, and to strengthen our Union through the practice of intelligent self-interest, as we did last year in the case of Alaska. I hope and trust that we will act positively, with no further delay, to bring the Territory of Hawaii, with its vast wealth of human and natural resources, into full union with our other 49 States.

It is apropos to quote here a statement made by Abraham Lincoln, who said some hundred years ago:

> Those who would deny freedom to others do not deserve it for themselves; and, under a just God, they will not retain it.

With all my heart, I believe those words to be true. And believing them to be true, I am convinced that statehood for Hawaii resolves itself, in essence, to this question: Will this Nation, by its action on this issue, turn from or continue to pursue the path which has led it to greatness, and has caused it to be the bright beacon of hope for freedom-loving peoples throughout the world?

Mr. Chairman, if statehood should be denied the deserving Territory of Hawaii through our failure now to close the small remaining gap, then every individual responsible for such a disgraceful occurrence would richly deserve censure of history. For, if this statehood bill should be defeated, we would have failed not only the disfranchised Americans of Hawaii, but we also would have failed to respond to the unmistakable and expressed wishes of a substantial majority of the people we represent.

Never should we forget that the American people are fair-minded; and time and again they have demonstrated that they are wise, wiser by far than is sometimes recognized. I firmly believe that the three out of four Americans who favor statehood for Hawaii do so because they know that the colonial status of the Territory is repugnant to both the letter and the spirit of our form of government; and they know, too, that if "taxation without representation" and "Government without the consent of the governed" were tyrannies 183 years ago, they are equally so today.

The American people also realize, of course, that the free peoples of the world and the evil forces of international communism are locked in a battle to the death for the minds of men; and their sound judgment tells them that we are denying ourselves an important victory in that struggle when we fail to give our Hawaiian citizens their full birthright as American free men.

Mr. Chairman, I have touched upon but a few of the significant points of the case for Hawaiian statehood. May I add here, however, a very brief summary:

Hawaii was an independent nation, with a king and a queen, until by agreement it became an incorporated Territory of the United States, with a complete understanding that statehood would be granted when the people had become prepared for it.

The Hawaiian is just as much an American as any citizen of any State. The citizen of Hawaii is subject to all the laws of our land, but is without a vote in the Congress.

In per capita income tax payments to the U.S. Treasury, Hawaii ranks about 16th among all the States, paying more income tax on a per capita basis than 32 States of the Nation.

Records show clearly that Hawaii is freer from communism than any State in the Union. The Hawaiian people's patriotism and their love for the American way of life are such that Communists find it very difficult to thrive there.

Hawaii has an educational system as fine as any in the world, outranking any of the States of the Union. Illiteracy is practically an unknown phenomenon in the islands.

In the history of the whole world, the Japanese-Hawaiian military unit emerged from World War II as the bravest military unit ever to do battle, receiving more medals for valor than any other military unit ever known.

During all the wars in which we have been involved since Hawaii became an incorporated Territory of the United States, Hawaii has always been the first to meet its war bond quota, before any of the States of the Union have done so.

Militarily, on a per capita basis, the Armed Forces enlistments from Hawaii have surpassed those of any State in the Union.

Mr. Chairman, I know the Hawaiian people; I have associated with them. They are fine Americans, for whom full citizenship as members of the Union of States is long overdue.

Just as, throughout the course of our national history, the addition of each new State has made us a better and stronger Nation, so, too, will Hawaii, upon admission to statehood, add its measure of greatness to the whole.

Now, Mr. Chairman, before I conclude, I wish to pay tribute to a great American, a dear personal friend, a fellow Louisianian, a successful businessman, an outstanding citizen, Mr. George H. Lehleitner, of New Orleans. More than any other single individual, either in the Government or out of it, George Lehleitner has been at the forefront in advancing the cause of statehood for both Alaska and Hawaii, and in finally bringing to reality what once was a hope, at times, it seemed, a hope far from fulfillment. But George Lehleitner, New Orleans businessman, outstanding American, became imbued with the ideal of gaining statehood for Hawaii and Alaska while in service as a naval officer, the captain of his ship, during World War II. The fire that was kindled within him then, through his association with the fighting men and the people as a whole of Hawaii and Alaska, has never since flickered. He has given of his very self—his time, his talents, his efforts, his financial means—to carry on the statehood fight, to bring about correction of the injustices resulting from keeping our fellow citizens of Hawaii and Alaska in Territorial status, without the full privileges of citizenship, although bearing all the responsibilities. Last year George Lehleitner saw justice done in the matter of statehood for Alaska; this year, I have no doubt, he will see justice done for Hawaii. He has fought the good fight, and now the victory. America is much the stronger, the better, because of him. For his great and good works, we of the Congress—Americans everywhere, and especially Alaskans and Hawaiians—owe to George Lehleitner a lasting debt of gratitude.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from Washington [Mr. TOLLEFSON].

Mr. TOLLEFSON. Mr. Chairman, on three occasions since it has been my privilege to serve in this House, I have voted in favor of statehood for Hawaii. Again I shall vote for the bill now pending before us, which would grant such statehood.

On each of the earlier occasions I sincerely believed that Hawaii deserved and was entitled to membership in our sistership of States. After hearing the arguments in favor of the pending measure I am more convinced than ever that statehood should be granted. The members of the Committee on Interior and Insular Affairs have presented an ironclad case in support of their proposal. Their arguments are irrefutable. I trust that the measure will be overwhelmingly approved.

Mr. WESTLAND. Mr. Chairman, I yield such time as she may desire, to the gentlewoman from Washington [Mrs. MAY].

Mrs. MAY. Mr. Chairman, unlike my colleague who spoke just before me, this will be my first opportunity to exercise the privilege of voting for Hawaiian statehood. I am going to be very proud so to do.

I am pleased to be able to add my remarks to those already made on this historic session of the House of Representatives because I believe our Nation needs Hawaii as a State of the Union.

Hawaii is a community of Americans who have proved that East and West can live and work together, in peace and war, under the flag of freedom. I am

sure that statehood will be an example before the world of American democracy in action. Hawaii has now passed every test.

The Nation wants Hawaii because public opinion is overwhelmingly in favor of admitting Hawaii into the Union. Numerous congressional hearings have exhaustively investigated Hawaii's fitness for statehood. This body has passed Hawaiian statehood bills many times. The platforms of both political parties have called for an immediate statehood.

I believe Hawaii's 500,000 people have fulfilled the obligation of citizens for more than one-half a century without enjoying all the privileges. They have paid taxes as residents of the States do and have served on battlefronts equally, but have had no voice in either tax or draft legislation and as we are all so aware, taxation without representation violates a basic American precept. Statehood is the expressed will of Hawaii's people, as it is the expressed will of the people of the United States of America. Statehood will be beneficial to us all and I am pleased to go on record as heartily favoring the admission of Hawaii as the 50th State of the United States of America.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from Ohio [Mr. HENDERSON].

Mr. HENDERSON. Mr. Chairman, I know that many of my colleagues have expressed misgivings with regard to this bill. Many more have been silently weighing the issues. At one moment they feel that the matter should be delayed another term or two. Further consideration suggests that action should be taken now. I must admit that I have had misgivings, and that some of them are yet unresolved.

I opposed the Alaska bill last year, and consistency might suggest that I follow the same course on this bill. But sometimes events occur which destroy some of the virtues of consistency. With Alaska, the step has been taken, statehood has become a reality. The action cannot be undone. There is a 49th State, and because of that precedent there is additional argument for a 50th. I shall support the bill, and I believe that there is ample reason for those in this Chamber, this Congress, to support the statehood issue.

Correspondence I have had with constituents leads one to believe that statehood for Alaska has popular approval.

Many arguments are advanced in opposition. The insular nature of the area, its distance from the mainland, the racial composition of the residents, the important position of the ILWU, and Communist influence have all been discussed and proper weight given to their importance.

I am glad to hear assurance from some of our colleagues, Mr. WALTER, Mr. JACKSON, among others, who have made a special study of subversion that statehood may strengthen the hand of loyal Americans by placing upon them full-scale American responsibilities of citizenship. I share that feeling, Mr. Chairman. I feel that statehood will give Hawaii the same completeness of American style of government which has enabled all the States to overthrow undesirable situations arising within them, and to withstand continuous to their existence.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from Pennsylvania [Mr. SIMPSON].

Mr. SIMPSON of Pennsylvania. Mr. Chairman, once again Hawaiian statehood is before the House and once again I rise in its support.

Although we have heard many arguments on both sides of this question, I feel certain that no issue coming before the Congress in recent years has captured the imagination of the American people as has the admission of two new States to our Union. In admitting Alaska last year, the Congress brought to fruition the hopes and dreams of the people of that far northern Territory and stirred in the hearts of many other Americans new dreams of another frontier for our adventurous people.

Mr. Speaker, in acting to admit Hawaii as our 50th State, we can right another wrong and bring to full citizenship some 575,000 people who have met all the obligations of citizenship for more than half a century without its privileges. The admission of Hawaii as a State would provide a dramatic example to the world, and particularly to our friends in the Far East, of American democracy in action. It would bolster Hawaii's defense role in the Far East and serve notice on the rest of the world that the United States intends to stay in the Pacific.

Hawaii has passed every test for statehood. Congressional committees, Government departments, military leaders, and many, many other groups have taken a close look at the islands and come up with one conclusion: Hawaii is ready for statehood and America is ready for Hawaii.

Since 1941, national surveys have shown that American public opinion is overwhelmingly in favor of admitting Hawaii into the Union. Some 30 national organizations have gone on record in favor of Hawaiian statehood.

The platforms of both political parties urge immediate statehood. Twenty separate congressional hearings have exhaustively investigated Hawaii's fitness for statehood. The House of Representatives has passed statehood bills three times, dating back to 1947.

The American press is nearly unanimous in its support of Hawaiian statehood. Let me cite a few examples from the newspapers in my State which could be multiplied over and over in every State in the Union.

First, Philadelphia Inquirer, February 1:

> Surely the time has come when this Territory should follow Alaska into the Union, as our 50th State. Her people deserve it, they very much desire it, and they would be a valuable addition to the United States of America.

Second, Pittsburgh Sun-Telegraph, February 6:

> It is illogical and unfair to grant statehood to Alaska and deny it to Hawaii.

Third, Reading Times, January 31:

> For we hope by the time the first session of the 86th Congress completes its chores, Hawaii will be the 50th State.

Fourth, Hazelton Standard-Sentinel, February 13:

> We need Hawaii as an equal partner as much as Hawaii needs statehood. (Interior Secretary Fred A. Seaton.)

Fifth, Lancaster News, January 4:

> It seems incredible that Hawaii can be kept out.

Sixth, Altoona Mirror, February 10:

> Let's aid Hawaii. Alaska is over the hurdle. Now it's Hawaii's turn.

Mr. Speaker, these are just a few examples of editorials that have come to my attention in recent weeks. But they demonstrate the overwhelming desire of the American people to bring into the Union this enchanted Pacific paradise whose beauty has overwhelmed its citizens and visitors for generations.

I would like to quote Mark Twain who once visited the islands and 20 years later remembered them in these words:

> No alien land in all the world has any deep, strong charm for me but that one; no other land could so longingly and beseechingly haunt me sleeping and waking, through half a lifetime, as that one. * * * Other things leave me, but it abides. * * * For me its balmy airs are always blowing, its summer seas flashing in the sun; the pulsing of its surfbeat is in my ears. * * * In my nostrils still lives the breath of flowers that perished 20 years ago.

Mr. Speaker, Hawaii is literally America's "Main Street" in the Pacific. It is a community of Americans who have proved that East and West can live and work and play together, in peace and war, under a flag of freedom which I sincerely hope will very shortly contain 50 stars instead of 49.

Mr. WESTLAND. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. SAYLOR] to close debate on this side.

Mr. SAYLOR. Mr. Chairman, today is a momentous day in American history, because before the sun sets today a condition will exist under the American flag that has not existed since July 1, 1776. On the 1st day of July 1776 in Philadelphia representatives of Thirteen Crown Colonies met in the Continental Congress. On that day the Jefferson resolution was called up. There was a great deal of debate. John Hancock presided until the last Delegate had spoken. He then turned over the chair to a Delegate from Virginia, Mr. Randolph; went over to the group that came from his own Colony and sat with them. Then the clerk of the committee called the roll for the first time of those Thirteen Colonies. It rather ominously began with the New England Colonies: Massachusetts, Rhode Island, Connecticut, New Hampshire, followed by New York, Delaware, Pennsylvania, and others. Is it not strange that today when the roll is called of the 49 States of the Union it begins with Alabama, Alaska, Arizona, Arkansas, California, and Colorado, names unheard of and undreamed of on July 1, 1776? Yet every

one of the 36 States that have been admitted to the sisterhood of States from that time has met opposition. But I dare say—and I challenge the members of this committee to have one Member of Congress from any one of those 36 States rise in the well of the House and say that when the Congress in its wisdom admitted his State to the sisterhood of States it made a mistake.

It is very interesting to note that even before the Constitution of the United States was adopted by the Thirteen Original Colonies they had granted an organic act to the Territory of Ohio. Two years later they granted an organic act to Tennessee, and State after State from that time down until last year was admitted into the sisterhood of States; and this country has become bigger, and better, and greater because of it.

When we vote in this House later this afternoon to admit the Territory of Hawaii into the sisterhood of States to make it the 50th State of the Union, for the first time in the history of our country, we will not have under the American flag an incorporated Territory.

Yes, Mr. Chairman, this is a momentous occasion. The people who voted against other States have lived to see the error of their ways. I appreciate, and I know that the other members of this committee appreciate the opposition, and the loyal opposition, of those who have spoken against Hawaiian statehood. But I call upon those who have up until now opposed statehood to see the error of their ways, to rise and support the action of the House Committee on Interior and Insular Affairs, so that this Congress can present to the world a unanimous front, so that when the word goes out this evening over the wires throughout the known world that the United States has added a 50th star to its flag, it will be known that it was done with the unanimous support of all of the Members of the House of Representatives.

Yes; let us not be like a Member of the other body who saw me last night and said, "Do you know, if I had it to do over again, I would have voted for Hawaiian statehood." Today you will have your last opportunity. No other Member of Congress in the foreseeable future will ever have the opportunity that is being presented to you today.

I urge you to support this committee and to make the vote not three to one but overwhelming in favor of Hawaiian statehood.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to my chairman.

Mr. ASPINALL. May I, at this time, commend the gentleman for his fine presentation. May I state that throughout the 10 years that I have worked with the gentleman from Pennsylvania his actions have been prompted as he has studied and made judgment on legislation not only by his mind, but also by his heart, and in his statement today, it is the heart of the Congressman from Pennsylvania [Mr. SAYLOR] making this presentation.

Mr. SAYLOR. I thank the gentleman.

Mr. RHODES of Arizona. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to my colleague from Arizona.

Mr. RHODES of Arizona. I want to compliment the gentleman for his fine statement and also I wish to compliment the gentleman for the many years that he has spent working for statehood for Alaska and Hawaii. When I first came to the Congress in 1952, the gentleman from Pennsylvania was chairman of the Subcommittee on Territories and Insular Possessions. He worked very hard in that Congress for statehood, and in every subsequent Congress. He has worked very hard in this Congress. I wish, at this time, to give the gentleman my personal word of congratulations not only to the gentleman from Pennsylvania but to the gentleman from New York and all the other members of the Committee on Interior and Insular Affairs for what I anticipate will be not only a great day for them but for the people in Hawaii as well.

Mr. O'BRIEN of New York. Mr. Chairman, I yield 5 minutes to the gentleman from Vermont [Mr. MEYER].

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. MEYER. I yield.

Mr. ASPINALL. Mr. Chairman, I thing it is perfectly fitting that we should now hear from the gentleman from Vermont who has just taken the floor to follow the presentation of the gentleman from Pennsylvania. It is certainly in order that the gentleman who represents in this House the first State to become a State by admission after the Thirteen Original States had united together under the Constitution of the United States should now state his position.

Mr. MEYER. Mr. Chairman, our Nation had its beginnings in the union of thirteen colonies who ultimately in 1787 drafted and subsequently ratified the Constitution of the United States of America.

In 1791 Vermont became the 14th State and was the first State to be admitted to the Union by a special act of Congress. Prior to its admittance, on January 10, 1791, Vermont had approved the United States Constitution and in presenting to the Congress its case for statehood the commissioners of Vermont said:

> They have seen with great satisfaction a new and more perfect union of the people of America, and the unanimity with which they have recently approved the national Constitution manifests their attachment to it, and the zeal with which they desire to participate in its benefits.

And in conclusion they added:

> The memorialists on behalf of their constituents most respectfully petition that the Congress will consent to the admission of the State of Vermont, by that name and style, as a new and entire member of the United States.

The petition was granted by act of Congress on February 18, 1791, and on March 4 of that year Vermont was legally admitted as the 14th State of these United States.

One hundred and sixty-eight years have passed since that memorable occasion and our Nation has increased in area, and in stature, and now comprises 49 States. There remains one Territory which desires statehood and which has demonstrated that it is prepared to assume equal partnership in our cherished Union.

I am happy to say that the people of my State have indicated to me that they favor the admission of Hawaii as the 50th State. I am able to enthusiastically express the wishes of those constituents who with rare exception wish to welcome a new star into our galaxy.

It is most appropriate that the Representative of the Green Mountain State—the first petitioners for statehood—should be supporting this proposal. Vermont again looks westward. We want Hawaii to join as full partners in our common destiny.

As I have listened to the arguments against the admission of Hawaii as a State, I recall that probably most of these arguments and many others were used in earlier opposition to the entrance of almost every other State that came in after the Thirteen Original Colonies. I propose that in the final analysis, granting the legitimacy of the opposition, it does not make much difference in the end. This country has grown and become great because we were willing to admit other States. If we had not seen fit to do so, probably the original Union would no longer endure; and, therefore, I hope that on this historic occasion we will present an overwhelming vote in favor of the admission of Hawaii.

Mr. O'BRIEN of New York. Mr. Chairman, I yield 3 minutes to the gentleman from Oregon [Mr. ULLMAN].

Mr. ULLMAN. Mr. Chairman, I want to take this time to pay tribute to the distinguished chairman of the full committee and the distinguished chairman of the subcommittee for the fine way in which they have brought this bill before the House. I would also like to commend the other members of the committee, many of whom worked on this legislation for years before I came to this body. And I would like to pay particular tribute to the gentleman who led the opposition in the committee, the gentleman from Texas [Mr. ROGERS] because although he was basically and deeply opposed to this legislation he nevertheless contributed greatly to the perfecting of the bill. He helped write the language that makes this bill one of the finest statehood bills that has ever come before this body.

My good friend the Delegate from Hawaii deserves great commendation for the statesmanlike way in which he handled this matter which has meant so much to him personally and so much to his Territory. When he came here he set a goal, and he worked consistently toward that goal. He did not let temporary changes in the political situation deter him; steadfastly he worked toward his objective. Today marks a tremendous personal victory for the Delegate from Hawaii.

We in Oregon celebrate our hundredth birthday of statehood this year, and I

am particularly happy that Hawaii is going to join the Union 100 years following the State of Oregon.

Mr. Chairman, as a sponsor of one of the proposals authorizing Hawaiian statehood, I am pleased that this legislation is now before the House for consideration.

Extensive hearings have been held by the Committee on Interior and Insular Affairs concerning the wisdom of permitting Hawaii to join the Union. I actively participated in those hearings, and I am convinced that now is the time to authorize statehood and thus provide long-overdue equitable treatment for the more than half a million loyal Americans inhabiting the Hawaiian Islands.

Hawaii has long been promised statehood, both by implication and by official action of the Government of the United States. Fifty-nine years ago Hawaii voluntarily surrendered its independence at the urgent invitation of this country. This action between two governments took place in order that Hawaii might be, as officially stated, "incorporated into the United States as an integral part thereof."

It is particularly significant that more than a hundred years ago, in 1854, President Franklin Pierce authorized negotiations to annex Hawaii to the United States. This proposed treaty of 1854 stated that the "Hawaiian Islands shall be incorporated into the American Union as a State, enjoying the same degree of sovereignty as other States, and admitted as such as soon as it can be done in consistency with the principles and requirements of the Federal Constitution to all the rights, privileges, and immunity of a State as aforesaid on a perfect equality with other States of the Union." Though the negotiations were not consummated, their discussion in official circles caused the people of Hawaii to believe statehood was their destiny.

President Andrew Johnson, in his annual message to the 40th Congress on December 19, 1868, in speaking of a reciprocity treaty with Hawaii, said "it would be a guarantee of the good will and forebearance of all nations until the people of the islands shall of themselves, at no distant day, voluntarily apply for admission into the Union." Twenty-two years later Hawaii was incorporated into the Union. Since then Hawaii has applied by petitioning Congress for statehood on at least 20 different occasions.

President Harry S. Truman as long ago as January 21, 1946, recommended statehood for Hawaii in his annual message on the state of the Union. He again recommended to Congress that Hawaii be granted statehood when the 81st Congress reconvened.

When the elected leaders of democratic America throughout a hundred-year period officially recommend that Hawaii should be granted State government, it is time the recommendation be fulfilled. In statements of its Members and by action of its committees, Congress itself has caused the people of Hawaii to believe that State government would soon be achieved.

The action taken by Congress is much more than an implied promise; it is the continuation of a policy firmly established by Congress on 29 other occasions when States have been brought from territoriality to statehood. It has been recognized historically that when Congress actively recognizes a Territory as a "part of the United States" and incorporates it into the Union as such, that in itself is a prerequisite to any step in the direction of statehood.

As long ago as 1900, Congress rejected an amendment to the proposed Organic Act for Hawaii which would have provided that Hawaii should not at any time in the future be admitted to statehood. It was during the 56th Congress, 1st session, that Congressman Ebenezer J. Hill, Republican, of Connecticut, during debate on the proposed Organic Act for Hawaii, moved to add an amendment as follows:

> Nothing in this act shall be construed, taken, or held to imply a pledge or promise that the Territory of Hawaii will at any future time be admitted as a State or attached to any State.

When questioned by a colleague, Congressman Joseph G. Cannon, of Illinois, as to whether or not there was anything in the bill providing a government for Hawaii which committed Congress to admit Hawaii to statehood, Congressman Hill replied:

> I think there is. * * * The American people look upon the authorization and full organization of a Territory as the first step toward statehood. It has always been so construed; it always will be so construed.

The amendment was rejected. But Congressman Hill was correct when he stated:

> The American people look upon the authorization and full organization of a Territory as the first step toward statehood.

On February 20, 1900, Senator Morgan, of Alabama, during debate on Hawaii's Organic Act in the Senate, said that when he was in Hawaii, as a member of the McKinley Commission to draft a form of government for Hawaii, he had made a study of Hawaii's experience in government. Following his two visits to Hawaii, he said:

> I became satisfied that those people had built up a government that was at least equal in all respects to any government in the American Union.

He then told the U.S. Senate his first proposition to the members of the Commission meeting in Honolulu was that—

> We should recommend that the people of the Hawaiian Islands should hold a convention, adopt a constitution, and apply for admission into the American Union.

The last survivor of that group, the late Justice Frear, wrote not long ago to Hawaii's late Delegate to Congress, Joseph R. Farrington, that the five-man Commission "did recognize and realize at the time that they were recommending for Hawaii a status which was regarded as leading to statehood."

During the past 20 years Congress has, on a number of occasions, sent its committees to Hawaii to investigate the readiness of Hawaii to attain statehood. Several of these congressional committees have also held statehood hearings in our National Capital. Every year since the end of the war, a congressional committee has recommended immediate statehood for Hawaii. No wonder the half-million people of Hawaii feel that statehood has been promised to them.

From every historical precedent in our dealings with former territories which are now States, the people of Hawaii have had every reason to believe that they would one day attain State government. Statehood for Hawaii has been promised by implication ever since our Nation began to function.

The Continental Congress provided in the ordinance of 1787 for the admission of States. In those days when a territory had 5,000 free male inhabitants, it was granted legislative powers and allowed to have a delegate to Congress; when it had 60,000 inhabitants it was eligible for statehood. Hawaii, today, has over half a million inhabitants—more than any of the other 29 territories had when they attained statehood, excepting only Oklahoma. Yet Hawaii, which has served an apprenticeship of half a century, in contrast to the average of 20 years for all other former Territories now States, still lives on in hopes of having the promises of statehood fulfilled.

The promises of statehood have not only been held out to Hawaii by action of our Government, and by statements of our Presidents, but by the two major political parties of the United States. Both the Democratic and Republican Parties endorse statehood for Hawaii. Those promises to the people of Hawaii must be kept. We must give increasing evidence to the millions of people the world over that democracy works.

The U.S. Congress has a direct obligation to the citizens of Hawaii to grant them statehood. Hawaii was annexed by act of Congress 59 years ago as a part of the territory of the United States. Congress, in 1900, by enactment of an organic act—in reality a pattern of a State constitution—completed the incorporation of Hawaii as an integral part of the Union. Based on historical precedent, Hawaii has been promised statehood.

Our Supreme Court recognizes the tentative character of Territorial status. The Court in one case before it concluded that—

> The organization of governments for the Territories was but temporary, and would be superseded when the Territories become States of the Union.

Thus, three branches of government under our Constitution have by their actions implied or promised State government to Hawaii. Congress has already enacted legislation to admit as States 30 former Territories, including Alaska. A number of our executives, President Eisenhower among them, have endorsed State government for Hawaii. Supreme Court decisions have pointed out that Territorial government was necessarily limited to a period of pupilage.

Let us not delay any longer in granting statehood to our fellow American citizens in Hawaii. Let us keep our promises to the people of the Territory of Hawaii that with maturity will come responsibility. In our modern world Hawaii needs voting representation in Congress. "No

taxation without representation" and "No government without the consent of the governed," are axioms as much alive and as important to the people of Hawaii as they were to our forefathers who first conceived them. They can only be made meaningful by the adoption of the legislation now before the House.

Mr. O'BRIEN of New York. Mr. Chairman, I yield 2 minutes to the gentleman from Colorado [Mr. JOHNSON].

Mr. JOHNSON of Colorado. Mr. Chairman, as one who supports the cabinet system at the Federal level and who supported the cabinet system for his own State, I welcome the cabinet system experiment reported in the constitution of the State of Hawaii.

As one who supports division of the budget into separate capital and expenditure sections, I welcome the fact that the State of Hawaii has seen fit to so divide its budget, as is indicated in the constitution reported to us today.

As one who has long supported in his own State an automatic constitutional reapportionment of the legislature on a reasonable population basis, I welcome the inclusion in the Hawaiian constitution of that feature as reported to us today.

As a first-term Member, I deem it a high privilege to have been sworn into this body on the same day as the gentleman from Alaska [Mr. RIVERS], the first Representative from that State, and I deem it an even higher honor to have the rare privilege and good fortune to be a Member of the Congress which admits the 50th State to the Union.

May I say parenthetically that I have yet to receive the first piece of mail asking me not to vote in favor of statehood for Hawaii. I can recall no occasion in my own State when this question has come up but what the vote, whether in my party or among my friends, was unanimous for the admission of the State of Hawaii into the Union.

As a Member from a mountain State, may I say I am pleased to see the Congress welcome into statehood a most unusual mountain State. We shall be glad to welcome Hawaii into the group of mountain States.

Speaking as a member of the Colorado delegation, I want to pay special tribute to the dean of our delegation, Mr. ASPINALL, the very able chairman of the Committee on Interior and Insular Affairs, for this very fine work in bringing this measure to the floor at this time. As a Member of this body, and I am sure on behalf of all the Members, I congratulate the entire membership of that committee on both sides, not only for the work they have done on the bill and the report, but also for the able presentation we have had today.

As an American citizen I welcome Hawaii into full membership in the family of States.

Mr. O'BRIEN of New York. Mr. Chairman, I yield 2 minutes to the gentleman from California [Mr. GEORGE P. MILLER].

Mr. GEORGE P. MILLER. Mr. Chairman, I rise in support of statehood for Hawaii. I was one of the members of the Larcade committee, a subcommittee of the then Committee of Insular Affairs that in 1946 visited the islands and made one of the most intensive studies on behalf of statehood that has ever been made. I am convinced, as I was then, that Hawaii is more than ready for statehood. She is as capable of governing herself as any of the States in the Union, and this privilege should be accorded her.

At that time we had the privilege of nailing to the mast a number of rumors in reference to subversion, and disloyalty that had been spread during the war. There was no positive evidence to support them.

There is only a small fraction of the people in our States who can be accused of disloyalty or whose political ideals are not the political ideals of the overwhelming number of Americans. If there are any who can claim any State is without such groups, let them stand up. Hawaii's proportion of such dissidents is no greater than the average.

Surely the people of Hawaii are no different from the people in the other 49 States. They are good American citizens who when called upon have done their bit to sustain this country and who are as proud of that citizenship as you are or I.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from New York [Mr. RIEHLMAN].

Mr. RIEHLMAN. Mr. Chairman, I rise in support of this legislation and I want to commend the committee for the fine work they have done in bringing this bill before the House for action today.

It is indeed a pleasure to be able to speak in behalf of Hawaiian statehood. Hawaii has been a Territory of these United States for many years. We have watched her grow and develop a healthy economy. We have watched her sons defend our constitutional liberties on the battlefield. We have watched her blossom into statehood status. Hawaii has come of age, she is fully able to bear her part of the burdens of statehood and I say it is time we extend to her the benefits of statehood.

It was my privilege to vote for Alaska in the last Congress. I deemed it a high honor to vote for the 49th State and I likewise deem it an honor and a privilege on this historic occasion to cast my vote welcoming Hawaii as the 50th State.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from New York [Mr. PIRNIE].

Mr. PIRNIE. Mr. Chairman, Hawaii has the population, economy, and proper respect for constitutional government to support statehood. As a Territory, its people have demonstrated a firm adherence to our common American ideals and practices. On the battlefields of Europe, the Pacific, and Korea, the loyalty of the people of Hawaii, as Americans, has been indelibly written into the pages of world history. I am proud to support the bill to admit Hawaii into the Union as our 50th State.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from New Jersey [Mr. WIDNALL].

Mr. WIDNALL. Mr. Chairman, I heartily support this bill and hope it will have a speedy passage. It not only makes possible the addition of a new State to the Union that richly merits such recognition, but awarding statehood should prove most advantageous to the future of the United States. Hawaii has for 40 years awaited statehood status since the first bill was introduced in the House. Its population of almost one-half a million has for years shown its ability to support a sound economy and it has had outstanding development through progressive leadership. During World War II many of our citizens believed that, because of the very varied national background of the people of Hawaii that the islands would prove an Achilles heel in our defense. To the contrary and to the everlasting credit of its residents their full loyalty was proven continually and aided immeasurably in our ultimate victory.

I believe that admission of Hawaii will prove of great significance in our history. It carries even greater import than the admission of Alaska last year. Finally, after many years of debate, sober thought, and judgment, the representatives of the 48 States and now Alaska, have put aside their prejudices and narrow views of the past. This year the debates on both the Senate and House floors were on a high level and did not display the appeals to passion and bias exhibited on some past occasions.

Not only does statehood fulfill the promises made in the Republican and Democrat platforms, but it demonstrates to the world that the people of our country respect the dignity of man and sincerely mean our belief in freedom and liberty and opportunity for all our citizens. Hawaiian statehood carries with it a spiking of Communist propaganda claims and I hope that it also indicates that the temper of both Houses is such that the long disfranchised residents of the District of Columbia will be granted self-government. It is a tragedy that the residents of Washington have been voteless for so many years.

We have spent billions on defense for missiles and H-bombs and billions to bolster the economy and yet unwillingness to grant the vote to District of Columbia citizens again provides Communist propaganda.

The vote that will be taken today will mark the beginning of a new era for the United States. As the Representative from the Seventh District of New Jersey, I consider myself most fortunate in being able to vote for Hawaii as our 50th State.

Mr. O'BRIEN of New York. Mr. Chairman, I yield 3 minutes to the gentleman from Arizona [Mr. UDALL].

Mr. UDALL. Mr. Chairman, we are nearing the close of the debate, and I think we all know that this legislation will pass by an overwhelming vote. I think the reason is that we are going to legislate our hopes here and not our fears. Some would have us vote "no" because we fear Harry Bridges, because we fear a little band of Communists, because we fear that these people in this great island—with their wonderful blend of racial strains—cannot govern them-

selves as other people do. I say that that is no way to legislate. We are going to pass this bill today because we will legislate our hopes. There appears—and I know all of you have seen it so many times that you probably have committed it to memory—in this great Chamber a statement by Daniel Webster high on the wall above the rostrum occupied by the Speaker. It is the only tablet or writing on the walls of this great room. I think that the challenge of Webster's great utterance was placed there as a challenge to us and to all others who will serve here. Let me read it:

Let us develop the resources of our land, call forth its powers, build up its institutions.

This is what we are doing today. We are strengthening our country. We are building up its institutions, I say to you. Further, Daniel Webster said in this statement that if we do these things, quoting again:

We also in our day and generation may perform something worthy to be remembered.

I say that if the 86th Congress does nothing else, when the history books are written, it will be recorded that we were the Congress that enlarged the concept of our Nation and admitted the Territory of Hawaii. So, let us vote yes today because we believe in democracy; vote yes because we believe in strengthening the institutions of our country. This is the reason this legislation will pass, and let us brush aside all the doubts, all the insignificant arguments, and vote for democracy and a strengthened United States.

Mr. BOGGS. Mr. Chairman, will the gentleman yield?

Mr. UDALL. I yield to the gentleman from Louisiana.

Mr. BOGGS. Mr. Chairman, I do not know whether the gentleman has ever made the acquaintance, during the many years of discussion on statehood for Alaska and Hawaii, of a citizen of my State, George Lehleitner. Mr. Lehleitner is well known in Alaska, as in Hawaii. I would not want this debate to end without paying tribute to him, because, using his own resources and with complete devotion to the causes of the peoples of these two great areas; I think more than any single individual he has contributed immensely to the historic occasions of statehood for Alaska and Hawaii. I might say also that I personally am proud that a man from my State of Louisiana has made this contribution, because the Louisiana Territory, purchased in 1803, was the first significant development of the United States of America after the Thirteen Original States.

Mr. UDALL. This is a most appropriate comment, and we on the committee know of his magnificent contribution.

Mr. WESTLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from New Jersey [Mr. CAHILL].

Mr. CAHILL. Mr. Chairman, on this historic occasion, I rise to support the legislation which will make Hawaii our 50th State.

Our history is convincing proof that our country has grown not only in size but in strength, vision, and unity with the admission of each succeeding State. As California, Louisiana, Texas, Alaska, and the remaining States admitted to the Union, opened new vistas to our people, increased our strength and unity and demonstrated the practical application of the words of the Constitution and the Declaration of Independence to the world, so will Hawaii.

My only reservation, occasioned by certain Communist influences, now apparently prevalent, has been resolved by the belief that a grateful people in a surge of patriotism kindled by their admission to the Union will exert the necessary effort to remove this one blemish from an otherwise untarnished record of patriotism, industry, and accomplishment.

I urge my colleagues to vote for the admission of Hawaii as our 50th State and, in the belief that this bill will pass by an overwhelming majority, welcome the people of Hawaii to the Union.

Mr. O'BRIEN of New York. Mr. Chairman, I yield 1 minute to the gentleman from Mississippi [Mr. COLMER].

Mr. COLMER. Mr. Chairman, in connection with the remarks of my distinguished colleague and friend, the gentleman from Louisiana [Mr. BOGGS], I wanted to say that I subscribe to the tribute that he paid to Mr. George Lehleitner, who maintains a home in my congressional district.

I have consistently, as the Members of this House know, opposed this legislation, and I am still opposed to it, and I am going to vote against it. But in this man to whom tribute was paid here we find one who unselfishly has been a great crusader for this cause. He has done everything he could to try to change my position, but whatever he has done has been unselfish, and I think he is entitled to the tribute that my friend has paid him. I respect his views even as I have reason to believe he respects mine. He is a gentleman in every respect and believes in fighting for what he subscribes to.

Mr. O'BRIEN of New York. Mr. Chairman, I yield such time as he may require to the gentleman from Texas [Mr. WRIGHT].

Mr. WRIGHT. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. WRIGHT. Mr. Chairman, statehood for Hawaii is the redemption of a promise which we made more than 60 years ago.

By granting it, the United States is proving today that we keep our word.

We shall be proving also that we still are motivated by the same principles which gave us birth as a nation when we said that "taxation without representation is tyranny."

For 60 years the proud people of Hawaii have uncomplainingly paid all Federal taxes paid by other Americans, and for 60 years their sons have willingly volunteered and have been conscripted to offer their lives in defense of our country. Yet they have had no voice in the governing of the country.

Today, happily, that fundamental wrong is being righted.

The citizens of Hawaii have fully demonstrated a readiness for full partnership in our American family of States.

The record clearly shows, to their great credit, that they have given their average youngster more years of schooling, have a far lower crime ratio in every category, pay a higher per capita tax to our Federal Treasury, and have sacrificed proportionately a greater number of their sons and husbands to defend freedom in the last three American wars than has the population of the United States as a whole.

For Hawaiians, this has been much more than merely a fight for political equality. It has been an intensely spiritual struggle by a people to demonstrate to their fellow Americans on the mainland, and especially to their own children, and the possession of an oriental or a Polynesian name and face is not of itself a badge of inferiority.

More important than any of this perhaps, we and they are today demonstrating to the world that the system of government we have perfected here in the United States works, not only for Caucasians, but for all of the world's peoples.

What an impact this lesson could have on all of Asia.

So far as Hawaiians themselves are concerned, they have long since proven their own deep and abiding patriotism to the United States.

During World War II, Hawaii's native son battalions endured the heaviest battlefield casualties of any American field unit and justly won the distinction of being the most highly decorated organization in the entire 170 year history of the U.S. armed services.

Many of my very good friends in Texas who served in the 36th Division during World War II owe their lives to the selfless, heroic, and sacrificial patriotic devotion of the men of the 442d Infantry Regimental Combat Team, Hawaiians all, who broke through the enemy lines in Italy during the bitter days of World War II when other units had failed and, at great cost to themselves, provided a rescue for that substantial part of the 36th Division which had found itself trapped and surrounded. No Texan, and no American, should ever forget that act of marvelous heroism.

In the Korean war, our only armed clash as a nation with communism, Hawaiian units were employed heavily in those heartbreaking early days when they, and a pitifully small number of other Americans, gallantly kept us from being pushed off the Korean Peninsula. As a consequence, Hawaii's Korean war deaths were more than four times higher than the U.S. average.

More than 22,000 Hawaiians wore the American uniform in that conflict with communism. Many were killed, and others taken prisoner. Yet the record reveals not a single case of defection or

desertion to the enemy. The Communists, with their most fiendish techniques, could never succeed in brainwashing a single one of them.

On every occasion when we have brought in another State as a member of this great American union, the action has precipitated bitter controversy. Always there have been dire predictions. But always those predictions have been proven to have been wrong. Most of the self-same arguments being employed today against Hawaii were employed against the admission of Louisiana, Florida, and Texas.

On the face of the great seal of Hawaii, there is this inscription: "Ua mau ke ea o ka aina i ka pono." Translated, it reads: "The life of a land and its people is preserved by righteousness."

It seems to me that all they ask of us today is righteousness—to be given a voice along with the rest of us in the governing of our common country which levies taxes against them and which takes the lives of their sons to defend our Nation.

To give them anything less would be unworthy of our own history and unworthy of our aspirations as a nation. For, as Abraham Lincoln stated:

> Those who would deny freedom to others, do not deserve it themselves. And, under a just God, they will not long retain it.

Mr. O'BRIEN of New York. Mr. Chairman, I yield one minute to the gentleman from California [Mr. SAUND].

Mr. SAUND. Mr. Chairman, when the vote was taken in the Committee on Interior and Insular Affairs on this bill, I was absent. I had accepted an invitation to speak before a group of State Department employees. I was unavoidably delayed. As I have stated to the chairman of the committee, if I had been present I would have voted for granting statehood to Hawaii, with an unqualified and emphatic "Yes."

Mr. O'BRIEN of New York. Mr. Chairman, I yield 4½ minutes to the gentleman from Oklahoma [Mr. EDMONDSON].

Mr. EDMONDSON. Mr. Chairman, I consider it the greatest honor I have known in my service in the House to have the privilege of being one of the closing speakers for the committee on this matter of Hawaiian statehood. I had intended to discuss from this well in the closing minutes the issue of communism, but I believe that has been so adequately handled by the distinguished chairman of the Committee on Un-American Activities and by the evidence put before us here today that no further comment is necessary.

To me the most convincing answer to any charge that suggests disloyalty or subversion among the people of Hawaii is their battlefield record in Korea. You cannot look at that record and see what it tells of heroism and loyalty of the Hawaiian soldiers without concluding that here is a people deserving of our trust and confidence. Remember, there has been only one battlefield of the world where American arms thus far have met the challenge of Communist arms, and that was the battlefield of Korea. On that battlefield, with 4½ times as many casualties per unit of population as the average for other States in this Nation, the people of Hawaii have demonstrated and proved their loyalty and their right to full participation in this Republic.

Three months ago, Mr. Chairman, I walked in the shadows of the walls of the Kremlin with a distinguished young American who is giving his life to the fight against communism. I asked him in the shadow of those walls in Moscow, "What could we in Congress do to contribute most effectively to this worldwide fight against the Communist conspiracy?" I would like to tell you here today that his answer was direct and unequivocal on the question of Hawaii. It was not. He did not say, "Vote statehood for Hawaii." But he did say something that leads to that conclusion. He said, "Give us from the Congress positive and affirmative acts to show the world what democracy means and what it stands for."

That is what we do here today, Mr. Chairman. We give to the world positive and affirmative acts by our votes and by admission of Hawaii to demonstrate to the world that the American dream is not limited to one continent, that the American dream is not limited to people of one particular racial strain or one particular national origin. We say to the world we believe in this American dream and we believe in it for all people who qualify for participation in this Union of States.

We say also to the world that America honors her commitments, that when we enter into a commitment with an incorporated Territory we keep that commitment and we extend to that Territory when it is ready for statehood the mantle of statehood and all that goes with it.

We also say to the world that we are not afraid of communism or the Communist philosophy among the people who know what the American dream stands for. Regardless of our people's racial origin, regardless of their place of birth, we have no fear that they will abandon American principles and American ideals for this Communist philosophy, in the Hawaiian Islands or any place else where statehood is entrusted to a people.

So I say to you today, we have the opportunity here with a positive and affirmative act to spread the glory of the American dream 2,000 miles to the west, and to say to a great people, we admit you to full partnership in this Union. And we are not afraid of the 2,000 miles, either. We know that you can go from Washington to Honolulu in less than 1 day. When this Nation was conceived it took 4 days to travel from Washington to Philadelphia. Today we travel the thousands of miles from here to Hawaii and we do it in less than a day.

We say to the world, "We are citizens of a new age and a new world. We are writing into law, with the new State of Hawaii, a new foundation for our Government and its future that recognizes this new age."

STATEMENT OF CONGRESSMAN B. F. SISK, 12TH DISTRICT, CALIFORNIA

Mr. SISK. Mr. Chairman, as a member of the Committee on Interior and Insular Affairs and of the subcommittee having jurisdiction over statehood, I am happy today to rise in support of full citizenship for the people who will become our 50th State. As a member of the Territories Subcommittee, I have supported statehood for Hawaii for the past 4 years. That support has been based upon my firm conviction that the residents of the islands were entitled to the full rights and privileges of citizenship. That feeling, however, had been rather an impersonal one based upon my philosophy and hearsay, rather than upon actual knowledge. Last fall, as a member of the special committee heretofore mentioned in this debate, it was my privilege to visit the islands and today my support is based upon a deep personal conviction of the absolute necessity to grant statehood to this area. It was my opportunity to meet and talk to hundreds of people in all walks of life and this led me to the deep conviction that here was a group of people of mature capabilities well able to carry out their duties and responsibilities as a sister State. Because of my contacts with labor unions, business organizations, educational people, religious and social leaders, I am deeply convinced of their awareness of and their ability to cope with the Communist issue in their area.

Allegations of Communist domination in Hawaii are again being injected into the statehood issue as a reason for delaying admission of this Territory into the Union.

I should like to make two points clear with respect to the revival of this line of attack.

The people of Hawaii and their many friends and mainland supporters know this tactic and they are most anxious that it be recognized. Its sole aim is the defeat of pending legislation for Hawaiian statehood.

The people of Hawaii, by vote of their Territorial legislature in 1949, requested the House Un-American Activities Committee to come to Hawaii and make an on-the-spot investigation.

The confidence of the people of Hawaii that they would be vindicated was justified by the reports of the committees which followed.

A subcommittee of the House Committee on Un-American Activities subsequently, during April 1950, conducted an investigation of Communist activities in the islands. Upon its conclusion, neither the Democratic chairman, Representative FRANCIS E. WALTER, nor the ranking Republican member found any cause whatever for withholding statehood from the Territory. As recently as the opening weeks of this 86th session of the Congress Representative WALTER voluntarily appeared before the Committee on Interior and Insular Affairs to reaffirm his belief that Hawaii should be granted statehood.

We have never assumed that there were no Communists in Hawaii. To do so would be as dangerous as it would be naive. Hawaii is too important to have been overlooked by the enemies of our way of life. However, the problem of communism in Hawaii is a national problem, just as it is in New York, and in

California, and everywhere else in the Nation.

We must not fall into the error of attempting to isolate a whole community of American citizens, and to keep them in isolation, just because there are some Communists among them.

A large number of labor unions are represented by locals in Hawaii. In only one of them, the largest, has there been a question of Communist influence. This is the International Longshoremen's and Warehousemen's Union, headed in San Francisco by Harry Bridges. It has been expelled from the CIO as part of the national organization's campaign against communism. More recently, it was accused of being Communist-dominated by one of its former leaders, Jack Kawano, in testimony before the subcommittee of the House Un-American Activities Committee.

As part of a nationwide roundup of alleged Communist leaders, the Federal Bureau of Investigation in September 1951 arrested seven persons in Hawaii on charges of violating the Smith Act. All seven were indicted by a Federal grand jury composed of Hawaii citizens.

On June 19, 1953, a jury of Hawaii citizens returned a unanimous verdict of guilty against all seven defendants. The fact that the verdict was nullified by the U.S. Supreme Court, does not destroy the importance of this example of Hawaii's ability to handle whatever Communist problem there may be.

It was during the 1949 waterfront strike that the Territory demonstrated most conclusively that it was able to control the effects of a vital labor-management dispute.

During the 1949 dock strike the Territorial legislature was convened in special session. A law was enacted authorizing the Territory to take over the docks and carry on stevedoring operations until the strike was settled. This law remains in effect and Hawaii's legislators have rebuffed efforts by the ILWU to have it repealed.

As a consequence of this strike the Hawaii Residents' Association was formed to carry on an educational program to combat communism. This association has continued its program for almost 10 years, supported by voluntary contributions from Hawaii's people.

In a further demonstration of Hawaii's determination and ability to deal with communism, the legislature established a Territorial commission on subversive activities. This commission serves as an investigating body and issues periodic reports on whatever evidence of lingering communism may be uncovered.

Thus have the people of Hawaii demonstrated their determination to handle their own Communist problem. In this way they have offered further evidence of their loyalty, political maturity and ability to fulfill the added responsibilities of statehood.

HOME RULE FOR THE DISTRICT OF COLUMBIA

Mr. FOLEY. Mr. Chairman, statehood for Hawaii will be recognition, at last, of an old American principle. Those who govern themselves are governed best.

The great progress Hawaii has made, the prosperity of the islands and the achievements of their community have qualified them for equal status with the States of the Union.

If there are any who doubt the benefits of self-government, I would like to refer them, for contrast, to the Commissioners' recent report to Congress on the state of the Nation's Capitol, the District of Columbia. Its pages make somber reading. Washington, after 85 years of Federal control of local government, is in a serious plight. The cold statistics of the Commissioners' report give a sorry picture of what can happen to a great city without self-government.

And the Commissioners themselves, and some of the Members of Congress most experienced in District affairs, are the first to declare that Washington needs its own local self-government.

My point, Mr. Chairman, is that it is time to examine the state of the District and ask ourselves whether, in good conscience, we can continue to deny the people of Washington the power and opportunity to deal with problems they are now helpless to attack. Look at the facts.

They show that much of the District is being blighted by slums. Higher income families are moving out and are being replaced by low income families unable to bear the tax burden required to run a modern city. Property values are declining and welfare costs are rising.

Decay has set in in the downtown business areas. Retail sales in the District decline while business is booming in nearby Maryland and Virginia.

District government finances are in trouble and the forecast in years ahead is even darker.

This picture, I submit, is in sharp contrast to the glowing economic health of Hawaii. It cannot be blamed on the voteless citizens of the District. We, not they, have presided over the decay of Washington.

It is true that many cities in this country are struggling with similar problems. But the people of other cities can fight their problems with their powers of self-government, local initiative and local enterprise. The people of Washington are denied even the chance to try to solve their problems.

If 85 years of nonrepresentative government have brought the Nation's Capital to this crisis, I say it is time for a change. Certainly, the people of the District could do no worse. I think they could do a lot better because I have faith in local self-government.

Hawaii has shown what local self-government can accomplish. When the time comes later this session—I hope not much later—let us bestow at least a measure of self-rule and self-respect on the nearly million people of the District by granting home rule.

Mr. DADDARIO. Mr. Chairman, I want to add my voice to those urging immediate passage of this bill to enable Hawaii to become a State. This measure is long overdue. The repeated promises, the repeated efforts that have been made, some by this House, to grant statehood can be crowned today by this effort.

I know of no one in this body with whom I have talked who thinks of this addition to our flag as a symbol of empire. We have no imperial intentions as we welcome Hawaii to the Union. We have no colonial designs. Instead Hawaii comes in as have 49 before her—agreeing to federate because in union there is strength. Her sovereignty as a State remains as does the sovereignty of all States. Her cooperation as a member of the Union lends strength to her and to this Federal Government.

The facts regarding Hawaii are available to all who have read the excellent report of the committee chaired by the distinguished gentleman from Colorado. I noted, in particular, the fact that Hawaii has a greater population today than any other State—but the original 13 and Oklahoma—had when admitted to the Union. It is larger in area than my own State of Connecticut. While it is true that its territory is not contiguous with the country, neither was California. Neither is Alaska.

The mail I have had from my district is overwhelmingly in favor of admission. Connecticut has historic ties with the Hawaiian Islands. Its people were among the first missionaries to settle there. The ancestor of a former Senator from Connecticut played an important part in its history. More recently, many of Connecticut soldiers who served in the Pacific in World War II had occasion to become familiar with the islands.

I would like to pause briefly to pay tribute to the Hawaiian participation in that war. As one who served in Italy, I am familiar with the record and achievements of the 442d Regimental Combat Team, the famous Go-for-Broke outfit. Their courage, their tenacity, their drive has gone down in the history of the Fifth Army. In the Pacific theater, I am particularly aware of the work done at the Amphibious Landing Training Center on the island of Oahu, where techniques of Pacific assaults were taught to members of divisions staging for combat. I know, of course, of the great bastion at Pearl Harbor and the Army installation at Schofield Barracks that marked this outpost of American defense.

Since 1903, Hawaii has petitioned no less than 17 times for statehood. We have repeatedly promised her the full rights and privileges of statehood. Let us make that pledge good.

Mr. ZABLOCKI. Mr. Chairman, I would like to comment briefly on the legislation before us, to provide statehood for Hawaii.

I have listened carefully and intently to the debate on this bill, both yesterday and today. The testimony and evidence presented leaves little doubt but that the majority of the people of Hawaii desire statehood. They wish to be joined more closely with our Nation. They want to be an integral part of our Nation. They desire to be admitted to the Union as the 50th State.

I have no doubt that the people of Hawaii would prove loyal citizens of such a new State, and loyal citizens of the United States of America. Their

past history and past endeavors make that point clear. Further, their energies and talents, and the resources of their Territory, would prove a definite asset to our great Nation.

In spite of these facts which argue strongly for the enactment of the legislation before us, I feel that I should voice certain reservations which have not been dispelled in this debate. These reservations do not cast any reflections upon the people of Hawaii—on their loyalty, their sincerity, or their strong desire to become entirely included in our Nation.

My reservations are based on a simple geographical fact: The fact that the Territory of Hawaii is, and will always remain, separated from our continent by thousands of miles of the Pacific Ocean. The Territory is not contiguous to our country. It has a separate geographical identity. This geographic location of the Hawaiian Islands has certain definite implications as far as the defense and security of the proposed 50th State are concerned.

It is very true that we have already assumed certain responsibility for the security and defense of Hawaii—a responsibility which will continue even if Hawaii should not be granted statehood. The fact remains, however, that—in the admission of Hawaii to statehood—our responsibility in this field will increase, and the discharge of that responsibility may entail problems which we have not encountered to date.

This is the only point that I wanted to stress. I believe that we must face this fact squarely as we vote to admit Hawaii to the Union. To avoid this issue, or to minimize its implications, would be very shortsighted.

Fully conscious of the new responsibilities it will entail, I shall vote for statehood for Hawaii because I believe that the reasons for the enactment of the bill before us outweigh the reasons which argue for another course of action. I sincerely hope that Hawaii, and our entire Nation, will in the long run benefit from this decision.

Mr. SCHWENGEL. Mr. Chairman, there are over 800,000 people living almost in the shadow of our Capitol, the world's greatest symbol of liberty and freedom—who have no voice in shaping the destiny of even their own affairs through self-government. In many States, because of disproportionate representation in State legislatures, many citizens of those States are referred to as second class citizens. In the District of Columbia these 800,000 people are not even citizens. So far as the law and the present situation continues, we the people of this great Government, we who proudly refer to our Government as a government of the people, by the people, and for the people, treat these people of the District as children. We Representatives in Congress who are elected to represent our districts are forced to sit as members of a city council or as members of a school board to look after the affairs of people who can and will take care of their own affairs and do it much better than we can, and if we gave them the right of representation here as we should they would give as good an account of themselves in this body as the new Representatives that this new State will send to this body.

Last year we granted the right to vote and representation in this Congress to the people of Alaska who have more territory and less people than any other State in the Union. In fact the election before they voted for the approval of statehood indicated that there were less than 30,000 people who were sufficiently interested in government to vote. We gave these people the right to have two votes in the U.S. Senate and one vote in the U.S. House of Representatives. Three votes in the greatest legislative body in the world.

My question, Mr. Chairman, is this: Is it not more important to give the people in the District a voice in their own government at least than it is to give people in far-off Alaska and in faraway Hawaii the right to be represented here?

These people can truly state that they are worse than second class citizens. They have every right to complain and join the refrain of another day which said, "Taxation without representation is tyranny."

Both Hawaii and the District of Columbia, I sincerely believe, present us with a basic moral issue. It is this—do we have a right and can we justify denying fellow Americans the rights of citizenship—the right to achieve equality? Is it right to ask their sons and daughters to face the enemy and fight with bullets and not give them the right to fight with ballots? It is my feeling that this Congress will and should meet this moral issue so far as Hawaiian statehood is concerned and in doing so I think we accept an equal moral obligation to grant our fellow Americans who live in the District of Columbia the right to at least govern their own local affairs.

Let us now give immediate attention the rights of people of the District of Columbia—who have been voteless much too long—the people of our country will approve and the freedom-loving people of the world will applaud.

Mr. JARMAN. Mr. Chairman, I want to go on record for statehood for Hawaii. Throughout our history three basic requirements have been demanded by tradition and precedent before a State can be admitted into this Union of ours: First, that the inhabitants of the proposed new State be imbued with, and sympathetic toward, the principles of democracy as exemplified in the American form of government; second, that a majority of the electorate desire statehood; third, that the proposed new State have sufficient population and resources to support a State government and to provide its share of the cost of the Federal Government.

With regard to the first requirement, there can be no question that the people of the Hawaiian Islands are thoroughly American. Their wartime record of patriotism leaves no doubt of their loyalty to the mainland, and I am sure my colleagues will agree that this loyalty is most certainly an integral part of our concept of Americanism. Hawaiians, regardless of ancestry, look to the West for guidance and emulation. Whether it be business, education, sports, politics, or mores, the pattern is always unmistakably American. Hawaii is in every way a mirror of the mainland. It is the showcase of American democracy.

Now, Mr. Chairman, concerning the second requirement that a majority of the electorate desire statehood. The record of Hawaii is quite clear in this respect. In a 1940 plebiscite, her people voted 2 to 1 for statehood. A decade later they approved the proposed State constitution by more than a 3 to 1 majority. More recently, the ratio of approval has jumped from the 3 to 1 ratio in 1946 to an 8 to 1 ratio in August of 1958. The people of the islands desire to participate in the full responsibilities of American citizenship.

Mr. Chairman, the third requirement for statehood—the ability to pay for statehood—poses no problem for Hawaii. The gross Territorial product of Hawaii for 1957 was about 1¼ billion, a figure twice as large as that of any other State at the time of its admission. In 1956 the per capita income exceeded that of 26 States, while the per capita tax burden was higher than that of 33 States.

The Territory is comparatively thickly settled with a population of about 582,000. In fact, Hawaii today has a greater population than that enjoyed at the time of admittance to the Union by any of the States, with the single exception of the State whose Fifth District I represent, Oklahoma.

Mr. Chairman, America was founded, and has grown into the great Nation she now is, on the principles of dealing fairly with all her people and granting equal rights to all those able to fulfill their responsibilities and share in carrying the common burdens. Hawaii has long since served her apprenticeship in the American way of life and the American way of government. She has accepted voluntarily and wholeheartedly our ideas, concepts and methods. Statehood for Hawaii and the obligations State sovereignty will impose on her people will bring the true spirit of liberty to the islands. Hawaii, the window through which all Asia views American democracy, will assume this last challenge with dignity and fortitude.

Mr. LIBONATI. Mr. Chairman, it is a foregone conclusion that H.R. 4221, presently substituted by S. 50, passed by the Senate on March 11, will pass the House by a comfortable margin estimated by good authority as 340 to 66.

The success of the measure was largely a result of the sagacious handling of the legislation by Delegate JOHN BURNS in the 85th Congress. His courage was matched only by his good judgment in acceding to the delay of the Hawaii bill in order to insure the adoption of the Alaska bill.

Under the forceful leadership of the gentleman from New York [Mr. LEO O'BRIEN], the opposition crumbled into total insignificance.

The prophecy that I made on July 31, 1958, relative to the recognition of Hawaii is now, as far as the House is concerned, a reality.

I am proud to insert in the RECORD the prediction that I made at that time together with the merited praise ac-

corded to Delegate BURNS, of Hawaii. I congratulate him on his foresight and leadership:

Mr. LIBONATI. Mr. Speaker, it is my privilege to attest to the sincere efforts of Delegate JOHN BURNS, representing Hawaii, in his laborious and persistent campaign to successfully carry the banner of his constituency into the circle of States.

In spite of the vicious opposition waged against Hawaii's admission, he has always maintained the patient and polite attitude of a gentleman. He earned the confidence and trust of all his colleagues and has demonstrated forensic abilities on the floor and in his committee work that commands the respect and admiration of the Congress and officials of Government.

Personally I am proud to number him among my intimate friends. He has so impressed me—a new Member—with his appeals for the admittance of Hawaii that I sponsored a bill for its admittance.

It is unfortunate that because of a combined effort on the part of several geographical divisions within the congressional membership that the presentment of both Alaska and Hawaii at the same session would, as in the past, sealed their doom.

So that it was the consensus of the opinion of the supporters of both States to delay the Hawaii bill and press for the Alaska bill—after many filibusters and other delaying tactics including some 15 quorum calls and lengthy debate about 3 days—it was purely a setup political stampede.

The treatment of the Alaska bill in the Senate followed the same pattern. And the threat was made that the Hawaii bill's filibustering would make the Alaska job look like a Sunday-school meeting.

Delegate BURNS succumbed to our advice. He could not jeopardize the Hawaii bill—the solid membership of both bodies, northern Democratic stalwarts and pro-Republican State men from the high timber and urban sections of the North, so decided. And they knew what they were talking about.

It has come to our attention that certain political promising wild guessers are blaming Delegate BURNS for the delaying to next session the statehood campaign for Hawaii.

No one was more anxious than Delegate BURNS to go ahead. We decided it for him—and we do the voting.

It will take a full campaign for 3 or 4 months to put over the Hawaii bill, so that means lack of time made the decision necessary. We stand behind Hawaii with an honest and sincere desire to establish her statehood. And we stand behind Delegate BURNS, the finest representative and most popular public servant in the Congress. His return insures the realization of the dreams of every Hawaiian.

Mr. ROBISON. Mr. Chairman, I was privileged last year to cast my vote in favor of statehood for Alaska. I do not wish to repeat here the many valid reasons given by my colleagues in support of statehood now for Hawaii. To my mind those arguments are as compelling today in favor of Hawaii as they were in the last Congress in favor of Alaska.

It is also my belief that an overwhelming majority of the people of my congressional district desire that this Congress extend the long overdue advantages of statehood to the loyal people of Hawaii and that, in view of that fact, I should not consider this question from the standpoint of political or partisan objections, as I fear some of us are tempted to do.

I am particularly impressed with one extremely important result of the action we may be taking here today. Statehood for Hawaii, Mr. Chairman, in my mind will dramatically demonstrate that the people of the United States both cherish and practice the democratic ideal that our citizens do stand equal before the law regardless of color or creed.

The example of a State of Hawaii will shine in the Pacific for half the world's people to see and compare with the empty promise of equality held out by communism. Let us act now to set such an example.

Mr. METCALF. Mr. Chairman, on this historic occasion in voting statehood for Hawaii our Government is keeping a promise made long ago. Hawaii has waited long and patiently. In some ways this long wait has not been in vain. The State constitution that has been adopted is a model one that might not have been so admirable had Hawaii gained admission earlier. The economy of Hawaii is better able to support a State government, and the voters of our new sister State have a maturity that will enable them to bear their new burdens with poise and their new obligations with dignity.

In the more than 100 years that have elapsed since Hawaiian statehood was first considered; and in the 22 hearings that have been held on that subject, no one man nor any single group of men can be given complete credit for the successful vote that is going to come about at the conclusion of this debate. However, special recognition should be given to a few who have participated in the culmination of Hawaii's long drive for statehood. I join in honoring the gentleman from New York [Mr. O'BRIEN], the chairman of the subcommittee, and the gentleman from Colorado [Mr. ASPINALL], the chairman of the Committee on Interior and Insular Affairs. The gentleman from Pennsylvania [Mr. SAYLOR], the ranking majority member of the Committee on Interior and Insular Affairs, and himself a former chairman of the territorial subcommittee, are the trio whose teamwork has brought this bill to the floor today. On the Senate side, my own senior Senator, Senator MURRAY, of Montana, presided over many of the Interior Committee hearings and committee sessions to bring out the bill in that body.

I join my colleagues in paying tribute to the untiring efforts of Mr. George H. Lehleitner, of New Orleans, who has made statehood for Alaska and Hawaii a personal crusade.

But if any one man is to be singled out for his statesmanship, his tact, his patience and perseverance in the cause whose triumph we are today witnessing, it is Delegate JOHN A. BURNS. Insofar as I know, only the gentleman from Oregon, Mr. ULLMAN, and I, of all the Members of Congress, were born in Montana. However, the delegate from Hawaii also has that great distinction. He was born at Fort Assiniboine in northern Montana. If he desires to represent his new State in the other body he will be the only Member of that body who was born in Montana. If he returns to our side, AL and I will welcome him as the third Montana-born Member of the House of Representatives.

Mr. DOYLE. Mr. Chairman, first, with extreme pleasure I compliment all the members of our Committee on Interior and Insular Affairs, both those who oppose this bill, H.R. 4221, and those who favor it—on both sides of the committee aisle. It is a splendid presentation of the case—both pro and con—that they present us for our important and historymaking decision to be recorded yet this afternoon on a rollcall vote.

As you may readily surmise, I will vote for statehood for Hawaii. I have done so each of the other occasions it has been before us during my dozen years in this great legislative body. I voted during the 85th Congress for statehood for Alaska. I shall vote for the House bill before us now, or if the Senate bill for Hawaii statehood, which passed the U.S. Senate on yesterday afternoon, is substituted for our House bill, I shall vote for that.

Having listened throughout yesterday's several hours of debate, and then again from this morning at 11 a.m. adding this information to that which I obtained at Hawaii when I was there a few years ago officially for one of my House committees, I cannot but conclude that the fair and sound, reasonable action should be to again act affirmatively for its admission into the sisterhood of United States.

I will not now take the time of this committee of the House in general debate to reenumerate the substantial arguments in favor of the admission of Hawaii under this bill, and which arguments I at this time adopt as and for my own; nor, could I do less than compliment those who have debated against the bill for their manifestly well-prepared presentation of their antiphilosophy toward the bill. As this debate comes to a close I observe it as one of the most dignified and best presentations of factual information and summary I have listened to in my more than a dozen years upon this floor.

Furthermore, I know full well that our minds are pretty firmly already made up as to how each of us shall vote in an hour or so from now.

As to the Communist problem existing in Hawaii, which is stated as one of the very major objections to admitting Hawaii into statehood, I call your specific attention to the clear-cut, analytical, factual statement made on this very floor within the hour by the distinguished chairman of the House Committee on Un-American Activities, Mr. WALTER, who although he sat in committee hearings in Hawaii on the subject of communism and became pretty intimately familiar with the problem there existing, took this floor and emphatically urged the passage of this bill. Having been a member of the House Un-American Activities Committee myself for several years now, some of which years he has been the committee chairman, I have never known Mr. WALTER to advocate any congressional move which would mean either the strengthening of, or success

for, the Communist philosophy or program. Furthermore, we must not overlook the fact that any of these citizens of Hawaii can come to the United States of America as American citizens. They are American citizens where they are. They are not aliens in the sense which you and I ordinarily think of a person as being an alien.

Beginning at the time I was a teenager in my high school years I was more proud than otherwise of my Nation because it was designated as "the melting pot of nations." I doubt if I can be successfully contradicted when I now make the observation that probably 90 percent of the Members of this House can trace their ancestry back to parents, grandparents or great grandparents born in foreign countries. Hence the fact of there being many thousands of American citizens of foreign ancestry or lineage in what will be the new State of Hawaii does not destroy my sense of decision that it is in the best interests of our beloved Nation's security, defense and expansion that Hawaii be admitted to full statehood. I shall vote accordingly.

Mr. GALLAGHER. Mr. Chairman, I would like to add some remarks about the memorable occasion of today in which I had the pleasure of participating.

It is an honor to vote for statehood for Hawaii and to participate in this historical moment of the passage of this bill.

This is a living demonstration of democracy in action. It is proof of the vitality of the United States. It is a complete refutation of the Communist lies that we wish to perpetuate colonialism.

It is the fulfillment of the hope that we have long held out to the loyal people of Hawaii. It is the fruition of their dream. It is a complete demonstration of the honor and integrity of the United States.

Pearl Harbor will long be remembered as the point where the infamy of the totalitarians challenged the honor and courage of the United States. History records how we responded to that challenge.

Today, we say to the people of Pearl Harbor and to all Hawaiians that we not only remember Pearl Harbor but that we remember the people of Hawaii and their loyalty to the United States.

This vote today demonstrates that the United States offers more than the hope of freedom to the world. It is proof that the United States of America is synonymous with the word freedom.

Mr. VANIK. Mr. Chairman, I am as happy to cast a vote in support of statehood for Hawaii as I was to cast a similar vote for Alaska last year.

On every count, the people of the Hawaiian Islands have proven their case for statehood.

The admission of these new States is a symbol to the rest of the world that America is still a young Nation and a growing Nation, a United States in which membership comes by the voluntary action and with the consent of both the new States and the old.

As a State, Hawaii will undoubtedly have to meet many problems of adjustment. The concentration of land ownership and the tight reigns on its control will quite likely become the concern of every American, particularly as Hawaii is drawn more closely to the Union. It will become increasingly difficult for one family to continue to own an island to itself and completely dictate the use of its land or the custom and habits of its people.

During my years in military service, I recall the restrictions which governed any military operations in and about the Island of Niihau, which was owned by one family and continues to be the property of one family today. This type of island proprietorship and matriarchal determination of what is good or bad for the occupants of an island must pass. Undoubtedly the longstanding grip of a few families on the fine and beautiful lands of Hawaii will in a like manner pass after more and more people migrate to the islands and among the islands in search of opportunity for work or pleasant living.

I know that Hawaii will take its proper place among the States and that adjustment to statehood will be quickly made.

The people of Hawaii owe a deep debt of gratitude to Delegate JOHN A. BURNS who worked with great and untiring devotion for the cause of Hawaiian statehood. It is my hope that the people of Hawaii will recognize these efforts as a newly admitted State.

Mr. DANIELS. Mr. Chairman, I am indeed very happy to be a Member of the 86th Congress which will vote upon Senate bill 50 for admission of the State of Hawaii into the Union. It is a great pleasure for me to join with my colleagues in the House in support of this bill. The economy of Hawaii is excellent and the loyalty and patriotism of its people during World War II and the Korean War was excellent, and, in my opinion, is still excellent today.

The people of Hawaii have petitioned the Congress of the United States no less than 17 times since 1903 to become a State of the Union. Hawaii has served its apprenticeship as a Territory longer than any other Territory now a State. These people are not foreigners, they are not Communists; they are people who seek to be brought into the full brotherhood of the Union of our 49 States. These people are imbued with the spirit and principles of our democracy as exemplified in our form of government. The people of this Territory deserve statehood. They are possessed with sufficient resources to support State government, as well as its share of the cost of the Federal Government.

Hawaii has demonstrated in many ways and many times its loyalty to our principles of government. It is my privilege to join with my colleagues of this House to vote for the admission of the State of Hawaii as the 50th State of the Union.

Mr. GIAIMO. Mr. Chairman, today is a historic day in the history of our beloved country.

Today by our vote on Hawaii we have shown once again to the world, as we have done throughout the history of our Nation, that ours is indeed a living, dynamic, and freedom-loving country dedicated to the principles enunciated in our Bill of Rights.

Today we have done our part to assure statehood for Hawaii. We have said to the world that the United States truly measures up to the oft-stated expression that it is man's greatest experiment in self-government. Our laws have long provided for admission to statehood of incorporated Territories when they should have attained the standards required for admission.

Today we are seeing these laws live and with such a magnificent vitality.

We are welcoming to the sisterhood of States an incorporated American Territory, 2,200 miles out in the Pacific Ocean, southwest of California, whose population is 85 percent native-born American and of diverse racial and national backgrounds, which are 23 percent Caucasian, 37 percent Japanese, 17 percent Hawaiian, and the remainder Filipino, Chinese, Korean, Puerto Rican, and others.

In effect we have proclaimed to all the world that America is for all Americans regardless of color, creed, or racial origin. We are welcoming a group of loyal Americans to the sisterhood of States realizing full well that the racial and national backgrounds of a majority differ from those of most continental Americans.

Surely this proves the spirit and words of the Constitution of these United States that America is not for some people, dependent on their race or color, or nationalistic background or religious belief, but rather that it is for all Americans. This has always been the heritage of America. This has always been the mission of America.

Today it has been proven once again to those who may need the proof.

I shall always remember with the greatest of pride for my country what has been accomplished in these last 2 days for Hawaiian statehood.

Truly, this has been a day in which history has been made and with humility and gratitude I am happy to have participated in it.

Mr. FASCELL. Mr. Chairman, on this historic occasion I am happy and privileged, on behalf of the people whom I represent in the Fourth Congressional District of Florida, to add my support to the legislation which is pending before this Committee granting statehood to Hawaii.

The record is abundantly clear that Hawaii, its people and its government have met every fair criteria and condition for joining us in this great union of sovereign States.

Over the many years that the issue of Hawaiian statehood has been considered, the people of Hawaii have waited patiently, and yet as Americans, have acted vigorously so that as this outstanding event in history takes place, the people of Hawaii can note with pride the progress which they have made.

As a star in the Pacific, the new State of Hawaii expresses a fulfillment of a hope—not only to Hawaiians, but to all people in the world who love and cherish freedom and respect of the individual found under our form of government.

Let us hope that the favorable and affirmative action which we take here today in the creation of the State of Hawaii will long be a shining light to the mass of humanity in this world still struggling mightily to achieve some small measure of a life free from fear, economic want, and political tyranny.

Mr. O'BRIEN of New York. Mr. Chairman, I yield such time as he may desire to the distinguished Delegate from Hawaii [Mr. BURNS].

Mr. BURNS of Hawaii. Mr. Chairman, I should like to thank each and every member of the Interior Committee, as well as each and every member of the Rules Committee, for his careful and thorough consideration of this present bill, for the time each has given, for the great interest and concern each has displayed. Personally, and on behalf of the people of Hawaii, I want also to express our deep and immense gratitude to those many Congressmen and Senators of both parties and those millions of American people who have worked for and supported Hawaii's efforts to be admitted as a sovereign State in the American Union. We convey, too, our respect to those Congressmen and Senators of both parties, and those citizens of the United States, who, while they have not supported Hawaiian statehood, have taken their stand out of conviction and out of concern for the same welfare of the same United States where we, in Hawaii, believe in and uphold with like conviction and like concern, and which we are convinced Hawaiian statehood will immeasurably advance.

I am proud and humbly thankful to stand here today on the floor of the U.S. House of Representatives as the representative of the people of Hawaii—of whom I am one—and to whom, as an American and as a human being, I owe so much. They are a great people and this is a great Nation. My only sorrow, and I assure you it is a deep one, is that so many of Hawaii's people and so many citizens of the 49 States and their Congressmen share, is that it is still necessary for someone to stand here before you and argue that Hawaii should be admitted as a State in the American Union.

Mr. Chairman, many people have remarked that the single greatest achievement for which the 85th Congress will go down in history was its passage of Alaska statehood. It is my deepest hope, the hope of the nearly 600,000 Hawaiian Americans, the hope of the vast majority of the American people everywhere, that the 86th Congress will go down in history as the Congress which authorized statehood for Hawaii.

Mr. Chairman, I share with many others the intense conviction that there is no more important piece of legislation before this Congress than Hawaii statehood. For passage of Hawaii statehood will usher in a great new era in the Pacific and in the East—in other words, in that area of the world whose astounding recent emergence has already placed in its hands the key to future world peace. Hawaii statehood will assure for America its full opportunity for leadership in the development of this major part of the world as a ground for thriving, free peoples, whose culture will be a strong, fruitful union of East and West. The outlines of this transformation are fast being drawn, and the State of Hawaii would provide a model agency and focal point through which the United States could play its part in shaping the direction of this transformation. Statehood for Hawaii would be our most decisive step to date in assuming this leadership and in opening up in this area a positive, invaluable avenue of approach.

There is no point in trying to elaborate here on Hawaii's many virtues and qualifications, on the many wonderful contributions it can make to our country as a State in the American Union.

What I do wish to point out is that Hawaii has waited long; that committee documents alone are so voluminous it would very likely take several months of sustained work for anyone to read them straight through; that Hawaii—unselfishly—precluded any good chance of its own passage in the last session of Congress to allow Alaska the full, free consideration it certainly deserved; and that Hawaii is willing and able to employ its talents, as a State equally with other States, in helping solve the vast and difficult problems which confront our American democracy in these times above all.

Mr. Chairman, on behalf of Hawaii's people, whom I am most privileged to represent, and who have always believed, and will always believe, that the Congress of the United States will never deviate from its historic effort to foster and secure liberty and self-determination for all its people, I express our earnest hope that this House, today, will enable Hawaii's people to assume their full, unfettered stature as Americans, as mature, responsible bearers of the American heritage in which they so deeply believe and whose ideals they have so wonderfully fulfilled.

The CHAIRMAN. All time has expired. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, subject to the provisions of this Act, and upon issuance of the proclamation required by section 7(c) of this Act, the State of Hawaii is hereby declared to be a State of the United States of America, is declared admitted into the Union on an equal footing with the other States in all respects whatever, and the constitution formed pursuant to the provisions of the Act of the Territorial Legislature of Hawaii entitled "An Act to provide for a constitutional convention, the adoption of a State constitution, and the forwarding of the same to the Congress of the United States, and appropriating money therefor", approved May 20, 1949 (Act 334, Session Laws of Hawaii, 1949), and adopted by a vote of the people of Hawaii in the election held on November 7, 1950, is hereby found to be republican in form and in conformity with the Constitution of the United States and the principles of the Declaration of Independence, and is hereby accepted, ratified, and confirmed.

SEC. 2. The State of Hawaii shall consist of all the islands, together with their appurtenant reefs and territorial waters, included in the Territory of Hawaii on the date of enactment of this Act, except the atoll known as Palmyra Island, together with its appurtenant reefs and territorial waters, but said State shall not be deemed to include the Midway Islands, Johnston Island, Sand Island (offshore from Johnston Island), or Kingman Reef, together with their appurtenant reefs and territorial waters.

SEC. 3. The constitution of the State of Hawaii shall always be republican in form and shall not be repugnant to the Constitution of the United States and the principles of the Declaration of Independence.

SEC. 4. As a compact with the United States relating to the management and disposition of the Hawaiian homelands, the Hawaiian Homes Commission Act, 1920, as amended, shall be adopted as a provision of the Constitution of said State, as provided in section 7, subsection (b) of this Act, subject to amendment or repeal only with the consent of the United States, and in no other manner: *Provided,* That (1) sections 202, 213, 219, 220, 222, 224, and 225 and other provisions relating to administration, and paragraph (2) of section 204, sections 206 and 212, and other provisions relating to the powers and duties of officers other than those charged with the administration of said Act, may be amended in the constitution, or in the manner required for State legislation, but the Hawaiian home-loan fund, the Hawaiian home-operating fund, and the Hawaiian home-development fund shall not be reduced or impaired by any such amendment, whether made in the constitution or in the manner required for State legislation, and the encumbrances authorized to be placed on Hawaiian homelands by officers other than those charged with the administration of said Act, shall not be increased, except with the consent of the United States; (2) that any amendment to increase the benefits to lessees of Hawaiian homelands may be made in the constitution, or in the manner required for State legislation, but the qualifications of lessees shall not be changed except with the consent of the United States; and (3) that all proceeds and income from the "available lands", as defined by said Act, shall be used only in carrying out the provisions of said Act.

SEC. 5. (a) Except as provided in subsection (c) of this section, the State of Hawaii and its political subdivisions, as the case may be, shall succeed to the title of the Territory of Hawaii and its subdivisions in those lands and other properties in which the Territory and its subdivisions now hold title.

(b) Except as provided in subsection (c) and (d) of this section, the United States grants to the State of Hawaii, effective upon its admission into the Union, the United States' title to all the public lands and other public property within the boundaries of the State of Hawaii, title to which is held by the United States immediately prior to its admission into the Union. The grant hereby made shall be in lieu of any and all grants provided for new States by provisions of law other than this Act, and such grants shall not extend to the State of Hawaii.

(c) Any lands and other properties that, on the date Hawaii is admitted into the Union, are set aside pursuant to law for the use of the United States under any (1) Act of Congress, (2) Executive order, (3) proclamation of the President, or (4) proclamation of the Governor of Hawaii shall remain the property of the United States subject only to the limitations, if any, imposed under (1), (2), (3), or (4), as the case may be.

(d) Any public lands or other public property that is conveyed to the State of Hawaii by subsection (b) of this section but that, immediately prior to the admission of said State into the Union, is controlled by the United States pursuant to permit, license, or permission, written or verbal, from the Territory of Hawaii or any department thereof may, at any time during the five years following the admission of Hawaii into the Union, be set aside by Act of Congress or by

Executive order of the President, made pursuant to law, for the use of the United States, and the lands or property so set aside shall, subject only to valid rights then existing, be the property of the United States.

(e) Within five years from the date Hawaii is admitted into the Union, each Federal agency having control over any land or property that is retained by the United States pursuant to subsections (c) and (d) of this section shall report to the President the facts regarding its continued need for such land or property, and if the President determines that the land or property is no longer needed by the United States it shall be conveyed to the State of Hawaii.

(f) The lands granted to the State of Hawaii by subsection (b) of this section and public lands retained by the United States under subsections (c) and (d) and later conveyed to the State under subsection (e), together with the proceeds from the sale or other disposition of any such lands and the income therefrom, shall be held by said State as a public trust for the support of the public schools and other public educational institutions, for the betterment of the conditions of native Hawaiians, as defined in the Hawaiian Homes Commission Act, 1920, as amended, for the development of farm and home ownership on as widespread a basis as possible for the making of public improvements, and for the provision of lands for public use. Such lands, proceeds, and income shall be managed and disposed of for one or more of the foregoing purposes in such manner as the constitution and laws of said State may provide, and their use for any other object shall constitute a breach of trust for which suit may be brought by the United States. The schools and other educational institutions supported, in whole or in part, out of such public trust shall forever remain under the exclusive control of said State; and no part of the proceeds or income from the lands granted under this Act shall be used for the support of any sectarian or denominational school, college, or university.

(g) As used in this Act, the term "lands and other properties" includes public lands and other public property, and the term "public lands and other public property" means, and is limited to, the lands and properties that were ceded to the United States by the Republic of Hawaii under the joint resolution of annexation approved July 7, 1898 (30 Stat. 750), or that have been acquired in exchange for lands or properties so ceded.

(h) All laws of the United States reserving to the United States the free use or enjoyment of property which vests in or is conveyed to the State of Hawaii or its political subdivisions pursuant to subsection (a), (b), or (e) of this section or reserving the right to alter, amend, or repeal laws relating thereto shall cease to be effective upon the admission of the State of Hawaii into the Union.

(i) The Submerged Lands Act of 1953 (Public Law 31, Eighty-third Congress, first session; 67 Stat. 29) and the Outer Continental Shelf Lands Act of 1953 (Public Law 212, Eighty-third Congress, first session 67 Stat. 462) shall be applicable to the State of Hawaii, and the said State shall have the same rights as do existing States thereunder.

SEC. 6. As soon as possible after the enactment of this Act, it shall be the duty of the President of the United States to certify such fact to the Governor of the Territory of Hawaii. Thereupon the Governor of the Territory shall, within thirty days after receipt of the official notification of such approval, issue his proclamation for the elections, as hereinafter provided, for officers of all State elective offices provided for by the constitution of the proposed State of Hawaii, and for two Senators and one Representative in Congress. In the first election of Senators from said State the two senatorial offices shall be separately identified and designated, and no person may be a candidate for both offices. No identification or designation of either of the two senatorial offices, however, shall refer to or be taken to refer to the term of that office, nor shall any such identification or designation in any way impair the privilege of the Senate to determine the class to which each of the Senators elected shall be assigned.

SEC. 7. (a) The proclamation of the Governor of Hawaii required by section 6 shall provide for the holding of a primary election and a general election and at such elections the officers required to be elected as provided in section 6 shall be chosen by the people. Such elections shall be held, and the qualifications of voters thereat shall be, as prescribed by the constitution of the proposed State of Hawaii for the election of members of the proposed State legislature. The returns thereof shall be made and certified in such manner as the constitution of the proposed State of Hawaii may prescribe. The Governor of Hawaii shall certify the results of said elections, as so ascertained, to the President of the United States.

(b) At an election designated by proclamation of the Governor of Hawaii, which may be either the primary or the general election held pursuant to subsection (a) of this section, or a Territorial general election, or a special election, there shall be submitted to the electors qualified to vote in said election, for adoption or rejection, the following propositions:

"(1) Shall Hawaii immediately be admitted into the Union as a State?

"(2) The boundaries of the State of Hawaii shall be as prescribed in the Act of Congress approved ----------,
(Date of approval of this Act)
and all claims of this State to any areas of land or sea outside the boundaries so prescribed are hereby irrevocably relinquished to the United States.

"(3) All provisions of the Act of Congress approved ---------- reserving rights or powers to the United States, as well as those prescribing the terms or conditions of the grants of lands or other property therein made to the State of Hawaii are consented to fully by said State and its people."
(Date of approval of this Act)

In the event the foregoing propositions are adopted at said election by a majority of the legal votes cast on said submission, the proposed constitution of the proposed State of Hawaii, ratified by the people at the election held on November 7, 1950, shall be deemed amended as follows: Section 1 of article XIII of said proposed constitution shall be deemed amended so as to contain the language of section 2 of this Act in lieu of any other language; article XI shall be deemed to include the provisions of section 4 of this Act; and section 8 of article XIV shall be deemed amended so as to contain the language of the third proposition above stated in lieu of any other language, and section 10 of article XVI shall be deemed amended by inserting the words "at which officers for all state elective offices provided for by this constitution and two Senators and one Representative in Congress shall be nominated and elected" in lieu of the words "at which officers for all state elective offices provided for by this constitution shall be nominated and elected; but the officers so to be elected shall in any event include two Senators and two Representatives to the Congress, and unless and until otherwise required by law, said Representatives shall be elected at large".

In the event the foregoing propositions are not adopted at said election by a majority of the legal votes cast on said submission, the provisions of this Act shall cease to be effective.

The Governor of Hawaii is hereby authorized and directed to take such action as may be necessary or appropriate to insure the submission of said propositions to the people. The return of the votes cast on said propositions shall be made by the election officers directly to the Secretary of Hawaii, who shall certify the results of the submission to the Governor. The Governor shall certify the results of said submission, as so ascertained, to the President of the United States.

(c) If the President shall find that the propositions set forth in the preceding subsection have been duly adopted by the people of Hawaii, the President, upon certification of the returns of the election of the officers required to be elected as provided in section 6 of this Act, shall thereupon issue his proclamation announcing the results of said election as so ascertained. Upon the issuance of said proclamation by the President, the State of Hawaii shall be deemed admitted into the Union as provided in section 1 of this Act.

Until the said State is so admitted into the Union, the persons holding legislative, executive, and judicial office in, under, or by authority of the government of said Territory, and the Delegate in Congress thereof, shall continue to discharge the duties of their respective offices. Upon the issuance of said proclamation by the President of the United States and the admission of the State of Hawaii into the Union, the officers elected at said election, and qualified under the provisions of the constitution and laws of said State, shall proceed to exercise all the functions pertaining to their offices in, under, or by authority of the government of said State, and officers not required to be elected at said initial election shall be selected or continued in office as provided by the constitution and laws of said State. The Governor of said State shall certify the election of the Senators and Representative in the manner required by law, and the said Senators and Representative shall be entitled to be admitted to seats in Congress and to all the rights and privileges of Senators and Representatives of other States in the Congress of the United States.

SEC. 8. The State of Hawaii upon its admission into the Union shall be entitled to one Representative until the taking effect of the next reapportionment, and such Representative shall be in addition to the membership of the House of Representatives as now prescribed by law: *Provided*, That such temporary increase in the membership shall not operate to either increase or decrease the permanent membership of the House of Representatives as prescribed in the Act of August 8, 1911 (37 Stat. 13), nor shall temporary increase affect the basis of apportionment established by the Act of November 15, 1941 (55 Stat. 761; 2 U.S.C., sec. 2a), for the Eighty-third Congress and each Congress thereafter.

SEC. 9. Effective upon the admission of the State of Hawaii into the Union—

(a) the United States District Court for the District of Hawaii established by and existing under title 28 of the United States Code shall thenceforth be a court of the United States with judicial power derived from article III, section 1, of the Constitution of the United States: *Provided, however*, That the terms of office of the district judges for the district of Hawaii then in office shall terminate upon the effective date of this section and the President, pursuant to sections 133 and 134 of title 28, United States Code, as amended by this Act, shall appoint, by and with the advice and consent of the Senate, two district judges for the said district who shall hold office during good behavior;

(b) the last paragraph of section 133 of title 28, United States Code, is repealed; and

(c) subsection (a) of section 134 of title 28, United States Code, is amended by striking out the words "Hawaii and". The second sentence of the same section is amended by striking out the words "Hawaii and", "six and", and "respectively".

SEC. 10. Effective upon the admission of the State of Hawaii into the Union the second paragraph of section 451 of title 28, United States Code, is amended by striking out the words "including the district courts of the United States for the districts of Hawaii and Puerto Rico," and inserting in lieu thereof the words "including the United States District Court for the District of Puerto Rico,".

SEC. 11. Effective upon the admission of the State of Hawaii into the Union—

(a) the last paragraph of section 501 of title 28, United States Code, is repealed;

(b) the first sentence of subsection (a) of section 504 of title 28, United States Code, is amended by striking out at the end thereof the words ", except in the district of Hawaii, where the term shall be six years";

(c) the first sentence of subsection (c) of section 541 of title 28, United States Code, is amended by striking out at the end thereof the words ", except in the district of Hawaii where the term shall be six years"; and

(d) subsection (d) of section 541 of title 28, United States Code, is repealed.

SEC. 12. No writ, action, indictment, cause, or proceeding pending in any court of the Territory of Hawaii or in the United States District Court for the District of Hawaii shall abate by reason of the admission of said State into the Union, but the same shall be transferred to and proceeded with in such appropriate State courts as shall be established under the constitution of said State, or shall continue in the United States District Court for the District of Hawaii, as the nature of the case may require. And no writ, action, indictment, cause or proceeding shall abate by reason of any change in the courts, but shall be proceeded with in the State or United States courts according to the laws thereof, respectively. And the appropriate State courts shall be the successors of the courts of the Territory as to all cases arising within the limits embraced within the jurisdiction of such courts, respectively, with full power to proceed with the same, and award mesne or final process therein, and all the files, records, indictments, and proceedings relating to any such writ, action, indictment, cause or proceeding shall be transferred to such appropriate State courts and the same shall be proceeded with therein in due course of law.

All civil causes of action and all criminal offenses which shall have arisen or been committed prior to the admission of said State, but as to which no writ, action, indictment or proceeding shall be pending at the date of such admission, shall be subject to prosecution in the appropriate State courts or in the United States District Court for the District of Hawaii in like manner, to the same extent, and with like right of appellate review, as if said State had been created and said State courts had been established prior to the accrual of such causes of action or the commission of such offenses. The admission of said State shall effect no change in the substantive or criminal law governing such causes of action and criminal offenses which shall have arisen or been committed; and such of said criminal offenses as shall have been committed against the laws of the Territory shall be tried and punished by the appropriate courts of said State, and such as shall have been committed against the laws of the United States shall be tried and punished in the United States District Court for the District of Hawaii.

SEC. 13. Parties shall have the same rights of appeal from and appellate review of final decisions of the United States District Court for the District of Hawaii or the Supreme Court of the Territory of Hawaii in any case finally decided prior to admission of said State into the Union, whether or not an appeal therefrom shall have been perfected prior to such admission, and the United States Court of Appeals for the Ninth Circuit and the Supreme Court of the United States shall have the same jurisdiction therein, as by law provided prior to admission of said State into the Union, and any mandate issued subsequent to the admission of said State shall be to the United States District Court for the District of Hawaii or a court of the State, as may be appropriate. Parties shall have the same rights of appeal from and appellate review of all orders, judgments, and decrees of the United States District Court for the District of Hawaii and of the Supreme Court of the State of Hawaii as successor to the Supreme Court of the Territory of Hawaii, in any case pending at the time of admission of said State into the Union, and the United States Court of Appeals for the Ninth Circuit and the Supreme Court of the United States shall have the same jurisdiction therein, as by law provided in any case arising subsequent to the admission of said State into the Union.

SEC. 14. Effective upon the admission of the State of Hawaii into the Union—

(a) title 28, United States Code, section 1252, is amended by striking out "Hawaii and" from the clause relating to courts of record;

(b) title 28, United States Code, section 1293, is amended by striking out the words "First and Ninth Circuits" and by inserting in lieu thereof "First Circuit", and by striking out the words, "supreme courts of Puerto Rico and Hawaii, respectively" and inserting in lieu thereof "supreme court of Puerto Rico";

(c) title 28, United States Code, section 1294, as amended, is further amended by striking out paragraph (4) thereof and by renumbering paragraphs (5) and (6) accordingly;

(d) the first paragraph of section 373 of title 28, United States Code, as amended, is further amended by striking out the words "United States District Courts for the districts of Hawaii or Puerto Rico," and inserting in lieu thereof the words "United States District Court for the District of Puerto Rico,"; and by striking out the words "and any justice of the Supreme Court of the Territory of Hawaii": *Provided*, That the amendments made by this subsection shall not affect the rights of any judge or justice who may have retired before the effective date of this subsection: *And provided further*, That service as a judge of the District Court for the Territory of Hawaii or as a judge of the United States District Court for the District of Hawaii or as a justice of the Supreme Court of the Territory of Hawaii or as a judge of the circuit courts of the Territory of Hawaii shall be included in computing under section 371, 372, or 373 of title 28, United States Code, the aggregate years of judicial service of any person who is in office as a district judge for the District of Hawaii on the date of enactment of this Act;

(e) section 92 of the Act of April 30, 1900 (ch. 339, 31 Stat. 159), as amended, and the Act of May 29, 1928 (ch. 904, 45 Stat. 997), as amended, are repealed;

(f) section 86 of the Act approved April 30, 1900 (ch. 339, 31 Stat. 158), as amended, is repealed;

(g) section 3771 of title 18, United States Code, as heretofore amended, is further amended by striking out from the first paragraph of such section the words "Supreme Courts of Hawaii and Puerto Rico" and inserting in lieu thereof the words "Supreme Court of Puerto Rico";

(h) section 3772 of title 18, United States Code, as heretofore amended, is further amended by striking out from the first paragraph of such section the words "Supreme Courts of Hawaii and Puerto Rico" and inserting in lieu thereof the words "Supreme Court of Puerto Rico";

(i) section 91 of title 28, United States Code, as heretofore amended, is further amended by inserting after "Kure Island" and before "Baker Island" the words "Palmyra Island,"; and

(j) the Act of June 15, 1950 (64 Stat. 217; 48 U.S.C., sec. 644a), is amended by inserting after "Kure Island" and before "Baker Island" the words "Palmyra Island,".

SEC. 15. All Territorial laws in force in the Territory of Hawaii at the time of its admission into the Union shall continue in force in the State of Hawaii, except as modified or changed by this Act or by the constitution of the State, and shall be subject to repeal or amendment by the Legislature of the State of Hawaii, except as provided in section 4 of this Act with respect to the Hawaiian Homes Commission Act, 1920, as amended; and the laws of the United States shall have the same force and effect within the said State as elsewhere within the United States: *Provided*, That, except as herein otherwise provided, a Territorial law enacted by the Congress shall be terminated two years after the date of admission of the State of Hawaii into the Union or upon the effective date of any law enacted by the State of Hawaii which amends or repeals it, whichever may occur first. As used in this section, the term "Territorial laws" includes (in addition to laws enacted by the Territorial Legislature of Hawaii) all laws or parts thereof enacted by the Congress the validity of which is dependent solely upon the authority of the Congress to provide for the government of Hawaii prior to its admission into the Union, and the term "laws of the United States" includes all laws or parts thereof enacted by the Congress that (1) apply to or within Hawaii at the time of its admission into the Union, (2) are not "Territorial laws" as defined in this paragraph, and (3) are not in conflict with any other provision of this Act.

SEC. 16. (a) Notwithstanding the admission of the State of Hawaii into the Union, the United States shall continue to have sole and exclusive jurisdiction over the area which may then or thereafter be included in Hawaii National Park, saving, however, to the State of Hawaii the same rights as are reserved to the Territory of Hawaii by section 1 of the Act of April 19, 1930 (46 Stat. 227), and saving, further, to persons then or thereafter residing within such area the right to vote at all elections held within the political subdivisions where they respectively reside. Upon the admission of said State all references to the Territory of Hawaii in said Act or in other laws relating to Hawaii National Park shall be deemed to refer to the State of Hawaii. Nothing contained in this Act shall be construed to affect the ownership and control by the United States of any lands or other property within Hawaii National Park which may now belong to, or which may hereafter be acquired by, the United States.

(b) Notwithstanding the admission of the State of Hawaii into the Union, authority is reserved in the United States, subject to the proviso hereinafter set forth, for the exercise by the Congress of the United States of the power of exclusive legislation, as provided by article I, section 8, clause 17, of the Constitution of the United States, in all cases whatsoever over such tracts or parcels of land as, immediately prior to the admission of said State, are controlled or owned by the United States and held for Defense or Coast Guard purposes, whether such lands

were acquired by cession and transfer to the United States by the Republic of Hawaii and set aside by Act of Congress or by Executive order or proclamation of the President or the Governor of Hawaii for the use of the United States, or were acquired by the United States by purchase, condemnation, donation, exchange, or otherwise: *Provided,* (i) That the State of Hawaii shall always have the right to serve civil or criminal process within the said tracts or parcels of land in suits or prosecutions for or on account of rights acquired, obligations incurred, or crimes committed within the said State but outside of the said tracts or parcels of land; (ii) that the reservation of authority in the United States for the exercise by the Congress of the United States of the power of exclusive legislation over the lands aforesaid shall not operate to prevent such lands from being a part of the State of Hawaii, or to prevent the said State from exercising over or upon such lands, concurrently with the United States, any jurisdiction whatsoever which it would have in the absence of such reservation of authority and which is consistent with the laws hereafter enacted by the Congress pursuant to such reservation of authority; and (iii) that such power of exclusive legislation shall vest and remain in the United States only so long as the particular tract or parcel of land involved is controlled or owned by the United States and used for Defense or Coast Guard purposes: *Provided, however,* That the United States shall continue to have sole and exclusive jurisdiction over such military installations as have been heretofore or hereafter determined to be critical areas as delineated by the President of the United States and/or the Secretary of Defense.

SEC. 17. The next to last sentence of the first paragraph of section 2 of the Federal Reserve Act (38 Stat. 251) as amended by section 19 of the Act of July 7, 1958, (72 Stat. 339, 350) is amended by inserting after the word "Alaska" the words "or Hawaii."

SEC. 18. (a) Nothing contained in this Act shall be construed as depriving the Federal Maritime Board of the exclusive jurisdiction heretofore conferred on it over common carriers engaged in transportation by water between any port in the State of Hawaii and other ports in the United States, or possessions, or is conferring on the Interstate Commerce Commission jurisdiction over transportation by water between any such ports.

(b) Effective on the admission of the State of Hawaii into the Union—

(1) the first sentence of section 506 of the Merchant Marine Act, 1936, as amended (46 U.S.C., sec. 1156), is amended by inserting before the words "an island possession or island territory", the words "the State of Hawaii, or";

(2) section 605(a) of the Merchant Marine Act, 1936, as amended (46 U.S.C., sec. 1175), is amended by inserting before the words "an island possession or island territory", the words "the State of Hawaii, or"; and

(3) the second paragraph of section 714 of the Merchant Marine Act, 1936, as amended (46 U.S.C., sec. 1204), is amended by inserting before the words "an island possession or island territory" the words "the State of Hawaii, or".

SEC. 19. Nothing contained in this Act shall operate to confer United States nationality, nor to terminate nationality heretofore lawfully acquired, or restore nationality heretofore lost under any law of the United States or under any treaty to which the United States is or was a party.

SEC. 20. (a) Section 101(a)(36) of the Immigration and Nationality Act (66 Stat. 170, 8 U.S.C., sec. 1101(a)(36)) is amended by deleting the word "Hawaii,".

(b) Section 212(d)(7) of the Immigration and Nationality Act (66 Stat. 188, 8 U.S.C. 1182(d)(7)) is amended by deleting from the first sentence thereof the word "Hawaii," and by deleting the proviso to said first sentence.

(c) The first sentence of section 310(a) of the Immigration and Nationality Act, as amended (66 Stat. 239, 8 U.S.C. 1421(a), 72 Stat. 351), is further amended by deleting the words "for the Territory of Hawaii, and".

(d) Nothing contained in this Act shall be held to repeal, amend, or modify the provisions of section 305 of the Immigration and Nationality Act (66 Stat. 237, 8 U.S.C. 1405).

SEC. 21. Effective upon the admission of the State of Hawaii into the Union, section 3, subsection (b), of the Act of September 7, 1957 (71 Stat. 629), is amended by substituting the words "State of Hawaii" for the words "Territory of Hawaii".

SEC. 22. If any provision of this Act, or any section, subsection, sentence, clause, phrase, or individual word, or the application thereof in any circumstance is held invalid, the validity of the remainder of the Act and of the application of any such provision, section, subsection, sentence, clause, phrase, or individual word in other circumstances shall not be affected thereby.

SEC. 23. All Acts or parts of Acts in conflict with the provisions of this Act, whether passed by the legislature of said Territory or by Congress, are hereby repealed.

Mr. O'BRIEN of New York (during the reading of the bill). Mr. Chairman, I ask unanimous consent that the bill be considered as read and open for amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. POAGE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. POAGE: On page 2, section 2, line 17, strike out the period at the end of the sentence and insert a comma and add: "but all of such areas, lands, and territorial waters together with all other areas, lands, and territorial waters lying or being in the Pacific Ocean and not now constituting any part of the States of California, Oregon, Washington, or Alaska, and which are now or may hereafter come under the jurisdiction of the United States of America may be included, in whole or in part, in the State of Hawaii at any time or times, when a majority of the qualified voters of any congressionally authorized area therein shall vote to become a part of such State of Hawaii.

"(b) The Congress shall have the right to offer a referendum in all or any part or parts of such area and on such terms and conditions and to such voters as it may from time to time decide, but such areas, lands and territorial waters shall never be constituted into another State without the expressed consent of the State of Hawaii and of the United States of America."

Mr. ASPINALL. Mr. Chairman, I make a point of order against the amendment, but I will reserve the right to argue it in order to permit my friend, the gentleman from Texas, to make his statement.

The CHAIRMAN. The gentleman from Colorado reserves the point of order. The Chair recognizes the gentleman from Texas [Mr. POAGE].

Mr. POAGE. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. POAGE. Mr. Chairman, we have heard a very persuasive argument that the United States should not hold in bondage and should not own as chattel any human beings or as property the territory where other people live. I think that enunciates a rather sound principle. It proclaims on the part of the United States the abandonment of colonialism.

To the extent that this legislation abandons the policy of colonialism, it has worldwide appeal. This bill, however, does not carry that persuasive suggestion to its logical conclusion. It limits to a portion of what was once the Territory of Hawaii, what was once the Kingdom of Hawaii, the area of the new State. It leaves hanging as a part of no State, some portions of that Territory that was once ruled by the royal line of Hawaii. It leaves without any statehood status other islands and territories in the Pacific Ocean over which the American flag flies and over which we claim jurisdiction.

This amendment, if adopted, will provide not for the immediate incorporation of areas that may not presently fit into the organization of the new State, but it does provide an opportunity for the ultimate inclusion of every acre of American territory in the Pacific Ocean to be organized into the State of Hawaii. I see nothing so startling or unfair about that proposition. It seems to me that if you accept, as I will accept, the philosophy that every bit of this area should be organized into the boundaries of a State that we ought to here and now make provision for it. We are told by the proponents of this bill that they too feel that these remote areas should ultimately become a part of the new State, but they suggest that we should not act now.

What is the alternative? Mr. Chairman, there is but one alternative, and that is that we will again meet this issue, and that the time will come when this Congress will again be called upon to organize another state or other states in the Pacific Ocean.

I think it has been well pointed out here today that the Hawaiian Islands have the population, have the resources, have the ability to maintain viable State government. No one has contended, and I do not think anyone will contend, that the small islands to the west and to the south of Hawaii can by themselves be so organized as to have that economic stability needed for statehood. Yet when you exclude them today, you exclude them from any possible future consideration, and your only alternative somewhere down the line is to meet the question of admitting those small islands or part of them as another State in our Union. That is, you must ultimately so admit them or you must forever leave them as the property of a colonial United States.

Frankly, I do not want to have to admit another state. I am prepared to vote to bring Hawaii in as a state of the Union with all of the islands of the Pacific under the American flag along with it, but I want to finish the job. I do not want to leave the door open.

I am not here offering this amendment to destroy this bill; on the contrary, I

want here and now to perfect the bill. I am not here trying to prevent Hawaiian statehood. I am trying to prevent a continuation of colonialism. I will accept the policy of anticolonialism for the United States. I wish that it were so easy for some of our friends to accept it. Their problems are often more difficult than ours in this field. I condemn no one. I just want to take advantage of the opportunity which we have today.

Nor do I think that is is quite fair to say that we are going to bring Hawaii into the Union today and that when we need two more votes in the U.S. Senate then we will bring in Samoa or Guam. And if you think that is not going to happen I ask you in all fairness how are you going to bring statehood status to these people on the other islands of the Pacific I ask those who would like to put it off with a smile, how are you going to provide this statehood status for all of the nationals of U.S. territory unless you are prepared to give statehood to those small groups of islands? So, inevitably, Mr. Chairman, we have got to face the question, and now is the time to face it.

There is no purpose in trying to pass just any bill here this afternoon. A bill has already been passed at the other end of the Capitol. We surely have time to consider what actually should be done, and it will take but a few minutes to adopt an amendment. We have got time to do the thing that ought to be done this afternoon and to solve this whole problem at one time. It ought not to be put off. We ought to give to every man who owes allegiance to the American flag the right to be a citizen of a State, of a district or a Commonwealth associated with the United States of America.

I hope you will adopt this amendment and make it possible to include within the boundaries of Hawaii all of the American islands in the Pacific, and thereby to take away from this Congress the power to create another state in the Pacific Ocean. I hope the members of the Committee will be willing to accept this amendment.

The CHAIRMAN. For what purpose does the gentleman from Colorado rise?

Mr. ASPINALL. Mr. Chairman, I rise in support of my point of order.

The CHAIRMAN. The Chair will hear the gentleman.

Mr. ASPINALL. Mr. Chairman, my point of order is this: Rule 16, clause 7 provides that—

> No motion or proposition on a subject different from that under consideration shall be admitted under color of amendment.

This is our familiar rule of germaneness.

The bill with which we are dealing, S. 50, deals with the immediate admission of a new State into the Union, subject only to a proclamation by the President that certain essential conditions precedent have been fulfilled. Subsection (a) of the amendment offered by the gentleman from Texas deals with a different subject. It deals with the enlargement of that State at some indefinite time in the future under totally different circumstances. Moreover, it deals with that subject only in a hypothetical way. It presupposes that some other area will ask to be admitted as part of the State of Hawaii. These proposals are not germane to the subject of the bill before us or to the subject of the section of the bill which it is proposed to amend. And they are of doubtful constitutionality. I read from article IV, section 3 of the Constitution:

> SEC. 3. New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the jurisdiction of any other State; nor any State be formed by the junction of two or more States, or parts of States, without the consent of the legislatures of the States concerned as well as of the Congress.

Subsection (b), in addition, anticipates that these island areas may, at some future time, seek to become a separate State. It provides that they may become such if they so vote, and if the State of Hawaii consents, and if the Congress agrees. This situation is entirely foreign to the purposes of S. 50. The amendment is not germane and is contrary to the ruling of Mr. Speaker Orr recorded in 5 Hinds 5529 and Mr. Speaker Carlisle recorded in 5 Hinds 5837.

I shall read the decision by Speaker Carlisle on a bill for the admission of one Territory. The amendment provided also for the admission of several other Territories. It was held not to be germane:

> On January 17, 1889, the House was considering a bill of the Senate providing for the admission of the Territory of Dakota into the Union. The consideration of the bill was governed by a special order, which specified that the bill of the House (H.R. 8466) might be offered as a substitute. Instead of this bill, however, there was offered by Mr. William M. Springer, of Illinois, a substitute different in form and containing, with a provision relating to Dakota other provisions providing for the admission of Montana, Washington, and New Mexico.
>
> Mr. Julius C. Burrows, of Michigan, made the point of order that the proposed amendment was not germane.
>
> After debate the Speaker held:
>
> "When the gentleman from Michigan made the point of order, the Chair supposed that the gentleman from Illinois had offered as a substitute the bill H.R. 8466, which is the bill mentioned in the order made by the House. Of course, if the gentleman has not offered that bill, the question which the Chair proposed to submit to the House has not yet arisen. The Chair supposes that a mere technical difference between the two bills would not be material—for instance, a correction of a mere clerical error, or something of that sort. But it seems that the proposed substitute now offered by the gentleman from Illinois contains provisions of a substantial character and not contained in the original House bill. The Chair thinks, therefore, that the order does not apply to it, and believes that in accordance with the practice of the House and its rules, even since the House overruled its own decision in the case of California, that this substitute is not in order under the rules. The Chair holds therefore, that the substitute sent to the desk by the gentleman from Illinois does not come within the terms of the order made by the House, and hence is not in order under the rules and practice of the House."

Mr. Chairman, it has been well said by a distinguished presiding officer of this House that "The fundamental purpose of the amendment must be germane to the fundamental purpose of the bill" (8 Cannon 2911) before the amendment can be considered. This is the test and this is the rule by which the proposed amendment fails.

For these and other reasons—reasons such as the usual rule forbidding enlargement of the scope of a bill by an amendment—see, for instance, 8 Cannon 2913, 2914, 2915, 2918—I object to the amendment that has been offered.

The CHAIRMAN (Mr. KILDAY). May the Chair inquire if the occasion the gentleman referred to, and the decision, was one involving a bill providing for the admission of one State and the substitute provided for the admission of an additional State or additional States?

Mr. ASPINALL. That is correct. It also provided for the determination of the question of statehood over areas which were not in the original bill.

The CHAIRMAN. The Chair thanks the gentleman. The Chair will now hear from the gentleman from Texas [Mr. POAGE].

Mr. POAGE. Mr. Chairman, basically the amendment which has been offered is one that changes the boundaries of the proposed State of Hawaii. The boundaries of the State of Hawaii are defined in the legislation before us. Certainly it is one of the subject matters presently before this House.

What are the boundaries of the area that we are bringing into the Union? Surely these boundaries are subject to change by amendment. Now, I take it certain of the boundaries may be established on time and certain of the boundaries may be established at a different time so long as it is done by or under the direction of this Congress. That has been done in the amendment. It was done in the case of numerous of the Western States when we did not have actual accurate maps of all of the areas at the time they were admitted. I am under the impression it was done at the time of the admission of the State of Maine. It was done at the time of the admission of the State of Texas. It has been done repeatedly. And, it can be done with the admission of the State of Hawaii.

We are therefore, by this amendment, fixing a different set of boundaries from those that were outlined in the original bill. We are providing that some of those boundaries shall be in effect today; that others of them shall be in effect at future dates upon the happening of future events. I therefore submit that the amendment is in order.

The CHAIRMAN (Mr. KILDAY). The Chair is prepared to rule.

The gentleman from Texas [Mr. POAGE] has offered an amendment which has been read at the Clerk's desk. The gentleman from Colorado [Mr. ASPINALL] has made a point of order against the amendment that it is not germane to the bill.

In ruling on the first portion of the amendment, the Chair will point out that it seeks to add additional language to the last sentence of section 2 of the bill. Section 2 of the bill and the sentence to which it is proposed to add language deals with the boundaries of the new State of Hawaii to be admitted

under this bill, and the language of the proposed amendment likewise deals with the boundaries of the State to be admitted. As to paragraph B of the proposed amendment, the Chair would point out that this language would grant to the new State of Hawaii a right over land not included within the boundaries proposed in this bill but land outside of the boundaries, so that it would be granting to the new State of Hawaii a right over those lands which she does not now possess and would be one of the conditions on which she is admitted.

The Chair is constrained to hold that the amendment is germane to the bill and overrules the point of order.

Mr. O'BRIEN of New York. Mr. Chairman, I rise in opposition to the amendment.

Mr. STRATTON. Mr. Chairman, will the gentleman yield?

Mr. O'BRIEN of New York. I yield to the gentleman from New York.

Mr. STRATTON. Before the gentleman speaks in opposition to the amendment, I would like to say, as a colleague of the gentleman from New York, that as we move forward this afternoon toward this historic occasion whereby we give positive evidence to the Communist world that America is indeed still growing, I would like to pay particular tribute to my colleague and friend, the gentleman from New York [Mr. O'BRIEN] for the tremendous job which he has done in steering this bill through the various stages of the legislative process in this House. We in New York State are proud of the gentleman from New York for the job that he is doing in Congress, not only in connection with this bill but also for what he did last year in connection with the incorporation of Alaska into the Union. And we in New York are proud of the constructive and nonpartisan leadership which he has demonstrated in this House. I might say that if the gentleman from New York never does anything else in his legislative career—and I know that he will in fact do many more great things here—what he has done in connection with the Hawaii and Alaska statehood legislation will carve for him a real and lasting niche not only in the history of this body but of the Nation.

Mr. O'BRIEN of New York. I thank the gentleman.

Mr. Chairman, the Chair has disposed of the germaneness of the amendment offered by the gentleman from Texas. I would like to discuss its merits. May I say quite frankly that while the gentleman indicated he might or even would vote for the statehood bill if the amendment were included therein, as far as I am concerned, the price is entirely too high.

The gentleman testified eloquently and with great ability before our committee. He proposed this very plan that is now before the Committee. It was not offered in committee by a single member of the committee nor was it discussed by the committee itself. It is my honest belief that if you want to kill the statehood bill, here is the test because, in effect, the amendment offered by the gentleman from Texas would bestow upon the Legislature of the new State of Hawaii the biggest legislative broom in history. They could reach out into the Pacific and make part of their State Guam. They could take the Trust Territories. They could have the strangest combinations possible. They would run into a situation where they might assert their right to a Trust Territory at the very moment that it was ceasing to be a Trust Territory. This would be too great a burden for any State to assume, let alone a new State. I hope that the Committee will reject the amendment.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. O'BRIEN of New York. I yield to the gentleman.

Mr. POAGE. I believe the gentleman misunderstood the amendment. It does not give Hawaii the right to reach out and bring anything in. It simply says that before you could admit those areas into any other State, the Legislature of Hawaii would have to join in the agreement. It does not bring anything in to Hawaii.

Mr. O'BRIEN of New York. It certainly would give, in a fashion, the new State of Hawaii absolute control over the ultimate destiny, no matter what it might be, of these assorted islands, big and small. We would get into the most confusing international situation that I can imagine if we adopted this amendment.

Mr. POAGE. Mr. Chairman, will the gentleman yield further?

Mr. O'BRIEN of New York. Gladly.

Mr. POAGE. The amendment specifically provides that only the Congress of the United States can submit the referendum to the people of the other islands, and then only that they can become a part of Hawaii. It does not require any action on the part of the Hawaiian Legislature, but if the Congress should decide it wanted to create them into another State, it would have to have the consent of the Hawaiian Legislature, and only in that event. The purpose of that is to prevent the creation of another State, to say that they may be admitted to Hawaii, but not as another State at some future time.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. O'BRIEN of New York. I yield.

Mr. ASPINALL. I am certain the gentleman did not wish to mislead the Committee. We did have this matter before the committee. It was proposed by the gentleman from New Mexico [Mr. MORRIS]. It was voted upon, and with the exception of two or three votes, it was refused by the committee.

Mr. O'BRIEN of New York. I thank the gentleman. He has refreshed my recollection. I think that makes it even more important to reject this amendment, because it was considered by the committee in Congress with the most intimate knowledge of this area, which has specific jurisdiction of these various areas in a legislative way. They considered the amendment, took into consideration the persuasive ability of the gentleman from Texas, and then voted it down.

I say that we would alter the whole face of this bill if we adopted this amendment.

Mr. HOFFMAN of Michigan. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the argument just made by the gentleman from New York [Mr. O'BRIEN] in opposition to the amendment offered by the gentleman from Texas [Mr. POAGE] boiled down, is that it would give Hawaii when admitted altogether too much authority and make it too big in area. Have we learned anything from tradition or history? If we have it is that nations are formed, grow, become so large, expand to such an extent that finally they fade out of the world picture.

In even our domestic affairs we have found it necessary to curb bigness as represented in monopolies.

The last few years this country of ours has been attempting to extend its influence throughout the world to tell the people in all the rest of the world and all the other nations what they should do. Yes, and on occasion what they should think. That is quite a job. It does seem to some that perhaps we should, before we tell other people what to do, set our own house in order—insure freedom in all parts of the world, establish it here.

If freedom of the individual be one of our goals, one of the purposes of our Government, it might be well to consider what has happened here. How the citizen is denied freedom, where freedom of the individual—the exercise of which harmed no one—has, by the U.S. Supreme Court, been denied the individual.

In the Apex Hosiery case, decided by the U.S. Supreme Court on May 27, 1940 (310 U.S. 469), the U.S. Supreme Court, in a suit for damages held that damages were not recoverable by the company from a labor union seeking to unionize the company's employees by violence and destruction of property, because the Sherman Antitrust Act did not apply to unions—that unions were exempt from Federal prosecution under that act.

Chief Justice Hughes, writing a dissenting opinion, concurred in by Mr. Justice McReynolds and Mr. Justice Roberts, among other things said:

> When the union demanded a closed shop agreement and, on its refusal, declared the strike, only 8 of the company's 2,500 employees were members of the union. The company's plant was seized and held for several weeks. Its machinery and equipment were "wantonly demolished or damaged to the extent of many thousands of dollars."
>
> There was not merely a stoppage of production, but there was also a deliberate prevention of the shipment of finished goods to customers outside the State.

In the final paragraph of the dissenting opinion, there is this statement:

> Once it is decided, as this Court does decide, that the Sherman Act does not except labor unions from its purview, once it is decided, as this Court does decide, that the conduct here shown is not within the immunity conferred by the Clayton Act, the Court, as it seems to me, has no option but to apply the Sherman Act in accordance with its express provisions.

In a case decided the next year—that of *U.S.* v. *Hutcheson* (312 U.S. 219), the Court held that strikes in restraint of trade, the purpose of which was to en-

force a secondary boycott, were not a conspiracy in violation of the Sherman law.

Here, again, Justice Roberts dissenting, and with his opinion Chief Justice Hughes concurred, pointed out that the Court was in error in holding that "because Congress forbade the issuing of injunctions to restrain certain conduct it intended to repeal the provisions of the Sherman Act authorizing actions at law and criminal prosecutions for the commission of torts and crimes defined by the antitrust laws" and added that the decision was radical legislation by the Court "where Congress has refused to do so."

In the case of *Bradley* v. *Local Union No. 3* (325 U.S. 797), decided in 1945, the Court, after holding that the Electrical Workers Union, through agreements with employers, had established a monopoly in the sale and servicing of electrical equipment in New York City, referring to the said union, said:

It intended to and did restrain trade and monopolize the supply of electrical equipment in the New York City area to the exclusion of equipment manufactured in and shipped in from other States, and did also control its price and discriminate between its would-be customers.

The Court stated the question this way:

Our problem in this case is therefore a very narrow one—do labor unions violate the Sherman Act when, in order to further their own interests as wage earners, they aid and abet businessmen to do the precise things which that act prohibits?

Among other things, the Court said:

Seldom, if ever, has it been claimed before, that by permitting labor unions to carry on their own activities, Congress intended completely to abdicate its constitutional power to regulate interstate commerce and to empower interested business groups to shift our society from a competitive to a monopolistic economy.

Then, by way of excuse, the Court said:

This, it is argued, brings about a wholly undesirable result—one which leaves labor unions free to engage in conduct which restrains trade. But the desirability of such an exemption of labor unions is a question for the determination of Congress.

Here, again, Justice Roberts dissented, as did Mr. Justice Murphy. Among other things, Justice Roberts wrote—page 814:

Unless I misread the opinion, the union is at liberty to impose every term and condition as shown by the record in this case and to enforce those conditions and procure an agreement from each employer to such conditions by calling strikes, by lockout, and boycott, provided only such employer agrees for himself alone and not in concert with any other.

* * * The course of decision in this Court has now created a situation in which by concerted action, unions may set up a wall around a municipality of millions of inhabitants against importation of any goods if the union is careful to make separate contracts with each employer, and if the union and employers are able to convince the Court that, while all employers have such agreements, each acted independently in making them—this notwithstanding the avowed purpose to exclude goods not made in that city by the members of the union; notwithstanding the fact that the purpose and inevitable result is the stifling of competition in interstate trade and the creation of a monopoly.

By its decision, the Supreme Court of the United States had decided that—page 819:

This Court, as a result of its past decisions, is in the predicament that whatever it decides must entail disastrous results.

These three decisions show how the freedom of the citizen has been destroyed by the Court. How a monopoly for certain union members has been established.

Today in New York State you cannot install and get electric equipment serviced so that you can use it unless it is manufactured by employees who belong to one union or serviced by members of a specified union. Why insist on freedom for people of other nations while denying it to our own citizens? That is the situation here in America today. Carry freedom to the people here, but don't linger on the way to dole out a little to the woman or man who, here at home, would like to work without paying tribute to a union boss.

One more example, and I will make it very, very brief. This is one you have heard so much about recently, about the farmer in the Fourth Congressional District of Michigan, Stanley Yankus, who grew and used wheat on land which he owns. What for? So that some producers of cotton, corn, rice, tobacco, peanuts, and wheat might get more for what they had to sell. Taking from one group and giving to another. He did not sell a kernel of the wheat he grew. He fed it all to his chickens.

In addition he purchased wheat on the open market. He reduced the surplus. Yet he was fined something like $5,000.

I know the fate of this bill. But let me tell you what one veteran thinks about freedom here at home. This letter is dated March 3, 1959:

DEAR SIR: Enclosed please find my endorsed World War II disability compensation check. This is to help pay the fine of Stanley Yankus for the crime of being an American. Each month as these checks come in I shall forward them to you for the above purpose, as the present state of justice and government for the people is far more disabled than I.

L. M. KNOWLES.

ROYAL OAK, MICH.

Here is a photostat of the check, for $19 and some cents, from the disabled veteran:

No. 2,786,012

CLEVELAND, OHIO,
February 28, 1959.

Treasurer of the United States: Pay $19 to the order of Loren M. Knowles, 1109 East Fifth Street, Royal Oak, Mich.

———— ————,
Regional Disbursing Officer.

(For Stanley Yankus fund.)

When Russia aside from our own country, is the only country trying to take over the rest of the world, when France, Great Britain, Belgium, and other countries have been relinquishing the authority they had over outlying territory, colonies, why should we follow down the road of bigness and ruin ourselves, fade out as did the nations of other days? Why expand until we fall apart? I cannot go along with a policy which I believe will destroy us as a Nation.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas [Mr. POAGE].

The amendment was rejected.

Mr. McCORMACK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the 86th Congress in the passage of this bill will go down in history as an historic Congress, just the same as the 85th Congress by its passage of the Alaskan statehood bill will always be recorded in history as an historic Congress. So we are going to culminate a very historic event today in the life of our country.

In connection with that, I want to compliment the chairman and all the members on the Committee on Interior and Insular Affairs, not only those who favor the bill but those who oppose it, because those who opposed it did so constructively from their angle, and they did not engage in any dilatory tactics.

I particularly want to compliment the distinguished gentleman from New York [Mr. O'BRIEN] because he, with another distinguished gentleman in the other body, that fine Senator from Montana, "JIM" MURRAY, will go down in history as two men who are the coauthors of two bills admitting States into the Union, Alaska and Hawaii.

The gentleman from New York [Mr. O'BRIEN] and "JIM" MURRAY, and no finer man did God ever make than JIM MURRAY, and that includes the gentleman from New York [Mr. O'BRIEN], will occupy a position in the history of our country, in my opinion, that no other Member of Congress will ever occupy in the future and that no Member has ever occupied in the past. They are the coauthors of bills that became law bringing two separate States into the Union of our country.

I also want to compliment the leadership in the other body for the outstanding manner in which the leadership has acted in bringing about the early passage of this bill in the Senate in a period of about 4 or 5 hours, and also in a period of 2 days bringing about the passage of three important bills—one, the authorization bill in relation to the outer space agency, known as NASA, the extension of the draft, and also the passage of this historic measure. That is the kind of leadership the country needs. The country needs firm leadership, good leadership, progressive-looking leadership, a leadership that recognizes responsibility and rises to the occasion. The kind of leadership that is weak and uncertain is properly subject to criticism, but a leadership that is fair and honest, decent and tolerant, firm and effective, and which produces results is the kind of leadership that should be complimented. I particularly refer to that great leader and great American, the senior Senator from Texas [Mr. JOHNSON].

Mr. Chairman, I rise to compliment the House on the passage of this historic measure and also to pay my respects to the chairman and all the members of this great committee as well as to compliment the other body and the leadership of the other body in the outstanding work that they have done.

Mr. ROGERS of Texas. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I have only one question to ask. There has been extended debate here concerning communism, but there is this one question I would like to ask of the distinguished chairman who has had control of this bill. The gentleman filed a report over his name in which he admitted that the union that has leaders in it who are members of the Communist Party had control of the economy of Hawaii, and I heard the distinguished gentleman from Pennsylvania who has done such great work against the Communist menace in this country, say that same thing was true and that he also found that. Then they undertook to take the position that the granting of statehood to Hawaii would provide the means by which you could combat that Communist menace. I think the record ought to be clear here during this debate as to where the responsibility lies at the present time for the failure to effectively combat communism in the Hawaiian Islands up to this date. I sincerely hope that the chairman of the committee or someone can answer that question for us.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield.

Mr. EDMONDSON. The gentleman is aware of the fact that the report to which he makes reference calls attention to the passage of a dock seizure bill by the Legislature of Hawaii in 1949 which was stoutly resisted by the ILWU and the Communist element and which they have been trying to repeal ever since its passage, but without success.

Mr. ROGERS of Texas. That is not the question I asked. The fact of the matter is it was stated there has been no effective combating of the Communist situation in Hawaii up to date. I think we ought to know who is responsible for the failure up to date. Is it this Congress who is responsible or who is responsible for not having done something up to this date? I yield to the chairman because I think he is the one who ought to be permitted to answer that question in view of the report that he filed.

Mr. O'BRIEN of New York. Mr. Chairman, the report by the committee which visited Hawaii did not say that nothing was being done to combat communism in Hawaii. In fact, the very strength of our report was based upon what they were doing, and what they are doing in Hawaii. We were told by the highest authorities and the people responsible for security that the Communist apparatus there had become ineffective. We know of our own knowledge that the punishment meted out to the Communists there was punishment meted out by the people of Hawaii and by a Hawaiian jury, and these people escaped jail by a decision outside of the islands.

Mr. ROGERS of Texas. Mr. Chairman, I do not yield further, because the gentleman is not answering my question. If that is true the ILWU still has control of the economy of Hawaii.

Mr. O'BRIEN of New York. May I say to the gentleman, if he has asked me that question, that as far as the security of the United States is concerned that control to whatever extent it may be is just as serious to us whether Hawaii is a Territory or a State; but we believe that with statehood they can combat it even better than they are now doing.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield to the gentleman from New York.

Mr. PILLION. Does the gentleman from Texas know that within the past month Mr. Hall, the Communist director of the ILWU, joined with Mr. Charles Kuomi, a member of the House of Representatives in Hawaii, and other radical ILWU members of the lower house of that legislature, and the whole membership of the Republican Party, to depose and get rid of the Democratic speaker, Mr. Esposito? And that the speaker who replaced that gentleman is now a creature of Mr. Hall and Mr. Kuomi? He was a leader of the Communist Party and the gentleman they put in as speaker sent a gavel to Mr. Bridges to open up the ILWU convention in San Francisco, and they now control the lower body of the House of Representatives in the Legislature of the Territory of Hawaii.

Mr. ROGERS of Texas. I thank the gentleman from New York.

The CHAIRMAN. Under the rule the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. KILDAY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (S. 50) to provide for the admission of the State of Hawaii into the Union, pursuant to House Resolution 205, he reported the bill back to the House.

The SPEAKER. Under the rule the previous question is ordered.

The question is on the third reading of the bill.

The bill was read a third time.

The SPEAKER. The question is on the passage of the bill.

Mr. PILLION. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. PILLION. I am.

The SPEAKER. The gentleman qualifies. The Clerk will report the motion.

The Clerk read as follows:

Mr. PILLION moves that the bill S. 50 be recommitted to the Committee on Interior and Insular Affairs.

Mr. KILDAY. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

Mr. ROGERS of Texas. Mr. Speaker, on that I ask for the yeas and nays.

The yeas and nays were refused.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

Mr. O'BRIEN of New York. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken and there were—yeas 323, nays 89, not voting 22, as follows:

[Roll No. 11]

NOT VOTING—22

Bolton	Green, Pa.	Nix
Cannon	Hall	Smith, Va.
Celler	Hargis	Taylor
Curtis, Mo.	Kelly	Thompson, La.
Denton	Laird	Tuck
Dixon	Landrum	Willis
Ford	Martin	
Frelinghuysen	Morrison	

So the bill was passed.

The Clerk announced the following pairs:

On this vote:

Mr. Martin for, with Mr. Smith of Virginia against.

Mr. Celler for, with Mr. Thompson of Louisiana against.

Mr. Green of Pennsylvania for, with Mr. Willis against.

Mr. Morrison for, with Mr. Landrum against.

Mr. Ford for, with Mr. Tuck against.

Until further notice:

Mrs. Kelly with Mr. Curtis of Missouri.
Mr. Denton with Mrs. Bolton.
Mr. Nix with Mr. Frelinghuysen.
Mr. Hall with Mr. Dixon.
Mr. Hargis with Mr. Laird.
Mr. Cannon with Mr. Taylor.

Mr. DONOHUE changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

The bill, H.R. 4221, was laid on the table.

PERSONAL ANNOUNCEMENT

Mr. CANNON. Mr. Speaker, I was in the well and I ask that my name be recorded as voting in the affirmative.

The SPEAKER. The gentleman cannot be recorded after the announcement of the vote unless he voted during the rollcall.

Mr. CANNON. Mr. Speaker, I ask unanimous consent that the RECORD be revised. I was standing here in the well.

The SPEAKER. The gentleman cannot be recorded by unanimous consent, if he did not vote. If the gentleman voted and wants to correct the RECORD and say that he is not recorded, he may do that but he cannot be recorded as voting if he did not vote.

Mr. CANNON. Mr. Speaker, I should have been recorded.

GENERAL LEAVE TO EXTEND

Mr. O'BRIEN of New York. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to extend their remarks in the RECORD on the bill, S. 50.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

DISTRICT OF COLUMBIA APPROPRIATION BILL

Mr. RABAUT. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tomorrow night to file a report on the District of Columbia appropriation bill for the fiscal year 1960.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. BOW. Mr. Speaker, I reserve all points of order on the bill.

PUERTO RICO, NEXT STATE IN THE UNION?

Mr. ANFUSO. Mr. Speaker, I ask unanimous consent to address the House for 10 minutes and to revise and extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. ANFUSO. Mr. Speaker, now that favorable action has been taken by the Congress to admit Hawaii into the Union as the 50th State, I submit the proposal that at the earliest possible occasion Congress should give consideration to the granting of statehood to another U.S. Territory which unquestionably deserves this recognition and meets all the criteria required for statehood. I refer, of course, to Puerto Rico.

Contrary to the prevailing opinion in the United States, a great majority of the people of Puerto Rico believe that the island merits statehood and they advance persuasive arguments in support of their views.

But first I wish to cite some facts about Puerto Rico. Our relationship with the island began in 1898 when Puerto Rico was formally ceded to the United States under the Treaty of Paris of that year. In 1900, Congress passed the first organic act reestablishing civil rule in the island and granting to its people the right to protection by the United States, including free trade, tariff protection and financial assistance. In 1917, Congress passed the second organic act granting U.S. citizenship to the people of Puerto Rico. As a result of the latter act, many Puerto Ricans have come to our shores and have become our neighbors.

Puerto Rico is now an autonomous Commonwealth voluntarily associated with the United States. On June 4, 1951, the Congress of the United States approved Public Law 600 to grant self-government to the people of Puerto Rico. On July 25, 1952, the new Puerto Rican regime was officially proclaimed and a constitution was drawn up setting up the Commonwealth of Puerto Rico.

Mr. Speaker, a paramount reason for the admission of Puerto Rico into the Union is the fact that a number of our legislators in the past, as well as both major political parties, have at various times urged eventual statehood for Puerto Rico. It will interest my colleagues to know that as long ago as March 9, 1900, Senator Lindsay, of Kentucky, declared as follows:

> Puerto Rico is essentially an American country. It lies almost within sight of our southern shores; and while its term of Territorial probation may necessarily be an extended one, there is no reason, in its geographical situation, in its industries, in its products, or in the character of its inhabitants that precludes it at some future time from being admitted into the Union as an American State.

These words sound almost prophetic today in the light of events.

A second argument in favor of statehood is that the platforms of both the Democratic and Republican Parties have in the past on various occasions called for eventual statehood for Puerto Rico. I prefer to believe that these political testimonials were not merely empty gestures but constituted a reflection of the sentiment of the American people.

Third, is the argument based on Puerto Rico's geographic position as it fits into the picture of strategic defense. I should like to ask my colleagues to look at the map of the Western Hemisphere. One of the most striking things as you look at the map is the location of Puerto Rico right in the center as the gateway from the Atlantic to the Caribbean Sea, and directly athwart of the approaches to the Panama Canal. The more you look at that location of Puerto Rico, the more you will become impressed with its strategic location and its major importance to the defense of our country, the Panama Canal, and the whole Western Hemisphere.

Finally, I submit the argument that the admission of Puerto Rico is amply justified by other important considerations, such as its economic growth and development, the adequacy of population, its financial stability, and similar requirements which the island meets most satisfactorily. In population, for example, Puerto Rico is far larger than that of any U.S. Territory at the time of its admission into the Union. According to the census of 1950, Puerto Rico's population at that time was 2,210,703, a figure almost 4½ times as that for Hawaii and more than 17 times as large as that of Alaska.

Puerto Rico's population is equal to or greater than 24 of our States: Maine,

Vermont, New Hampshire, Rhode Island, Connecticut, North Dakota, South Dakota, Kansas, Nebraska, Delaware, West Virginia, South Carolina, Mississippi, Arkansas, Oklahoma, Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, and Oregon.

The composition of its population should also be of interest to us. The 1950 census lists 1,762,411 whites, 446,948 Negroes, and 1,344 of other races. Puerto Rico's population is further classified as follows: Urban, 894,813; rural, 1,315,890. Thus, it is primarily a rural-agricultural community raising coffee, sugarcane, and other products which are not competitive with those raised on the U.S. mainland.

In the financial and economic spheres, Puerto Rico's progress in recent years has been phenomenal. Some 300 new industries have been established in the island in the past decade. The total annual production of Puerto Rico is over a billion dollars, which is a highly respectable figure for a community chiefly agrarian and small industry, and aslo compares favorably with the production of many of our States.

As for its trade with the United States and other countries, I cite these figures for the year 1955, as taken from the Statistical Abstract of the United States:

Puerto Rican imports from the United States, $548 million.

Puerto Rican imports from other countries, $53,671,000.

Puerto Rican exports to the United States, $368,688,000.

Puerto Rican exports to other countries, $12,982,000.

Total imports, $601,681,000.

Total exports, $381,671,000.

By way of comparison, let me cite the figures for Alaska and Hawaii for the same year 1955 and from the same source:

Alaska's total imports, $2,217,563.

Alaska's total exports, $6,457,995.

Hawaii's total imports, $19,998,829.

Hawaii's total exports, $9,106,983.

And one other fact that I wish to point out. The area of Puerto Rico is 3,435 square miles, compared with 6,423 square miles for Hawaii. Puerto Rico is a little larger than half the size of Connecticut, or greater than the combined area of Delaware and Rhode Island.

I should like to mention briefly the patriotism and the loyalty shown by Puerto Ricans during World War II and the Korean war. They distinguished themselves with great valor and bravery in battle and earned wide admiration and appreciation of the American people and the whole free world.

Mr. Chairman, there is no doubt in my mind that Puerto Rico has ably demonstrated its eligibility and has met all the requirements for statehood. The people of Puerto Rico make good American citizens and are a valuable asset to our country in every phase of its activities. They are part and parcel of the fabric of America. Like millions of other Americans, our citizens of Puerto Rican descent are vitally interested in maintaining a higher standard of living, in education, in adequate housing, in proper standards of health, and, above all, they are interested in maintaining the United States and the Western Hemisphere as an area of freedom and a bulwark of democracy. They stand shoulder to shoulder with us in the current world struggle against communism.

In conclusion, I wish to state that while Puerto Ricans have received excellent treatment on the part of the American people, there have been rumblings in some quarters that they were still regarded as second-class citizens because of their Territorial status. Granting statehood to Puerto Rico would remove any doubt as to their status and would enable them to receive equal treatment and the enjoyment of all rights and privileges as all other Americans.

Now that Alaska and Hawaii have been admitted into the Union, I submit the proposal to the Congress to also consider Puerto Rico's admission. It is logical, it is desirable, it will enhance our position throughout all of Latin America.

DIVERSION OF WATER FROM LAKE MICHIGAN

The SPEAKER. The Chair recognizes the gentleman from Indiana [Mr. MADDEN].

Mr. MADDEN. Mr. Speaker, I call up a privileged resolution (H. Res. 202) and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 1) to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Public Works, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. MADDEN. Mr. Speaker, I yield 30 minutes to the gentleman from Illinois [Mr. ALLEN] and yield myself such time as I may need.

The SPEAKER. The gentleman from Illinois is recognized.

Mr. MADDEN. Mr. Speaker, House Resolution 202 makes in order the consideration of H.R. 1, requiring a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation, and for other purposes:

H.R. 1 would provide for a 3-year study by the Secretary of Health, Education, and Welfare and the Secretary of the Army of the effects of a diversion of Lake Michigan waters at Chicago in an amount of 1,000 cubic feet per second for a period of 1 year. The diversion would start 1½ years after funds were first made available for the study and would be completed a year later. The first year and a half and the last half year of the 3-year period would be used for field and office studies, evaluation of the findings and preparation of the report.

This bill is a modified version of legislation approved by the House in the last four Congresses. The principal modification in H.R. 1 is that it calls for a diversion of only 1 year, whereas the bills previously reported called for a diversion of 3 years.

The purpose of H.R. 1 would be to permit a test period of diversion to be evaluated in a study of its possible effects on the sewage treatment problem at Chicago. The bill is supported by the city of Chicago and others who are seeking a solution to the pressing pollution problem which exists in Chicago. All members of the Illinois delegation, both Republican and Democratic with the exception of one, are in favor of this bill.

After completing the study, the Secretary of Health, Education, and Welfare and the Secretary of the Army would correlate their findings and report to Congress on or before June 1, 1962. The report would contain their recommendations with respect to continuing the authority to divert water from Lake Michigan into the Illinois Waterway. Congressman THOMAS O'BREIN, the dean of the Chicago delegation, is deserving special commendation for the outstanding support he has given this legislation in this and previous sessions of the Congress.

The Public Works Committee has held extensive hearings on this subject during the past few years, and I urge the adoption of House Resolution 202 at this time.

Mr. FULTON. Mr. Speaker, will the gentleman yield?

Mr. MADDEN. I yield to the gentleman from Pennsylvania.

Mr. FULTON. What position does the administration take on this, the Department of the Interior?

Mr. MADDEN. I do not know what position they are taking on it in this session, but the President vetoed it I think session before last.

Mr. FULTON. Because of the 1-year limitation are they against this particular bill?

Mr. MADDEN. I will yield to the gentleman from Illinois [Mr. YATES] to answer the gentleman.

Mr. YATES. The 1-year limitation is a reduction from the previous bill which sought to obtain a 3-year diversion. The reduction was made at the suggestion of the administration last year.

Mr. FULTON. So, actually, the administration, then, has no opposition to the 1-year diversion, having vetoed a 3-year provision.

Mr. YATES. The administration has expressed itself through the Department of State and through the Bureau of the Budget as being in opposition to the bill.

Mr. ALLEN. Mr. Speaker, I yield myself such time as I may use.

Mr. Speaker, the rule now before us makes in order H.R. 1, a bill to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Water-

way for navigation, and for other purposes.

The author of the bill is my close friend, Hon. THOMAS J. O'BRIEN, of Chicago, one who has worked long and faithfully on this most meritorious bill.

Long hearings have been held before the Committee on Public Works, and it was favorably reported by that Committee. The Rules Committee, after holding hearings, has favorably reported it for House action.

While I am not in agreement, Canada and six Great Lakes States oppose it. Illinois is not one of the opposing States.

Canada and the opposing Great Lakes States contend that the additional diversion would do serious damage to navigation and power projects by lowering Great Lakes level. Supporters of the bill maintain that any damage would be extremely small.

This bill authorizes a diversion of an additional 1,000 cubic feet a second from Lake Michigan for a trial period of 1 year. Chicago now diverts an average of 1,500 cubic feet per second into the waterway for navigation and sanitary purposes, and uses about 1,600 cubic feet per second for domestic purposes. This also is discharged into the waterway.

I sincerely believe that after listening to debate, the great majority of the membership of the House will agree that this is a most meritorious bill, and will meet with your approval.

Mr. Speaker, it has been mentioned here that the President of the United States will veto this bill. It is true he has vetoed a bill along these lines, but not this identical bill.

Mr. Speaker, I yield such time as he may desire to the gentleman from Illinois [Mr. SPRINGER].

Mr. SPRINGER. Mr. Speaker, I have supported similar legislation to this in 3 previous years. I supported the legislation because I thought it was good legislation and would not do the harm it was claimed it would do by other States bordering on the Great Lakes, but, on the other hand, would do a great deal of good for the city of Chicago. I believe it is legislation in the general public interest.

Mr. ALLEN. Mr. Speaker, I yield such time as he may desire to the gentleman from Illinois [Mr. DERWINSKI].

Mr. DERWINSKI. Mr. Speaker, on behalf of the residents of my district and the entire State of Illinois, and I can truthfully say in a theoretical sense, on behalf of all the citizens of the country, I wish to join my colleagues from Illinois in urging that the members of the House support H.R. 1 giving needed lake diversion for the Chicago metropolitan area in the State of Illinois an opportunity to be properly tested.

It is unfortunate that a measure so obviously in the public interest should be subject to gross misinterpretation by misguided opponents throughout the country. All that we are asking for in this measure is to authorize the Chicago Metropolitan Sanitary District to take an additional 1,000 cubic feet of water a second from Lake Michigan for a 1-year experimental period. This increased diversion would be a tremendous help to the disposal of sewage in the Chicago area and for navigation on the all-important Illinois inland waterway system.

I urge you to disregard the objections that have been raised to this measure including the obvious confusion that our State Department has in their knowledge of this issue. All the reliable research indicates that this 1-year experimental period will have no practical effect whatsoever on the water level of the Great Lakes.

I am positive, ladies and gentlemen of the House, that you will support the united stand of the Illinois representatives and vote for this practical, worthwhile, and necessary measure.

Mr. ALLEN. Mr. Speaker, I yield such time as he may desire to the gentleman from Ohio [Mr. FEIGHAN].

Mr. FEIGHAN. Mr. Speaker, I am opposed to adoption of this rule and the passage of H.R. 1. The minority report in opposition to H.R. 1 sets forth 14 cogent reasons in opposition to H.R. 1. The supplemental views of the gentleman from Ohio [Mr. SCHERER] present a clear analysis of the bill and the reasons why it should be rejected. The water level of Lake Erie is about 4 feet lower than it was 6 years ago. In 1952 the elevation of Lake Erie was 574.4 above sea level. Today it is 570.2. This low water level means that Cleveland must have additional dredging to accommodate the large ships that will soon be sailing on the Great Lakes. If the water level is lowered more, other very expensive rehabilitation programs will be necessary. Reduction of the water level of Lake Erie would greatly lessen cargo capacities of freighters. Reduction of the water level would very adversely affect the city of Cleveland because as a result of the diversion, the potential capacity of Cleveland's four water intake plants would be reduced about 2½ to 3½ million gallons a day. This in face of the fact that a serious problem already exists at two of the filtration plants where maximum extraction of water is required each summer. Ralph S. Locher, Cleveland law director, has stated that passage of this bill would endanger the city of Cleveland's domestic water supply.

I feel strongly that the fact that the city of Chicago, under the United States Supreme Court decision, may apply for and obtain relief if it can present and sustain persuasive arguments on its behalf, is sufficient guarantee to it that its rights are protected. I feel that it has a legal remedy and that any redress to which it is entitled will be given it if it is able to persuade the United States Supreme Court of the justice of its claims.

It is my opinion that the arguments presented in opposition to H.R. 1 are overwhelming. The city of Chicago is not in a position whereby it does not have any redress. There is the opportunity open to it to present its case to the U.S. Supreme Court in accordance with the procedure outlined in its decision.

I urge the defeat of this rule.

Mr. ALLEN. Mr. Speaker, I yield such time as he may desire to the gentleman from Michigan [Mr. BENTLEY].

Mr. BENTLEY. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. BENTLEY. Mr. Speaker, I rise in opposition to the passage of H.R. 1, a bill to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation, and for other purposes. I intend to confine my remarks this afternoon to a study of the probable effects this legislation, if passed and enacted into law, would have upon our relations with the Canadian Government. For that purpose, I include in my remarks at this point the text of a memorandum prepared for me by the Department of State and containing a review of the Canadian position on the proposed Chicago diversion.

MEMORANDUM

There has been a continuous diversion of waters from Lake Michigan at Chicago into the Mississippi watershed since January 17, 1900, when the Chicago drainage canal was opened. Five thousand cubic feet of water per second (an amount greater than that presently authorized) was diverted for purposes of navigation and sewage dilution by permit from the Secretary of War.

During the years 1922–26, various Great Lakes States filed suits in the U.S. Supreme Court to enjoin the diversion or to restrict diversion to an amount to be determined by the Court. The defendants were then diverting 8,500 cubic feet per second under a permit issued by the Secretary of War in 1925. The Supreme Court held in 1929 that the Secretary of War's authority was limited to permitting diversion for navigation in the Illinois Waterway and that it did not extend to diversion for sanitation purposes. In order to avoid health hazards, the Court decided that the reduction in diversion to an amount necessary only for navigation should be gradual to enable Chicago to construct sewage-treatment plants. Consequently, a decree was entered on April 21, 1930, authorizing Illinois and the Chicago Sanitary District to divert, in addition to whatever water was needed for domestic uses, no more than 1,500 cubic feet per second from Lake Michigan after December 31, 1938. That Supreme Court decree is still in effect.

In the 83d, 84th, and 85th Congresses legislation was introduced authorizing the Chicago Sanitary District to divert an additional 1,000 cubic feet per second for a period of 3 years, during which time studies were to be made of the effect of such increased diversion upon the level of Lake Michigan and upon navigation on the Great Lakes and the Illinois Waterway. The diversion bills passed the 83d and 84th Congresses, but were vetoed by the President. A similar bill in the 85th Congress failed to pass the Senate. In the present 86th Congress H.R. 1 and similar bills have been introduced providing for a 1-year additional diversion as part of a 3-year study.

The Government of Canada has made known to our Government at various times its views on the diversion legislation before the 83d, 84th, 85th, and 86th Congresses.

Two notes from the Canadian Embassy to the Secretary of State dated February 1 and March 10, 1954, objected to the bill before the 83d Congress. In the latter note, the

Canadian Government referred to article II of the Boundary Waters Treaty and stated:

"The terms of the last paragraph of that article clearly affirm the understanding that neither party to the treaty surrenders 'any right which it may have to object to any interference with or diversion of waters on the other side of the boundary the effect of which would be productive of material injury to the navigation interests on its own side of the boundary.' If the proposed increase in the diversion at Chicago were to take place, the Government of Canada would, in the circumstances described above, consider that there would be material injury to the navigation interests on its side of the boundary."

The Canadian note of March 10, 1954, concludes as follows:

"The Canadian Government wishes to draw attention once more to the fact that the Chicago diversion is one aspect of a matter now before the International Joint Commission and it is suggested that it would be in the best interests of Canada and the United States to allow the Commission to complete its study of this and related matters before any change in arrangements affecting the levels of the Great Lakes is authorized."

A third note, dated August 24, 1954, was sent by the Canadian Embassy to the Department of State. Attention was again drawn to the contents of its previous notes and the following statement was made:

"As mentioned in my previous two notes, the Canadian Government considers that the adoption of this measure would have an adverse effect on navigation in the Great Lakes and the St. Lawrence River. After careful consideration the Government of Canada has reached the conclusion that an increase in the diversion at Chicago by 1,000 cubic feet per second as provided in this legislation would in fact result in injury to navigation in boundary waters, particularly during cycles of low levels on the Great Lakes.

"It is the view of my Government, therefore, that the implementation of this proposed legislation would constitute a diversion of waters on the United States side of the boundary, the effect of which will be productive of material injury to the navigation interests on the Canadian side of the boundary. In these circumstances and in accordance with the right which is expressly reserved in article II of the Boundary Waters Treaty of 1909, I am instructed by my Government to make formal objection to the proposed increase in the diversion of the waters of Lake Michigan and to request that the United States Government take whatever measures may be appropriate to insure that this proposal is not implemented."

In his further note of February 13, 1956, the Canadian Ambassador stated in the concluding paragraph that—

"I am accordingly instructed to make clear that, in the view of the Canadian Government, the enactment of the proposed legislation would be prejudicial to the navigation and power interests of both countries."

An aide memoire of January 6, 1958, from the Canadian Embassy referred to "useful conversations between United States and Canadian officials" on July 9, 1957, on various aspects of the proposed diversion from the Great Lakes system.

"In considering the economics of alternative methods of improved waste disposal, it is assumed that full consideration will be given to the economic harm which may be done to navigation and hydroelectric generation in both countries by extended use of dilution methods.

"It is not possible to give a firm undertaking to provide flows of a particular volume through the existing Long Lac and Ogoki diversions to the Great Lakes Basin during the 3-year period envisaged by proposed United States legislation. However, if it were possible to offset part of the effects of the Chicago diversion by inflows from the Albany Basin in Canada, it would be equitable that an equivalent amount of water should remain available for use in hydroelectric power generation by the Ontario interests at St. Marys Falls, Niagara Falls and in the international section of the St. Lawrence River until the effects of the proposed temporary diversion will have ceased to be felt in the Great Lakes system.

"All rights under the provisions of the Boundary Waters Treaty of 1909 are specifically reserved."

In an aide memoire dated February 20, 1959, responding to a request from the United States Government dated February 9, 1959, the Canadian Government set forth its views on H.R. 1 and similar diversion bills being considered by the 86th Congress. A copy of this aide memoire and the United States request therefor are enclosed herewith for your information.

I also wish to include in my own remarks, Mr. Speaker, the text of the State Department's press release No. 136 dated February 24, 1959. This release contains the text of an exchange of aide memoires between the United States Government and the Canadian Government on increased diversion of water from Lake Michigan at Chicago.

The State Department today released the text of an exchange of aide memoires between the United States Government and the Canadian Government on increased diversion of water from Lake Michigan at Chicago.

The text of the U.S. aide memoire, sent to the Canadian Government on February 9, 1959, is as follows:

"The Canadian Government has, on various occasions in the past, furnished the Department of State with the Canadian views on proposed U.S. legislation aimed at increasing the diversion from Lake Michigan into the Illinois Waterway. The most recent comments of this nature were contained in an aide memoire received on January 6, 1958, from the Canadian Embassy in Washington.

"Once again this year, as in recent years, a considerable volume of legislation, looking to increased diversion from Lake Michigan at Chicago, has been introduced in the 86th Congress. Some of this legislation is similar to former legislation with regard to which Canadian views have previously been expressed. A number of other pending bills, however, such as H.R. 1, a copy of which is enclosed, call for a 1-year additional diversion period to be made as part of a 3-year study of the effect on Lake Michigan and on the Illinois Waterway of such an increased diversion.

"Congressional hearings on this legislation are scheduled to begin in the near future. During the course of these hearings, it is anticipated that the Department of State will be asked to submit a statement as to the present Canadian views. It is hoped, therefore, that the Canadian Government will be able to transmit to the Embassy at an early date, its views with respect to that proposed legislation which authorizes an additional 1,000 cubic feet of water per second to be diverted from Lake Micihgan into the Illinois Waterway for a period of 1 year as part of a 3-year study."

On February 20, the Canadian Government responded to the United States memorandum with the following aide memoire:

"On a number of occasions in the past, the Canadian Government has expressed its objections to proposals envisaging increased diversions of water from Lake Michigan at Chicago. Once again, and at the invitation of the Government of the United States through the United States Embassy's aide memoire of February 9, 1959, the Government of Canada is anxious to make known its views on legislative proposals now before Congress such as bill H.R. 1, which are intended to authorize an increased diversion of water from the Great Lakes Basin into the Illinois Waterway.

"While recognizing that the use of Lake Michigan water is a matter within the jurisdiction of the United States of America, it is the considered opinion of the Canadian Government that any authorization for an additional diversion would be incompatible with the arrangements for the St. Lawrence Seaway and power development, and with the Niagara Treaty of 1950, and would be prejudicial to navigation and power development which these mutual arrangements were designed to improve and facilitate.

"The point has been made repeatedly by Canada that every withdrawal of water from the basin means less depth available for shipping in harbors and in channels. Additional withdrawals would have adverse effects on the hydro-electric generation potential on both sides of the border at Niagara Falls and in the international section of the St. Lawrence River, as well as in the Province of Quebec, and would inflict hardship on communities and industries on both sides of the border.

"The Government of Canada therefore protests against the implementation of proposals contained in H.R. 1."

There is no question in my mind, Mr. Speaker, that this additional diversion authorized by H.R. 1 would set dangerous precedents in our relationships with Canada. I refer to the recent testimony of Robert Moses, chairman of the New York State Power Authority, on February 17 who said that if Chicago were allowed to take water from a system jointly shared with Canada, then Canada would have a basis for demanding that it be allowed to divert additional water from Niagara, the St. Lawrence, and the Columbia River Basin.

On March 3, the attorney general of the State of Michigan, Paul L. Adams, testified before the House Public Works Committee and referred to a State Department study entitled "Legal Aspects of the Use of Systems of International Waters," printed as Senate Document No. 118. He referred to certain principles contained in this study governing systems of international waters and which are clearly applicable in this case.

The House should be informed that, under the Boundary Water Treaty of 1909, the International Joint Commission was created to study the contentions of Canada and of our country over the use of waters which are international in character between us and Canada such as the Columbia-Kootenay River system.

In his earlier testimony before the committee on February 17, Attorney General Adams referred to a conversation with Mr. Harry C. Donohue, secretary to the American section of the International Joint Commission. To use Mr. Adams' own words:

He (Mr. Donohue) informed us that there has been no settlement between us and Canada of the proposed Columbia River diversion; that Gen. A. G. L. McNaughton, chairman of the Canadian section, still insists on Canada's right to divert the Columbia River; that Canada still reserves its right under the treaty of 1909 with respect to the Chicago diversion and still continues to use

the Chicago diversion as a precedent against us in justification of its demands to divert the Columbia River.

At this point, Mr. Speaker, I think it would be useful to include in my remarks the text of a letter written by Attorney General Adams and Assistant Attorney General Olds of Michigan to Col. John Raymond, Deputy Legal Advisor to the State Department, under date of December 3, 1958, discussing the international ramifications of the Chicago diversion controversy.

STATE OF MICHIGAN,
Lansing, December 3, 1958.

Col. JOHN RAYMOND,
Deputy Legal Adviser,
State Department,
Washington, D.C.

DEAR COLONEL RAYMOND: It was a real pleasure to have had the privilege of discussing with you and your associates in the State Department the international ramifications of the Chicago diversion controversy. It occurs to me that since this matter is of such vital importance both to the States involved and to the Federal Government we should keep each other informed of any developments that would affect in some degree our separate or mutual interests.

Although the other complainant States did not have personal representatives at this conference, may I assure you that the views expressed by Mr. Boyd, assistant attorney general of Ohio. Mr. Torina, solicitor general of Michigan, and myself reflect the views of those who have been representing the States of Minnesota, Wisconsin, Pennsylvania, and New York with whom we have been conferring during the past year.

May I summarize what I consider to be the viewpoints of the complaining States as we discussed them at this conference:

1. The Great Lakes Basin constitutes the largest fresh water basin in the world; it is an international body of water since it forms a boundary between the United States and Canada, and whatever occurs in or to these waters may cause injury to either Nation.

2. Both the United States and Canada have a common, mutual interest in the navigation that occurs on these waters, and of course this interest is now greater than before on account of the near completion of the St. Lawrence Seaway.

3. The Great Lakes Basin is the source of enormous hydroelectric power, particularly beginning at Niagara and extending southward in Lake Ontario and the St. Lawrence River. The production of this power has been agreed upon by our two countries and, of course, every drop of water that is lost to this basin by diversion or by any other artificial extraction directly affects adversely the generating potential of the powerplan's now in construction as well as those contemplated.

4. Both countries have a common interest in maintaining the integrity of the water naturally belonging to this basin because lake levels affect the navigational depth of ports and harbors, the use of our shores for recreational purposes, and the management and maintenance of the wildlife populations that abound in these waters.

5. Although Lake Michigan does not actually border Canada, nevertheless Lake Michigan and Lake Huron constitute one lake both geologically and hydraulically. Any lowering of water in Lake Michigan directly affects the levels of Lake Huron, Lake Erie, Lake Ontario, and the St. Lawrence River. This fact does not seem to be understood by many people, even some who are high in the Government of the United States. I recall very vividly many efforts made by Senator KERR during the hearings before the Senate Public Works Committee this summer in which he repeatedly insisted that Lake Michigan did not border Canada and, therefore, he could not understand what business it was of Canada's to protest the diversion at Chicago.

6. Although the memorandum received from the State Department by the Senate Committee on Public Works indicated that Canada would not protest the temporary 1-year diversion of 1,000 cubic feet per second contemplated during the hearings on H.R. 2 in the 85th Congress, nevertheless we are under the impression (as indicated in your letter to me of April 22, 1958) that Canada has protested the Chicago diversion pursuant to paragraph 2 of article 2 of the Boundary Water Treaty of 1909.

There are certainly real grounds for fearing that should the Chicago diversion continue to increase in amount, as it surely will if Illinois and the sanitary district succeed in their efforts, Canada will use the diversion by Chicago as a precedent against us before the International Court of Justice in case we get into a disagreement with Canada over its intentions to divert the waters of the Columbia River. The intricacies of this international problem are explained in Senate Document 118 containing a study made by Mr. Griffin of your Department on "The Legal Aspects of the Use of Systems of International Waters With Reference to Columbia-Kootenai River System."

Consequently, it behooves all of us, State officials as well as officials of the Federal Government, to take positions which are not vulnerable in the event serious efforts are made to bring about diversion of rivers or bodies of water that rise in Canada and flow into the United States.

7. As we explained to you in great detail at the conference, there exists no overriding necessity on the part of the Sanitary Dictrict of Chicago to continue its present diversion of water for domestic uses, let alone to increase it. Every single municipality on the Great Lakes except Chicago returns to the Great Lakes the water which it has extracted, used and purified through sewage treatment plants. We see no reason why Chicago should not be made to do likewise; in fact, the only excuse that it may offer for its neglect and refusal to return the water to Lake Michigan is that it would cost money to do so. To us this is no valid reason, let alone a legal defense. Chicago and its metropolitan area is a rich, growing, expanding community. I am told that its per capita cost for collection and treatment of sewage is well below that which is carried by much smaller communities. It has such a large tax and revenue-collecting base that it could well afford to construct and operate the works that are necessary to return to Lake Michigan the effluent which is discharged by its plant after adequate treatment.

8. However, there is an even greater danger confronting us and this danger looms ever larger than the present and prospective diversion at Chicago. When we visualize a growing demand for enormous quantities of water for domestic and industrial uses as our population increases and industry demands greater water supplies for its processes, the danger becomes even more menacing.

You will recall that we showed you a map of the Great Lakes Basin prepared by the Lake Survey Division of the United States Corps of Engineers. In many places the divide is not too far distant from the shores of Lake Michigan, Lake Superior, Lake Erie, and Lake Ontario. There are many places at which new and additional diversions could be initiated both by Canada and by our States. In fact right now we are wrestling with an attempted diversion by the Elmhurst—Villa Park—Lombard Water Commission to supply the water needs of communities in DuPage County situated in Illinois on the Misisssippi side of the divide.

There have already been some inquiries and talk circulating around that industries located on the Ohio River side of the divide wish to extract water from Lake Erie into the Ohio River. You will recall that we observed many places where such diversions could be made. We must remember that this huge fresh water basin, the largest of its kind in the world, is viewed with longing eyes by water-thirsty communities located in other places that would like to tap and drain its water resources.

Therefore, it is our fear that unless both our courts and our legislative bodies, including Congress, adhere to a firm principle by which it is considered an act of trespass or illegality for any person, State or entity to extract water from the Great Lakes Basin and thereafter allow it to be diverted to another basin, the day will come when the Great Lakes Basin will be nothing but a "grab-bag" for all comers. The result will be utter chaos and the consequences will be sad to contemplate.

Perhaps this was the first opportunity that you have had to become acquainted with the views of the other Great Lakes States in regard to the transcendent issues which are involved herein. We believe that they should be settled upon the basis that paramount interests of the whole Nation are at stake. The increase in overseas navigation which will result from the existence of the St. Lawrence Seaway is a benefit that will inure to future generations for centuries to come. However, unless we jealously guard the waters that rightfully belong in this basin from depredation, all the expense and effort that have gone into construction of this eighth wonder of the world will be dissipated and set at naught.

We feel very strongly that our Supreme Court has not had the benefit of a clear exposition of the vast international and national interests here involved. We appreciate that this is the function of the Solicitor General of the United States, but we realize that he depends on your Department for information, advice and guidance on these phases of this case. May we hope that you will present this problem in the setting which we have tried to express in this letter so that he will understand, and the court will understand, that we are not here dealing with a microcosmic problem, but with one which unless resolved correctly now will later bring untold injury and anguish to the generations which follow us.

Very truly yours,

PAUL L. ADAMS,
Attorney General.
By NICHOLAS V. OLDS,
Assistant Attorney General.

Now, Mr. Speaker, with further reference to the possible effect of the passage of H.R. 1 on upper Columbia River diversions, I refer to a letter written by the State Department on July 29, 1958, to Senator NEUBERGER, of Oregon, which reads in part as follows:

The proposed legislation authorizing an increased diversion from Lake Michigan at Chicago has been opposed by Canada on the ground that it may cause injury to Canadian navigation and hydroelectric power interests. Canada's reasons for opposing the Chicago diversion bill are thus very similar to those of the United States with respect to the Columbia River diversion, and it would seem that H.R. 2, if enacted, could constitute a precedent to be used by the Canadian interests in support of their proposals on the Columbia.

This letter was referred to in Senator NEUBERGER's individual concurrent views contained in Senate Report No. 2482 of last year and concerned with H.R. 2, a somewhat similar piece of legislation to that which we are considering today. In those views Senator NEUBERGER stated

"It seems clear that, had this been the last word on this subject, it would have been our duty in the situation described above to oppose H.R. 2 in defense of the tremendous interest which the Pacific Northwest has in an equitable solution of the Columbia River problem, in the face of a continued objection by Canada to the Chicago diversion we could, in the interests of our region of the country, reach no other decision." I submit to my colleagues from the Pacific Northwest that the opposition of the Canadian Government to H.R. 1 has been clearly established and that I am certain they will see their proper course of action.

Mr. Speaker, at this time I should like to give a background sketch of the international legal situation on the question of this diversion issue that I believe will be helpful in considering this entire matter.

There has been a continuous diversion of waters from the Great Lakes Basin at Chicago into the Mississippi watershed since January 17, 1900, when the Chicago Drainage Canal was opened and 5,000 cubic feet of water per second—an amount greater than presently authorized—was diverted by permit by the Secretary of War—Olia and Sprecher, "Legal Aspects of Lake Diversion," Northwestern University Law Review, page 656 (1957). The amount of the diversion had been increased at the time that the treaty between the United States and Great Britain relating to boundary waters and questions arising between the United States and Canada were signed on January 11, 1909 (36 Stat. 2448; T.S. 548). The treaty went into effect on May 13, 1910, and is still operative.

Canadian opposition to the Chicago diversion existed prior to the signing of the 1909 treaty. The "Second Interim Report of the Canadian Section of the International Waterway Commission," dated April 25, 1906, contained the following reference to this diversion:

> At Chicago, the Americans have built a drainage canal which, when in full operation, will use about 10,000 cubic feet of water per second * * * which will have the effect of lowering Lake Michigan by over 6 inches, and Lake Erie by 4½ inches.
>
> * * * * *
>
> It is exceedingly important in the interests of navigation, both to ourselves and to the people of the United States, that the diversion by way of the Chicago drainage canal should be limited. It is equally essential in the interest of both countries that no diversion or interference should be allowed in streams crossing the boundary which would interfere with the interests of navigation in either country.

The terms of the Boundary Waters Treaty of 1909 do not appear to affect the legal rights of United States or Canadian interests in regard to the Chicago diversion. The preliminary article of the treaty defines "boundary waters" as "the waters from main shore to main shore of the lakes, along which the international boundary between the United States and the Dominion of Canada passes, including all bays, arms, and inlets thereof, but not including tributary waters, which in their natural channels would flow into such lakes." Lake Michigan is not a "boundary water" because it is entirely within the United States, and the part of the lake which is closest to Canada is about 40 miles from the international boundary. Secretary of State Elihu Root, who negotiated the treaty on behalf of the United States explained in his testimony regarding the treaty before the Senate Foreign Relations Committee that "the definition of boundary waters was carefully drawn in order to exclude Lake Michigan"—Naujoks' "The Chicago Water Diversion Controversy," 30 Marquette Law Review 228, 251 (1947).

Jurisdiction and control over diversions from bodies of water, such as Lake Michigan, which do not fall within the definition of "boundary waters" are reserved to the State where such water is located by article II of the treaty which reads in part:

> Each of the high contracting parties reserves to itself or to the several State governments on the one side and the Dominion or Provincial Governments on the other as the case may be, subject to any treaty provisions now existing with respect thereto, the exclusive jurisdiction and control over the use and diversion, whether temporary or permanent, of all waters on its own side of the line which in their natural channels would flow across the boundary or into boundary waters.

Injured parties are given certain rights and remedies in respect of diversions in the other country by the succeeding clause of the treaty subject to the proviso that such rights and remedies do not apply to cases already existing. That proviso thus eliminates rights of injured parties in regard to the Chicago diversion which was already an existing case.

Canadian Federal and Provincial interests which may be injured by diversions are not covered by the rights and remedies clause just cited or the proviso thereto. A memorandum by Mr. Chandler Anderson, who drafted the treaty, states as follows:

> The right of action for damages provided for in article II applies to private or individual interests in distinction from public or governmental interests. Any question on the point is set at rest by the use of the words "injured parties." Whenever the word party is used in a treaty, referring the high contracting parties, a capital P is used, so the absence of the capital and the use of the word in the plural indicates that it can refer only to individuals. (Files of the Department of State.)

The only other provision of the treaty which must be considered in connection with the Chicago diversion is the final paragraph of article II, which states:

> It is understood, however, that neither of the high contracting parties intends by the foregoing provision to surrender any right, which it may have, to object to any interference with or diversions of waters on the other side of the boundary the effect of which would be productive of material injury to the navigation interests on its own side of the boundary.

Secretary Root in his testimony, cited above, made the following statements after citing the terms of the last paragraph of article II:

> There should clearly be a right, there would be a right to object to, for instance, drying up one of the lakes. Either country, for instance, would be justified in going to war to prevent the other country from drying up Lake Erie, and that right to object to the destruction of the navigation in these international waters is preserved. I did not want to press Canada to give up any such rights, and I did not want to give up any such rights ourselves.

And later on in his testimony, when the Secretary was explaining why Canada was allowed to take a greater amount of water at Niagara than the United States under article V of the treaty, he stated:

> In the third place they consented to leave out of this treaty any reference to the drainage canal, and we are now taking 10,000 cubic feet per second for the drainage canal which really comes out of this lake system.

The opinion of Attorney General Judson Harmon, rendered on December 12, 1895, to the Secretary of State relates to the taking of water from the Rio Grande for irrigation in relation to article VII of the treaty of Guadalupe Hidalgo between Mexico and the United States of February 2, 1848. He concluded that the United States as the upstream country in that case had an unlimited right to divert the waters in question and that injured Mexican interests were without right or remedy. The Department of State believes that a reiteration of the Harmon doctrine by any branch of the U.S. Government would not be in the best interests of this country or in line with the progressive development of international law during the last 60 years.

When the United States negotiated a treaty with Mexico relating to the utilization of waters of the Colorado and Tijuana Rivers and of the Rio Grande with Mexico, which was signed at Washington on February 3, 1944—TS 994—the United States no longer asserted that the upstream country had an unlimited right to divert waters within its boundary. At the time the Secretary of State made the following statement before the Senate:

> It must be realized that each country owes to the other some obligation with respect to the water of these international streams, and until this obligation is recognized and defined, there must inevitably be unrest and uncertainty in the communities served by them—a condition which becomes more serious with the increasing burden of an expanding population dependent upon the waters of these streams.

In addition the Assistant Secretary of State declared:

> The logical conclusion of the legal argument of the opponents of the treaty appears to be that an upstream nation by unilateral act in its own territory can impinge upon the rights of a downstream nation; this is hardly the kind of legal doctrine that can be seriously urged in these times. (Hearing before the Committee on Foreign Relations, U.S. Senate, 79th Congress, 1st sess., part 1, p. 19 (Secretary of State); part 5, p. 1762 (Assistant Secretary of State).

The Supreme Court, in dealing with the problem of interstate diversions, has developed the principle of "Equitable Apportionment" in a notable series of cases—*Kansas* v. *Colorado*, 185 U.S. 125 (1902), 206 U.S. 46 (1906); *Hinderlider* v. *La Plata Company*, 304 U.S. 92 (1937). In the development of this principle, the Court has indicated that it was acting, at least partially, in the field of interna-

tional law. Thus, in the second opinion in *Kansas* v. *Colorado*, the Court states, at page 97:

Nor is our jurisdiction ousted, even if, because Kansas and Colorado are States sovereign and independent in local matters, the relations between them depend in any respect upon principles of international law. International law is no alien in this tribunal.

Principles similar to that of "Equitable Apportionment" have won increasing acceptance in international law. The Italian Court of Cassation, for example, stated in 1939:

International law recognizes the right on the part of every riparian State to enjoy, as a participant of a kind of partnership created by the river, all the advantages deriving from it for the purpose of securing the welfare and the economic and civil progress of the Nation. * * * However, although a State, in the exercise of its right of sovereignty, may subject public rivers to whatever regime it deems best, it cannot disregard the international duty, derived from that principle, not to impede or to destroy, as a result of this regime, the opportunity of the other States to avail themselves of the flow of water for their own national needs. In order to settle this conflict between the exercise of the right of sovereignty and the fulfillment of the duty imposed by the comitas sentius, regulations have been laid down by international conventions. ("Annual Digest and Reports of Public International Law Cases" (1938–1940, 120 at 121).)

The United States has taken the position that there is no basis under either the Boundary Waters Treaty of 1909 or customary international law for any contention that Canada has a legal right unilaterally to divert within its own territory certain waters of the Columbia River Basin, without regard to any material injury which may be sustained by downstream interests in the United States.

Canada, in its most recent aide memoire—February 20, 1959—has protested against the proposed legislation—H.R. 1—authorizing an increased diversion from Lake Michigan on the ground that such diversion would adversely affect navigation and hydro-electric interests in the Great Lakes Basin. If this increased diversion should take place despite Canada's protest and if, in fact, it should cause material injury to Canadian interests, Canada might well take the position that the United States by ignoring the Canadian protest gave Canada justification for taking a similar course of action with regard to a diversion in the upper Columbia River Basin.

Two notes from the Canadian Embassy to the Secretary of State dated February 1 and March 10, 1954, objected to the bill before the 83d Congress. In the latter note, the Canadian Government referred to article II of the Boundary Waters Treaty and stated:

The terms of the last paragraph of that article clearly affirm the understanding that neither party to the treaty surrenders "any right which it may have to object to any interference with or diversion of waters on the other side of the boundary the effect of which would be productive of material injury to the navigation interests on its own side of the boundary." If the proposed increase in the diversion at Chicago were to take place, the Government of Canada would, in the circumstances described above, consider that there would be material injury to the navigation interests on its side of the boundary.

The Canadian note of March 10, 1954, concludes as follows:

The Canadian Government wishes to draw attention once more to the fact that the Chicago diversion is one aspect of a matter now before the International Joint Commission and it is suggested that it would be in the best interests of Canada and the United States to allow the Commission to complete its study of this and related matters before any change in arrangements affecting the levels of the Great Lakes is authorized.

A third note, dated August 24, 1954, was sent by the Canadian Embassy to the Department of State. Attention was again drawn to the contents of its previous notes and the following statement was made:

As mentioned in my previous two notes, the Canadian Government considers that the adoption of this measure would have an adverse effect on navigation in the Great Lakes and the St. Lawrence River. After careful consideration the Government of Canada has reached the conclusion that an increase in the diversion at Chicago by 1,000 cubic feet per second as provided in this legislation would in fact result in injury to navigation in boundary waters, particularly during cycles of low levels on the Great Lakes.

It is the view of my Government, therefore, that the implementation of this proposed legislation would constitute a diversion of waters on the United States side of the boundary, the effect of which will be productive of material injury to the navigation interests on the Canadian side of the boundary. In these circumstances and in accordance with the right which is expressly reserved in article II of the Boundary Waters Treaty of 1909, I am instructed by my Government to make formal objection to the proposed increase in the diversion of the waters of Lake Michigan and to request that the U.S. Government take whatever measure may be appropriate to insure that this proposal is not implemented.

In his further note of February 13, 1956, the Canadian Ambassador stated in the concluding paragraph that:

I am accordingly instructed to make clear that, in the view of the Canadian Government, the enactment of the proposed legislation would be prejudicial to the navigation and power interests of both countries.

An aide memoire of January 6, 1958, from the Canadian Embassy referred to "useful conversations between United States and Canadian officials" on July 9, 1957, on various aspects of the proposed diversion from the Great Lakes system:

In considering the economics of alternative methods of improved waste disposal, it is assumed that full consideration will be given to the economic harm which may be done to navigation and hydroelectric generation in both countries by extended use of dilution methods.

It is not possible to give a firm undertaking to provide flows of a particular volume through the existing Long Lac and Ogoki diversions to the Great Lakes Basin during the 3-year period envisaged by proposed U.S. legislation. However, if it were possible to offset part of the effects of the Chicago diversion by inflows from the Albany Basin in Canada, it would be equitable that an equivalent amount of water should remain available for use in hydroelectric power generation by the Ontario interests at St. Marys Falls, Niagara Falls and in the International Section of the St. Lawrence River until the effects of the proposed temporary diversion will have ceased to be felt in the Great Lakes system.

All rights under the provisions of the Boundary Waters Treaty of 1909 are specifically reserved.

I should also like to include at this point the text of the statement of Mr. Woodbury W. Willoughby, director, Office of British Commonwealth and Northern European Affairs, before the House Committee on Public Works on H.R. 1.

STATEMENT OF WOODBURY W. WILLOUGHBY, DIRECTOR, OFFICE OF BRITISH COMMONWEALTH AND NORTHERN EUROPEAN AFFAIRS, BEFORE THE HOUSE COMMITTEE ON PUBLIC WORKS ON H.R. 1

H.R. 1 authorizes the withdrawal of water from the Great Lakes Basin at Chicago and thus must be considered in relation to the rights of Canada as a co-riparian in the waters of that basin. The Department, in the interest of maintaining harmonious relations with that country, has traditionally sought its views on proposals of this type.

This committee has previously been furnished with the texts of the recent communications exchanged with the Canadian Government regarding its views on H.R. 1, and will have noted the protest registered by that Government against implementation of the proposals contained in the bill. I should be glad to submit a copy at this time for insertion in the record.

The most recent Canadian aide memoire, dated February 20, 1959, expresses the opinion that any authorization for an additional diversion from Lake Michigan at Chicago would be incompatible with the arrangements for the St. Lawrence Seaway and power development, and with the Niagara Treaty of 1950, and would be prejudicial to navigation and power development which these mutual arrangements were designed to improve and facilitate.

Neither the Niagara Treaty nor the International Joint Commission orders relating to the development of power by the United States and Canada in the International Rapids section of the St. Lawrence River, place any specific limitation upon diversions of the type authorized by H.R. 1. Nevertheless, the Department is not in a position to question the Canadian position that an additional withdrawal of water from the Great Lakes Basin such as that under consideration would affect adversely Canadian navigation and power interests in the Great Lakes, their connecting channels, and the St. Lawrence River.

I understand that estimates have been furnished to the Congress by the U.S. Army Corp of Engineers as to the extent of the damage that would be suffered by downstream hydroelectric interests on both sides of the boundary in the event that the present proposal is enacted. It is noted that H.R. 1 provides no means by which injured parties may be compensated.

In view of the foregoing, the Department believes that enactment of H.R. 1 would adversely affect our relations with a friendly foreign government. Therefore, it is unable to support this legislation.

Mr. Speaker, I have read the committee report on H.R. 1. It is contained therein that the Columbia River problem should have no weight in reaching a decision on the Chicago diversion. I think that the words of Mr. Donohue as quoted in the February 17 testimony of Attorney General Adams is evidence that the Canadian Government does feel that Lake Michigan diversion would definitely provide it with a precedent for Columbia River diversion.

I note that the committee report also states "since Lake Michigan is not an international water and is not covered by the Boundary Waters Treaty of 1909, there is no legal obstacle to diversion by the United States of water from Lake Michigan." But the Canadian Government, Mr. Speaker, has not asserted that the Chicago diversion constitutes a breach of the treaty but has rather stated that the increased diversions would be productive of injury to Canadian navigation interests. The right on the part of the Canadians to make such an objection is contained in paragraph 2 of article II of the Boundary Waters Treaty.

I believe I have presented sufficient evidence here this afternoon, Mr. Speaker, to show that the Canadian Government is opposed and has been opposed for some time, to enactment of legislation such as H.R. 1. I think the presumption can safely be drawn that the enactment of H.R. 1 would be damaging to our present friendly relations with the Government of Canada.

Mr. Speaker, until quite recently, good relations with our neighbors to the north were taken as a matter of course. But lately there have been disturbing signs that even the closest and friendliest of neighbors should not be taken for granted. In this connection, I refer Members to the two reports of the Hays-Coffin study mission to Canada last year. There is an important paragraph contained in the conclusion to the second report (p. 43):

> It may well be that we have reached a stage where the cooperation possible between the two North American neighbors can be much greater than is usually found, even among allies and traditional friends. Such cooperation must develop within the context of world relationships and responsibilities. Internal differences will continue to exist. But the realization that full strength for the free world depends largely on the ability of the Western Hemisphere to provide a firm economic and military base on which to build emphasizes the need for the closest kind of coordination, especially between the United States and Canada.

Mr. Speaker, I submit that enactment of H.R. 1 would damage our good relations with Canada and would go far toward endangering United States-Canadian cooperation in many fields too numerous to mention here but many of which relate directly to the national defense and security of this country. I, therefore, believe that H.R. 1 should not be enacted at this time.

Mr. MADDEN. Mr. Speaker, I yield 5 minutes to the gentleman from Illinois [Mr. YATES].

Mr. YATES. Mr. Speaker, I think it is well that we meet the Canadian protest at the beginning of the debate.

The gentleman from Michigan has told you that the Dominion of Canada has protested against the passage of H.R. 1, and that is so, and it is unfortunate. But that protest, Mr. Speaker, is one of the great mysteries of this controversy. We have always sought Canada's cooperation, and last year we received its approval. Only a few months ago, last August to be exact, I received a letter from the Department of State which declared that the Government of Canada had no objection whatsoever to the diversion of an additional 1,000 cubic feet of water per second at Chicago. That was the attitude of the Government of Canada to the proposal which is now before the House, exactly the same proposal. At the time the Government of Canada took that position, as revealed by the State Department, the situation was exactly the same, the conditions were exactly the same, and yet, Canada changed its mind. Why? Why did the State Department suddenly write the Government of Canada to submit its viewpoint on this bill? It knew Canada's views. The State Department must have wanted the protest. I say that the State Department is really the culprit in the picture. I believe that pressure was applied on the State Department by a ranking member of the Committee on Foreign Relations of another body, and the State Department wilted under that pressure. There was no need for the State Department to invite the opinion of Canada on this bill. It was exactly the same bill that was before the Government of Canada at the time it expressed itself as having no objection.

The gentleman from Illinois [Mr. O'BRIEN] had spent almost an entire year hounding the State Department in an effort to find out what the attitude of the Government of Canada was. Then last January, in an aide memoire which the State Department furnished to the chairman of a subcommittee on public works of the other body, the Government of Canada indicated that it had no objection to the bill then pending which provided for a 3-year diversion.

Mr. BENTLEY. Mr. Speaker, will the gentleman yield for a correction?

Mr. YATES. I yield to the gentleman from Michigan.

Mr. BENTLEY. I think that if the gentleman will review the correspondence he will find the Canadian Government did not at that time, last August, interpose an objection to a temporary 1-year diversion.

Mr. YATES. That is correct—nor can the Canadian aide memoire of last January be said to be an objection. The Government of Canada reviewed the bill, H.R. 2, and did not specifically object to it in contrast to specific objections it had made to earlier diversion bills. Then in August in a letter that was addressed to me personally, the Assistant Secretary of State declared that the Government of Canada had assured the State Department that it had no objection to the diversion.

Why then this sudden change of attitude by the Government of Canada? I think it is because politics raised its head at that time. As a matter of fact, Mr. Speaker, in the Chicago Daily News for March 4, it is indicated that the ranking member of the Foreign Relations Committee of another body set about to persuade Canada to change its view.

Mr. HOFFMAN of Michigan. Mr. Speaker.

Mr. YATES. Does the gentleman want me to yield to him?

Mr. HOFFMAN of Michigan. I want to make a point of order, as much for information as anything else. The gentleman is talking about a change of attitude in the Canadian Government on this proposition, and then he very clearly intimates, if he does not charge directly, that the change is due to the representations made by the chairman of a committee of the other body.

Mr. YATES. Not by a chairman of a committee, but by a ranking member.

Mr. HOFFMAN of Michigan. All right, by a ranking member of the committee. But what I would like to point out is, I would like to know whether it is a proper argument. I do not care what the gentleman says, but I make the point of order on that question.

Mr. YATES. I referred to an article in the Chicago Daily News, Mr. Speaker, which indicated that the ranking member of the Foreign Relations Committee of another body had indicated that he had undertaken to get a change of views. I think it perfectly proper to refer to it.

Mr. HOFFMAN of Michigan. I am not questioning the accuracy of it as to what the other fellow did or did not do. I am just wondering and raising the point as to whether it is proper for a Member here to suggest, as has been suggested, that the chairman of the other body influenced the Canadian Government to change its position.

Mr. YATES. Well, Mr. Speaker, may I respectfully suggest that if Members will read the Chicago Daily News of Wednesday, March 4, in the article pertaining to this bill, that the Members can then make up their own minds as to whether any special influence was used.

Mr. JOHANSEN. Mr. Speaker, I make the point of order that it is out of order to make such reference to a Member of the other body.

Mr. YATES. Mr. Speaker, I am referring to a member of another body.

Mr. DINGELL. Mr. Speaker, will the gentleman yield?

Mr. YATES. Mr. Speaker, I decline to yield further at this time.

The SPEAKER. The gentleman from Illinois will proceed in order.

Mr. YATES. Mr. Speaker, there was no reason for soliciting Canada's viewpoint. It had expressed itself clearly to the proposal incorporated in this bill.

The SPEAKER. The time of the gentleman from Illinois [Mr. YATES] has expired.

Mr. MADDEN. Mr. Speaker, I yield 5 additional minutes to the gentleman.

Mr. YATES. Mr. Speaker, the treaty of 1909 to which the gentleman from Michigan referred dealt with boundary waters including waters of the Great Lakes and specifically excluded Lake Michigan from its consideration as being inland waters—waters entirely within the United States; and it is interesting to note that the treaty allocated water from Niagara River between the United States and Canada and granted 36,000 cubic feet per second to the Canadian side and 18,500 cubic feet per second to the American side. The Secretary of State, Elihu Root, who was interrogated about it at that time said the reason for the disparity was that Chicago was with-

drawing 10,000 cubic feet per second of water. This was the reason for allotting Canada more water, he said. So it is expressly recognized by Canada by this treaty of 1909 that Chicago has the right to withdraw 10,000 cubic feet of water per second. Chicago today is withdrawing only a fraction of that amount, 1,500 cubic feet per second to be exact.

The treaty of 1950 to which the gentleman from Michigan referred in no way affected or changed the treaty of 1909.

Let me suggest this additional point to you. In the controversy before the Supreme Court in which the amount of water which Chicago would withdraw was reduced from 10,000 cubic feet to 1,500 cubic feet per second, Canada did not appear before the Court to make its position known. Two years ago when there was a critical shortage in the Illinois Waterway, the Supreme Court upon petition of the State of Illinois granted the Sanitary District authority to withdraw 8,500 cubic feet of water per second, Canada did not appear at that time either and Canada did not protest.

The amount of water the Supreme Court permitted Illinois to withdraw was decidedly greater than the amount sought in this bill. Canada did not protest the decision of the Supreme Court. It did not appear before the Supreme Court; it made no representation of protest to the Department of State. It cited no damage that had occurred. And yet, now, when faced with a situation which would permit diversion of a much smaller quantity it files a protest.

Of course the protest of Canada is something that should be considered. We from Illinois do not want to disrupt or strain our relationship with our great neighbor to the north. But I must say it comes with poor grace for our neighborhood to file its objection in view of the fact that it indicated only 6 months ago under exactly similar conditions that it had no objection to the relief that is sought in this bill.

The charge will be made, too, Mr. Speaker, that the diversion at Chicago could very well serve as a precedent in the dispute between Canada and the United States over the division of the waters of the Columbia River. This is not a valid point. I have an opinion by the legal counsel of the State Department to the effect that if there is no material damage to Canada from the diversion of water at Chicago, the diversion cannot serve as a precedent in the dispute over the division of the waters of the Columbia.

So, Mr. Speaker, I think it is well that we meet this Canadian objection at the inception of this debate. We regret very much the Canadian protest. I personally think that it was inspired. I believe that the State Department opened up the whole controversy by inviting the Government of Canada to make a protest at a time when the State Department knew that under exactly the same circumstances the Government of Canada had indicated it had no objection to this bill.

Mr. Speaker, I hope the rule is granted and I hope the bill passes.

I now yield to the gentleman from Illinois [Mr. PUCINSKI].

Mr. PUCINSKI. Mr. Speaker, the gentleman from Michigan rests his entire opposition to this bill on the basis of preserving friendly relations with Canada. I wonder if the gentleman from Illinois would clarify this point: Is it not a fact that Canada had not offered any opinion about or opposition to this legislation as late as August, and came into the picture only after such an opinion was solicited by our own State Department?

Mr. YATES. This year, after H.R. 1 was filed. The gentleman is entirely correct.

The SPEAKER. The time of the gentleman from Illinois has again expired.

Mr. YATES. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. ALLEN of Illinois. Mr. Speaker, I yield such time as he may desire to the gentleman from Illinois [Mr. COLLIER].

Mr. COLLIER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. COLLIER. Mr. Speaker, as an ardent supporter of the lake diversion bill since its inception, I contend that failure to pass this much needed legislation in the 86th Congress would certainly be a sin of omission.

The controversy over this bill during the last three sessions of Congress has consumed countless hours of debate and literally thousands of pages of testimony—much of a highly technical nature and all punctuated with conjecture.

Not even the most avowed opponents of this legislation can question the need for something to be done to increase the flow of water into the Illinois Waterway to clear the streams and decrease stagnation in the interest of the general health and welfare of our people.

The fact that on three different occasions, the most recent in 1944, diversion of water from the Great Lakes became a must to meet the emergency conditions which developed as a result of an entirely inadequate flow into the Illinois and Mississippi Rivers.

Since the need has been established by the most qualified sanitary engineers plus the very history of our waterways, let us then honestly appraise the objections of those who would oppose even granting a 3-year test in this very important project.

You will hear that this diversion will lower the lake level.

The truth of the matter is that the level of the Great Lakes might be lowered by one-eighth of an inch maximum during this 1-year test period—but let me remind you that the seasonal variation by the normal processes of Nature is 18 to 22 inches per year and has frequently gone considerably above that figure in all of the five Great Lakes.

You will be told that the diversion will cause the loss of hydroelectric power.

Regardless of how many figures in kilowatt hours are presented, the fact remains that the loss of electrical energy will amount to a small fraction of 1 percent of the total energy production at the plants affected in the Great Lakes region.

The question, of course, of Canada's objection has been raised.

I submit, however, that the original treaty of 1909 is still in full force and effect under the International Joint Commission which has jurisdiction over certain diversions of water from the Great Lakes.

But, and I believe this is a very important point, Lake Michigan is not a boundary water as provided in the terms of that treaty.

It is, as you know, the only one of the five Great Lakes which lies entirely within the United States and neither borders nor extends into Canada as do the other four Great Lakes.

But even if we are to assume that Lake Michigan is by a vague interpretation of this treaty under this jurisdiction, I wish to point out that in 1909 when this treaty was entered into, the city of Chicago was authorized to withdraw 10,000 cubic feet per second from Lake Michigan for the Illinois Waterway.

This permission was subsequently reduced to the point where today the people of the vast Chicago area are permitted approximately 1,500 cubic feet per second for drinking water and domestic pumpage. I do not believe it is necessary to comment on the tremendous population growth in the country and northern Illinois in recent years and the corresponding need for this diversion of water from Lake Michigan.

Yet all we ask in this legislation is 1,000 additional cubic feet on a test basis under the supervision of the Army Corps of Engineers.

We will then abide by the decision based upon the actual results of this test rather than conjecture and unfounded theory.

In closing, I submit that in both the 83d and 84th sessions of Congress, after long and intensive study of this bill by Members of both the House and the Senate more than 350 Representatives from the 48 States voted for this authorization and apparently felt in their wisdom, that it was necessary and proper after having all the facts and—in each session there were but hardly more than 100 Members who voted against the project.

I contend that this legislation is a must in the interest of the general health and welfare of millions of our people. I contend that in dealing with this issue, ladies and gentlemen, we must place human values before commercial and political interests.

I certainly would be remiss if I did not in conclusion pay much deserved compliment to Congressman THOMAS J. O'BRIEN for the long hours of work and the diligent and untiring efforts he has extended in the cause of this vitally important legislation.

Mr. ALLEN. Mr. Speaker, I yield 10 minutes to the gentleman from Ohio [Mr. SCHERER].

Mr. SCHERER. Mr. Speaker——

Mr. BECKER. Mr. Speaker, will the gentleman yield?

Mr. SCHERER. I yield to the gentleman from New York.

Mr. BECKER. I preface my remarks by saying that I served for 5 years on the Public Works Committee which has dealt with this subject. I would like to ask the gentleman why this bill comes to us authorizing a study but not authorizing the expenditure of any money to make the study? I understand from the report that this study is going to cost $550,000. It would seem to me that the bill should contain an authorization for the expenditure of the money necessary to conduct the study the bill authorizes. What can the gentleman tell me about that?

Mr. SCHERER. I understand that if this legislation is passed the Appropriations Committee will have to provide the necessary funds to conduct the study.

Mr. BECKER. And in the report is a statement that it will cost approximately $500,000, is that correct?

Mr. SCHERER. That is correct.

Mr. CURTIS of Massachusetts. Will the gentleman yield?

Mr. SCHERER. I yield to the gentleman from Massachusetts.

Mr. CURTIS of Massachusetts. I would like to ask the gentleman about the title of this bill. Is it an adequate description of what the bill really does?

Mr. SCHERER. I do not feel that the title covers the substance of the bill and I shall discuss that in my remarks.

Mr. JOHANSEN. Mr. Speaker, will the gentleman yield?

Mr. SCHERER. I yield to the gentleman from Michigan.

Mr. JOHANSEN. Do I understand that the hearings on this bill have not yet been printed?

Mr. SCHERER. The report was made available this morning, not the hearings.

Mr. JOHANSEN. The hearings?

Mr. SCHERER. The hearings, I understand, have not been printed. The report was made available this morning.

Mr. JOHANSEN. May I observe, the real mystery is why we should grant a rule before we have the hearings printed on such a complex subject as this is?

Mr. SCHERER. Mr. Speaker, since the objection of Canada was discussed by the two previous speakers, I would like to treat with that subject first.

We can dispute the legal or moral right of Canada to raise an objection to this legislation, we can point out that Canada may or may not be harmed by this bill or that Canada is acting in bad faith or that our State Department may have solicited Canada's opinion with reference to this legislation. However, the fact remains, Mr. Speaker, that Canada has objected to the passage of H.R. 1 and if we ignore that objection at this time, Canada, then, will have money in the bank on which to draw when she begins diversion of the headwaters of the Columbia River before those waters leave Canada. If we do that we are going to not only put the United States but every State in the Pacific Northwest over the proverbial barrel because we will not have a leg to stand on to oppose diversion which Canada presently is contemplating in the headwaters of the Columbia River.

Mr. Speaker, if the end result of H.R. 1 was only the additional diversion of 1,000 cubic feet of water per second for 1 year from Lake Michigan by the Sanitary District of Chicago, and there was some substantial evidence that such diversion would help solve Chicago's sewer pollution problems, I would not oppose this legislation.

Now I realize that some of the proponents of this legislation contend that this is all they are asking. If they said that it was all they were asking at the moment, I might agree with them.

The last sentence of the bill itself indicates what the proponents really want and expect to get. This sentence reads:

> The report on such results shall contain recommendations with respect to continuing the authority to divert water from Lake Michigan into the Illinois Waterway in the amount authorized by the first section of this act or increasing or decreasing such amount.

Once this additional diversion of 1,000 cubic feet per second is granted, everyone in this House knows that there is no more chance of having it stopped than there is of repealing a tax once it is enacted. The purpose of this bill is to get the foot in the door—to get the matter away from the Supreme Court, to get Congress to take jurisdiction, to let the politicians do the necessary logrolling so that from year to year the diversion can be increased and increased permanently.

Ever since 1930 the Supreme Court of the United States by continuing decree has had jurisdiction over the diversion of waters from Lake Michigan to Chicago. There have been numerous applications under this decree filed by Chicago and the lake States for orders to increase or decrease the diversion. After exhaustive hearings the Court has acted. In some instances it has granted the relief prayed for in the applications by either increasing or decreasing the authorized diversions. In some instances it has refused to act.

It is my opinion that, whenever Chicago offers satisfactory evidence that she is entitled to additional diversions, the Court under the 1930 decree will act as it has in the past. The trouble is that Chicago is not able to make a case on its merits for additional diversions before the Court and, therefore, wants Congress to act arbitrarily in the matter and grant her the relief she seeks.

The fact is, however, that Chicago has not made a case before the Committee on Public Works to justify the Congress in acting. Her hope is to gain her objective for political considerations, rather than on the merits of her case.

There is no question but that there is a legal right to divert waters from the Great Lakes for navigation purposes. The Supreme Court, the Army Engineers, and all competent authorities agree that the 1,500 cubic feet per second diversion which Chicago is now permitted to make under the 1930 decree of the Supreme Court is sufficient to take care of the navigation needs on the Illinois Waterway. Whenever it is shown that additional waters are needed on a temporary or permanent basis for navigation needs, the Court, as it has in the past, will grant such additional diversion. To contend that the additional diversion requested in H.R. 1 or the study proposed therein is for navigation purposes is pure unadulterated nonsense and legal subterfuge.

The real purpose of this legislation is, as I have said, to get congressional authority for a diversion which will be increased from year to year in order to assist Chicago with its sanitary problems. No one will deny that Chicago does have a sanitary problem. She has had one for more than 30 years. True it is that Chicago has one or two of the most modern treatment plants in the world, but she does not have enough of them, of sufficient capacity, properly located, to handle the waste from the ever-increasing population and industrial development in the Chicago area. If Chicago were willing to spend the money and do the job that should be done in the Chicago area to handle the sewage problem, there would be no need for additional diversions.

It would take an additional diversion of almost 10,000 cubic feet per second to dilute the sometimes raw and partially treated sewage that is today dumped into the Illinois Waterway. The testimony is conclusive that the diversion of an additional 1,000 cubic feet could in no way help Chicago's situation; it could not even assist in making the test or survey that is proposed in this bill. It certainly cannot cure Chicago's problem.

Obviously the Chicago Sanitary District needs a survey—a survey to determine exactly what Chicago must do to handle her ever-increasing sewage problems, a survey to determine how many more sewage treatment plants are required and in what locations. The problem in the Chicago area is going to grow worse. The projected population increase and industrial expansion in the next 10 years is going to be such that without adequate preparation and changes by the sanitary district to handle the increased sewage load, we might be required to run all of Lake Michigan through the Illinois Waterway and eventually into the Gulf of Mexico.

While I realize it would be extremely costly if Chicago properly treated all of its sewage and then returned the effluent to Lake Michigan as does every other large city on the lakes, she could then divert as much water as is needed without any damage to or complaints from the other lake cities and States and without violating the basic law governing water usage and diversion.

Chicago over the years has received preferred treatment. In addition to the 1,500 cubic feet per second which she is allowed to divert for navigation purposes under the 1930 Supreme Court decree, she is taking approximately 1,800 cubic feet per second for domestic pumpage,

which should be returned to Lake Michigan as is done by all other cities of the lake basin. Instead, as we know, the ever-increasing domestic pumpage is lost forever to the Great Lakes. This diversion of domestic pumpage has permanently lowered the lake levels approximately 2 inches. The damage and loss caused by this lowering over the years in hydroelectric power, in shipping losses, and in the cost of dredging harbors and connecting channels, is incalculable.

We must also remember that Chicago by changing the course of three streams which originally flowed into Lake Michigan has also deprived the lakes of the normal flow of these streams to which the lakes are entitled.

But I suppose cities are like some people. When they have a special privilege, advantage, or concession, they are never satisfied. They become greedy and want more and more, even if it results in inconvenience and damage to their neighbors.

Chicago today is diverting from Lake Michigan approximately 3,300 cubic feet per second. The additional 1,000 cubic feet asked for in this bill makes a total diversion of 4,300 cubic feet per second.

Now when you talk about water in cubic feet per second, 4,300 cubic feet per second does not sound like too much water to the average Joe since he is used to measuring water by gallons. But do you know that a diversion of 4,300 cubic feet per second is a diversion at Chicago of 2,786,400,000 gallons every day. This is almost twice the flow of the Delaware River.

When you take this amount of water out day in and day out, year in and year out, one can readily comprehend the annual loss in hydroelectric power at Niagara and the St. Lawrence, the tonnage loss to shipping, and the additional cost for the dredging of hundreds of harbors and connecting waterways. It would take a Univac machine to calculate the totals for just 10 years.

Under these circumstances should we give Chicago the amount of water provided in this bill, namely, an additional 648 million gallons per day?

If we create this precedent, how many buckets of water are we going to allocate to Detroit, Toledo, Cleveland, Buffalo, Milwaukee, and hundreds of other smaller lake cities when they come to the Congress with all their water and sewage problems?

There are a number of cities in Ohio which are willing to take care of their own sewage problems but need a little additional water for domestic purposes. Maybe they can come to the Congress with a bill next year which would permit the building of canals or pipelines to divert just a few billion gallons from Lake Erie. Furthermore, a little Lockport plant down on the Ohio River in my district would give us some cheap hydroelectric power. In the succeeding years we can take care of cities in Indiana, Pennsylvania, New York, and our Canadian friends.

Seriously, Canada has entered its objection to this legislation with the State Department.

Mr. ALLEN. Mr. Speaker, I yield the remaining time on this side, 4 minutes, to the gentleman from Michigan [Mr. HOFFMAN].

CALL OF THE HOUSE

Mr. JOHANSEN. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 12]

Bailey	Hall	Nix
Barden	Hargis	O'Brien, N.Y.
Bolton	Hébert	Powell
Boykin	Jackson	Short
Cahill	Judd	Smith, Miss.
Celler	Kelly	Smith, Va.
Curtis, Mo.	Lafore	Spence
Denton	Laird	Taylor
Dixon	Landrum	Thompson, La.
Ford	McGinley	Toll
Frelinghuysen	Martin	Tuck
Green, Pa.	Morrison	Willis

The SPEAKER. On this rollcall 392 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

DIVERSION OF WATER FROM LAKE MICHIGAN

The SPEAKER. The Chair recognizes the gentleman from Michigan [Mr. HOFFMAN], who has 2 minutes remaining.

Mr. BENTLEY. Mr. Speaker, will the gentleman yield?

Mr. HOFFMAN of Michigan. I yield to the gentleman from Michigan.

Mr. BENTLEY. I would like to point out that I am afraid some of my friends from Illinois left the impression that the protests of the Canadian Government on this diversion issue have been rather recent. I would like to ask them to read my remarks tomorrow morning whereby they will see that the Canadian Government has been protesting Lake Michigan diversion as far back as the turn of the last century.

Mr. HOEVEN. Mr. Speaker, will the gentleman yield?

Mr. HOFFMAN of Michigan. I yield to the gentleman from Iowa.

Mr. HOEVEN. Mr. Speaker, I am pleased to announce that the Secretary of Agriculture today announced that current dollars-and-cents support prices for manufacturing milk and butterfat will be continued through the 1959–60 marketing year which begins on April 1.

The support prices are being continued at $3.06 per hundredweight for manufacturing milk and 56.6 cents per pound for butterfat.

In carrying out the program to support prices of milk and butterfat sold by farmers, USDA as in the past will offer to purchase butter, cheddar cheese, and nonfat dry milk in carlot quantities.

The announcement is as follows:

By law, the Secretary of Agriculture must before the beginning of the marketing year (presently April 1) set a level of price supports that will "assure an adequate supply."

During 1958, milk production was reduced by some 700 million pounds. Milk cow numbers as of January 1, 1959 were down 2.8 percent from a year earlier. The number of milk cows on farms is expected to decline still further in 1959 but not at as rapid a rate as in 1958.

With a rise in our population and a significant increase in cheese consumption and little per capita change in the use of other products, total commercial use of milk products increased in 1958 over 1957. As a result and since milk output declined, CCC outlays for price support purchases of dairy products are down substantially. (For details see press release USDA 645–59, dated Mar. 6, 1959.)

We have moved into consumption the reduced acquisitions. Our uncommitted supplies are as follows in comparison with last year:

Uncommitted supplies

[In million of pounds]

	Butter	Cheese	Nonfat dry milk
Feb. 28, 1959	28.5	6.5	49.3
Feb. 28, 1958	55.9	143.3	35.4

Nineteen hundred and fifty-nine production is not expected to be significantly different from 1957 or 1958 levels. Increased consumer incomes are in prospect, and commercial use of milk products per person is expected to be at least as large as in 1958. With the rise in population, supply, and the commercial use of milk products—measured on a fat basis—is expected to be more nearly in balance than in several years. (However, we still expect some surplus of nonfat dry milk solids.)

In arriving at a decision, I have consulted with producer groups, farm leaders interested in dairying, and the CCC Advisory Board.

Based on analyses by our dairy technicians, it would appear that retention of the present support levels is desirable to provide the level of production with the margin of safety to "assure an adequate supply." Therefore, I am maintaining the 1959 marketing year support levels for butterfat and manufacturing milk at the same dollar and cents levels as for 1958.

The dairy industry provides one of the most important sources of cash income for our farmers—about 14 percent of cash receipts from marketing in 1958. I believe its future is bright. Each morning there are 8,000 new customers for its products.

For good nutrition we need to consume more dairy products. We will do everything feasible to cooperate with this great industry to promote and merchandise its products. We will, of course, continue to assist the dairy industry in every sound way to expand its markets, reduce costs, and help it build on a firmer foundation.

Mr. HOFFMAN of Michigan. The gentleman from Illinois may extend his remarks immediately following those by the gentleman from Michigan [Mr. BENTLEY] and I ask unanimous consent to strike out what I previously said and yield back the balance of my time.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. MADDEN. Mr. Speaker, I move the previous question.

The SPEAKER. The question is on the resolution.

The question was taken; and on a division (demanded by Mr. JOHANSEN) there were—ayes 163, noes 62.

So the resolution was agreed to.

Mr. BLATNIK. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 1) to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 1 with Mr. SISK in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. BLATNIK. Mr. Chairman, I yield myself such time as I may require and to revise and extend my remarks.

Mr. Chairman, the hour is late. Most of us are quite familiar with the subject matter of H.R. 1. So may I limit myself to a brief summary of what the bill will do and then let the proponents and the opponents discuss in more detail the points in controversy?

Most of the Members, with the exception of the new Members of the House, have heard this bill discussed or debated, pro and con, for a period of perhaps 8 to 10 years, in the 82d, 83d, 84th, and 85th Congresses. The present bill has been modified somewhat to try to meet, to as great an extent as possible, the objections raised during those years of debate.

Very briefly, H.R. 1 would provide for a 3-year study to be conducted by the Secretary of Health, Education, and Welfare and the Secretary of the Army, of the effect of the diversion of Lake Michigan waters at Chicago in the amount of 1,000 cubic feet per second for a period of 1 year.

I want to emphasize the fact that the diversion will be for 1 year whereas previous bills had called for a diversion of this amount of water over a 3-year period. In addition to this 1 year of diversion, the remainder of the time, up to a period of 3 years, would be used for field, office, and engineering studies and for the preparation of a report.

Mr. Chairman, there are those of us who may have some reservations about a permanent diversion and the speaker has some doubts concerning perhaps the effects of a permanent diversion. But the study is desperately needed by the city of Chicago to solve what is probably the most pressing sewage disposal problem of any city, certainly of any major city, of the United States. And although the city of Chicago through its sanitary district has constructed one of the most elaborate and efficient treatment plants in the world, one which has been referred to as one of the seven engineering wonders of the country by the American Society of Civil Engineers, the tremendous growth of the metropolitan area and the rapid industrial growth, combined with the peculiar geographical location of the city, at the very foot of Lake Michigan, make it necessary, in fact imperative, to find some means of combating this serious problem.

One of the first steps in the solution is the proposed study of diversion, and I feel there can be little, if any, valid objection to this experimental research. With one possible exception all of the objections concern the effect of permanent diversion at Chicago.

I wish to emphasize, Mr. Chairman, that this is not a permanent diversion, that the argument that this will be a foot in the door is not valid because the moment the time expires as to the life of this bill the act automatically becomes as dead as a doornail, and all of the required work would have to be put into motion to initiate a new bill for any further diversion. So in my judgment and the judgment of the majority of the committee which voted out this bill by a vote of 19 to 11, this argument is not valid.

Mr. BROOMFIELD. Mr. Chairman, will the gentleman yield?

Mr. BLATNIK. I yield to the gentleman from Michigan.

Mr. BROOMFIELD. I wonder if the gentleman from Minnesota then would explain the last paragraph of H.R. 1, which states:

> The report on such results shall contain recommendations with respect to continuing the authority to divert water from Lake Michigan into the Illinois Waterway in the amount authorized by the first section of this act.

To me it is very obvious that that section, being in the bill, does imply that it is a foot-in-the-door policy.

Mr. BLATNIK. That question implies only what one may want it to imply. I think the language is clear. I was interested in what diversion, if any, may be required. The study may recommend no diversion. So what do you imply? You imply what you want to read into the bill. It is only a recommendation which will come back before the House Committee on Public Works for consideration.

Mr. BROOMFIELD. If I may pursue that one step further, why cannot the study be based on the present diversion of water? Why do they need additional water to make their study?

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. BLATNIK. I yield to the gentleman from Illinois.

Mr. YATES. I have here a letter from Mr. G. E. McClelland, who is the chief of the water-supply and water-pollution control program of the Chicago Department of Health and Welfare, under the heading "Broad Knowledge That May Be Derived From a Study of the General Type Authorized in H.R. 1." I shall put this whole letter in my remarks, but I want to read one paragraph of that in reply to the question of the gentleman from Michigan. He says this:

> Many American communities are now faced with the problem of maintaining water quality for all legitimate purposes in the face of having a variable streamflow providing only a limited amount of dilution water at critical times. The critical problem in protecting water quality is that of discharging treated waste effluent into a watercourse having limited dilution capacity. This problem becomes especially acute when the community is providing the highest degree of waste treatment now feasible. The study will add much needed knowledge of dilution requirements under conditions existing at Chicago that could be applied elsewhere.

So that this study will probably be of value not only to Chicago but to every major metropolitan community in the United States.

Mr. BLATNIK. Yes; that is correct.

Mr. VANIK. Mr. Chairman, will the gentleman yield?

Mr. BLATNIK. May I, for the sake of orderly progress, conclude this? Then we will hear the speakers in the regular order. The gentleman from Ohio has been most considerate on this matter, and I appreciate it.

That has been made perfectly clear. The committee has thoroughly investigated all possible objections to a test diversion. Most of them have been repeated and repeated and repeated until we know them by heart. We feel that the seriousness of the problem here does justify this temporary diversion for a period of 1 year. Then we will have the results of the specialized agencies, the Corps of Engineers and the Department of Health, Education, and Welfare, who can tell us precisely and exactly what the effect of this and any other diversion may be on navigation, or what else may be required for proper sanitation and pollution control in the sanitation district in Chicago, or whatever the effect may be on the loss of hydroelectric power.

I do strongly urge the adoption of this bill. It merely provides for an experimental test and survey.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. BLATNIK. I yield to the gentleman from Michigan.

Mr. DINGELL. I do not read anywhere in this bill where there is anything other than a study on navigation. Is the gentleman telling us now we are going to have a study in addition to navigation of pollution and other things in the Illinois Waterway? Is that what the gentleman is telling us?

Mr. BLATNIK. That is right.

Mr. DINGELL. Is there any such language in this bill, H.R. 1?

Mr. BLATNIK. Yes. I think the words are broad but they do cover the intent.

Mr. DINGELL. May I ask the gentleman this question. He was telling us at this time that a part of this bill or rather a part of the study that will be made pursuant to this bill will be a study of pollution in the Illinois Waterways; is that correct?

Mr. BLATNIK. Yes.

Mr. DINGELL. Then, I assume the gentleman would have no objection nor would any other sponsors or proponents of this particular measure have any objection to having concrete language in the form of an amendment to H.R. 1, which would specifically set forth that it shall include a study of pollution in this particular waterway; is that correct?

Mr. BLATNIK. I have no objection, but I doubt if it is necessary. There is now a study going on and underway which the proponents from the city of Chicago and in particular the author will explain. The study is now underway which is costing over 150,000-and-some-odd dollars studying this sewage disposal problem aspect.

Mr. DINGELL. Then, I shall remind the gentleman and others who favor the enactment of this particular measure of this particular colloquy at the appropriate time when I offer an amendment.

Mr. VANIK. Mr. Chairman, will the gentleman yield?

Mr. BLATNIK. I yield.

Mr. VANIK. With respect to this report and study that the gentleman referred to, as I read the bill on page 3, it provides for a study to be made of the effect on Lake Michigan and on the Illinois Waterway. We, in the lower lakes, Lake Erie in particular, are concerned about the effect of this on the connecting channels and the Great Lakes and on our Lake Erie, as I suppose it would affect the other lower lakes. What would be the feeling of the gentleman if this were amended to provide for reporting on the navigational effects with respect to the connecting channels of the lower lakes?

Mr. BLATNIK. Let us understand, of course, there will be some effects on other neighboring lakes, and they, too, are included in this report.

Mr. VANIK. Should not they be included in the language of the bill so that we who have this concern about the effect on navigation could have some assurance that our interests are going to be covered in this investigation and report?

Mr. BLATNIK. It is our understanding that that aspect of the problem would be included and it is not necessary to make more detailed or specific restrictions on the scope of the study.

Mr. VANIK. This specifically says on Lake Michigan and on the Illinois Waterways. Would the gentleman have any objection to including instead of Lake Michigan, "the Great Lakes and connecting channels thereof"?

Mr. BLATNIK. I would have no objection, but I would like to hear more from the author of the bill.

Mr. Chairman, I yield such time as he may desire to the dean of the Illinois delegation and our beloved friend and distinguished and eminent colleague from Chicago, Mr. O'BRIEN, the author of the bill, H.R. 1.

The CHAIRMAN. The gentleman from Minnesota has consumed 11 minutes.

Mr. O'BRIEN of Illinois. Mr. Chairman, this is the fourth time I have appeared in the well of this House in support of the Chicago lake diversion bill. It is not often that I take the floor and I hope that you will forgive me for taking these few moments to again make some brief remarks in support of my bill.

I hope—and expect—that it will be the last time I will have to urge passage of this bill. I hope that it receives congressional approval and that the President will sign it.

Essentially, H.R. 1 is like the bill that passed the 85th Congress. There is a significant difference, however, in that the earlier bill provided for withdrawal of 1,000 cubic feet of water per second for 3 years to supplement the city of Chicago's presently authorized withdrawal of 1,500 cubic feet per second. This bill reduces the period of the diversion to 1 year. The remaining 2 years of the experimental period will be taken up with studies and measurements prior to and following the actual diversion.

To most of the Members of the House, this is not a major bill but I can assure you that to those of us who come from the city of Chicago and the State of Illinois—it is a major bill. It is a bill of extreme importance.

Chicago is one of the great industrial communities of the world. As an industrial city it has the burden of disposing of a tremendous amount of waste products, and as a matter of fact, its human and industrial waste is the greatest in the United States—greater even than New York City itself. And Chicago is growing and will continue to grow, thereby multiplying its waste disposal problems enormously.

To meet this problem the Metropolitan Sanitary District of Greater Chicago has built a sewage disposal system which is perhaps the finest of its kind in the world. It has the finest and most modern equipment in the world, purchased at a cost of hundreds of millions of dollars, all paid for by the citizens who live in Cook County. The engineering processes of the system permit a 90-percent purification which is the highest degree obtainable. It is for the treatment of the 10 percent balance that we need a small amount of additional water from Lake Michigan.

Let me emphasize that this is not a permanent diversion. You will hear statements today from opponents of the bill who will talk to you about the camel's nose and this being the first step toward permanent diversion. Such statements are totally unwarranted. This is a bill for a one-year diversion to be carried out under the supervision of the Corps of Army Engineers. The tests are to be conducted by the Department of Health, Education, and Welfare. I repeat—it is not permanent.

We are quite sure the small amount of additional water will not be injurious to any of the communities on the Great Lakes. We have an unsanitary condition in the Illinois Waterway that we want to try to relieve. All we ask is your approval to permit us to make this test. The passage of H.R. 1 will give us that opportunity. Thank you.

Mrs. CHURCH. Mr. Chairman, will the gentleman yield?

Mr. O'BRIEN of Illinois. I yield.

Mrs. CHURCH. Mr. Chairman, I would like to take this opportunity of expressing my pride and that of the entire Illinois delegation for the remarkably fine and enduring and courageous fight the gentleman from Illinois, Mr. O'BRIEN, has given us under his leadership.

One of the things I am proud of in my service in the Congress is to be able to serve under his leadership. I am glad to say that I nominated him to head this fight knowing full well he was the only one who could put through such a bill, and I am sure he is going to be successful.

Mr. O'BRIEN of Illinois. I thank my colleague.

Mr. ASHLEY. Mr. Chairman, when we cut through the fog of confusing and often conflicting statements made in support of the measure now before us—H.R. 1—it becomes clear that the net result of this bill would be to benefit Chicago at the expense of other Great Lakes cities and States.

Not only would this increased diversion result in adverse effects on Great Lakes shipping and power development, but it is clear that to pass this bill would seriously jeopardize our good relations with Canada.

To support this statement I would like to quote briefly from a memorandum of the Canadian Government dated February 20, 1959:

> While recognizing that the use of Lake Michigan water is a matter within the jurisdiction of the United States of America, it is the considered opinion of the Canadian Government that any authorization for an additional diversion would be incompatible with the arrangements for the St. Lawrence Seaway and power development, and with the Niagara Treaty of 1950, and would be prejudicial to navigation and power development which these mutual arrangements were designed to improve and facilitate. * * * The Government of Canada therefore protests against the implementation of proposals contained in H.R. 1.

Mr. Chairman, we are spending many millions of dollars to improve the Great Lakes both in connection with the St. Lawrence Seaway and the related deepening of Great Lakes ports.

Much of this effort will be wasted if at the same time we undertake this increased diversion.

As a final point I would like to submit that at present jurisdiction for Lake Michigan lies in the Supreme Court. If the Congress, by enacting H.R. 1, assumes this jurisdiction, we can look forward to constant and continued harassment on the multitude of problems connected with this great body of water. Thank you.

The CHAIRMAN. The gentleman from New Jersey [Mr. AUCHINCLOSS] is recognized.

Mr. AUCHINCLOSS. Mr. Chairman, I yield to the gentleman from Washington [Mr. MACK] who will yield time on this side.

The CHAIRMAN. The gentleman man from Washington [Mr. MACK] is recognized.

Mr. MACK of Washington. Mr. Chairman, I yield myself 5 minutes.

The CHAIRMAN. The gentleman from Washington will proceed.

Mr. MACK of Washington. Mr. Chairman, this bill came out of the House Public Works Committee by a vote of 19 to 11. We are here as a result of that vote debating the academic question of whether a thousand cubic feet of water should be diverted from Lake Michigan at Chicago as proposed by this bill.

I call this an academic question because everyone who has studied the history of this legislation must realize that this bill if passed by the Congress will be vetoed by the President.

I say it will be vetoed because the President on two previous occasions, in 1954 and 1956, vetoed similar bills passed by the Congress.

I say the President will veto this bill because the State Department is emphatically and unequivocally opposed to it. The State Department says this bill if passed will imperil our friendly relations with Canada.

The Bureau of the Budget is emphatically and unequivocally opposed to this bill. Because of the opposition of these two departments and judging by his previous vetoes we may be certain that this legislation if passed faces an inevitable veto. The question before us today therefore is purely academic. It will not become law.

This bill proposes to take from Lake Michigan 1,000 cubic feet of water per second. That may seem like a small amount, but 1,000 cubic feet a second is 60,000 cubic feet a minute or 3,600,000 cubic feet an hour. The water to be diverted would be the equivalent of a river 100 feet wide, 10 feet deep, flowing into the Illinois ship canal at a rate of about 15 miles a day.

That quantity of water, the engineers inform us, will lower the water in Lake Michigan by 1 inch if continued for a 15-year period.

It is argued that this legislation is temporary legislation. It is called only a 1-year diversion. This is foot in the door and camel's nose under the tent tactics. There is no reason whatsoever for any survey unless a permanent diversion is its purpose.

The only benefits claimed for this proposed diversion is that it will clean-up the pollution in the Illinois canal. Navigation in the canal will not be improved by this legislation. The only thing the extra water will do is to lessen pollution.

We have almost all of the information now on this problem. We know that the pollution in the Illinois Waterway is tremendous. It is unhealthy. It is unsanitary. It should be removed. Chicago can remove this pollution by the same methods employed by nearly every large city in the country. These other cities reduced pollution by building large enough in size and numerous enough in number sewage disposal plants to remove the solids in sewage before they reach a river. But Chicago, looking after the financial interests of Chicago, does not want to build these plants which would cost her millions of dollars. Chicago proposes to correct her pollutions by diverting water, a plan which will cost her nothing.

Canada is very much disturbed by this bill. Canada has protested very emphatically against it. State Department witnesses in testifying before our committee, in answer to questions by me, stated that passage and approval of this bill will give Canada an excuse and a precedent for diverting water from the Columbia River in Canada to the Frazier River in Canada. A few years ago Canada did propose to divert from the Upper Columbia River one-third of all the water that comes down that stream into the United States. If that water is diverted, why it would wreck havoc and cause millions of dollars of damage annually to power production on the American side of the Columbia River Valley where our Government has numerous power dams dependent for generating capacity on this water that has its origin in Canada.

If Canada diverts water from the upper Columbia that will lower the level of water in the lower Columbia River, with the result that navigation will be imperiled and tremendous damage done shipping which uses this river. We in the Pacific Northwest are very much concerned about Canada obtaining an excuse or a precedent for diverting Columbia River water.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. MACK of Washington. Mr. Chairman, I yield myself 3 additional minutes.

Mr. Chairman, shipping interests using the Great Lakes testified before our committee that if the level of water in the Great Lakes and their connecting channels is reduced by 1 inch, every large Great Lakes vessel will be compelled to carry 100 tons less of freight. There are hundreds of ships plying up and down the Great Lakes with cargoes. Shipping interests testified that the loss to shipping would total $2 million a year, of which sum the Canadian shipping companies would lose about $600,000.

The New York Power Authority testified that if the level of the lakes is lowered by 1 inch the Canadian power dams and the American power dams on the St. Lawrence and Niagara Rivers will lose $600,000 a year in power generation capacity; one-third of this loss would be suffered by Canada. So Canadian interests stand to lose about $800,000 a year of revenue which they now are obtaining when the water takes its natural course; that is, flows through the Great Lakes, through the St. Lawrence, to the sea, instead of being diverted at Chicago to go down the Illinois Waterway to the Mississippi River.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. MACK of Washington. I yield to the gentleman from Illinois.

Mr. YATES. Will the gentleman tell the House what legal basis, if any, Canada has to object to this bill?

Mr. MACK of Washington. Canada has a right legally, of course, to object. Anybody has a right to object to anything. Any government has a right to protest to our State Department. The Canadians admit the United States has the legal right to divert the water if our Congress chooses to do so. The United States admits that Canada has the legal right, if she chooses, to divert water from the upper Columbia River in Canada.

Mr. YATES. In connection with the treaty of 1909, did not Canada by that treaty agree that Chicago could withdraw 2,000 cubic feet per second?

Mr. MACK of Washington. I am not familiar with that.

Mr. BENTLEY. Mr. Chairman, will the gentleman yield?

Mr. MACK of Washington. I yield to the gentleman from Michigan.

Mr. BENTLEY. As I pointed out in my statement, Canada has the right to object under article II of the 1909 treaty to any action taken by the United States which in Canada's opinion would adversely affect her navigation.

Mr. MACK of Washington. I know the gentleman has made a very thorough study of the international problem in relation to water decisions. He is an able and most fully informed member of the House Foreign Affairs Committee.

Mr. BROOMFIELD. Mr. Chairman, will the gentleman yield?

Mr. MACK of Washington. I yield to the gentleman from Michigan.

Mr. BROOMFIELD. I would like to ask the question why is Chicago so interested in circumventing the Supreme Court ruling? After all, was it not our understanding that Chicago went before the Supreme Court and got permission to divert something like 8,500 additional gallons per second a year ago, when there was an abundance of water? I cannot see why the Chicago delegation is so interested in circumventing the Supreme Court ruling.

Mr. SCHERER. Mr. Chairman, will the gentleman yield?

Mr. MACK of Washington. I yield to the gentleman from Ohio.

Mr. SCHERER. The gentleman from Washington gave us some idea of the magnitude of the water that would be diverted at the rate of 1,000 cubic feet per second. Is it not a fact, that Chicago, for domestic pumpage today, diverts in addition to the 1,500 that is allowed for navigation another 1,800 cubic feet per second for domestic pumpage?

Mr. MACK of Washington. For domestic pumpage and for industrial use in the city of Chicago.

Mr. SCHERER. Is that water ever returned to the lake?

Mr. MACK of Washington. I am positive it is all returned to the Illinois Waterway. It goes eventually into the Mississippi. None of it goes back into Lake Michigan.

Mr. SCHERER. But not to the lakes?

Mr. MACK of Washington. That is correct.

Mr. SCHERER. Does any other city on the Great Lakes divert water for pumpage that is not returned to the lakes?

Mr. MACK of Washington. I do not believe so.

Mr. SCHERER. Now, if this additional 1,000 cubic feet per second is granted, that will make a total diversion at Chicago from the Great Lakes of 4,300 cubic feet per second, will it not?

Mr. MACK of Washington. The gentleman is correct.

Mr. CEDERBERG. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and twenty Members are present, a quorum.

Mr. MACK of Washington. Mr. Chairman, I yield 5 minutes to the gentleman from Wisconsin [Mr. WITHROW].

Mr. WITHROW. Mr. Chairman, I am opposed to the pending piece of legislation which would permit the diversion of 1,000 additional cubic feet of water from Lake Michigan at Chicago. I feel that this is entirely a local problem and I sincerely believe that if this bill is passed by the Congress and signed by the President, it will mean extensive and expensive litigation. Many eminent lawyers are of the opinion that Congress has not the authority or the jurisdiction to regulate the diversion of water from any of the Great Lakes. The attorney general of the State of Wisconsin particularly is very firm in his belief that the Supreme Court is the forum in which it should be decided. To me that seems very reasonable indeed, because when you divert water from Lake Michigan at Chicago, no matter how much that diversion may be, you lower the lake level on every one of the Great Lakes with the exception of Lake Superior. Certainly the people who live in the cities on the lakes will be affected adversely by a lowering of the lake level in their respective lakes. So to me it seems reasonable that this is a question for the Supreme Court to decide.

The Supreme Court as of April 21, 1930, did reduce the number of cubic feet that could be diverted at Chicago by 1,000 cubic feet per second.

In regard to the veto of the President on legislation similar to this, as stated by our good friend, the gentleman from Illinois [Mr. O'BRIEN], President Eisenhower as of September 3, 1954, vetoed the bill H.R. 3300, a similar bill, which provided for 1,000 cubic feet per second additional water to be diverted from Lake Michigan at Chicago. His reasons were as follows, and I quote from a copy of the veto message of September 3, 1954:

I am unable to approve the bill because, first, existing diversions are adequate for navigation on the Illinois Waterway and Mississippi River; second, the methods of control of lake levels and protection of property on the Great Lakes should be considered before arbitrarily proceeding with the proposed increased diversion; third, the diversions are authorized without reference to the negotiations with Canada; and fourth, the legitimate interests of other States affected by the diversion may be adversely affected.

Further in that message he goes on in detail to enlarge upon his objections to H.R. 3300, which is a measure similar to this one. In the bill before us today, not one single objection of the President has been met. I cannot for the life of me see how the President in good conscience can possibly sign this piece of legislation even though it were approved by both Houses of the Congress.

I am including herewith President Eisenhower's veto message of September 3, 1954.

LOWRY AIR FORCE BASE, DENVER—MEMORANDUM OF DISAPPROVAL

I have withheld my approval of H.R. 3300, "To authorize the State of Illinois and the Sanitary District of Chicago, under the direction of the Secretary of the Army, to help control the lake level of Lake Michigan by diverting water from Lake Michigan into the Illinois Waterway."

The bill would authorize the State of Illinois and the Sanitary District of Chicago, under the supervision and direction of the Secretary of the Army, to withdraw from Lake Michigan, in addition to all domestic pumpage, a total annual average of 2,500 cubic feet of water per second into the Illinois Waterway for a period of 3 years. This diversion would be 1,000 cubic feet per second more than is presently permitted under a decree of the Supreme Court of the United States dated April 21, 1930. The bill also would direct the Secretary of the Army to study the effect in the improvement in conditions in the Illinois Waterway by reason of the increased diversion, and to report to the Congress as to the results of the study on or before January 31, 1957, with his recommendations as to continuance of the increased diversion authorized.

The bill specifies that the diversion would be authorized in order to regulate and promote commerce, to protect, improve, and promote navigation in the Illinois Waterway and Mississippi Valley, to help control the lake level, to afford protection to property and shores along the Great Lakes, and to provide for a navigable Illinois Waterway. No mention is made of possible improvement of sanitary conditions or increase in hydroelectric power generation on the waterway.

I am unable to approve the bill because (1) existing diversions are adequate for navigation on the Illinois Waterway and Mississippi River, (2) all methods of control of lake levels and protection of property on the Great Lakes should be considered before arbitrarily proceeding with the proposed increased diversion, (3) the diversions are authorized without reference to negotiations with Canada, and (4) the legitimate interests of other States affected by the diversion may be adversely affected. I wish to comment briefly on each of these points.

I understand that waterborne traffic on the Illinois Waterway has grown in the last 20 years from 200,000 tons to 16 million tons annually. The Corps of Engineers advises, however, that the existing diversions of water are adequate for navigation purposes in the Illinois Waterway and the Mississippi River. Surveys are now underway by the International Joint Commission and the Corps of Engineers to determine the best methods of obtaining improved control of the levels of the Great Lakes and of preventing the recurrence of damage along their shores. Reasonable opportunity to complete these surveys should be afforded before legislative action is undertaken.

The diversion of waters into and out of the Great Lakes has historically been the subject of negotiations with Canada. To proceed unilaterally in the manner proposed in H.R. 3300 is not wise policy. It would be the kind of action to which we would object if taken by one of our neighbors. The Canadian Government protested the proposed authorization when it was under consideration by the Congress, and has continued its objection to this bill in a note to the Department of State dated August 24, 1954. It seems to me that the additional diversion is not of such national importance as to justify action without regard to the views of Canada.

Finally, as is clear from the report of the Senate committee, a major purpose of the proposal to divert additional water from Lake Michigan into the Illinois Waterway is to determine whether the increased flow will improve existing adverse sanitation conditions. The waters of Lake Michigan are interstate in character. It would seem to me that a diversion for the purposes of one State alone should be authorized only after general agreement has been reached among all the affected States. Officials of several States adjoining the Great Lakes, other than Illinois, have protested approval of the bill as being contrary to their interests and not in accord with the diversion authorized under the 1930 decree of the Supreme Court. Under all of these circumstances, I have felt that the bill should not be approved.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *September 3, 1954*

You may speak about an inch not meaning much in the lowering of the lake level. It may not mean much when the lake level is up, but there is a cycle involved; there are times when the water is up and likewise there are certain times when the water is down. The testimony before the committee was to the effect that there would be a lowering of 1 inch in the lake level if 1,000 cubic feet per second were diverted at Chicago. What does that mean? Responsible people testified that a lowering of 1 inch in the lake level at a low-level time would adversely affect lake shipping to the extent of 1 million tons annually. Do you know that during World War I and World War II and during the Korean conflict, fortunately, we had high levels on the lakes.

Certainly we were very fortunate that the levels were high during these critical times.

This question of lowering lake levels by permitting diversion is fundamental. It not only can have an adverse effect upon our economy but it can also greatly impair our national defense effort. Even during the comparatively high lake level period we are now in, there are numerous ships plying the Great Lakes that are restricted in the amount of tonnage they can carry. When the St. Lawrence Seaway is completed, more vessels will have access to the Great Lakes and to Great Lakes ports, which will increase the tonnage adversely affected at the present time. I hope that H.R. 1 is defeated.

I want to quote from the testimony of Adm. Lyndon Spencer, president of the Lake Carriers' Association, in testifying before the committee on H.R. 1, the bill before us today:

The Congress has no moral or legal right, acting in the interest of Illinois, to experiment with property or assets belonging to the people of all the States and Provinces bordering the Great Lakes.

Additional diversion will result in irreparable loss and injury to the Great Lakes vessel industry, port facilities, and shoreside industries dependent upon lake-borne commerce.

Canadian rights to the waters of the lakes must be given full consideration, and this can be done only through an international body providing joint representation to both Canada and the United States.

Admiral Spencer informed the committee that the loss to shipping on the Great Lakes would amount to about $2 million annually; two-thirds of the damages would have to be borne by U.S. carriers and one-third by Canadian carriers. He explained his computation by saying that for each inch a ship is immersed the tonnage runs to a little over 100 tons; this loss per inch is multiplied by the number of trips a ship makes, which results in a total economic loss of 1 million tons annually on the basis of an additional diversion of 1,000 cubic feet per second.

Mr. ZABLOCKI. Mr. Chairman, will the gentleman yield?

Mr. WITHROW. I yield to the gentleman.

Mr. ZABLOCKI. I should like to ask the gentleman whether he could advise the House whether the President is going to veto H.R. 1 in this session of Congress?

Mr. WITHROW. I do not see how he can sign it in good conscience. Canada has protested, and it is a matter for the courts; it is not a matter for the Congress.

Mr. COLLIER. Mr. Chairman, will the gentleman yield?

Mr. WITHROW. I yield to the gentleman from Illinois.

Mr. COLLIER. Is the gentleman forgetting the St. Lawrence Seaway, which will more than compensate for any loss of shipping?

Mr. WITHROW. I have not forgotten about that, but I cannot see the sense in whittling out through the earth the St. Lawrence Waterway when you are going to permit the lakes to be lowered by diversion of water. You are working entirely at cross purposes.

Mr. ZABLOCKI. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. ZABLOCKI. Mr. Chairman, I want to reiterate my strong and continued opposition to the proposed legislation which would increase the rate of water diversion from Lake Michigan through the Chicago Sanitary Canal.

The district which I represent in the House of Representatives—the Fourth District of Wisconsin—lies on the very shores of Lake Michigan. The Milwaukee Harbor, our municipal port, and other public, industrial, and recreational facilities, located in my district, are closely affected by fluctuations in the level of Lake Michigan. It is for this reason that I am particularly concerned about this legislation, and its potential effect on the interests and the well-being of our people.

It is only fair to expect the interests of Milwaukee, and of all other Great Lakes communities, to be considered in determining the disposition of H.R. 1. If that will be the case, H.R. 1 will be soundly defeated by this House. I have no doubt about this, because the weight of evidence against the passage of this legislation is very considerable.

My objection to H.R. 1, based on past experience and the results of careful studies, can be summarized very briefly.

My first point is this:

Increased water diversion through the Chicago Sanitary Canal will permanently lower the level of Lake Michigan, and of other Great Lakes, to the detriment, first, of the navigation and shipping activities in our ports and harbors; secondly, of the use of our shores for recreational purposes; thirdly, of the hydroelectric power production in the Great Lakes Basin; and, fourthly, of the management and maintenance of the wildlife populations that abound these waters.

We know this from experience, as well as on the basis of recent studies, to wit, the study completed not long ago by the Corps of Engineers.

As to past experience, back in 1930, after almost 40 years of litigation between Chicago and the other States of the Great Lakes area, the Supreme Court of the United States pointed out that the Chicago water diversion up to that time had caused a permanent lowering of 6 inches in the level of the Great Lakes; that it had greatly damaged lake commerce by decreasing the cargo capacity of lake vessels; that it had damaged beaches, fisheries, and recreational areas; and that it had caused a permanent lowering of the water table in the Great Lakes region with great damage resulting to docks, harbor facilities, and building foundations.

It was for these reasons that the Supreme Court ruled that the rate of diversion then in effect through the Chicago Sanitary Canal should be reduced gradually from 10,000 cubic feet per second to 1,500 cubic feet per second. The decision of the Court proved to be very wise.

Now I realize that H.R. 1 proposes only what is referred to as a "temporary and experimental" increase in the rate of diversion. The fact remains, however, that even such a limited increase will lower the level of the Great Lakes. Further, this temporary and experimental increase can well become the "foot-in-the-door" which will lead to larger, and permanent, increases. For this reason, I must oppose it.

My second point is this:

Placing aside for a moment the fact that the communities on the shores of the Great Lakes, with the exception of Chicago, oppose this legislation in the sincere and substantiated belief that it will cause all of us harm, no bona fide case has been presented by Chicago to show the necessity for overcoming these objections and enacting H.R. 1.

This legislation is not required for reasons of public health. There is no evidence—at least none has been presented—to show that the health of the people of Chicago will be jeopardized if the rate of diversion is not increased.

Further, the proposed increased rate of diversion is not necessary for navigation of barges in the waterway which connects with the Chicago Sanitary Canal. The Army Corps of Engineers arrived at this conclusion on the basis of their study—and no one in Chicago has successfully challenged their opinion.

Finally, the proposed increase is not absolutely necessary to help Chicago solve its sewage problem. Every single municipality on the Great Lakes, except Chicago, returns to the Great Lakes the water which it has extracted, used, and purified through sewage treatment plants. I see no reason why Chicago should not do likewise. As a matter of fact, the only excuse that can be offered for Chicago's refusal to return the water to Lake Michigan is that it would cost money to do so. This is no valid reason, let alone a legal defense. The Chicago metropolitan area is a thriving community, and it can well afford to construct and operate the works that are necessary to return to Lake Michigan the effluent which is discharged by its plant after adequate treatment.

My third and final point is this:

Both the United States and Canada have a common interest in maintaining the integrity of the water in the Great Lakes Basin. We have a treaty with Canada on this subject. Further, Canada has objected to the proposed unilateral increase in the diversion through the Chicago Sanitary Canal. Now I believe—all other things being equal—that this fact alone should argue strongly against any unilateral action on our part, action which could damage our good relations with Canada, and work to the detriment of our national interests in the future.

That is all that I have to say. I believe that the reasons which I have summarized argue strongly against the enactment of H.R. 1. I hope that this bill will be defeated, and I shall vote against it.

Mr. GROSS. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] Seventy-three Members are present, not a quorum.

Mr. BLATNIK. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. HARRIS) having assumed the chair, Mr. SISK, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 1) to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation, and for other purposes, had come to no resolution thereon.

AREA REDEVELOPMENT LEGISLATION

Mr. LANE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. LANE. Mr. Speaker, communities where people live and work were never intended to be unchanging clusters of factories and stores and homes and public buildings. They are not confined by walls and moats. Even buildings and factories grow old and die, and industries come and go.

Through its slum clearance and urban renewal programs, the Federal Government has recognized its responsibility in assisting the communities to tear down and rebuild the deteriorated areas that are no longer fit for human habitation or for retail enterprise. It owes a similar responsibility toward the ancient, rundown, and abandoned industrial areas of these communities, in order to revitalize their economies.

The decline of local industrial economies, followed by chronic unemployment, is a postwar problem that cannot cure itself. Some of the affected communities, based upon an older industry that is steadily contracting, or has moved away, have been bogged down in the surplus labor category, for the past 7 years. Meanwhile, the empty and obsolete factory buildings are a drag upon the life of the whole community.

Our experience with this problem has proved that local groups and local initiative, despite valiant and partially successful efforts, cannot complete the heroic task of redevelopment without help from outside. Show me just one community, suffering from prolonged labor surplus, that has managed to lick this problem entirely by itself.

The danger of industrial blight is one that, sooner or later, can affect the economic health of any community, and that is the reason why we must have national legislation, providing adequate remedies, to help the distressed areas of tomorrow as well as those of today.

The old textile, coal mining, and railroad centers, are the current victims. But other communities are in the first stages of infection, and are refusing to admit the symptoms.

When I first introduced an industrial redevelopment bill in 1953, the suggestion was slow to win support. Within a few years, as the problem continued to plague many communities, public opinion gave more and more support to the need for legislation along these lines.

A pledge to aid chronically distressed areas was written into both the Democratic and the Republican Party platforms. In 1958, the House and the Senate passed an area redevelopment bill that was vetoed by the President. In the congressional election of last fall, the results in those areas of chronic unemployment, reflected public repudiation of the President's delaying action. I say "delaying" because the need for area redevelopment legislation is plain for all to see. The only question is: How soon and to what extent?

I believe that the composition and the viewpoint of the present Congress will insure passage of this legislation, even if it has to override another veto but with plenty of votes to spare.

For this program to be more than a half-hearted gesture, it must provide financial assistance for industrial and commercial facilities from revolving funds of $100 million for urban redevelopment areas and a like fund for rural redevelopment areas; grants up to $75 million for community public facilities; at least $5 million for technical assistance; and provision for suitable retraining for the unemployed.

To assist our expanding economy, we must be original in our thinking and flexible in our planning. Area redevelopment legislation meets these modern requirements. As it limits eligibility to those communities that have had substantial unemployment over a period of time sufficient to prove that the distress is not due to seasonal or other temporary factors, it will apply only to those areas that are clearly in need of help. When its mission has been accomplished, and the area has been restored to economic health, there will be no further need of Federal participation. Bear in mind also that the major emphasis is on loans, which, as they are repaid, will restore the capital to asist other affected communities in the future.

This is the type of pioneering that proves the capacity and the wisdom of our Federal union in coping successfully with any problem that may arise.

I am convinced that by the enactment of legislation to promote area redevelopment, we shall be able to help depressed communities so that they shall share as equals in our national progress.

IS FRANCO EITHER FRIEND OR ALLY?

Mr. PORTER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. PORTER. Mr. Speaker, is Franco a friend? I believe that it is clear he is not. This can be demonstrated beyond any doubt, despite the statements and actions of our Ambassador to Spain, Mr. John Davis Lodge.

Is Franco an ally? He is, but not a very good or dependable one. He has allowed us to build and occupy valuable military bases in Spain.

Should this House again vote to urge Spain's admission to the NATO alliance?

This has been proposed by House Concurrent Resolution 29 by the distinguished gentleman from Pennsylvania [Mr. WALTER].

It is my hope that the Foreign Affairs Committee will fully consider this proposal, and take into account, among other things, the following ten facts, each of which will be separately explained:

First. Franco was morally and actually on the Axis side in World War II.

Second. The U.S. Ambassador to Spain, John Davis Lodge, contrary to Dr. Milton Eisenhower's recent recommendation which the President endorsed, publicly advocates an abrazo—embrace—for Spain from the United States.

IMPORTANCE OF U.S. AID HIDDEN

Third. Even though our aid to Franco Spain now amounts to almost $2 billion, Franco's policy has been to hide the extent and importance of this aid. He claims that current Spanish inflation is caused by the construction of American bases.

Fourth. U.S. economic aid has not helped solve the country's economic problems but has merely permitted the Government to avoid facing them.

Fifth. Spaniards persist in smuggling large sums out of the country, hedging against both inflation and the fall of Franco.

Sixth. The Spanish Government has been selling at a big profit cotton purchased from the U.S. under the surplus agricultural disposal programs.

Seventh. We have no binding assurances that we will be able to use our military installations on Spanish soil in case of war.

Eighth. The people of Spain do not like us because they believe us responsible in large part for their bad economic situation and because we appear to be closely identified with Franco.

Ninth. The U.S. message of freedom and democracy is not reaching the Spanish people.

Tenth. Communist support grows under Franco.

The explanation of these points follows:

FRANCO DOESN'T LIKE US

First. Franco was morally and actually on the side of the Axis in World War II.

Franco does not like us, or Britain or France. He never has. He plotted and fought against us in World War II.

On March 4, 1946, 13 years ago, our Department of State publicly announced that France, the United Kingdom and the United States had agreed that—

So long as General Franco continues in control of Spain, the Spanish people cannot anticipate full and cordial association with those nations of the world which have, by common effort, brought defeat to German Nazism and Italian Fascism, which aided the present Spanish regime in its rise to power and after which the regime was patterned.

There is no intention of interfering in the internal affairs of Spain. The Spanish people themselves must in the long run work out their own destiny. In spite of the present regime's repressive measures against orderly efforts of the Spanish people to organize and give expression to their political aspirations, the three governments are hopeful that the Spanish people will not again be subjected to the horrors and bitterness of civil strife.

On the contrary, it is hoped that leading patriotic and liberal-minded Spaniards may soon find means to bring about a peaceful withdrawal of Franco, the abolition of the Falange, and the establishment of an interim or caretaker government under which the Spanish people may have an opportunity freely to determine the type of government they wish to have and to choose their leaders. Political amnesty, return of exiled Spaniards, freedom of assembly and political association and provision for free public elections are essential. An interim government which would be and would remain dedicated to these ends should receive the recognition and support of all freedom-loving peoples.

Such recognition would include full diplomatic relations and the taking of such practical measures to assist in the solution of Spain's economic problems as may be practicable in the circumstances prevailing. Such measures are not now possible. The question of the maintenance or termination of the Governments of France, the United Kingdom, and the United States of diplomatic relations with the present Spanish regime is a matter to be decided in the light of events and after taking into account the efforts of the Spanish people to achieve their own freedom.

How far afield we have strayed from these noble words.

As item A following these remarks I am appending the entire State Department pamphlet of which the above statement is the introduction.

The pamphlet is entitled "The Spanish Government and the Axis, Official German Documents" and was published by the Department of State in March 1946. Newspapermen have had trouble finding copies. We ought to be reminded of Franco's role in World War II. The communications among Franco, Hitler, and Mussolini make interesting reading—the significance of which, in the case of Franco, is more than historical.

AN ABRAZO? FOR WHAT?

Second. The U.S. Ambassador to Spain, John Davis Lodge, contrary to Dr. Milton Eisenhower's recent recommendations which the President endorsed, publicly advocates an abrazo—embrace—for Spain from the United States.

The United States has become closely associated with the Franco regime in the eyes of many Spaniards. This is inevitable when a series of U.S. bases is being operated in Spain and the Spanish Government receives military and economic aid from the United States, even if the Spanish people are not generally aware of the extent of this aid.

The United States has gone further, however, and has made a special point of emphasizing its friendship with Spain. One recent example of this is contained in a speech delivered by U.S. Ambassador John Davis Lodge before the Spanish Institute at New York. Mr. Lodge said:

> Our relations with that great nation (Spain), to which America owes so much of its heritage, have progressed so steadily that today I would not hesitate to call them exemplary. As in relations between people, relations between nations must go through various stages, from the somewhat cool first handshake to the informal and heartfelt abrazo. I believe that we have reached with Spain the stage of the abrazo (the embrace). In the two-way street of friendship and association, this stage can only be reached through mutual respect and sincerity. (U.S. Department of State Bulletin, December 15, 1958, p. 963.)

This assertion by Ambassador Lodge contrasts strangely with the recommendations made by Milton Eisenhower a few weeks later when he reported to the President on our Latin American relations. Milton Eisenhower said:

> I believe the suggestion of Vice President NIXON is sound and would be applauded by Latin America itself—that we have an abrazo for democratic leaders, and a formal handshake for dictators. Trivial as this may sound, I recommend that it be our official policy in relations with Latin American leaders and nations. (Dr. Milton S. Eisenhower, report to the President, "United States-Latin American Relations, December 27, 1958"; Department of State publication 6764, 1959, p. 15.)

It is difficult to see why the United States should embrace the dictator of Spain but not the dictators of Latin America. It would seem more consistent to adopt the policy of a handshake toward dictators everywhere.

Third. Even though our aid to Franco Spain now amounts to almost $2 billion, Franco's policy has been to hide the extent and importance of this aid. Instead, he claims that current Spanish inflation is caused by the construction of American bases.

AID TO SPAIN—HOW MUCH?

Spain has been one of the leading recipients of U.S. assistance since 1953, but the exact sum of this aid is the subject of controversy.

The officially announced totals for aid actually transferred to Spain are:

	(*Millions of dollars, or equivalent*)
Grants (nonmilitary from fiscal year 1946 through 1958)	$343.02
Mutual security aid	257.48
Agricultural commodities through private agencies	65.33
Military equipment loans	20.234
Aid to Spanish dependencies	.066
Loans and other credits utilized (fiscal year 1941 through 1958)	142.58
Export-Import Bank (directly and through agent banks)	50.49
Mutual security program	81.92
Mutual security under Agricultural Trade Development and Assistance Act	10.18
(In addition there was $162.56 millions in unutilized loans and credits available on June 30, 1958. Most of this sum resulted from the Agricultural Trade Development and Assistance Act)	
Military aid	239.0
The Department of Defense announced on Oct. 7, 1958, that $239 million in military aid had already been provided to Spain.	
Total officially announced in these categories	724.6

Unofficial estimates of U.S. aid provided to Spain considerably exceed the official figures.

The New York Times reported on January 3, 1959, that Spain had received $350 million in arms aid and $894 million in varying types of economic aid, including $351 million in commodities and $100 million in foodstuffs distributed through American Roman Catholic charities. This would make a total of $1,244 million.

The Times does not specify exactly what it considers as foreign aid. This figure may include the sale of U.S. surplus agricultural commodities to Spain in return for Spanish pesetas rather than dollars. Commodities have been sold in this way for about a $380 million equivalent in pesetas. Some of these peseta funds are included in the official totals above, however, when they are later loaned or granted to Spain. About $115 million equivalent in Spanish pesetas have been granted or loaned to Spain from these funds.

Nor does the Times specify whether its reported figures represent aid actually transmitted to Spain, or merely authorization and commitments. These, of course, run substantially ahead of actual transfers. The official U.S. figures cited above represent only the aid which has been transmitted. And they do not include the value of agricultural commodities sold to Spain for pesetas unless this money was later loaned or granted to Spain.

If the sale of agricultural surplus commodities to Spain is added to the categories of aid listed in the official figures above, it would add about $206 million making the total aid value $930.6 million rather than $724.6 million. The figure of $206 million represents the present value in dollars of the Spanish pesetas in U.S. accounts that have been derived from the sale of surplus agricultural products and which have not been loaned and granted to Spain.

Some unofficial accounts of U.S. aid to Spain also include the cost of constructing the U.S. base system in Spain, usually estimated at about $400 million. Some feel this is at least indirect foreign aid since the base agreement (1953) provides that the bases and all permanent construction located there will revert to Spain when the agreement is terminated. The agreement runs for 10 years, with two planned renewals of 5 years each.

The full $400 million cannot be considered aid, however, since most of the local construction and materials costs were paid for out of the Spanish counterpart funds and did not involve a new outlay of U.S. dollars. Counterpart funds are foreign owned, but jointly controlled funds generated by the sale within a foreign country of U.S. grant aid. It has been estimated that perhaps $75 million of the $400 million total base construction funds came from the Spanish peseta counterpart funds.

The London Economist also provided an estimate of U.S. aid to Spain in its issue for January 17, 1959. The Economist reports that economic aid has passed the $1 billion mark. It also includes $350 million for base construction and $400 million in military aid for modernizing the Spansh armed forces. Together, these forms of aid total $1,750 million. The Economist, like the Times, does not itemize what it considers to be economic aid so that it is difficult to compare these unofficial estimates with the official ones in any kind of responsible way.

If the Economist's aid totals are used it is possible to estimate that Spain has received an average of approximately $300 million in U.S. aid each year since 1954. A rough idea of the significance of this aid to the Spanish economy can be had by comparing the Spanish foreign trade deficit with the value of aid received.

FINANCING THE DEFICIT

In 1957 the total Spanish trade deficit was at a record high of $387 million and preliminary estimates place the 1958 figure at approximately the same level. If the Economist's aid total is used it may be said with some oversimplification that the United States has been financing most of the Spanish foreign trade deficit during the last 2 years.

Despite the magnitude of U.S. aid and its importance to Spain, the Spanish Government has generally seen fit not to give publicity to the actual dimensions of this aid. The policy of the Spanish Government as it has been reported by foreign correspondents in U.S. newspapers is to say there has been too little U.S. aid without, however, citing any figures, and then to claim that the current Spanish inflation results from construction of the American bases.

Recently this situation has been corrected somewhat by the widespread publicity in Spain given to statements

by U.S. Ambassador John Davis Lodge citing total aid figures and refuting the charge that the American bases have caused Spanish inflation. In January 1959, for instance, the weekly Spanish news magazine, SP, carried a five-page interview with Ambassador Lodge which dealt at length with the bases and the aid program.

Finally, it should be noted that the Spanish Government has appealed for increased U.S. aid. The New York Times reported on January 3, 1959, that Gen. Antonio Barroso, Spanish War Minister, recently had visited Washington and requested help in modernizing five Spanish divisions at an estimated cost of $400 million.

In general, U.S. aid to Spain is regarded as a quid pro quo for the American bases. The development of ICBM's by the Soviet Union has increased the vulnerability of the Spanish bases to Soviet attack and Spain is requesting more aid, partially in recognition of this new situation.

Press reports also indicate that some Spaniards have come to look upon U.S. economic aid as a kind of Spanish Marshall plan that should be designed to develop the national economy. When considered from this perspective, the American aid is felt by the Spanish Government to be insufficient.

At the same time there is little indication that the United States has conceived of the Spanish aid program as one aimed at the economic development of the nation. The United States has assumed that its economic aid to Spain has been designed to support the military aid program and as compensation for base rights.

There is little to suggest that the U.S. economic aid to Spain is intended for the purposes of thoroughgoing economic development. Some accounts do suggest, however, that the United States originally hoped to stimulate economic development and a liberalizing political trend through the aid program. If this ever was a major purpose it surely has failed.

QUESTIONS ARE RELEVANT

Because the Spanish aid program is mainly on a quid pro quo basis does not mean it is completely irrelevant to ask questions concerning the use of these funds. First, it may be questioned whether expensive military aid should be provided when it is unrelated to building the necessary defenses of the recipient country against external aggression. This appears to have been the case in Spain.

A report prepared for the Senate Special Committee To Study the Foreign Aid Program by the Institute of War and Peace Studies of Columbia University included the following reference to the military aid program in Spain:

> Spain furnishes the best illustration of a country which seems to have been granted aid on a straight quid pro quo basis. The United States wanted rights to build and maintain air and naval bases at given locations in the country, and the Spanish Government wanted hundreds of millions of dollars worth of certain specified types of military hardware. It was probably not a coincidence that Spanish sights were set at a level which reflected provisions written into mutual security legislation making available at least $225 million for Spain before the negotiations were concluded. The bargain was struck at about that level, making the Spanish case the outstanding example of a substantial grant of military aid in which the immediate American security interest was not to increase the aided country's own military power. This is not to say that modernized, effective Spanish armed forces might not prove useful in certain future contingencies, but rather that, for a variety of reasons, including Spain's exclusion from NATO, her forces were not likely to have a role in Western European defense which justified about $225 million worth of military aid at that time. (U.S. Congress, Senate, Special Committee To Study the Foreign Aid Program; Foreign aid program, compilation of studies and surveys; S. Doc. No. 52; 85th Cong., 1st sess., 1957; pp. 949–950.)

HAVE ECONOMIC REFORMS BEEN MADE?

Fourth. U.S. economic aid has not helped solve the country's economic problems but has merely permitted the government to avoid facing them.

There is good evidence to suggest that the Spanish Government despite its interest in a Spanish Marshall plan has failed to make the necessary economic reforms that make economic development a real possibility.

As a result, the U.S. economic aid has not helped solve the country's economic problems but has merely permitted the Government to avoid facing them. The Franco government has pushed industrial expansion by the importation of foreign machinery so fast that the nation's gold reserves have dwindled to $57 million, which is the untouchable minimum required to cover the national currency. Industrialization has been pushed forward at the expense of agricultural needs. The Government has further increased the country's economic problems by failing to disturb vested economic interests, by resisting foreign capital investment, and by excessively controlling private economic activity. See the Economist, January 17, 1959, page 229.

INFLATION IN SPAIN

The nation is in the midst of a spiraling inflation that has made the cost of living soar 40 percent in the last 2 years, thus wiping out the benefits of large wage increases decreed in the fall of 1956 and pricing Spanish goods out of foreign markets, thus reducing her exports.

Spain looks to the United States for help in extricating it from the increasing economic difficulties. But unless Spain is willing to undertake economic reforms it is doubtful whether further economic aid will help resolve the economic difficulties. It may perhaps be true that even though economic aid is provided for political and military reasons it still must be used in an economically rational manner or the result will be to increase the total problems facing the receiving country.

Fifth. Spaniards persist in smuggling large sums out of the country, hedging against both inflation and the fall of Franco.

Another reported problem which may illustrate the Government's failure to marshal national resources for its own economic development is the recent financial scandal involving the flight of hundreds of millions of dollars worth of Spanish pesetas to Switzerland. These are smuggled out of the country and deposited in private Swiss bank accounts by individual Spanish citizens. This has been happening for some years, but in December 1958 it was announced that some $100–$400 million worth of pesetas had been smuggled out in the preceding 2 months alone. These sums are highly important in the present perilous Spanish economic situation. Yet it is widely rumored but not confirmed that many of the highest government officials have been participating in this flight of the peseta. The Spanish Government has ordered an investigation, but little has been made public. The New York Times, December 17, 1958, in commenting on the scandal said:

> Spanish citizens hedging against mounting inflation here, others desirous of secreting foreign currency abroad for travel or purchasing puposes, and still others fearful of disturbances in Spain when Generalissimo Franco passes from the scene, have been exporting pesetas for years and selling them at a discount for whatever dollars, sterling or Swiss francs they could get.

When economic aid is provided as a noneconomic quid pro quo in Spain, the United States is often deprived of the leverage for achieving necessary local reforms which a program of this magnitude would normally be expected to provide. Spain feels that the United States needs the base system as much as Spain needs American aid. This country therefore does not seem to be in a position to curtail the aid program without inflicting an equal or greater injury upon itself, possibly by making American use of the bases somewhat more ambiguous than it is now.

See item B appended after these remarks.

A PROFIT AT U.S. EXPENSE

Sixth. The Spanish Government has been selling at a big profit cotton purchased from the United States under the surplus agricultural disposal programs.

Examples of the United States failure to exact Spanish economic reforms have been made public. Most recently, this country has been unable to have Spain change its pricing policies on the cotton which it buys from the United States under the surplus agricultural disposal programs in return for Spanish pesetas and then sells to the Spanish people. The Government sells this cotton to Spanish spinning mills at a significantly higher price than it pays the United States for the cotton—U.S. Congress, House Committee on Appropriations, Department of Agriculture appropriations for 1960, hearings, part 1, 86th Cong., 1st sess., 1959, page 207.

SPECIFICS ARE LACKING

Seventh. We have no binding assurances that we will be able to use our military installations on Spanish soil in case of war.

Under the terms of the defense agreement signed between Spain and the United States on September 26, 1953—TIAS 2850—the United States was permitted to construct, maintain, and use

military installations on Spanish soil in cooperation with Spanish armed forces. In theory the bases are to be used jointly by the two countries.

They remain under the Spanish flag and command, and at the termination of the agreement revert to full Spanish control. The agreement states that, "the time and manner of wartime utilization of said areas—bases—and facilities will be as mutually agreed upon."

The base agreement, therefore, does not specifically provide for United States use of the bases in wartime. It is reported that a verbal agreement exists to the effect that the United States will be able to use the bases, but this has not been put in writing. The absence of written permission has been questioned by many observers.

In 1955, Secretary of the Air Force Talbott was asked by a Washington reporter whether the agreement with Spain did not provide only for the peacetime use of the bases. He replied, "Well, who's going to stop us? There are certain agreements on the use of the bases, but when the balloon goes up we are going to use them." It seems clear that in the last analysis the wartime use of the bases depends on the consent of the Franco government or whatever one succeeds it. It is perhaps open to question whether this is a satisfactory guarantee for the United States to plan the use of the Spanish bases in a future emergency.

It was noted earlier that $350 to $400 million is the generally accepted unofficial figure for the cost of constructing the bases. This is higher than was expected at the beginning of work. In 1954 it was reported that the total construction program in Spain was to cost $216 million—U.S. Congress, Senate, Appropriations Committee, special report on Spain and French Morocco, by Hon. DENNIS CHAVEZ; 83d Congress, 2d session, 1954, page 2:

> The following is the list of airbases, all belonging to the 16th Air Force stationed in Spain: Torrejón de Ardoz, near Madrid; Sanjurjo, near Zaragoza; San Pablo, near Sevilla; Morón de la Frontera, southeast of Sevilla; and Rota, on the northern entrance to the Bay of Cadiz.
>
> The list of the naval bases is as follows: El Ferrol, in Galicia, which has always been the largest naval port of the Iberian Peninsula and one of the largest natural ports of Europe (it has, in addition, the distinction of being General Franco's birthplace); Rota, which is not only an airbase, but also the largest American naval establishment in Spain, from where the nearly 800-kilometer pipeline supplying all American bases, with the exception of El Ferrol, leads to Zaragoza via Sevilla, Ciudad Real, and Loeches. Beyond its special significance as a combined air and naval base, Rota is important as a subsidiary of Gibraltar, the latter's runways being too short for certain types of planes, and its waters not deep enough to accommodate warships of the *Forrestal* type.
>
> The whole system of American bases is completed by a number of air warning stations which are a part of the American early warning network spread across Western Europe.
>
> Contrary to an opinion widespread among the population of Spain, the size of the American mission is small. It totals 20,000 persons, including the families, about 7,000 men being ready for combat.

Eighth. The people of Spain do not like us because they believe us responsible in large part for their bad economic situation and because we appear to be closely identified with Franco.

Reports from Spain hold that there is a general local hostility toward the U.S. bases on the part of the Spanish people despite the scrupulous American efforts to avoid this hostility. The American mission, including families of servicemen, total about 20,000 persons, most of whom are stationed on the premises of the bases themselves. When off base the American forces do not appear in uniform and are careful to avoid discussing political topics. Violations of discipline are severely punished. In general, their lives are isolated since they have their own stores, clubs, and restaurants. Despite all this, the Spaniards have a general distrust, prejudice, and antipathy toward foreign troops stationed in their country.

Hostility toward the American forces in Spain and the bases is increased by the Spanish Government's public accusations that they are a major cause of the current Spanish inflation. Referring to these charges, Ambassador Lodge said last year:

> It is true that through the construction of military bases some additional pesetas have been placed in circulation. But about two-thirds of the base construction costs are paid for in dollars made available by the United States in the form of equipment, supplies, and services. The peseta costs, which are met not from the Spanish budget but from the counterpart funds generated by American aid, have been more than matched by imports to absorb the additional purchasing power created. (Quoted in Christian Science Monitor, June 21, 1958.)

Finally, it should be noted that hostility toward the American bases and Armed Forces also flows from the fact that many Spaniards who are out of sympathy with the Franco government look upon the bases and American aid as one of the Government's major supports. Antipathy toward the Franco dictatorship thus becomes antipathy toward the United States in some cases. C. L. Sulzberger, a New York Times correspondent, wrote recently from Madrid:

> Intellectuals and university students see Washington as a principal prop for the Caudillo (Franco). They begin to identify us with his stultified regime. Unreasonably, some conclude that we prefer to keep Spain underdeveloped and dictatorially controlled. (New York Times, Feb. 9, 1959.)

LET'S USE OUR "VOICE"

Ninth. The U.S. message of freedom and democracy is not reaching the Spanish people.

The United States has little opportunity to present American policy to the Spanish people and as noted earlier, the Spanish Government has been reticent about informing its people of the actual dimensions of U.S. aid. The U.S Information Agency offices in Spain have publicized our aid program, but this is a very modest activity, which is not widely seen by the people.

The United States has not even been able to use the Voice of America to reach the Spanish people. We do not beam any program directly to Spain. Instead we provide programs on tapes to the Spanish Government which it uses at its own discretion. These tapes are weekly cultural programs and a series of 2- to 3-minute excerpts from speeches by the President or other prominent Americans. The Spanish Government has not signified its willingness to accept any other American programs.

Taped broadcasts instead of live programs are used by the Voice throughout Western Europe, so that Spain is not an exception here. In each case the local government determined what it will use and attributes the material to the Voice according to its own wishes. It should be noted, however, that in general the other Western European countries are willing to use a much greater variety of Voice taped programs than is Spain.

Voice of America programs are beamed directly to Yugoslavia and that Government does not jam the programs. A case might be made for treating Spain like Yugoslavia in regard to Voice of America broadcasts. Both are on the fringes of Western Europe. Both are dictatorships. In both instances it seems important for the United States to have increased means of presenting its own story to the local people.

COMMUNIST SUPPORT INCREASING

Tenth. Communist support grows under Franco.

According to official United States estimates the Communist Party in Spain has only 5,000 members, though some responsible commentators cite reports that its supporters may number in the hundreds of thousands. The strength of the Spanish Communist Party and its operations are cloaked in considerable secrecy and there is disagreement as to its relations with the Franco government.

There is a widespread feeling among those writing about Spain today that although the Communist Party has been insignificant up to now, it may become a potent force in the near future by picking up strength from the rising Spanish opposition to the Franco government. The Communist Party's current program aims at a united front of all anti-Franco parties and groups directed at reasserting Spain's historic policy of neutrality.

On the other hand one report concludes that the Spanish Communist line has now changed to collaboration with the Franco government in a joint opposition to the non-Communist anti-Franco groups. According to this report, the Government is presumed to have ceased its attacks on the Communist Party and in return the Communists have ceased making anti-Government broadcasts into Spain from Eastern Europe—reported in Iberica, December 15, 1958, page 4. It has not been possible to check completely on the accuracy of this report. It has been ascertained, however, that the Communist radio broadcasts have not been silenced, but continue as in the past to support the local party line. In return, the Spanish Government radio blasts back at the Iron Curtain countries in Czech, Russian, Polish, Chinese, and so forth.

Many commentators on the Spanish scene seem to feel that the tactics of the Franco government, in stifling all

opposition at the same time the country is going through a severe economic crisis, may tend to weld the anti-Franco forces together. This could benefit the Communist united front position. Some commentators even claim that disillusion with the present state of Spanish affairs has spread to the Falange Party itself. C. L. Sulzberger, writing in the New York Times, from his present post in Spain says:

Some Falangists recognizing the failure of their own system, are attracted by the new Communist line: "Let us forget the past and achieve national unity." Students sent by the party to agricultural Andalusia, draw glowing pictures of the Soviet collective system. Poor peasants can be heard to mutter: "When the Russians come we shall welcome them." (Feb. 11, 1959.)

THE PICTURE IS MUDDY

The picture of communism in Spain today is so confusing that it is impossible to draw many dependable conclusions until much greater information is available. It does seem clear, however, that support for the Communist position is growing in Franco's Spain today. Opposition to the Franco regime is rising and the Government has recently repressed several opposition groups.

It is also clear that the U.S. foreign aid program has not been the instrument to undercut whatever communism there was in Spain. Foreign aid has contributed to the growing industrialization of the country. But Spain might be suggested as almost a classic example of an instance in which economic development has heightened internal problems because the local government has not been willing to adopt strict and responsible policies that would make development a success.

Is Franco our friend?

He was not during World War II. He thought our victory would mean his downfall.

Why does Ambassador Lodge believe that Franco's Spain merits our embrace? A Spain that has been saved from economic collapse by U.S. funds. A Spain that gives us no firm assurance we can use our bases in time of war. A Spain with a leader who blames the United States for economic woes when he knows that our help has been essential.

It is clear that Franco is not our friend. It is also clear that we do not want him as a friend, any more than we wanted his friends Mussolini, deceased; Hitler, deceased; Trujillo, tottering; Perón, deposed; Pérez Jiménez, deposed; or Batista, deposed.

But we do need those bases so we have to deal with him, at least until our ICBM's are sufficiently operational. Very well, let us deal with him at arm's length and, as absolutely necessary, a formal handshake. We are paying value to him.

PUT IT IN WRITING

Let us insist on a written agreement as to the use of our bases in case of war. Let us stipulate, as a condition to further aid, that the facts about this aid be known to the Spanish people—and through more channels than our Franco-philic Ambassador.

PUT IT ON THE AIR

Let us also beam radio broadcasts into Spain to tell the Spanish people about our freedom and democracy. We do not do this now, but eight Soviet stations regularly give the Communist side to the Spanish people.

Franco's hold on Spain is weakening. Who will succeed him is by no means clear in Spain or elsewhere. None knows the date of Franco's death. All we know for certain is his final resting place in solitary grandeur in the Valley of the Fallen. Anyone who wants to look at the facts, some of which are stated above and more of which are appended, can predict that his successor will be anti-United States unless our policies and our Ambassador are quickly and forthrightly changed.

We need Franco as an ally but we do not have to compromise our deepest traditions to curry his favor, any more than we have to treat Trujillo as though we respected him and his despotic government.

LET US LEAD AS WE SHOULD

Vice President NIXON phrased it, Milton Eisenhower recommended it, and President Eisenhower endorsed it—an embrace for democratic leaders and a formal handshake for dictators. Now is the time to start carrying out this inevitable, commonsense policy in this hemisphere and throughout the world.

The United States can successfully lead the freedom-loving people of the world to better days, and away from godless mechanistic communism, only by holding fast to the Christian principles of individual freedoms on which our Nation was founded as it was born in a revolution against a tyrant.

ITEM A

THE SPANISH GOVERNMENT AND THE AXIS

I. STATEMENT BY THE DEPARTMENT OF STATE [1]

The Governments of France, the United Kingdom, and the United States of America have exchanged views with regard to the present Spanish Government and their relations with that regime. It is agreed that so long as General Franco continues in control of Spain, the Spanish people cannot anticipate full and cordial association with those nations of the world which have, by common effort, brought defeat to German nazism and Italian fascism, which aided the present Spanish regime in its rise to power and after which the regime was patterned.

There is no intention of interfering in the internal affairs of Spain. The Spanish people themselves must in the long run work out their own destiny. In spite of the present regime's repressive measures against orderly efforts of the Spanish people to organize and give expression to their political aspirations, the three Governments are hopeful that the Spanish people will not again be subjected to the horrors and bitterness of civil strife.

On the contrary, it is hoped that leading patriotic and liberal-minded Spaniards may soon find means to bring about a peaceful withdrawal of Franco, the abolition of the Falange, and the establishment of an interim or caretaker government under which the Spanish people may have an opportunity freely to determine the type of government they wish to have and to choose their leaders. Political amnesty, return of exiled Spaniards, freedom of assembly and political association and provision for free public elections are essential. An interim government which would be and would remain dedicated to these ends should receive the recognition and support of all freedom-loving peoples.

Such recognition would include full diplomatic relations and the taking of such practical measures to assist in the solution of Spain's economic problems as may be practicable in the circumstances prevailing. Such measures are not now possible. The question of the maintenance or termination by the Governments of France, the United Kingdom, and the United States of diplomatic relations with the present Spanish regime is a matter to be decided in the light of events and after taking into account the efforts of the Spanish people to achieve their own freedom.

[1] This statement was released to the press by the Department of State on March 4, 1946.

II. DOCUMENTS [2]

No. 1, memorandum by the German Ambassador in Madrid

BERLIN, *August 8, 1940.*

OPERATION GIBRALTAR

Conditions for Spain's entry into the war:

According to a memorandum presented in June of this year by the Spanish Embassy, the Spanish Government declares itself ready, under certain conditions, to give up its position as a "nonbelligerent" state and to enter the war on the side of Germany and Italy. The Spanish Foreign Minister, and also the Minister of the Interior, have up until the last few days repeatedly pointed out this Spanish offer to me, so that it may be assumed that Spain even today will keep its promise made in June.

As conditions for entry into the war, the Spanish Government cites the following:

1. Fulfillment of a set of national territorial demands, Gibraltar, French Morocco, that part of Algeria colonized and predominantly inhabited by Spaniards (Oran), and further the enlargement of Rio de Oro and of the colonies in the Gulf of Guinea;

2. Making available military and other assistance required for carrying on the war.

The memorandum of Admiral Canaris enclosed here [3] gives detailed information regarding the extent of military assistance apparently necessary.

Besides this military assistance, however, economic support of Spain will also be necessary. To this belong, above all else, the delivery of gasoline and, at the beginning of next year, delivery of grain for bread. According to a recent utterance of the Spanish Minister of Foreign Affairs (of the 3d of this month) Spain, due to its shortage of gasoline, can wage war without our help 1½ months at the most. As concerns the grain for bread, the Minister believes that Spain has sufficient supplies until about March of next year. I consider this latter supposition as too optimistic, unless a strict rationing is carried out.

Besides this necessary assistance however, Spain, beginning with entry into the war, will with respect to a number of other commodities as well be exclusively left to the resources of German and Italian aid.

Advantages of the operation:

1. The effect of the declaration of war on England by a new country will be very strong in England and on the entire world; England's prestige and her prospects for victory will receive a new severe blow, while—upon success of the operation—our prestige will be greatly increased.

2. England will no longer be able to carry on trade with Spain, thus will receive from there no more ores and above all no more pyrite.

[2] This series of 15 documents (translations) was released to the press by the Department of State on March 4, 1946.

[3] Not printed.

3. Nullification of English property rights in ore and copper mines, et cetera.

4. A victorious execution of the operation will mean the control of the straits.

Dangers of the operation for Spain:

1. It would be possible that England, after becoming aware of Spain's war preparations, would beat Spain to the draw and begin war operations.

2. For this purpose she could attempt to extend the territory of Gibraltar in order thereby to make the attack upon Gibraltar more difficult. England could further occupy the Canary Islands, Tangier, and the Spanish colonies, operations which without doubt will result at least in part after the outbreak of war. Spain even considers the Balearic Islands as being threatened.

3. A break between Spain and England can have consequences for Portugal. The English could occupy Lisbon and Lagos or other places in Portugal so that Spain would have a land front. In case of an occupation of Portuguese harbors Salazar is said to have naturally held out to the Spaniards the prospect of military countermeasures, and to have declared himself agreed to a Spanish entry for rendering assistance against England.

4. Outbreak of the war between Spain and England can bring events to a head in north Africa, especially Morocco, where the situation is very tense. Spain distrusts Resident General Nogues who is said to be ogling with the English. Therefore a cooperative English-French-Moroccan operation against the Spanish zone and Tangier would be possible.

5. Because of debilitation resulting from the civil war, Spain is economically unfit to carry through to the end a war lasting more than a few months, if she does not receive economic aid from German and Italian quarters. Aside from gasoline, this, as mentioned above, is true of grain for bread as well.

6. As a result of an intensification of the grave economic situation and eventual starvation and as a result of political and military setbacks (loss of islands, of the colonies) domestic riots could result. This danger I do not consider as very grave at first, since the army is intact. Should the war be of longer duration, however, the situation could become serious.

Difficulties and dangers for us:

1. For transporting the necessary war material to Spain, only the railroad line Bordeaux-Hendaye-(border)-Irun-San Sebastián-Burgos, and so forth, and the road running parallel are available. Within the border area occupied by our troops there is only one other passageway over the Pyrenees, namely, at St. Jean Pied de Porc. According to information from General of the Infantry von Both in Biarritz, only passenger cars and light trucks can travel on this passroad because of its narrow curves. The transporting of all war material must therefore go along the coast where, for long stretches, between Bayonne and San Sebastian, the railroad and the road can be observed and fired upon from the sea. A further difficulty exists in the fact that the Spanish railroad has a different gage from the French so that reloadings are necessary and such equipment as railway guns cannot be transported on. Heavy artillery and other [artillery] are therefore confined exclusively to the roads.

2. The claims upon Germany to deliver weapons and supply special troops should meet with no objections. On the other hand, should the war be of longer duration, the economic assistance requested of us could represent a great burden (especially with respect to nutrition).

If the operation is undertaken, it is in any case necessary:

1. To have the preparations go forward in as camouflaged a manner as possible, to make available in Spain supplies of gasoline and war material (ammunition, bombs) which can be unobtrusively transported by railroad and truck, and, not until the last moment, to bring the heavy guns collected in the south of France across the border by fast transit and into the prepared emplacements, while the air arm is absolutely not to make its appearance until the operation begins in earnest.

2. The moment for initiating the preparations and the operation itself must be adjusted to the expected development of things in England itself, in order to avoid a too early entry of Spain into the war, that is to say, a period of war unendurable for Spain, and thus under certain circumstances the beginning of a source of danger for us.

STOHRER.

No. 2, letter from General Franco to Mussolini

CHIEF OF STATE AND GENERALISSIMO
OF THE SPANISH ARMY,
Madrid, August 15, 1940.

To His Excellency Senor BENITO MUSSOLINI, *Head of the Italian Government, Italy.*

DEAR DUCE: Since the beginning of the present conflict, it has been our intention to make the greatest efforts in our preparations, in order to enter the foreign war at a favorable opportunity in proportion to the means at our disposal, since the lack of the most vital provisions and the interruption of communications with Italy and Germany hindered every operation at the moment.

The rapid and devastating victories in Flanders altered the situation; the defeat of France liberated our frontiers, lessening the grave tension which we along with our Moroccans have been bearing since our civil war.

From this moment, our horizon became brighter, our operation became possible and could become very effective, once the difficulties of provisioning have been removed.

In this manner, upon the entry of your nation into the war, we had to take a clearer stand, one of alertness, changing to one of nonbelligerency, which, in the field of foreign affairs, could not fail to have great repercussions. This awakened jealousy and opposition, and unleashed an Anglo-American offensive against our provisioning, aggravated in these days by the new measures taken by the United States against our exports, and by the English blockade measures, causing grave tension in our relations with those countries.

The consequences, which the conquest of France is to have for the reorganization of the north African territories have made it advisable for me, now that the time has come, to charge my Ambassador in Rome with transmitting to Your Excellency the Spanish aspirations and claims traditionally maintained throughout our history in the foreign policy of Spain, today more alive than ever in our consciousness; to territories, whose present administration is a consequence of that Franco-English policy of domination and exploitation, of which Italy also bears so many scars. To the legitimate Spanish aspirations are added in this case the requirements for security necessitating the elimination of a weak and thinly protected frontier, and the assuring of our communications with the Canary Island group.

In this manner, Spain in addition to the contribution which she made to the establishment of the new order, through our years of hard struggle, offers another in preparing herself to take her place in the struggle against the common enemies.

In this sense, we have requested from Germany the necessities for action, while we push forward the preparations and make every effort to better the provisioning situation as far as possible.

For all these reasons, you will understand the urgency in writing you, to ask your solidarity in these aspirations for the achievement of our security and greatness, while I at the same time assure you of our unconditional support for your expansion and your future.

With my greatest admiration for the brave Italian comrades who are fighting so gloriously, I send you my most cordial regards.

F. FRANCO.

No. 3, letter from Mussolini to General Franco

THE CHIEF OF GOVERNMENT
AND DUCE OF FASCISM,
Rome, August 25, 1940.

To the Head of the Spanish Government, Generalissimo DON FRANCISCO FRANCO-BAHAMONDE, Madrid.

DEAR FRANCO: I thank you for the letter which you have sent me, and in which you sketch the position of Spain in the present stage of the war.

I should like to make it clear to you at once, that your letter has not surprised me.

Ever since the outbreak of the war I have been constantly of the opinion that your Spain, the Spain of the Falange revolution, could not remain neutral until the end of the war, but at the right moment would change to nonbelligerency and finally to intervention.

Should that not happen, Spain would alienate herself from European history, especially the history of the future, which the two victorious Axis Powers will determine.

Furthermore, she would have no moral justification for the solution of her African questions, and, let me say to you, a victorious revolution must set itself extreme goals of an international type, such goals, therefore, as can, at a given moment, require the complete attention and the total effort of a people.

It is clear to me that Spain, after 3 years of civil war, needed a long period of recuperation, but events will not permit it, and your domestic economic condition will not get worse when you change from nonbelligerency to intervention.

I should like to say to you, dear Franco, that I, with these my practical considerations, do not wish to hasten you in the least in the decision that you have to make, for I am sure that in your decisions you will proceed on the basis of the protection of the vital interests of your people and am just as certain that you will not let this opportunity go by of giving Spain her African Lebensraum.

There is no doubt that after France, Great Britain will be defeated; the British regime exists only on one single element: the lie.

I certainly do not need to tell you that you, in your aspirations, can count on the full solidarity of Fascist Italy.

I beg you, dear Franco, to accept my most cordial and comradely greetings.

MUSSOLINI.

No. 4, notes of a conversation between the Führer and the Spanish Minister of the Interior Serrano Suñer in the presence of the Reichs Foreign Minister in Berlin on September 17, 1940

As a preliminary Serrano Suñer delivered a short and voluntary message of Generalissimo Franco, in which the latter expressed to the Führer his gratitude, sympathy, and high esteem, and emphasized to him his loyalty of yesterday, of today, and for always. Franco had commissioned him to bring about a direct contact with the German Government in this decisive time. Since he had already informed the Reichs Foreign Minister of the Spanish wishes, he did not at the moment want to come back to that again, but only wished to emphasize that the Spanish attitude toward Germany had not changed in the least. It was not a question of a revision of the Spanish foreign policy, but only of a clarification of the conditions under which Spain was ready to fight the war together with Germany. Whenever Spain's

supply of foodstuffs and war material was secure she could immediately enter the war. With reference to the war material, Suner declared that the details of the Spanish wishes had been conveyed to Admiral Canaris and Suñer made precise the wish for placing artillery at their disposal specifying that the Spaniards considered 10 38-centimeter guns necessary for Gibraltar.

The Führer replied that the German people had not forgotten the stand which Spain had taken in the World War and that this feeling of appreciation had been the most profound cause for the German conduct during the civil war. Now Germany was in the decisive struggle against England. Continentally this struggle was already decided. A British landing on the Continent was to be characterized as an absolute chimera. The only military possibility still existing was an attempt by England to alienate the French colonies in north Africa from the Pétain government and use them as a new position for the continuation of the war. Aside from that, England had no more opportunities whatever for penetration into the European Continent, from Norway to Spain and Portugal.

In this connection, Suñer pointed to the Spanish fear concerning an English landing on the Cantabrian coast and in this regard mentioned that communistic elements in the population of the Asturias would render the situation very complicated in the event of such a landing attempt. The Führer replied that he could set Suñer's mind at rest in this respect on the basis of landing experiences with landings in Norway where indeed the entire population had been on the side of the English, and the latter, in spite of that, could achieve no success. In Norway it had also been shown that coast artillery was not suitable for repelling an attack, but instead that air defense brought the most favorable results. If a group of Stukas and a group of heavy pursuit planes were made available for the conquest of Gibraltar, then within 8 days no enemy ship would any longer dare to venture into these Spanish areas within a radius of 350 kilometers for the heavy bombs of 1,800 kilograms which these machines carried could perhaps not completely destroy a ship but with a direct hit would render it so incapable of battle that a repair of several months would be necessary. The English, however, would not want to run such a risk. In Norway, however, we had forced the English to retreat only through the use of Stukas.

When Serrano Suñer for his part pointed again to the great strength of the fortress of Gibraltar, the Führer replied that an attack with heavy artillery against an establishment of that type would not be as effective as would be an operation with the special weapons used in overwhelming the Maginot Line. Heavy aerial bombs had an effect many times as great as the heaviest artillery and even the works of the Maginot line could not stand up under it, since armored structures which, according to World War experience, could withstand the heaviest artillery, had been annihilated by 1,000-, 1,400- and 1,800-kilogram aerial bombs inside of 10 minutes. Even when there was no direct hit, the concussion effect of a 1,000-kilogram bomb was, in itself, tremendous. Therefore, the decisive factor for the conquest, and later defense, of Gibraltar, is the guaranteeing of absolute air supremacy.

To be sure, we had set up heavy artillery on the channel coast; it was, however, intended only for very bad weather when penetration by air attacks upon the enemy positions was completely out of the question. Aside from that the installation of 38-centimeter guns lasts several months. Already in the middle of July we had installed the batteries erected in the vicinity of Calais.

The superiority of the Stukas as compared to the heavy artillery is shown by the following figures: A great long-barreled gun could fire 200 rounds without repair, while a Stuka squadron of 36 machines in use thrice daily could drop 120 bombs of 1,000 kilograms each, every 1 of which contained the appropriate amount of high-powered explosives, while a 38-centimeter shell contained only 70 to 75 kilograms of explosives.

It (was a sure thing that one could not long resist the attack of a)[4] dive-bombing group of Junkers 88's and that, at the approach of this feared opponent, the English fleet would immediately get away from Gibraltar and from the entire vicinity.

The Führer declared further that it would not be possible to provide 38-centimeter guns for Gibraltar. Even the transporting would involve extraordinary difficulties, and the installation would require 3 to 4 months. Germany could, however, make special artillery available for the Gibraltar undertaking. Moreover, it was clear that Germany would do everything in her power to help Spain. For once Spain entered the war, Germany would have every interest in her success, since indeed a Spanish victory would be a German one at the same time.

In the Gibraltar undertaking, it would be primarily a matter of taking the fortress itself with extraordinary speed and protecting the straits.

Serrano Suñer thanked the Führer and pointed out that in the previous discussions which had taken place on this subject between German military experts, among others General von Richthofen, and Admiral Canaris, and General Franco, the German intentions had not clearly come to light, indeed, quite on the contrary a certain confusion had arisen. Because of the Führer's statements, the military possibilities had appeared in an entirely new light. He was asking the Führer whether he was ready to put down in writing the views just expressed so that he could convey them to General Franco on his return.

The Führer promised this and emphasized that the question of the capture of Gibraltar had already been studied exactingly by the Germans. For example, a commission of German frontline officers who had had a leading part in the conquest of important French and Belgian fortifications, like Fort Eben Emaël and the Maginot line, had gone to Spain in order to examine the question on the spot. On the basis of the impressions of this commission as well as of the particulars about the condition of Gibraltar which Germany had possessed from former times or obtained recently through Admiral Canaris they had come to the conclusion that Gibraltar could be conquered by a modern attack with relatively modest means. It was a matter of methods which Germany had already used so successfully in the west. Gibraltar was definitely less capable of resistance than the fortifications in the west. (Casemated)[5] guns could be silenced more easily than perchance the guns of the Maginot line which were installed in armored cupolas, and the exposed artillery of Gibraltar could be overwhelmed even more easily. The military cooperation of Germany in the Spanish war would consist of:

1. Immediately expelling enemy ships from the straits, and

2. Making available a small troop of specialists with special weapons by whom Gibraltar could be quickly overwhelmed without great sacrifice of blood. This would be a matter of a small selected special troop of assault engineers equipped with special armor-destroying guns—the so-called "Scharten" or "Pillbox-crackers." As soon as Gibraltar was taken, the problem of the Mediterranean would therewith be settled and no serious danger from French Morocco either could any longer threaten.

In the further course of the conversation, Serrano Suñer, in the same fashion as in his conference with the Reichs Foreign Minister again criticized a few Spanish diplomats. In Berlin, Spain had unfortunately been represented by an Ambassador too old and too liberal-minded, but the Falange had not been able to build up the necessary young forces fast enough to fill the posts important in foreign policy with the right people. The Führer replied that he had great appreciation of this difficulty, for Germany, also, in certain instances in 1934, still had representatives abroad with the spirit of 1932. Suñer seized upon this remark and said that Germany in fact had not always been well represented in Salamanca also. Sometimes it was a matter of Germans who, to be sure, spoke Spanish because they had formerly lived in South America, but who had had no idea of the actual Spanish problems and of the Spanish spiritual sphere.

In the further course of the conversation, Serrano Suñer came to speak about Morocco, and justified the Spanish claims for it in a manner similar to that in the conversation with the Reichs Foreign Minister. He characterized Morocco as Spain's Lebensraum and as her natural expansion objective. For reasons of domestic strengthening of the regime and of external security, Spain was raising the known territorial demands.

The Führer agreed with him in the last point with the remark that many a domestic difficulty which Spain at the moment perhaps still had to face could quickly and easily be overcome by successes with foreign policy. This was an old historical experience. Moreover, it was a matter of two questions:

1. Of the problem of the war, which essentially was a military question, and

2. Of the future configuration of the relationships in Europe and Africa.

Here Germany, on the one hand, had economic interests—she wanted to buy raw materials and sell finished manufactured goods—and, on the other hand, there was the problem of security for her African future in central Africa. For under (certain) conditions, a great danger could threaten her possessions there and even the whole new order as well. It was not out of the question that England and France would try to entice America to the Azores and in these efforts find support in certain imperialistic tendencies of America now already coming to the fore. England could in this way gain a foothold in the islands stretching out in front of Africa—whereby, in time, a very unpleasant situation would arise. For the Continent would be dependent upon that power which kept the outlying islands occupied, especially if it concerned a power with naval superiority. Now the control of the seas could be exercised neither by Italy, nor by Germany, nor by Spain. Therefore, it was necessary to set up defensive strong points on the islands in good time.[6]

To this, Serrano Suñer remarked that Germany had won the war and could claim the leadership in the new order. The defense of the European-African area, however, must take place within the framework of a military alliance of the three powers and of a wise policy. The Führer, continuing, explained the German interests. It was a matter of:

First, to render the northern area free from the blockade;

Second, to create security toward the east for danger always threatened from the east, and Germany was filling a very useful role as the eastern bulwark for Europe; and

Third, to assure Germany a great colonial area, which was not, however, a matter of

[4] Probable translation; text indistinct in microfilm.

[5] Probable translation; text indistinct in microfilm.

[6] Most of one paragraph illegible on microfilm.

area for settlement, of which she possessed enough on the European Continent, but instead purely a matter of raw-material colonies.[7]

After a 1-hour duration the interview was concluded.

SCHMIDT,
Minister.

SEPTEMBER 19, 1940.

No. 5, letter from Generalissimo Franco to Hitler

CHIEF OF STATE, GENERALISSIMO OF THE NATIONAL MILITARY FORCES,
September 22, 1940.

MY DEAR FÜHRER: I received your letter in which you stated to me your views and those of your General Staff in connection with the problems with respect to Spain which are arising from the war, views which with the exception of small details match my thoughts and plans and those of my General Staffs.

I must thank you for the cordial reception which you and your people prepared for my envoy, Minister Serrano Suñer, who reported to me about your conversation and about your esteemed ideas, which satisfy our wishes, and with which we believe ourselves to be in complete agreement, as you will see from the content of this letter. In spite of complete agreement with your words "to recognize the Spanish claims to Morocco with the one limitation of assuring Germany through favorable commercial agreements a share in the raw material of this area," there is to be sure one point where they are inconsistent, namely in the wishes of Herr von Ribbentrop, expressed in the form of a proposal during the conversations between our Ministers, for the establishment of an enclave for German military bases by occupying both the two harbors of the southern zone. These are, according to our opinion, unnecessary in peacetime, and superfluous in wartime, because in this case, you can count upon not only these harbors but on all of them that Spain possesses, since our friendship is to be sealed firmly for the future as well. The advantages that these bases could offer would neither counterbalance the difficulties which this type of enclave always produces nor the harm which they cause to the areas involved whose outlet to the sea they constitute.

I thank you very much for your idea, put before Minister Suñer, of providing me with an opportunity for us to meet near the Spanish border, for, apart from my eager wish to greet you personally, we could have a more thorough and more direct exchange of ideas than our present communications make possible. I should therefore like to state to you my opinion about the individual points of your letter.

1. In regard to your trains of thought set forth in point one concerning the political and economic effects of the present struggle, I can only say to you that I have agreed from the first day on with your opinion expressed there. Only our isolation and the lack of resources most indispensable for our rational existence made our operation impossible.

I am in agreement with you that driving the English out of the Mediterranean Sea will improve the condition of our transports, although it is self-evident that not all questions of the provisioning of Spain will be solved thereby since there are many products and raw materials which Spain lacks, and which are not to be found in the Mediterranean Basin.

2. I am likewise of the opinion that the first act in our attack must consist in the occupation of Gibraltar. In this sense our military policy in the straits since 1936 has been directed by anticipating the English intentions of expanding and protecting their bases.

I agree with your opinion that is is possible to aim at the success of this operation within a few days by the use of modern equipment and tried troops. In this sense, the equipment which you offer me will be of great effect.

For our part, we have been preparing the operation in secret for a long time, since the area in which it is to take place has no suitable network of communications. With respect to the special conditions of the rock, points of resistance can withstand even the strongest action from the air, so that they will have to be destroyed by good and accurate artillery. The extraordinary importance of the project would, in my opinion, justify a strong concentration of resources.

3. The fall of Gibraltar would actually protect the western Mediterranean, and rule out any danger, except the dangers which might arise in passing should De Gaulle succeed with his plan for rebellion in Algiers and Tunis.

A concentration of our troops in Morocco will prevent this danger.

In this respect, it would be suitable for your control commission to increase the precautionary measures to the utmost.

4. I completely share your opinion about the effectiveness of dive bombers for the defense of the coasts, as well as about the actual impossibility of establishing fixed artillery emplacements with heavy material on the vulnerable points on the coast. Evidently a mistake has crept into the transmittal of my wish, for my wish concerned not stationary guns of large caliber, but movable material of about 20 centimeters. I consider this necessary for the future as well and indeed in moderate quantities because of the conditions of the terrain which is mountainous and irregular. The possibility of constructing airports is therefore extraordinarily limited. In most cases, these will lie far removed from the coast and from the objects to be defended. Furthermore, one must reckon with the limitations which necessarily result from the storms and rains frequently occurring there.

In any case, the strong air forces offered by you are indispensable.

5. At the present moment, there is actually little probability of the English undertaking a landing attempt on the peninsula. Even if this should be the case, our own resources and those which you offer me would quickly ruin this plan.

6. The possibility of a surprise attack on the Canary Islands by the English in order to create a naval base for themselves to protect oversea connections has always been a worry of mine. Within the scope of our possibilities we are about to lay aside there supplies of food, ammunition, and sufficient artillery material which we are getting from other less-threatened regions; we effected a partial mobilization several months ago, and also have sent arms for the entire archipelago. We have transferred a group of pursuit pilots there who would no longer have been able to get there once the war had begun. I am of your opinion and consider the presence of dive bombers and destroyer planes in Las Palmas extremely useful, for which bomb material and spare parts must be sent in advance.

7. Obviously freedom of movement in the western Mediterranean is dependent upon Italian successes in Alexandria and Suez, by which the destruction of the English Fleet in these waters will be made possible. At such a moment, a great part of our provisioning problem would be solved.

8. I consider the offer contained in your point 8 for our undertaking as extremely useful and absolutely necessary. For the economic aid which you offer me with such foresight and in the highest measure possible for Germany is just as important as the military equipment. For our part, I offer you reciprocal aid of the same type and to the greatest extent possible considering our potentialities.

In the meantime I consider it my duty to point out to you that in my opinion the conversations hitherto conducted by our specialists have taken the course of negotiations more of a purely commercial orientation. By having treated the settlement of old matters, by wanting to solve the economic problems and the postwar exchanges of commodities, they have deviated from the main subject, which affects both parties equally and which will find its complete solution in the statements of your letter, with which I completely agree.

I would like to thank you, dear Führer, once again for the offer of solidarity. I reply with the assurance of my unchangeable and sincere adherence to you personally, to the German people, and to the cause for which you fight. I hope, in defense of this cause, to be able to renew the old bonds of comradeship between our armies.

In the expectation of being able to express this to you personally, I assure you of my most sincere feelings of friendship and I greet you,

Your,

F. FRANCO.

No. 6, notes covering the interview between the Führer and Count Ciano in the presence of the Reichs Foreign Minister and the State Secretary Meissner in Berlin on September 28, 1940

At the beginning the Führer directed to Count Ciano the question whether the possibility existed for a meeting with the Duce at the Brenner. He considered it right to bring about an exchange of opinion with the Duce concerning the general situation but especially also concerning the Spanish question, before far-reaching decisions were to be made. Also he wanted to speak with him about the strategic situation. As concerned Spain, Germany, on the basis of the experiences gained during the civil war, was clear about the fact that one could not make progress with the Spanish without quite concrete and detailed agreements. It was critical for Germany and Italy successfully to end the war in great security and in as short a time as possible.

The Spanish proposals to Germany, somewhat crassly expressed, go as far as the following:

1. Germany is to deliver for the coming year 400,000–700,000 tons of grain;
2. Germany is to deliver all the fuel;
3. Germany is to deliver the lacking equipment for the army;
4. Germany is to put up artillery, airplanes, as well as special weapons and special troops for the conquest of Gibraltar;
5. Germany is to hand over all of Morocco and besides that, Oran, and is to help her get a border revision in the west of Rio de Oro;
6. Spain is to promise to Germany, in return, her friendship.

One must think it over thoroughly if one intends to enter into such obligations and if one is to bar other possibilities from oneself. Aside from that, he (the Fuhrer) was afraid that the agreements concerning Morocco would somehow leak through and become known in France. In this case the French would possibly even come to an agreement with the English, if they knew that Morocco would be lost to them in any case after the conclusion of the war. At all events, it would be more favorable for Germany if the French remained in Morocco and defended it against the English. If the Spanish were to occupy the territory, they probably would only call for German and Italian help in the event of an English attack, and moreover they would let the tempo of their civil war prevail in their military measures. It was therefore necessary to talk over very calmly

[7] Two subsequent paragraphs are illegible in the material available and have, therefore, been omitted here.

for a few hours with the Duce the whole question in the light of its usefulness and its military significance, especially since the deliveries demanded of Germany would represent a great sacrifice, which after all could not be made only in return for the good graces of the Spanish. Thus far, at any rate, the Spanish had not yet held out the prospect of an equivalent. One must ponder the problem very cooly and examine it in the light of its possible effects. The case would be entirely clear if Spain would assume distinct obligations. Considering the uncertainty of the Spanish attitude, Germany and Italy in this interview between the Fuhrer and the Duce would have to take a similar stand on the Spanish problem. The agreements with Spain would only contain obligations for her partners and in practice would have to be made good militarily by Germany and Italy. The consequences could be very unpleasant. It would not be impossible that, the commitments concerning Morocco and Oran becoming known, North Africa even might fall into the hands of the English. That would make a conquest of this territory necessary. This military undertaking would have to be carried out over the very dubious bridge, Spain, during which the possibility would definitely exist that Spain then would withdraw again into her neutrality. At all events, England would then have in Africa a great number of airbases, which to be sure would not be decisive for the war, but which could really turn out to be very unpleasant, since air penetration from Germany and Italy would be difficult on account of the great distance.

The Fuhrer then mentioned in this connection the invitation which Franco had extended to him to meet with him on the Spanish-French border. He did not yet know whether he ought to accept this invitation. It would all depend on the conversation with the Duce. In any case he was not convinced that Spain had "the same intensity of will for giving as for taking". Moreover it was customary for allies to support one another reciprocally; in the case of Spain, however, the reciprocity would have to be missed.

When Spain was engaged in the Civil War, Germany had supported Franco in a very extensive measure considering her [Germany's] condition at the time. This support moreover had not been without risk. It was not limited only to the delivery of materiel, but volunteers were also made available and many Germans and Italians had fallen in Spain. He did not intend to compute this blood sacrifice in terms of economic values, but instead considered it an outright gift to Spain.

Economically Germany had given out many hundreds of millions for Spain. He (the Fuhrer) had taken the stand that the payment of this debt should be left alone during the war, however that it would have to be taken up again after the victory of Franco. Whenever the Germans demand the payment of the 400 million debt incurred during the Spanish Civil War, this is often interpreted by the Spanish as a tactless confusing of economic and idealistic considerations, and as a German, one feels toward the Spanish almost like a Jew, who wants to make business out of the holiest possessions of mankind. Therefore in all agreements with the Spanish one must to begin with clearly stipulate the terms, and if Germany is to furnish grain, the question of compensation must be settled now already.

Italy and Germany had done very much for Spain in the year 1936. Italy just had its Abyssinia undertaking behind her, while Germany was in the midst of her rearming. Without the help of both the countries there would today be no Franco.

From all these considerations a joint discussion with the Duce was necessary before making further decisions which could be very far-reaching. In no case should any step which would be undertaken with regard to Spain lead to a deterioration of the strategic position in the Mediterranean Sea.

Count Ciano replied that the Duce certainly would gladly seize the opportunity for a discussion with the Fuhrer. He had already frequently spoken to him (Ciano) about it. Would the Fuhrer like to make a suggestion concerning the date.

Moreover the Duce had the same fears as those the Fuhrer had just mentioned concerning the difficulties involved in an entry of Spain into the war. Italy also had not forgotten the experiences of the Spanish Civil War. At that time Franco had declared that if he received 12 transport planes or bombers, he would have the war won in a few days. These 12 airplanes became more than one thousand airplanes, 6 thousand dead, and 14 billion lire. With all due sympathy for Spain, this had upon reflection proven in fact to be right, and now again the Duce feared that many sacrifices would be demanded of Italy and Germany without return. Aside from this, it was to be feared that following the pattern of the Spanish Civil War, Spain's demands as now reported would be increased more and more in the further course of events. Therefore caution was in order and a discussion very appropriate.

It was then decided to hold the discussion between the Fuhrer and the Duce at the Brenner in connection with the visit of Serrano Suner in Rome on Friday, October 4, 1940.

SCHMIDT, *Minister.*

BERLIN, *September 29, 1940.*

No. 7, letter from Serrano Suñer to Von Ribbentrop

EL PRESIDENTE DE LA JUNTA
POLITICA DE FALANGE ESPANOLA
TRADICIONALISTA Y DE LAS JONS,
Madrid, October 10, 1940.

To His Excellency J. VON RIBBENTROP,
Minister of Foreign Affairs of the German Reich.

MY DEAR MR. MINISTER: Upon my return from Berlin and Rome I had several conversations with the Caudillo for the purpose of continuing the examination of the questions and viewpoints which were considered during our meeting in the capital of the Reich. We have at hand the proposals of an economic character which were formulated by the German Government and expect shortly to make a concrete counterproposal with the object of arriving at an agreement on those matters, as well as on those dealing with the details and circumstances of the 10-year military alliance with Germany and Italy. We believe that all of these should be negotiated with the utmost secrecy in order not to jeopardize the several shiploads of Argentine and Canadian wheat which we are endeavoring—with great difficulty—to acquire. All of this for the good of the common cause. This will be done in such a way that while the rank and file of our diplomatic service continue keeping the balance in order to obtain the greatest possible quantities of wheat and gasoline, our negotiations will be carried on through our personal contacts and through secret correspondence between the Führer and the Caudillo.

We have in the Canary Islands four batteries, an important group of pursuit planes and machinegun nests, all of which dispose of the possibility of an English or American landing. One of the bravest generals of our army departed yesterday to take command of the Grand Canary.

We have just finished sending to Morocco two additional divisions under good command. The Caudillo has requested me to inform you of his impression that De Gaulle is preparing an uprising in Oran.

While reiterating the expression of my personal friendship toward you, please be good enough to renew my respects to the Führer, with best wishes for the collaboration of our two peoples for the common good.

RAMÓN SERRANO SUÑER.

No. 8, notes on the conversation between the Führer and the Caudillo in the Führer's parlor car at the railroad station at Hendaye on October 23, 1940

At the beginning the Caudillo expressed his satisfaction about the fact that he was at the moment able to make the personal acquaintance of the Führer and to render to him Spain's thanks for everything that Germany has done for his country up to the present. Spain has always been allied with the German people spiritually without any reservation and in complete loyalty. In the same sense, Spain has in every moment felt herself at one with the Axis. In the civil war the soldiers of the three countries had fought together and a profound unity has arisen among them. Likewise, Spain would, in the future, attach herself closely to Germany for historically there were between Spain and Germany only forces of unity, and none of separation.

In the present war as well, Spain would gladly fight at Germany's side. The difficulties which were to be overcome therein were well known to the Fuhrer. A war would necessitate preparations in the economic, military, and political spheres. Within her modest possibilities, Spain had begun these preparations; was, of course, coming up against difficulties therewith which were being made for her by elements in America and Europe, hostile to the Axis. Therefore, Spain must mark time and often look kindly toward things with which she was thoroughly not in accord.

Franco then came to speak of Spain's growing provisioning difficulties and in this connection mentioned that the United States and Argentina apparently were precisely following orders from London, for there had been cases in which the channel through the British Embassy immediately removed difficulties in both the above-mentioned countries. The difficulties already existing would be more intensified by the bad harvests. In spite of this, Spain with a view toward her spiritual alliance with the Axis powers, has assumed the same attitude towards the war as Italy had in the past autumn.

The Führer replied that he was glad to see the Caudillo personally for the first time in his life after he had so often been with him in spirit during the Spanish Civil War. He knew precisely how difficult the struggle in Spain had been, since he himself since 1918–19 had had to go through similar grave conflicts, until he had helped the National Socialist movement to victory. Spain's enemies had been his enemies, too. The struggle which was raging in Europe today would be decisive for the fate of the Continent and the world for a long time to come. Militarily, this struggle in itself was decided. Germany had established a front against the British Islands from the North Cape to the Spanish border and would no longer allow the English a landing on the Continent. The military actions were now taking place right in English motherland. In spite of that, England had certain hopes: Russia and America. With Russia, Germany had treaties. Aside from this, however, he (the Führer) immediately after conclusion of the French campaign had undertaken a reorganization of the German Army so that, beginning with March of the coming year, the latter would present itself in the following strength: of a total of 230 divisions, 186 were attacking divisions. The rest consisted of defense and occupation troops. Of the 186 attacking divisions, 20 were armored divisions equipped with German material,

while 4 additional armored brigades possessed captured material in part. In addition to this there were 12 motorized divisions. With this army strength Germany was grown ready for any eventuality. He (the Führer) believed that England was wrong too in placing her hope on Russia. If the latter country were aroused at all from its inactivity, it would, at the most, be active on the German side. It was therefore a matter of misspeculation on the part of England.

With respect to America, there was no need to be afraid of an active attack during the winter. There would therefore be no change in the present military situation. Until America's military power would be fully armed, at least 18 months to two years would pass.

There would arise, nevertheless, a considerable danger if America and England entrenched themselves on the islands stretching out off Africa in the Atlantic Ocean. The danger was all the greater because it was not certain whether the French troops stationed in the colonies would under all circumstances remain loyal to Pétain. The greatest threat existing at the moment was that a part of the Colonial Empire would, with abundant material and military resources, desert France and go over to De Gaulle, England, or the United States. Moreover, the war of Germany against England was continuing. The difficulty was that the operations had to be carried on across an ocean which Germany at sea did not control. She had only air supremacy. Of course the weather over the Channel for exercising it had, up to then, been extremely unfavorable. Since the middle of August there had not even been five fair days, and the major attack against England had as yet not been able to begin since an attack against the British naval forces, on the part of Germany, could only be carried out from the air, whereby, under good atmospheric conditions, the British fleet had always been forced to yield, according to previous experiences.

According to meteorological forecasts which prophesied with certainty a period of fair weather for seven to eight days, a great air attack had been started on a fixed day. Of course it had to be broken off again after lasting half a day because of a sudden change in the weather.

Germany had, up to this point, carried off very great victories. But for this very reason, he (the Führer) wanted to guard against suffering a failure by some thoughtless move. In this connection, the Führer mentioned as an example of his tactics, the events of the great offensive in France. Originally he had had the plan of striking the great blow as early as October of the previous year, but had constantly been hindered from doing this by the weather. He had suffered because of not being able to act but he had been really determined not to begin the offensive in bad weather, but on the contrary had preferred to wait until the weather conditions became better. When the meteorologists had then reported to him that on May 10 the normal period of clear weather for the summer would begin, he had, on May 8, issued the order for attack. The result of this attack was known, and in the battle against England he would act precisely as in the French offensive. He would begin the great attack only when the weather conditions permitted absolute success. In the meantime, England, and especially London, was being bombarded day and night. On London alone, 3,500,000 kilograms of bombs had been dropped. Many harbor installations, factories, and armament works were thus being shattered; England's approaches were being mined; and an increasing U-boat activity was contributing to the further isolation of the islands. At the moment, the number of U-boats being finished every month was 10. In spring, it would rise to 17; in July to 25; and after that up to 34 per month. He hoped the concentrated activity of the air arm, minelayers and destroyers, U-boats, and speedboats would do so much damage and harm to England that in the end attrition would set in. In spite of this, he was lying in wait in order to carry out the great blow during fair weather, even if this could not happen until spring. It is self-evident that the time during which such vast masses of troops were lying inactive would continue to be exploited.

Naturally Germany had an interest in ending the war in a short time if possible, since every additional month cost money and sacrifice. In the attempt to bring about the end of the war as soon as possible and to render the entry of the United States into the war more difficult, Germany had concluded the Tripartite Pact. This pact was compelling the United States to keep its Navy in the Pacific Ocean and to prepare herself for a Japanese attack from that direction. In Europe as well, Germany was attempting to expand her base. He could confidentially report that several other nations had announced their intention of joining the Tripartite Pact.

To guarantee her petroleum supply, Germany has sent pursuit squadrons and Panzer troops to Rumania upon the request of the Rumanian Government and in agreement with it.

The great problem that was to be solved at the moment consisted in hindering the De Gaulle movement in French Africa from further expanding itself, and (hindering) the establishment, in this way, of bases for England and America on the African coast. A danger in this direction was actually present. The Petain government was in the deplorable condition of having to liquidate a war for which it was not responsible, for the consequences of which, however, its opponents blamed it. It was now a matter of preventing De Gaulle from receiving an increase in power from this difficult position of the French Government, something which moreover would lead France to complete collapse. Finally, the attempt had to be made to bring France herself to a definite stand against England. This indeed was a difficult undertaking because there were still two tendencies in France: A Fascist one represented by Petain and Laval, and an opposition one which wanted to carry on a doubledealing game with England. Moreover, it was particularly difficult to stir the French to a clear stand because they did not know how the peace would look. On the other hand, nothing could be said about the peace as long as the war was not completely ended, for one of Germany's opponents certainly had to pay for the war. Were England soon overpowered, Germany would then be ready without further ado to grant France easier peace terms. Should the war, however, continue on and should the English, as a result, offer Germany a compromise, she (Germany) would certainly not continue to fight only to spare France. Moreover, Germany needed France as a base as long as she was fighting against England. Yesterday he had, in all frankness, informed Vice President Laval of this interpretation and he would, on the morrow, speak with Petain in precisely the same manner.

The purpose of this conference in Hendaye was the following: If they would be successful in effecting quite a large front against England, then the struggle would be substantially easier for all the participants and could be ended sooner. In setting up this front, the Spanish desires and the French hopes were obstacles in the path. Were England no longer participating in the war and if there were no De Gaulle, one would not have to think of relinquishing the demands on France. France could then be brought to submit and, in case she did not wish to cooperate, she could be occupied by the military within 12 days without any difficulty. More difficult would be the solution of the administrative problems and the economic problems. To occupy North Africa would of course be difficult and would not be possible without a strong military effort. The French knew that they had to sacrifice something in the peace treaty. They counted on losing the German colonies and Alsace-Lorraine; they knew that border rectifications would be undertaken and that Nice, Corsica, and Tunis would be lost to them. In the latter case, they would of course be very downcast over the loss and would prefer to make an arrangement which would, in another fashion, assure access to the raw materials there. Such an arrangement would be a fraud, however, for whoever no longer had the country, to him, at the proper moment, would no longer be given the raw materials. There was the danger that, if it were concretely asserted to the French that they would have to get out of certain African areas, the African possessions would perhaps desert France even with the concurrence of the government of Vichy. In order to meet this danger, he had worked up a general formula which he had developed yesterday to M. Laval. In doing this he did not allow himself to make any concrete statement of the territorial changes to take place after the war.

(The record of this conversation is incomplete.)

No. 9, German Foreign Office memorandum

BERLIN, *October 31, 1940.*

(Reporter: Councillor of Legation Kramarz)

NOTE.—The Naval Warfare Command informs that the necessity exists in connection with naval operations in the Bay of Biscay for being able to supply German destroyers with fuel in out-of-the-way bays of the Spanish coast. For this purpose, German tankers would be sent there, from which replenishing would take place by night in order thus to guarantee the secrecy. The Naval Warfare Command has in this connection pointed to the fact that the Spanish Government has already shown similar obligingness in the supplying of German U-boats.

The Naval Warfare Command requests opinion and corresponding instruction of the Spanish Government.

Herewith submitted to Ambassador Ritter.

KRAMARZ.

No. 10, telegram from the German Ambassador in Madrid to the Foreign Office in Berlin

MADRID, *December 5, 1940.*

In reply to proposal made by Embassy as instructed, Foreign Minister has now informed that Spanish Government has agreed to the placing in readiness of German tankers in out-of-the-way bays of the Spanish coast for the supplying of German destroyers with fuel. Foreign Minister vigorously requested observing greatest caution in carrying out measure.

STOHRER.

No. 11, telegram from the German Ambassador in Madrid to the Foreign Office in Berlin

MADRID, *December 12, 1940.*

(Strictly secret)

In reply to telegraphic directive No. 2246 of December 11.

The protocol of General Vigón covering the conference of Admiral Canaris with the Generalissimo (Dec. 7, 1940) reads in translation:

"Admiral was received 19:30 o'clock in presence of General Vigón. Admiral presents Chief of State Führer's greeting and conveys Germany's wish to undertake attack upon Gibraltar within a short time in con-

nection with which German troops are to march into Spain on January 10. Reports that the Führer considers this moment the most favorable since the troops now available for operation are directly thereafter to be used for other undertakings and therefore could not be reserved for indefinite time. Admiral reports that as soon as march of troops began, economic cooperation of Germany would at once begin.

"To this Generalissimo explains to Admiral that it was impossible for Spain for reasons duly presented to enter into the war on the suggested date.

"1. English fleet still possesses such freedom of operation that the success being expected in Gibraltar—which he considers certain and quick—would very soon be dimmed by loss of the possessions of Guinea and later on one of the Canary Islands. Further, pretexts would be given England and the United States for occupying the Azores, Madeira, and the Cape Verde Islands.

"2. Although tied up with difficulties because of restriction of foreign trade, military preparation of Spain has progressed. They are endeavoring to improve as much as possible defense of the islands and of coast, and are strengthening artillery of the straits. Everything is however incomplete and unfinished; this is however not the actual reason which is preventing Spain from accepting the proposed date.

"3. Spain's provisioning is absolutely inadequate both with respect to the present scanty supplies, as well as with respect to their distribution. There are at the moment two problems:

"(a) the deficiency in foodstuffs, especially grain, which latter [deficiency] is estimated at 1 million tons.

"(b) the inadequacy of transports due to lack of railway materials and because of the compulsory restriction in the use of motor trucks. If one adds to it the discontinuance of the sea transports as results of the war, the situation of many provinces would become unbearable.

"4. Generalissimo and Government are endeavoring to remove these difficulties. They effected grain purchases in South America and Canada; they are pushing the purchase of railway cars and are expediting provision of locomotives; they are effecting purchases of gas generators for motor trucks for the eventuality of a complete lack of gasoline. But incipient exhaustion of all supplies and restriction of foreign trade are preventing quick improvement.

"5. For these reasons Spain cannot enter into the war within a short time. She could also not wage a long war without imposing unbearable sacrifices upon the Spanish people. Aside from that, a long war would with certainty bring with it loss of a part of the Canary Islands, which could only be supplied for 6 months.

"6. In presenting all the difficulties which are preventing Spain from accepting the proposed date, Generalissimo wishes to stress that he is not only thinking of Spain's advantages but is also considering those of Germany, for, in his opinion, in a war of rather lengthy duration Spain's weakened condition would certainly represent disadvantage and burden for Germany.

"Admiral asked Generalissimo whether, under these conditions, which are preventing fixing the 10th of January as the date, it would be possible now already to set a different later date. Generalissimo replies that since removal of difficulties depends not only upon the will of Spain, he too could name no definite date, which might have to undergo change because of the circumstances. In any case, his attention and his effort would be directed toward hastening and completing Spain's preparations. The preparation was being continued with vigor, something which the admiral himself would have the opportunity of confirming upon his next visit to the area of the straits. Generalissimo also shows admiral photographs of the mortar 240, which is to make up for the lack of heavy artillery and air arms, and with which tests are at the moment being made.

"Generalissimo considers is advisable that a German economist visit Spain in order to examine the then-existing condition and to pass on to his government a firsthand impression. He agrees with the admiral that preparatory studies and labors begun be continued jointly and in the same discreet form hitherto carried out.

"He then charges the admiral with conveying to the fuhrer his most cordial greetings and with reporting the conference [to him] at the same time expressing again his esteem to the admiral and his delight at seeing him again in Spain.

"JUAN VIGÓN,
"Divisional General."

End of the protocol.

STOHRER.

No. 12, letter from Hitler to Franco, February 6, 1941

FEBRUARY 6, 1941.

DEAR CAUDILLO: If I write this letter it is done in order to determine once again with extreme clarity the individual phases of the development of a situation which is not only important for Germany and Italy but could have been of decisive importance to Spain.

When we had our meeting, it was my aim to convince you, Caudillo, of the necessity of common action of those States whose interests in the final analysis are certainly tied up indissolubly with each other. For centuries, Spain has been persecuted by the same enemies against whom today Germany and Italy are forced to fight. In addition to the earlier imperial strivings inimical to our three nations there now arose, moreover, antitheses conditioned by world outlook: The Jewish-international democracy, which reigns in these States, will not excuse any of us for having followed a course which seeks to secure the future of our peoples in accordance with fundamental principles determined by the people and not those imposed by capital. As concerns the German determination to follow this fight through to the final consequence, I need waste no word. The Duce thinks no differently. On the basis of this analysis, the Japanese people as well will not in the long run get by, unless it be by a submission sacrificing the future of the Japanese people. I am now convinced that Spain faces the same fate. Caudillo, if your struggle against the elements of destruction in Spain was successful, it was only because of the democratic opponents forced to be cautious by attitude of Germany and Italy. You will be forgiven, Caudillo, but never for this victory. Just as little does England think of letting you remain for a long period in North Africa opposite Gibraltar—as soon as she is once again in a position of power. The Spanish seizure of the Tangier zone would in such a case—and this is my deepest conviction, Caudillo—only be a passing intermezzo. England, and probably America too, will do everything to render this entry into the Mediterranean in the future even more secure under their dominion than up to now. It is my most heartfelt conviction that the battle which Germany and Italy are now fighting out is thus determining the future destiny of Spain as well. Only in the case of our victory will the present regime continue to exist. Should Germany and Italy lose this war, however, then any future for a really national and independent Spain would be impossible.

I have thus been striving to convince you, Caudillo, of the necessity in the interests of your own country and the future of the Spanish people, of uniting yourself with those countries who formerly sent soldiers to support you, and who today of necessity, are also battling not only for their own existence, but indirectly for the national future of Spain as well.

Now at our meeting we agreed that Spain declare its readiness to sign the Three-Power Pact and to enter the war. In setting the date, periods in the far future were never considered or even mentioned, but instead the conversation always was concerned with a very short time-limit within which you, Caudillo, still believed that you could carry out various economic measures favorable for your country.

I personally have been skeptical from the beginning about the hope of receiving very soon more real economic benefits for Spain.

1. England indeed has no thought at all of really helping Spain. England is only endeavoring to postpone the Spanish entry into the war, to put it off in order in this way continually to increase her distress and thus to be able finally to overthrow the Spanish Government of that time.

2. But even if England were about to think otherwise, in an impulse toward some kind of sentimentality never present in British history up to now, she could not really help Spain under any conditions. She is absolutely not in the condition even in transportation alone to aid another country in a time in which she herself has already been forced to the most rigorous retrenchments in her standard of living. And the need for transport space will as the months go by not decrease but instead will get more and more serious.

In spite of the fact that I, therefore—as stated—have been thoroughly skeptical about this from the beginning, I nonetheless brought to bear every bit of appreciation for your efforts in at least trying, even before entering the war, to get shipments of foodstuffs into Spain from countries overseas as well.

Germany, however, has for her part, declared herself ready to deliver to Spain, immediately after undertaking entrance into the war, food, that is—grain—to as great an extent as possible. Furthermore, Germany has declared herself prepared to replace the 100,000 tons of grain which was waiting in Portugal destined for Switzerland in order that it might benefit Spain immediately. This of course remains contingent upon the final decision for Spain's entry into the war. For about one thing, Caudillo, there must be clarity: We are fighting a battle of life and death and cannot at this time make any gifts. If it should later be asserted that Spain could not enter the war because she received no supplies, that would not be true. For immediately after settling the entry into the war, a fixed date of which there has as yet been no outward indication at all, Spain would receive the first supplies, that is, 100,000 tons of grain. I doubt whether 100,000 tons of grain could really have reached Spain from abroad within the same period of time, even if such an inclination had existed. Thus, I also doubt that this is going to happen. The assertion, however, that—if our grain had been delivered immediately—the Spanish people could thus by propaganda have been prepared for entry into the war is self-contradictory for another reason.

Your, yourself, Caudillo, have indeed personally indicated to me the importance of not yet consummating publicly the entrance in the Three-Power Pact, because you feared that this would have hurt your other efforts, for example in obtaining more grain, indeed would perhaps have wrecked them. How much less possible would it then have been to carry on open propaganda for entering the war? No, I am taking the liberty once more to confirm that:

1. During our conversation, it was never considered that Spain's entry into the war

would perchance not take place until autumn or the coming winter, and that—

2. Germany was ready to furnish supplies to the Spanish Government at the moment when the final date for entering the war was determined.

When I had the request made to you, Caudillo, with the impression of urgency to bring relief to the Italian ally and to set this date in the middle or the end of January, that is, to permit the German march against Gibraltar to begin on or after January 10, in order to start attacking at the end of January, then for the first time our negotiators were unequivocally informed that such an early date could absolutely not be considered and this was again motivated by economic factors. However, when I thereupon let it be known again that Germany was indeed ready to begin at once with deliveries of grain, Admiral Canaris received the conclusive information that this delivery of grain would not be decisive at all, for via railway, it certainly could accomplish no practical effect. It was now further declared that since we had already made available batteries for the Canary Islands and moreover intended also to provide dive bombers for additional security—even that was not decisive, since the Canary Islands from the point of view of food could no longer be held after 6 months.

That is absolutely not a matter of economic factors but rather of others is apparent from the last statement in which it is stated that for climatic reasons to march in this season could not succeed, but on the contrary should only be considered at the earliest in the autumn or winter.

Under these conditions, of course, I do not understand why one should first want to declare an event impossible on economic grounds, which is now said to be impossible simply for climatic reasons. Now I do not believe that the German Army would be disturbed during its march in January by a climate which in itself is nothing out of the ordinary for us. In any case, we solved our problems in the Norwegian campaign under varied conditions and with severe climatic hindrances in the form of snow and ice, not to mention the fact that, from the participation of German soldiers and officers in your campaign, Caudillo, the climatic conditions of Spain are nothing unfamiliar to us. I regret most profoundly, Caudillo, this your opinion and your stand since:

1. I feel it my duty to bring relief to my Italian friend and ally and thus be of help to him—indeed be of help at the moment when he experienced an unfortunate mishap. The attack on Gibraltar and the closing of the straits would have changed the Mediterranean situation in one stroke.

2. I am of the conviction that in war, time is one of the most important factors. Months which one lets slip by are often never regained again.

3. Finally however it is clear that, on January 10 if we had been able to cross the Spanish border with the first formations, Gibraltar would today be in our hands. That means: 2 months have been lost, which otherwise would have helped to decide world history.

4. I am further of the conviction that Spain's economic condition would have improved and not become worse because of what would in any case have come to Spain through us and that on the other hand the deliveries which since then actually came to Spain from abroad during this time can only amount to a fraction compared to that which would in any case have been delivered at once by us.

But quite aside from this, Caudillo, I should like now to mention the following:

The entrance of Spain into this struggle has certainly not been conceived of as exclusively to the benefit of the interests of Germany and Italy. Spain herself has advanced very great territorial claims for the fulfillment of which the Duce and I had declared ourselves ready in every degree which could at all be reconciled with an acceptable new arrangement of the African colonial possessions for Europe and its countries. And I may point out in this regard that in this struggle up to now first Germany and then Italy, have suffered the most prodigious blood sacrifice, and that both, in spite of this, themselves made very modest claims.

In any case, however, the moment of military operations above all can only be proposed by the one who therewith assumes the main burden of the struggle and who must therefore calculate it into the total program of a military analysis which is after all of worldwide extent. That I myself have no other goal in mind than the common success is certainly understandable. Indeed in this case, Caudillo, my urging in and of itself only proves the strength of my consciousness of responsibility toward my ally as well. For wheresoever in the course of this war difficulties should arise, it will be my unbending will to help out with them; and my decision to make good in the final settlement whatever during one or another stage of this war can perhaps at first have miscarried. This affects Spain as well. Spain will never get other friends than those given [her] in the Germany and Italy of today, unless it becomes a different Spain. This different Spain however would only be the Spain of decline and of final collapse. Even for this reason alone, Caudillo, I believe that we three men, the Duce, you, and I, are bound to one another by the most rigorous compulsion of history that is possible, and that thus we in this historical analysis ought to obey as the supreme commandment the realization that in such difficult times, not so much an apparently wise caution as the bold heart, rather, can save nations.

Moreover, Caudillo, this war is decided regardless of what ephemeral successes the British believe they can achieve anywhere on the periphery. For independently thereof, the fact remains that the British power in Europe is broken and that the mightiest military machine in the world stands ready for every additional task which may be put to it to solve. And how good and reliable this instrument is, the future will prove.

Accept my cordial and comradely greetings.

Your

ADOLPH HITLER.

No. 13. letter from General Franco to Hitler

EL PARDO, *February 26, 1941.*

DEAR FUEHRER: Your letter of the 6th makes me wish to send you my reply promptly, since I consider it necessary to make certain clarifications and confirmation of my loyalty.

I consider as you yourself do that the destiny of history has united you with myself and with the Duce in an indissoluble way. I have never needed to be convinced of this and as I have told you more than once, our civil war since its very inception and during its entire course is more than proof. I also share your opinion that the fact that Spain is situated on both shores of the strait forces her to the utmost enmity toward England, who aspires to maintain control of it.

We stand today where we have always stood, in a resolute manner and with the firmest conviction. You must have no doubt about my absolute loyalty to this political concept and to the realization of the union of our national destinies with those of Germany and Italy. With the same loyalty, I have made clear to you since the beginning of these negotiations the conditions of our economic situation, the only reasons why it has not been possible up to now to determine the date of Spain's participation.

Having in mind our own postwar difficulties, you will recall that I have never fixed too short a period for our entry into the war. Permit me, Führer, to say that the time elapsed until this moment has not been completely lost, since we have been obtaining not certainly great enough quantities of grain to permit us to build stocks, but certainly for some of the bread necessary for daily sustenance of the people who otherwise would have perished of starvation in considerable numbers.

Furthermore, it must be acknowledged that in this question of the supply of foodstuffs, Germany has not fulfilled her offers of effective support until very recently. We are now beginning to move in the realm of concrete facts and within this field there is nothing I desire more than to hasten the negotiations as much as possible. With this end in view several days ago I sent to you information on our needs as to foodstuffs and in general economic and military fields. These data are open to new examination, clarification, verification, and discussion in order to reach quickly the solution which interests us both equally. However, you will understand that at a time when the Spanish people is suffering the greatest starvation and enduring all sorts of privations and sacrifices, it is not certainly propitious for me to ask further sacrifices of them if my appeal is not preceded by an alleviation of this situation, which at the same time may permit us to carry out beforehand an intelligent propaganda on the constant friendship and effective support of the German people, which will reawaken in the Spaniard the sentiments of sincere friendship and admiration which he has always had for your nation.

My remarks about our climate were simply an answer to your suggestions, and were not in any way a pretext to postpone indefinitely that which at the right moment it will be our duty to do.

During the recent Bordighera conference I gave proof to the world of the nature of my resolute attitude; this conference also served as a call to the Spanish people marking the direction in which lie their national obligations and the preservation of their existence as a free nation.

One observation I must repeat to your Excellency; the closing of the Strait of Gibraltar is not only a prerequisite for the immediate amelioration of the situation of Italy but also perhaps for the end of the war. However, in order that the closing of Gibraltar may have a decisive value it is also necessary that the Suez Canal be closed at the same time. If this last circumstance should not take place, we who are making the actual contribution of our military effort have the duty sincerely to say that the situation of Spain in the event of an inordinately prolonged war would then become extremely difficult.

You speak of our demands and you compare them with yours and those of Italy. I do not believe that one could describe the Spanish demands as excessive, still less, when one considers the tremendous sacrifice of the Spanish people in a battle which was a worthy forerunner of the present one. Concerning this point the necessary preciseness does not exist in our agreement as well. The protocol of Hendaye—permit me to express it—is in this respect extremely vague and Your Excellency remembers the conditions (today so changed) of this vagueness and lack of preciseness. The facts in their logical development have today left far behind the circumstances which in the month of October had to be taken into consideration with respect to the prevailing situation, and the protocol then existing must at the present be considered outmoded.

These are my answers, dear Führer, to your observations. I want to dispel with them all shadow of doubt and declare that I stand

ready at your side, entirely and decidedly at your disposal, united in a common historical destiny, desertion from which would mean my suicide and that of the cause which I have led and represent in Spain. I need no confirmation of my faith in the triumph of your cause and I repeat that I shall always be a loyal follower of it.

Believe me your sincere friend, with my cordial greetings,

F. FRANCO.

To: His Excellency ADOLPH HITLER,
Führer of the German People.

No. 14, secret protocol between the German and Spanish Governments

MADRID, *February 10, 1943.*

At the time in which the intention of the German Government to deliver to the Spanish Army in the shortest time possible arms, war equipment, and war material of modern quality and in sufficient quantity is to be realized, the Spanish Government, at the request of the Reich Government, declares that it is determined to resist every entry by Anglo-American forces upon the Iberian Peninsula or upon Spanish territory outside of the peninsula, that means, therefore, in the Mediterranean Sea, in the Atlantic and in Africa as well as in the Spanish protectorate of Morocco, and to ward off such an entry with all the means at its disposal.

Both parties obligate themselves to keep this declaration, prepared in the German language and in the Spanish language absolutely secret.

For the German Government:

VON MOLTKE.

For the Spanish Government:

GOMEZ JORDANA.

No. 15, notes on conversation between General Franco and Ambassador Dieckhoff

BERLIN, *December 15, 1943.*

The conference with the Spanish Chief of State, which took place on Friday, December 3, at the Pardo Palace, in the presence of the Foreign Minister, Count Jordana, and lasted somewhat over an hour, took the following course:

I explained to the chief of state that I had now been in Madrid more than 7 months and had attempted to secure for myself a picture of the Spanish foreign policy. I had the feeling, and the Reich Government was under the same impression, that the foreign policy of Spain was recently beginning to change. We observed in a number of spheres little of a positive attitude of the Spanish Government with respect to Germany and we had especially the feeling that this change in the Spanish attitude was to be traced to English and American pressure. I could only point with the greatest emphasis—and I was speaking on the order of my Government which was taking a very serious interest in these matters—to the fact that it would be a very dangerous policy for Spain to make concession after concession to the English and Americans; Spain would thereby find herself on the downgrade, and she would become more and more dependent upon the Anglo-Saxon powers. Only a completely firm and stable policy which made no concession was proper and guaranteed that the English and Americans would permanently refrain from further pressures; it would be a fatal error if the Spanish Government believed that it could change its course with allegedly slight concessions; the Anglo-Saxons would seize not only the little finger but the hand and the whole arm and would draw Spain deeper and deeper into a relationshiup of dependency. I certainly could not believe that this was the intention of the Spanish Government for the chief of state must certainly be clear about the fact that the policies of the English and of the Americans—as they always had been—were interested only in a weak Spain, in contrast to the German policy, which was always intent upon a strong national Spain. I then mentioned in detail those points to which we especially objected (concession by the Spanish Government in the question of passage of French fugitives through Spain to North Africa, compliant conduct of the Spanish Government in the question of Italian merchant ships in Spanish harbors, unjustified internment of various German U-boat crews, withdrawal of the Blue Division, action against German ships in Vigo and in the Canary Islands, and so forth). I told the Caudillo that I considered it my duty to lay before him in all sincerity all these facts of the case summed up, as I had already often done with Count Jordana, and that I was requesting him (Caudillo) to tell me how he stood on these matters.

The chief of state listened to me seriously and calmly and then stated the following: He would like to emphasize at once that there was no question of the Spanish foreign policy changing. He knew quite certainly that the German policy was pursuing the objective of strengthening Spain, while the English and American policies traditionally aimed at weakening Spain. Further, he knew for certain and was clearly conscious of the fact that only the victory of Germany would make possible the continued existence of the regime of Franco; a victory of the Anglo-Saxons, in spite of all the pacifying declarations which would be made to him from time to time in this respect by the English and American side, would mean his own annihilation. He therefore was hoping with all his heart for the victory of Germany and he had only one wish that this victory would come as soon as possible. In the meantime, however, he was in a difficult position. His country was only now recovering slowly from the effects of the civil war, and it could only recover if it imported gasoline and cotton from abroad, products which he could receive only from the Americans and only with English navicerts. The Anglo-Saxons were ready to deliver these things to him and were delivering to a certain extent, they were demanding in return, however, that Spain assume not too outspoken a pro-Axis attitude and that matters which were indisputably unneutral should be discontinued. This was the reason why the Spanish Government recently had permitted a few modifications. The Caudillo took up these points in detail. He said on the subject of the Blue Division that recently it had actually become more difficult to mobilize Spanish volunteers for this unit and that for this reason alone they had to start on a conversion of the division into a weaker legion. The Anglo-Saxons had presented no ultimatum with regard to the withdrawal of the Blue Division, but he had to expect that they sooner or later would present an ultimatum for the withdrawal, whereby the Spanish Government would then find itself in a very difficult position; for this reason he had preferred to anticipate such an ultimatum and to request of the Reich Government the withdrawal of the division. He emphasized, however, that the attitude of the Spanish Government against bolshevism and communism would thereby be altered in no way; and that at home as well as abroad this struggle was continuing, just as against Jewry and Freemasonry. As concerns the question of the passage of French refugees through Spain to north Africa, this was a problem which has for a long time been causing the Spanish Government annoyance and inconveniences. It was a matter of several thousand people, almost all of them bad, undesirable elements, who had in some way succeeded in getting into Spain across the border of the Pyrenees, and who could not be turned over to the German authorities since this would provoke a frightful outcry on the part of the Anglo-Saxons, and who therefore must either be retained in Spain or thrust out over the other borders. The retention of these people meant not only a great financial burden but also a certain internal political danger since it was a matter predominantly of communistic riffraff. He had therefore granted his permission for a large part of these people to be transported to North Africa. To my objection that this was really a matter of a clear favoring of the enemy, who was sticking these men into uniform and then having them fight against Germany, the Caudillo answered by saying that this was not to be feared, since it was a matter of people so inferior and so undesirous of fighting, who had actually fled from France only to avoid work, and that their entry into the De Gaulle army would mean no strengthening of the enemy fighting power worth mentioning at all. Moreover, he had directed that the transports cease from now on. As concerned the Italian ships in Spanish harbors, the Caudillo emphasized that the warships were interned and would remain interned; the crews of the warships would be transported into Spanish camps. As concerned the merchant ships, the legal question was very unclear. In two cases they had not been able to avoid letting the ships put to sea upon the request of Ambassador Badoglio. The other cases were still being investigated, and it was probable that most, if not all, of the ships would be retained in Spain. In this connection it was very important that the Mussolini government order a representative to Spain as soon as possible, to take up these matters, even though previously the points of view of the Mussolini government had already been represented by the Italian shipping interests themselves and by the German Embassy. As concerned the question of the recognition of the Mussolini government, the Caudillo emphasized—just as previously in the conference of October 5—the Spanish Government was ready to receive an unofficial representative. On the question of the U-boat crews, the Caudillo was of the opinion that on this point the English had been extraordinarily sharp in insisting that these crews be interned. The situation according to international law—contrary to the German assertions—had not been cleared up totally without objection, and the Spanish Government had therefore considered it wiser to proclaim for the time being the internment. He could assure me, however, that the crews would be set free gradually, as had already happened in previous cases; and moreover the most important officer, Lieutenant Commander Brandi, the wearer of the Oak Leaves, had, with the consent of the Spanish Government, immediately been let out of Spain. With respect to the attitude of the Spanish press, the chief of state said that it was indeed being kept somewhat more objective and somewhat more neutral to avoid protest from English and American sides, but that it, however, was still quite predominantly appreciative of Germany and sympathetic to Germany, and that it doubtlessly was very much better than any other neutral press, such as the Turkish, Swedish, Swiss, Portuguese, or Argentine. Even with respect to this, only a somewhat more cautious press line had resulted in order to avoid conflicts, the Spanish Government was not, however, thinking of allowing the Anglo-Saxons an inroad into the press, just as little as she was thinking of permitting them an inroad into Spanish foreign policy.

In summarizing, the Caudillo said that he believed that this cautious policy of Spain was not only in the interest of Spain but also in the interest of Germany. If because of a newspaper article or for any other of the reasons mentioned above, a serious conflict with the Anglo-Saxon powers should result, this would in his opinion not at the present moment be desirable for Germany as well;

a neutral Spain which was furnishing Germany with wolfram and other products was, in his opinion, more valuable for Germany at the present than a Spain which would be drawn into the war. Of course, Spain would not go beyond the comparatively trivial concessions mentioned above. Demands as had been made upon the Portuguese by the English side would not be accepted by the Spanish. In a case of this kind Spain would fight. Of course, Spain was not only economically very dependent, but was also militarily rather weak. She had, indeed a good army with brave soldiers and good officers, but she did not have sufficient weapons at her disposal; especially lacking were heavy weapons and airplanes. Had Spain a stronger armament, the Anglo-Saxons would proceed less presumptuously; also Spain would then be able to strengthen Portugal, with whom she was on very friendly terms, against English pressure even more than this had hitherto been possible. The Caudillo therefore urgently requested that if possible we should send more weapons than we had already sent and more than we had had in mind. The chief of state concluded the conversation in a very cordial fashion, by emphasizing again his hope for the German victory and his friendship for Germany and very warmly requested me to greet the Fuehrer most cordially on his behalf.

Of interest was the fact that the chief of state, in connection with the mention of the Portuguese situation, remarked that Salazar, in his conference with Jordana, shortly before the conclusion of the Azores agreement, had stressed the fact that he was finding himself in a very difficult position and was having to give in; not only were the English exerting very strong pressures, but his own, Salazar's, position was being weakened by the fact that General Carmona as well as half of the army was taking a different stand than he himself.

DIECKHOFF.

MADRID FINES 369 FOR FUNDS ABROAD—PENALTIES TOTAL $5 MILLION FOR THOSE WITH UNAPPROVED DEPOSITS IN SWITZERLAND

(By Benjamin Welles)

MADRID, March 9.—The Spanish Government has cracked down on 369 Spanish citizens found guilty of having maintained unauthorized deposits in Swiss banks.

Fines of nearly 117 million pesetas (about $2,786,000) were announced here today, plus confiscation of foreign money and other assets totaling $1,198,715 in U.S. currency, £8,000 ($22,400) in sterling, and 5,506,213 Swiss francs.

The total revenue that will accrue to the Spanish Treasury following 10 weeks of investigations is estimated at more than $5 million. Those who have been fined may appeal, but only after having deposited the full amounts of the fines and confiscations with the Government.

None of the 369 persons publicly cited are prominent in government, military, or clerical circles. Many, however, are well known socially or are outstanding in business and professional life here or in Barcelona, Bilbao, San Sebastian and other cities.

SWISS BANK'S AGENT HELD

The Government's action stems from the arrest here in December of George Laurenz Rivara, an agent of the Société de la Banque Suisse, whom the Spanish fiscal authorities had been watching.

Rivara's arrest led to the seizure of a list of persons, both Spanish and foreign, with bank deposits in Switzerland—none under specific names, but under numbers.

It is not an offense in Spanish law to have foreign currency or valuables deposited abroad. However, it is an offense when Spanish citizens do not register such holdings with the fiscal authorities here.

The arrest of Rivara became an overnight sensation and a prime topic of conversation throughout Spain. However, because of the tight censorship imposed by Gabriel Arias Salgado, Minister of Information, rumors spread abroad that amounts between $280 million and $1 billion were involved.

The Spanish Government, for reasons still unexplained, has never issued a complete statement detailing what amounts were involved in the case, though cabinet ministers privately complained against the campaign of defamation that they insist the world's press is waging against their country.

TOTAL PUT AT $6 MILLION

Today, a government source of the highest rank said that the overall total was around 300 million pesetas—that is, about $6 million.

The largest fine has been the peseta equivalent of $520,000 assessed against Carlos Sobrino Alvarez, a Madrid coal merchant, who was ordered also to remit $516,057 in foreign-banked dollars. The next highest penalty was $170,000 in pesetas, imposed on Ricardo Gorina Oliver of Barcelona, plus $160,000 in confiscated dollars.

Others who received heavy fines included Ansemlo Bangel Lopez Martin of Madrid, $100,000; Antonio Sabates Vila of Madrid, $70,000, and Constantino Villar Soria of Madrid, $60,000. Most of the fines ranged between $1,000 and $10,000.

The 369 Spaniards who were found guilty were included in a list of 872 names carried today in the government's official bulletin. Publication of the list had been urged for weeks by Falangist groups and newspapers as a political blow at capitalist enemies of the regime.

FOREIGN RESIDENTS NAMED

Apart from the 369 persons fined, the names were divided into five categories. In the first category were 149 foreign residents in Spain, including 3 U.S. citizens who have bank deposits in Switzerland but have violated no laws and against whom the Spanish Government has made no charges.

The three U.S. citizens are George F. Train, a highly respected businessman here and former chief of the U.S. economic aid mission to Spain; Miss Edith Breedon Bulson, for many years a U.S. Embassy employee, and Mrs. Emily Nunn Weldon. There was some surprise that the Spanish Government had listed foreign nationals, whose right to deposit their money abroad is not questioned under Spanish law.

The four other categories of names included Spanish citizens who are absent or whose cases are still being investigated or who were found to have complied with the legal formalities and thus have been exonerated.

SPANISH MISUSE OF VOICE IS SEEN—STUDENT LEADER HOLDS U.S. BROADCASTS INTEGRATED WITH PROPAGANDA

A Spanish student leader said yesterday that broadcasts of the Voice of America in Madrid had been integrated with daily Spanish radio propaganda.

The United States has thus been identified with government policy in the mind of the Spanish public, Juan Manuel Kindelan, 26-year-old leader of an anti-Franco student union, said in an interview at the office of Iberica, a publishing concern, at 112 East 19th Street.

He declared that the effect was damaging to the United States irrespective of the broadcasts' content.

Señor Kindelan said that for 6 months before he left Spain, in May 1958 he heard Voice of America 3-minute broadcasts on the regularly scheduled Spanish Government afternoon program of domestic and foreign news. The British Broadcasting Corp. and the Paris radio did not participate, he added.

The United States Information Service at 250 West 57th Street explained yesterday that tapes were sent to Spanish broadcasting stations for use at their discretion. It was not known here or in Washington precisely how or when the material went on the air, a spokesman said.

Señor Kindelan, a Socialist, is a nephew of Gen. Alfredo Kindelan, chief of General Franco's air forces during the civil war. Señor Kindelan is returning from Lima, Peru, where he attended an international student meeting. He lives in Paris.

FRANCO'S STRAPERLO GAME

(By Lawrence Fernsworth)

(Lawrence Fernsworth, now a Washington correspondent, has represented the New York Times and the London Times in Spain and other countries of Europe. His articles have appeared in Foreign Affairs, Current History, the Fortnightly (London), and the Economist, among others. His books include "Nothing but Danger," "Dictators and Democrats," and "Spain's Struggle for Freedom.")

The time has come for a full-scale congressional investigation of the regime headed by Generalissimo Francisco Franco, Spain's chief of state, in its dealings with the United States under the so-called bases agreements. These military air bases will have cost us $2 billion or more by the end of the current fiscal year. What has been their value to the United States? How worthwhile are they likely to be in the future? How usefully has American money been spent and to what extent has it served the valid interests of the two countries? What is the impact on world opinion, and particularly on Latin American opinion, of the aid and comfort extended to Western Europe's most odious dictatorship by American military and foreign policy? What is the impact on the feelings and the opinions of Spaniards? Have we earned their good will? Will the bases agreements be fruitful of future good relations between the two countries and their peoples? Is it likely we will ever be allowed to use those bases should the calamity of war overtake us?

Let us look at a few of the facts in an effort to answer these questions.

On New Year's Eve, 1953, Franco broadcast to the world a speech in which he envisaged himself and General Eisenhower, as the American Chief of State, exercising "a rectifying responsibility over the destinies of the universe." The fact that Spain and the United States were both governed by generals provided a greater hope for peace than if civilians were the heads of those governments, he boasted.

Every New Year's Eve since, Franco has addressed the world via the radio, but the fervor of that first speech, so far as a prospective Franco-Eisenhower axis is concerned, has been lacking. It is true that President Eisenhower and Secretary of State John Foster Dulles last year forgot their warning that it is "too late to mock men's hopes with mere words and promises and gestures," and indulged in encomiums of Franco and his regime in a broadcast to the American people. Dulles spoke of the Franco dictatorship as one of the ties that hold the free world together. But on the last night of 1958, Franco's enthusiasm for the rectifying influence of himself and the American President—and for the $2 billion lift his regime is getting from the United States—had so subsided that his 8,000-word speech contained no mention of either Eisenhower or this American bounty—not one word of recognition or thanks.

Since World War II the United States has acquired such broad interests in the Mediterranean area that it has become, in effect, one of the family of Mediterranean countries. Since the Napoleonic Wars, the keystone of that family has been Spain. But Franco's dream of becoming the protector of Mediterranean nations has petered out everywhere. His buttering of Egypt's Nasser, which went to the extreme of lauding his seizure of the Suez Canal, has not brought results. The Arabs have rejected him scornfully. In desperation he has been making friendly gestures toward Russia, whose totalitarian system he praised in one of his speeches, while at the same time proclaiming himself Europe's only sure bulwark against communism—a statement which our well-intentioned but all too naive national legislators seem to believe.

Franco and what he stands for will run out the life span set down for him in history's book—as has happened in such countries as Venezuela, Colombia, and Argentina, and most recently in Cuba. Spain, thereafter, will regain an authoritative voice in Mediterranean councils. Where then will we stand with its people? Will their feelings of disillusionment about us, and their distrust of us, which already runs deep among Spaniards, find issue in some kind of cold war, or will we travel together as friends? This is a primary and paramount question, overshadowing even the transitory question of the "straperlo" game which many Spaniards and other acute observers are convinced Franco is playing with us.

Spaniards have a knack of summing up their bruised feelings about things they detest in an odious nickname, a shibboleth by which they effectively turn thumbs down on what they reject. "Straperlo," the name of a crooked gambling game, was adopted in the thirties and signifies swindle. Now, ironically, Spaniards have dubbed with the word "Eisenhowers" the armed tanks we have been sending to Franco, which they say are being used to render them powerless in their efforts to throw off the dictatorship. The "Eisenhowers" signify partnership with tyranny.

It is not too late to reverse such Spanish thinking by showing them when we say, as President Eisenhower has said, "we shall never acquiesce in the enslavement of any people in order to purchase fancied gains for ourselves," that these words will be implemented by deeds. If we do not, it will hurt us forever.

Franco's big selling point in his "straperlo" game with the United States is that he saved Spain from communism. This is believed by Americans despite the facts spread on the record of history, and despite the testimony of a long line of competent correspondents who had nothing in common with communism that of all European countries the Spanish Republic, up to the time of the war against it jointly by Hitler, Mussolini, and Franco, was least influenced by communism; that it was forced to turn to Russia for arms only when it could not buy them elsewhere.

Here is what a capable former Associated Press reporter, Charles Foltz, wrote about Franco and communism in his revealing and still valid book, "The Masquerade in Spain":

"One day wandering through the halls of the vice-secretariat of press and propaganda of the Falange, seeking a censor, I discovered a room full of anti-Franco pamphlets. They were fresh from the Falange printing presses. The signature was that of the Junta Suprema Nacional [supposed Communist underground]. Not long afterward I received this pamphlet by ordinary mail * * * printed with the same type face and on the same paper as that used in Arriba, the organ of the Falange." The Falange is the official party, headed by Franco. "The Family" [the clique around Franco], the author continued, "knows that Spanish communism is so weak that it must be nursed along to survive."

When the United States continues to pour billions into Spain under the assurance that its dictator saved, and continues to save, Europe from communism, we should examine the validity of that assurance.

"Franco—How Good an Ally?" was the title of an article by New York Times correspondent Samuel Pope Brewer that appeared in the Yale Review before the bases agreements were signed. Because of the truths that he told in this and in other articles, he, like many another honest correspondent, was kicked out of Spain. The question, "How good an ally is Franco?" is as valid a question as ever and needs to be considered on the basis of facts.

In his last year-end speech Franco announced his "neutrality." What does that mean, especially in the light of his flirtations with Russia and with Nasser? He has led us to believe that he was anything but neutral, indeed was our sworn and undying ally in all that concerned the discomfiture of communism. Does this proclamation of "neutrality," along with other warnings directed toward the United States by him personally, by his official spokesmen, or by his personally controlled and inspired press, mean that he is disposed to pull the military rug out from under us when convenient?

Franco began his "straperlo" game the moment we started making our blueprint for bases in Spain. This is revealed in a report made by U.S. Comptroller General Joseph Campbell last year. He reported that there was "no military need for one of the U.S. bases being built in Spain," and "there is no operational need for the facilities planned at San Pablo. * * * Had the Air Force not insisted on the construction of this base it could have saved $5 million." The Air Materiel Command found that base unnecessary for its mission, but, said Campbell, "The project was continued because its rejection would have adverse effects on Spanish-American relations."

Campbell reported further that "the selection of another base site, at Torrejon, 15 miles from Madrid [which by officially published figures has now cost us $69.2 million], was made largely on the initiative of the Spanish authorities who wanted a base near the national capital, and as a showpiece for at least one fighter jet squadron."

Franco is now demanding that this same Torrejon base, which he originally insisted the United States build, be turned over to him as a commercial airport on the plea that it is too near Madrid to be used as a military base. The United States would then be free to build another big base for another $70 million or so, somewhat farther away. This demand was secretly made to several Members of Congress who talked with Franco last fall.

The breakdown of funds so far handed to Spain (according to published dispatches from Madrid, but kept officially secret here) is: modern arms, $350 million; various types of economic aid, $894 million; cost of bases to date; $400 million. A New York Times dispatch tells us that War Minister Antonio Barroso, on his recent visit to Washington, asked for another $400 million to equip five Spanish divisions with modern arms. These figures total more than $2 billion. When the bases agreements were made, the American public was told they would cost a few hundred million at most. When I wrote in Foreign Affairs that the total would run to a billion, the forecast was challenged in some quarters.

The current financial scandal is another example of the Franco government's fraudulent operations, this time involving millions of United States' dollars which have been siphoned out of Spain. Officially the exportation of foreign capital is put at $280 million. Other reports say it is at least $400 million. Some estimates run as high as a billion. At the same time Spain's treasury reserves are down to, at best, $70 million. The trade balance deficit is $215 million.

Although the men around Franco—"The Family"—are making a grandstand show of indignation over the exportation of funds (largely to Swiss banks, but also for the purchase of stock and bonds, and investment in various properties in the United States and elsewhere) the fact is that "The Family" itself has been the exporter. An uncensored dispatch from Madrid reports: "The investments of Dona Carmen Polo de Franco, wife of the Caudillo, in Swiss, American, and Canadian banks, is the subject of jokes and rumors in all the cafes of Spain." Spaniards call her the richest person in Spain.

There is nothing new about this export of capital. It has been going full blast for 2 or 3 years on the pattern set by Latin American dictators, like Cuba's Batista.

Franco well knows that only more and more U.S. dollars can save his regime from collapse. A searching inquiry into the Franco clique's holdings in the United States, in bank deposits, stocks, bonds, and other investments, would be revealing.

Highly pertinent in determining the value of the U.S. military and quasi-political alliance with Franco is the question of the regime's stability. How long is it likely to last? This writer, who witnessed the fall of the monarchy in 1931, sees a strikingly similar situation now. The monarchy and its military dictatorship fell because of rising public sentiment against them and because they were coming apart at the seams—just as is happening now. They fell without violence, like a house of cards in a breeze. It could not stand before the fresh wind heralding—as Spaniards then fondly believed—a new order of freedom.

In Spain, sentiment and political action on the part of university students has had a profound effect on the country's political fortunes—a situation unknown in this country. A survey of 400 students in 1955 revealed they were preponderantly against everything for which Franco stood. Vicente Girbau Leon, a former official of the Spanish Foreign Office who escaped from Spain after being tried for not liking the things Franco stood for, reveals some of the results of this survey in the January issue of the U.S. publication Iberica:

Seventy-four percent of the students accused the government of incompetence, 85 percent of immorality; 90 percent accused the army of ignorance and incompetence, 48 percent of immorality; 67 percent found their professors unqualified; 52 percent accused the church hierarchy of immorality and of dedication to ostentatious and worldly affairs; 67 percent felt the church lacked concern for the workers; 70 percent found the church's social doctrine did not inspire confidence; 70 percent opposed their country's social-economic structure; only 20 percent accepted the Falange's totalitarian philosophy.

These are a few of the highlights of the things we should know about Franco and his dictatorship. Only a few—for the entire list is long. If we must continue our relations with him, it should be on the basis of complete and duly assessed information. Up to now the evidence used to justify our dealings with Spain cannot be found in the record. It is a situation which the croupiers of Franco's "straperlo" game find most profitable, but which is neither helpful to the United States now, nor good for our relations with Spain and her people in the future.

TENSION IN SPAIN

(By Bogdan Raditsa)

(Bogdan Raditsa recently spend 4 months in Spain, where he was engaged in research on the philosopher, Miguel de Unamuno.

Raditsa is a professor of European history at Fairleigh Dickinson University.)

The Spanish people are marking the 20th anniversary of Generalissimo Francesco Franco's rule by scarcely disguised contempt for the Caudillo and his regime. The widespread arrests of liberals and socialists all over Spain are not only the symptoms of Franco's unpopularity but one of the clearest signs of his weakness.

This sickness of a decaying regime buttressed by obsolete and weary propaganda is probably the most depressing feeling one has after living in Spain for several months. Yet in no country of Europe is there such a tremendous drive for change and such a strong desire to cross the Pyrenees, the mountain barrier that still seems to hold Spain back from the rest of Europe.

Two generations of Spaniards, one over 40 years of age, the other under, are locked in silent conflict over the question of political and other fundamental changes. Those who still remember the civil war and its horrors have been either resolute or tepid supporters of Franco. They are strongly opposed to any change. To them change means an unpredictable future and the specter of another civil war. But to those who have grown and developed intellectually under Franco's shadow, change means the way to put an end to apathy and backwardness.

That Spain is the most backward country in the Atlantic community is clear to everyone who has lived there recently. At least 50 years behind Italy, young Spain, aware of the progress taking place in all neighboring countries, yearns for advances in all directions: economic, political, social, and cultural. It now wants to be part of Europe, and the archaic, traditionalist, autarchic, and authoritarian Franco regime stands against its powerful desire to "Europeanize."

The most tragic paradox of the new Spanish drama is the opposition of one man, backed by a corrupt police state, to a whole nation's desire for a new way of life. And the more the Caudillo persists in his rejection of change, the more resolved the people become to do all they can to bring about a change.

What, then, is the real possibility of a change in Spain? How could Franco eventually be overthrown? Will Franco finally step down and open the door to a peaceful succession? What are the forces that keep Franco in power and what are those opposing him? What do the Spanish people seek from other nations of the West?

The forces behind Franco are still those that helped the Generalissimo establish himself in power 20 years ago.

The army, the strongest of those forces, has been rebuilt and has achieved such economic and political strength that it is still Franco's major support. Most of the old generals and officer elite from the civil war are dead, leaving Franco without any serious rival. The new generals and colonels are Franco's creatures and see in his perpetuation in power their own security. The regime has given them a remarkable economic situation that makes them eager to postpone any change. In the lower ranks of the army, however, a new feeling of opposition is growing, and it could eventually turn against the dictator.

A similar climate prevails in the old church hierarchy. The old bishops and clergy fear that a change could expose the church to wide-scale persecution. Many bishops are former military vicars, owing their position to Franco. This section of the church still fights against the dead Immanuel Kant and Miguel de Unamuno as much as against the living Jacques Maritain or Luigi Sturzo. They are often in conflict with Rome, and some of the late Pope's encyclicals have been expurgated before publication in Spain. Their feeling of social responsibility toward the people, primarily the peasantry, is limited to a paternalism reminiscent of the Middle Ages. They support the big landed proprietors in the south and still teach the peasantry that to suffer is God's will. Their influence upon the young clergy is weak and diminishing. To them, Spain is still the old fortified castle that must fear God and remain aloof from the liberal and Protestant West.

Together with these two traditional forces, a new class has arisen in Spain as the result of the economic transformation which has inevitably occurred despite the regime's inertia. This new class is not, as one might expect, the old Fascist Falange which has died both as an ideology and a political movement. It is a class of aggressive nouveaux riches whom the regime has made wealthy through corruption and through financial speculation and the use of foreign aid, powerful in obtaining and delivering export and import licenses, thus becoming the strongest vested interest in the State.

Although not exactly a part of the new class—the term has been used in Spain, too, following the publication of Milovan Djilas' "The New Class"—the Opus Dei comes next as a powerful group in the State. It is a Roman Catholic laymen's association that claims to be socially minded and politically enlightened.

The Opus Dei has been publicized often abroad as a Christian Democratic movement. Nothing could be more incorrect. It is a Catholic "Masonry," as it is called even by the Catholics, and is a clearly antidemocratic movement which tries to control the education and, to a certain extent, the finances of the country. It offers Franco an impressive screen behind which he can cover his own passion for power. Though the Opus Dei, as an association of Catholic laymen, denies it possesses any power in Franco's regime and often emphasizes its nonpolitical character, it is strongly attacked by the young revolutionary Catholics and by the Jesuits, who see the role played by Opus Dei in the state as a misfortune for the church.

The Opus Dei has filled the Spanish ideological and political vacuum which was aggravated by the fall of international facism. The Falange remains strong in the government-controlled trade unions, the Sindicatos, whose aim is to keep the workers silent and acquiescent in a regime which has slightly improved their standard of living and provided a certain degree of social security. The decline of the Falange has had another and more complex result: The sons of the old Falangists are today the best recruits for the Communists, if not the most active elements in the Communist underground, which the regime leaves free to act.

The enemy of the regime is not communism, but socialism and liberalism. Franco fights the liberals and the Socialists with greater passion and conviction than the Communists. The latest arrests are not the only example of Franco's eagerness to fight the liberals and the Socialists while permitting the Communists to continue their activities. The Communists, on the other hand, seem satisfied to see Franco eliminate their opponents, for the sole Communist aim today is to promote action "against the foreigner," so as to get the Americans and their bases out of Spain. In that movement, they have the backing of the Falange and, what is even more dangerous, the younger officers, supported by a public opinion which is convinced that Franco's prolonged stay in power is due to American aid.

Though it is understandable that the Americans did not go to Spain to free it from Franco, as they did not go to Yugoslavia to free the Yugoslavs from Marshal Tito, it is nevertheless true that the indifference with which the West looks upon Spain is responsible for Franco's stability. The economic aid that has moved Spain out of stagnation has helped the new class of merchants, middlemen, and managers more than the broad masses of the people. It has made the rich richer and kept the poor poor. This, too, explains the unrest and gives the Communists a useful source of propaganda against the West.

The opinion which the anti-Franco intelligentsia has of the West and its policy in Spain can be summed up as follows: "Spain is an underdeveloped country. The West treats Spain as all the underdeveloped countries. It seems to think that it is easier to work out a policy through a monolithic dictatorship than through a constitutional democratic government. Therefore, all the talk about the West being attached to the principle of democracy leaves us baffled. The Spanish people have now only one alternative: to fight Franco and the West and free themselves from the foreigners whose attitude toward Franco is subservient and opportunist." These opinions are repeated again and again, not only by the liberals and the Socialists, but by the Christian Democrats and nationalists.

They all believe the time has come when they must break with the older generations which, according to them, have betrayed Spain's right to live as a modern democratic society. The Christian Democrats talk with enthusiasm of a revolutionary Christianity that would sweep away medieval feudalism and give Spain greater political and social freedom.

The young Christian Democrats with revolutionary tendencies and the Socialists have much in common. When I was in Spain I was very surprised to be introduced to a Socialist by a young Catholic clergyman and by young left-wing Christian Democrats. In Barcelona I met some anarchists and syndicalists in the home of a priest and they spoke freely and without fear. They were all united against the older generation and against Franco, of course—and against the Communists too.

That is not the case with the youngest group, the young students, who are sympathetic to the Communists. For the Communists are the only ones, I was told, who can organize successful underground action against the regime. Franco's regime has done nothing to help the youth understand the real meaning of Communist action. The books that in the West have opened people's eyes about communism are not obtainable in Spain. Franco fights liberalism and Christian and social democracy. Whenever the Soviet Union achieves a technological victory over the West, Franco is the first one to praise it as the achievement of a strong and totalitarian state and to accuse democracy of decadence.

What are the prospects for the future in Spain? The question of Franco's succession is still an open one. Spain is a monarchy without a king. Two pretenders to the Spanish throne, Don Juan Bourbon, and his son, Don Carlos, one living in comfortable exile in Portugal and the other studying in Spain, are waiting for the succession. The Spanish monarchy, according to the Caudillo, is traditional, Catholic, social and representative, and it could be established as soon as Franco says so. But Franco, a healthy and vigorous man at 66, who seems to desire power for power's sake, doesn't appear ready to move out. Though offered assurances that he would be safe when out of power, he knows that his life in Spain would be endangered.

Yet the longer Franco stays in power, the more remote appears the possibility of a normal and peaceful transition to monarchy. What would happen if Franco should die? When asked this question by one of the most distinguished of Spain's high clergymen, Franco declared serenely that power lies in trustworthy hands, the hands of the

Council of the Realm, which would insure the normal succession under a monarchy.

As this answer did not satisfy the high clergyman, it does not satisfy the younger generation in Spain, who seem convinced that Franco's continued stay in power cannot contribute to the peaceful transformation of the state into a constitutional monarchy. Many predict a new civil war, a new conflict between the old and young, and a new period of anarchy and internecine social strife. Furthermore, an internal separatist movement cannot be excluded. The national feelings of Catalonia and of the Basques are running high again. Franco, with his policy of enforced assimilation, has merely helped strengthen these internal regional passions.

The West can no longer ignore the new developments in Spain. The revolutionary movements sweeping the Middle East have had a direct impact upon Spain. Against change stands not only an old decrepit regime but also the indifference of the West. The only possibility of preventing Spain from moving torward a new civil war in which the Communists might benefit is change in the direction of democracy.

The recent arrests of some of the most distinguished Spanish liberals and Socialists is a new warning not for the Caudillo, but for the West to help Spain to win her freedom.

ITEM F

[From the London Economist, Dec. 13, 1958]

OPERATION TREADING ON EGGS

With 866 housing units for married Air Force officers and enlisted men nearing completion on the outskirts of Madrid, a new white village welcoming Air Force families near Seville, and a housing shortage looming near Cadiz, the American "guests of the Spanish Government" are settling in.

The process entails a degree of diplomacy that is seldom demanded of the individual citizen, even on a visit. Some 17,000 Americans, people more inclined to bounce than to tiptoe, have been shoe-horned into a country traditionally sensitive and suspicious of foreigners. Here they expect to stay, as a corps if not as individuals, for 10 years or more, barring accidents too dire to be contemplated by anyone other than a billeting officer facing a delegation of indignant housewives.

The figure of 17,000 is a symbol rather than a statistic. Given with reserve, it does not include the expansion in force now going on near Cadiz, nor does it include either the large Embassy staff or the swarm of unofficial visitors—businessmen, friends, relatives and so on—who crowd the best Madrid hotels. The American population in Spain is understandably fluid.

The problems it creates for Spain, and itself, are no trifle, but still the worrying that is done about it looks out of proportion. This may be partly because the American Government has been trying so hard to prove that a force of 6-foot fliers, equipped with wives, electric refrigerators, blond children and baby-blue automobiles could be inserted into Spain without disturbing the Spanish economy or upsetting the conservative Spanish sense of how life is lived. The technique chosen to work this miracle is separate living, buying and schooling.

For some time the Air Force has had a hotel on lease in Madrid where incoming service families were lodged on arrival; next the families had to find living quarters in the town, and this increased the city's acute housing problem. Now that the new American suburb near the Torrejon base, called Royal Oak, is nearly finished, families are assigned living quarters there, built to American standards.

Food and clothing are to be had at a commissary and a post exchanged where Air Force wives can buy the tinned goods, packaged groceries and frozen foods that they buy back home. Bread is baked to Air Force specifications, although not always with success; Spanish bakers find it hard to understand why they should substitute foam for their own firm loaf.

The theory is that all this procedure operates without putting pressure on the Spanish economy, that it takes nothing out of it, and avoids the inflationary effect of competitive buying in local markets on the part of housewives equipped with fatter purses than most Spanish women have. It is also supposed to keep the American wife healthy and happy by providing her with approved and familiar goods. It may also please American suppliers and soothe Congressmen.

But behind this somewhat ostrich-like procedure lie other and deeper problems less easily handled. The whole business of building American airbases and housing airmen in another land, is difficult, as the British well know, but for reasons of history on both sides of the Atlantic the Spanish affair has been handled with kid gloves piled on velvet.

So tricky did it seem at first, that all airmen sent to Spain were hand-picked as Catholic, married, and Spanish-speaking. To cushion Spanish sensibilities still further, they could not wear uniforms off the base. Now that the forces are larger, the bases are finished, and the first idea of a huge supply center near Seville has given way to the concept of a small body of Strategic Air Command fliers changing frequently in line with the demands of Operation Reflex (described in the Economist on July 26) most of these precautions have lapsed. Airmen must still wear civilian dress, (and their wives may not wear slacks in public) but some of them are bachelors, and some are even Protestants.

The Americans have provided nearly a billion dollars for use in Spain, and the horn of plenty is still open-ended. What it has bought them, apart from such tangible things as miles of concrete airstrip, and hundreds of buildings on base and in housing units—buildings that will revert to Spain when and if the forces are withdrawn—is, first, an official permission to practice military activities which (as both sides miss no occasion to declare) are as important to Spain as to the United States.

Second, it has bought them an almost embarrassing popularity among the people of Spain, a popularity which is recognized as fragile and certainly reversible, should there be any falling out between the two governments.

New as it all is to the Americans, some of them have heard that it is only 4 years since Spanish mobs crying "Gibraltar for Spain" marched on the British Embassy in Madrid with the clear intention of burning it down. Balked by the police, they smashed every window that gave on the street. If someone were to put it into these same heads to cry, "Torrejon for Spain!" the vast expanse of glass in the American Embassy building would be equally vulnerable.

What the Spaniards have got out of the billion that has been spent is less stressed, and this concession to delicacy may be a mistake.

The Spanish Government maintains firmly that American spending has done almost nothing for them, that far too little has been given, and that much more is needed. The American officials maintain with equal stoutness but less repetition, that they have done a great deal—cushioned bad crop years with food imports, helped railway rehabilitation and roadbuilding; at the same time they insist that their spending, like their presence, has had no harmful effect on the Spanish economy and is in no way responsible for the current inflation.

In private conversation, the benefits to Spain tend to be played down and the problems emphasized. This may be the effect of a short and exacting experience, but the Americans talk like men still uneasy in Spain, who need to reassure themselves, as well as the visitor that everything is going well. The one word that must not be used under any circumstances is "occupation." These forces are "guests of the Spanish Government" and there during good behavior only. The sole hope of staving off a request to go, is by walking as softly as to cause no alarm.

But exemplary behavior—and that is what one sees—can only go so far. What of accidents, such as the highway tragedy involving an American car going at high speed? What of an angry scandal, a public quarrel such as the one that flared up between a Seville bootblack and a young American, and was on its way to the riot stage when a respected Spaniard intervened?

What of an explosion in the pipeline? What of a change in ambassadors if the (U.S.) Republicans lose in 1960? What of General Franco's not eternally postponed end?

These are some of the nightmares that haunt responsible officials. Any one of them might break all the eggs on which the Americans walk so warily. Yet the obvious concern makes one wonder whether the obligations inherent in the guest status have not been overplayed until they too constitute a danger point.

If this operation of bases and pipeline is as truly important to Spain as to the United States, is not the same thing true of the responsibilities of adjustment to each other's ways?

Is there no manner in which the Americans, in this second phase, can convince the Spanish Government that the risks have to be borne jointly? If not, when the honeymoon is over and the base operations become routine, they may find the long-feared incident upon them—and not by chance.

MANUFACTURE AND SALE OF FERTILIZER BY THE TENNESSEE VALLEY AUTHORITY

Mr. ALGER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. ALGER. Mr. Speaker, among the business enterprises which the Hoover Commission pointed out the Federal Government operates in competition with taxpaying private industry is the manufacture and sale of fertilizer by the Tennessee Valley Authority.

Originally justified in part by the fact that the Tennessee Valley area was deficient in supply of fertilizers, the Commission pointed out that by 1954, in competition with private business TVA was manufacturing $19,800,000 worth of fertilizer which it sold in 35 States.

I have today introduced, for the third time, a very simple and modest bill aimed only at finding out what this fertilizer costs and what it ought to sell for.

This bill would not do away, necessarily, with TVA's fertilizer operation. It would simply direct the Comptroller General to look into this operation and lay all the cards out on the table, and it would require this Government operation, if it is to compete with private enterprise, to charge at least a price for

its product which will cover its real cost to the taxpayers.

Can anyone seriously object to determining the real cost of something being manufactured for sale by a Government agency?

COUNTERVAILING DUTY ON WOOL TOPS

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. PHILBIN. Mr. Speaker, the distinguished and famous gentleman from Virginia, Senator HARRY F. BYRD, chairman of the Committee on Finance, U.S. Senate, has informed me that he has inserted in the record of his committee's hearings my protest on the proposed removal of the countervailing duty on wool tops from Uruguay by the Treasury Department.

At my request, the very distinguished gentleman has also inserted protests from various labor-management groups in my district and State.

The proposed removal of this countervailing duty on wool tops is just another distressing instance of the destructive operation of current reciprocal trade policies which are having such a disastrous impact upon many American industries.

The disease of reciprocal "treatyitis" which has infected the American economy is seriously undermining the production of American industries and the employment of American workers and taxpayers.

This disease is spreading from one industry to another and is now affecting a wide range of American manufacture and production. Its worst effects are to be observed in the textile industry, but are by no means confined to that industry, since it is now embracing many other industries.

Since the executive department has not generally approved recommendations of the Tariff Commission designed to enforce the peril-point and escape-clause provisions of the trade treaty law, I urge that Congress give immediate attention to the revision of basic reciprocal trade treaty laws, and put real teeth into these laws that will promptly and automatically stop foreign imports injurious to American industry, responsible for causing serious unemployment in this country.

It would be well, in my opinion, to question in such proposed legislation, the very basis of trade treaty laws, and to adopt workable provisions in the form of a quota system, or some similar techniques, for adequately protecting American workers and businesses from ruthlessly cutthroat competition that is threatening to overwhelm our entire productive system.

I have stated time and time again, and now reiterate, that I favor and support mutually beneficial trade and commerce with all free nations. In fact, I am anxious that this Government should encourage and stimulate that kind of commerce and trade in ways that would redound to the mutual benefit of nations of the free world. Drastic and prompt action must be taken, however, to effectively stop the kind of competition from abroad which is crumbling the foundations of the American competitive economy.

In the process of taking this corrective action, Congress should and must gather and evaluate the recent reports that under the offshore procurement program and notwithstanding the Buy American Act, the Navy has purchased large quantities of steel from Japan and TVA has contracted to buy $13 million worth of turbo-generators from England.

What the Navy Department is doing with Japanese steel, I do not know, but am endeavoring to find out.

How a tax-supported, public subsidized agency like TVA, competing against private enterprise business, could so flagrantly purchase electricity-producing equipment overseas that could be procured in this country under conditions more favorable respecting long-term costs for repair, replacement and security safeguards in the event of war and emergency, is completely incomprehensible to me. These agencies should be called upon to explain these apparently unjustified purchases.

These are questions which this Congress must explore and correct. What must the American worker employed in these industries, who painfully pays heavy taxes to this Government, think of this situation? What must American businessmen who are taxed and taxed and taxed almost beyond the point of tolerance and fiscal stability think about these deliberate decisions to patronize foreign business and turn valuable procurement contracts away from their doors.

What kind of policy is it, anyhow, that turns its back on American workers and American industries in favor of foreign workers and foreign industries?

Congress has the duty of coming up with the answers to these questions, if we are to adequately fulfill our constitutional responsibilities which require us to protect, defend and safeguard the interests of the United States and develop its human material and natural resources for the general welfare of the country.

TEXTILES AND ECONOMIC FALLACY

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks I include a very illuminating excerpt from a recent editorial of the Saturday Evening Post entitled "America's Textile Industry Threatened by a Maze of Bewildering Restrictions."

This article outlines the extremely difficult problems of the textile industry in trying to cope with the impact of the reciprocal trade treaties. When we consider the $18 billion invested in textiles in this country and the millions of individuals employed directly and indirectly in the industry, the damage inflicted upon this industry by foreign competition arising from the operation of the trade treaties is pathetic and almost unbelievable. It is rapidly liquidating large segments of this once great industry.

The program is inflicting unconscionable damage, detriment, and injustice to a vital American industry, and the worst of it is that the contagion of this paralyzing trade treaty disease, with which the American economy has been inoculated, is spreading to many other important industries.

If some effective way is not found in the Congress before long to control the effects of the operations of the trade treaties, the American economy as a whole will suffer additional staggering, shocking injury which could be disastrous to many industries.

I again urge that Congress give its early attention to these crucial problems. The people are in favor of sound foreign trade; we all want good relations with our neighbors and other nations. But we should insist upon truly reciprocal treatment. Foreign trade should not be a one-way street. It should be mutually and severally beneficial. The present situation which accords great trade benefits to foreign nations and inflicts serious detriment upon our own Nation is an economic fallacy of the first magnitude. It cannot be permitted to keep its deadly stranglehold on American business and the livelihood of American workers and their families.

The editorial follows:

AMERICA'S TEXTILE INDUSTRY THREATENED BY A MAZE OF BEWILDERING RESTRICTIONS

Most Americans respond favorably to the general purpose behind the administration's effort to expand international trade. However, when you get down to cases and understand how the reciprocal-trade program works in specific instances, approval is considerably short of unanimous. The plight of the textile-manufacturing industry, which involves an investment of $8 billion and provides employment for more than a million individuals, plus another million workers and $4 billion investment in the apparel industry, is a case in point. The threat to the cotton-textile industry is a weird combination of obstacles before which any American industry might quail.

First, the textile manufacturer who uses cotton yarn must buy his raw cotton at the price fixed under the agricultural-support program. In the meantime the Government, stuck with cotton which it has accumulated at the support price, sells it in the world market, where the price is about 20 percent under the American "kept" price. Thus the manufacturer in Japan, Italy, or Indonesia is able to buy his major raw material for 20 percent less than his American competitor has to pay.

Why, it may be asked, doesn't the American manufacturer go into the world market for his cotton? The cotton farmers' lobby and its political henchmen have taken care of this possible loophole by placing an import quota on raw cotton. Although most raw-cotton imports are prohibited by the quota, the present duty on cloth, dresses, shirts and underpants made from our exported cotton does not close the gap between the world price and the higher American legislated price.

Another major threat to the textile industry is the difference between American high wages, to a large extent compulsory under various laws and regulations, and the low wages prevailing in competing areas, especially Japan and Hong Kong. The classical free-trade position—advanced by supporters of the General Agreement on Tariff and Trade—is that consumers are entitled to the benefits of low costs in other countries and that, if the American producer cannot meet the competition, he ought to go into some other trade. But, argue the American producers, even if it were desirable to junk the American standard of living in order to boost standards of living elsewhere, it couldn't be done without the repeal of minimum-wage and maximum-hours laws and other protections which the American worker now enjoys.

Furthermore, the U.S. textile man points out, our International Cooperation Administration and other distributors of foreign aid have made the lot of our foreign competitors even easier by helping to equip them with brand new plants and the latest machinery to go with them. Modernization of the American industry, while impressive, has been hampered by inadequate depreciation allowances.

As of now, imports of all textiles are but a small fraction of the total textile production in this country. Furthermore, the American industry exports more textiles than it imports. However, the manufacturer of one category of textiles, ginghams or velveteens for example, heavily hit by low-cost imports, does not benefit because the manufacturer of another variety, like industrial webbing, is unscathed. The ratio of textile imports to exports is far less in favor of exports than it once was, for the obvious reason that our foreign customers are being taken from us by competitors blessed with the advantages already mentioned.

Obviously we cannot build a nonscalable tariff wall around the textile industry. However, it does not seem unreasonable to suggest a compensating import duty on goods made from the cotton which we supply to foreign processors at a 20-percent discount. After all, American flour mills are protected against imports of flour made from wheat sold abroad for less than the support price. A little less enthusiasm for setting up still more textile industries abroad with American money would also contribute.

There would still remain the wide difference between American and Asiatic wages in the affected industries. Probably there is no cure for this except an enforcible quota which should be liberal enough to give the Japanese and foreign industry generally a reasonable share of the market, but drastic enough to prevent disaster to the domestic industry.

THE APPROPRIATION PROCESS AND TAX REVISION

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. PHILBIN. Mr. Speaker, I was pleased to note that the very able chairman of our great House Ways and Means Committee, the distinguished gentleman from Arkansas [Mr. MILLS], and his esteemed colleagues have brought a bill to the floor of the House for taxing life insurance companies.

This important question has been pending in Congress for many years during which the Federal Treasury has lost huge revenues which normally should have flowed into the coffers of the Government. It is satisfying to note that under this bill the income will now be received by our Federal Treasury.

The insurance companies themselves have recognized the need and the justice of such legislation and have been agreeable to an equitable formula setting forth what the industry should pay.

We all know the difficulties presented by such legislation by the very nature of the insurance business, and I think we are all substantially in agreement that the insurance companies should pay their fair share of taxes just as other corporations and individuals. They should be dealt with fairly and equitably by the Government.

I think that Mr. MILLS and the committee should be complimented for their endeavors to work out a measure that will accomplish this result without imposing unfair tax burdens on any segment of our great insurance business.

The problem of reaching a suitable formula to tax life insurance companies and mutual insurance companies, undoubtedly presented a very challenging task for the committee, and I hope that their earnest labors have resulted in a bill which will be agreeably received by the companies concerned and will result in the very substantial revenue which is anticipated from this legislation. At least, we may agree that this is one step in the right direction.

In my opinion, the committee and the House have other important steps which they should take at a very early date to tackle and thoroughly revise the complex, inequitable, outmoded tax system under which the Government is now operating.

The balloon budgets of recent years, annually swelling and inflating in an alarming way, require adequate revenue, if we are not to revert to budget deficits. They must be painstakingly considered, item by item, and all fat eliminated.

In the past 6 years, Congress has cut over $20 billion from the Executive budget, but there is clear indication that the annual budget is still heavily larded with fat. This cannot be tolerated.

Does Congress have adequate efficient machinery for evaluating, going over and cutting these huge annual budgets? Are our committees properly and adequately staffed to examine with scrupulous care the thousands of items that go into these budgets?

Are we equipped to make intelligent cuts that will effect permissible economy and yet not interfere with national security and essential services of the Government.

Do we have the informed know-how and adequate administrative facilities here for following up the expenditures we authorize and appropriate for, on governing and checking waste, extravagance, seeing how funds we appropriate are used, protecting the interests of our taxpayers?

Is there need for more and better cooperation between the executive and legislative branches and the effective coordination of budget-making policies and the actual appropriation of funds to carry them out?

Is there sufficient coordinated effort made to hold down expenditures to the minimum point consistent with national safety and the proper socially conscious conduct of Government.

Do we need here a supplementary joint appropriation body, similar to the one that exists in the tax field, staffed with experts, lawyers, economists, inspectors, and investigators, to go over budget requests with a fine tooth comb, assist the Appropriations Committee in determining minimum necessary expenditures, and follow up the entire appropriating and spending process through departmental levels to make sure that waste and extravagance are minimized and that appropriated funds are efficiently used?

I mention this subject at this time because, as I have indicated, the size of the annual budget bears necessary relation to the size of the national tax levy.

Now for a moment, I would like to deal briefly with the related question of tax revision. From time to time, Congress has made herculean efforts to change and modernize the tax structure, both in its substantive and procedural aspects. Various efforts have been made and legislation presented. One measure I recall was so voluminous that the bill consisted literally of a large book, which, of course, very few Members of this House could possibly read in its entirety since it embodied countless technical changes, let alone fully comprehend its provisions.

The withholding principle, enacted back in the war years, marked a radical tax departure, and, in addition, war taxes, nuisance taxes, and a wide assortment of taxes on about everything from baby oil to transportation, many of them still unfortunately with us, were adopted by Congress.

High rates ranging from 20 percent in the lower to 91 percent in the upper brackets were established. High corporate rates were also enacted. Excise and other Federal taxes imposed a virtually impenetrable labyrinth of regulations written into a tax system so all-embracing, haphazard and uncoordinated that inequities and injustices flourished; fair, clear-cut tax obligations were minimized.

What is worse, exemptions and special administrative rulings applying frequently in a discriminating way, multiply and fasten a tight grip on about every class of the taxpaying public.

Of great concern to all of us are these constantly growing, continually spreading tax burdens weighing down workers, business, farmers, veterans, social security beneficiaries, retired pensioners, and others under the press of laws and regulations freezing inequities, favoritisms, and gross discriminations, lowering standards of living for a huge majority of Americans, working hardships on poor people, swallowing up seed capital in the maws of Government bureaucracy, disrupting and impeding the productive functions of our free enterprise system.

It would be impossible to estimate the hardship, inconvenience, and damage that is being caused by oppressive taxation, nor can we even approximately determine the profound, deteriorative effect of high-bracket taxation on our

economic system—that fabulous mechanism which at once affords work, free play for talent, energy, and ambition, high standards of living, and investment opportunities for our people.

How long can a free enterprise system, constituted as ours, stand up under the oppressive tax burdens that are inexorably weighing it down so heavily as to give genuine concern that its very underpinnings are being undermined, and may, in the not too distant future, collapse?

All of these questions point to the urgency of tax reform of a sweeping nature as soon as Congress can get to it.

Unprecedented demands are being made upon the Federal Government by the States and local communities. The Federal Government has undertaken large, financial support in a great many activities heretofore deemed to be solely within the province of the several States.

How far can we go down this road and retain State sovereignty, or indeed preserve constitutional balance and the vitality of our economic system is a question Congress and the American people will have to determine.

I think that thoughtful Americans are gravely concerned about these trends toward centralism in the guise of national welfare, and I personally believe that before we proceed further along our present economic course that we should stop and take heed of the clear warning signs indicating that we cannot hope to socialize American institutions and at the same time retain the immeasurable benefits and blessings that have come to us and our great country as a consequence of the operations of our free enterprise system. At the moment it seems to me that we cannot further delay vigorous action in these two fields of budgetary reform and drastic tax revision. Nor should we further delay a broad evaluation of alarming trends in Government leading us farther and farther away from our free institutions and State and local autonomy.

I will not here elaborate upon the basic, guiding principles, so well known to Members of the House, which we should follow in this process of regulating our fiscal affairs and tax structure.

We are committed to the fundamental principle of ability to pay. By the same token, we should be very careful and see that this principle is so applied that it will not go beyond the true, reasonable ability to pay, and thus cause hardship, indebtedness, and penalty to our people and our business groups. The vital thing is to move with all practicable speed to harness necessary national expenditure to our true revenue potential under efficient appropriation procedures consistent with maximum economy and under a realistic, modernized Federal tax system, fair and equitable to all and stimulative to our free enterprise institutions.

I hope very earnestly, Mr. Speaker, that the House may soon be prompted to the full implementation of these fundamental principles and wholeheartedly pledge myself, by voice, vote, and vigorous effort to every cooperation.

PRICE SUPPORT LEVEL ON MILK

Mr. QUIE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. QUIE. Mr. Speaker, the news that the Secretary of Agriculture has agreed to maintain the present price support level on milk at $3.06 per hundred is certainly heartening. Many of us have been concerned that the Secretary would lower this support level by 10 cents—to $2.96 per hundred.

A price support drop such as this would have resulted in a difference of approximately $1,327,000 of income for the First District of Minnesota, and would have worked a hardship on the dairy farmers across the Nation.

It was for this reason that I have urged the Secretary not to reduce support prices on dairy products.

The need to continue this level is clear. From a national standpoint, it has been estimated that approximately 1,500,000 farm families of the United States derive all, or a major part of their income, from dairy cows. Dairying produces 19 percent of the gross national income from agriculture—larger than any other segment of our farm economy.

Dairying exerts an important influence on Minnesota's farm income as well. It has been estimated that approximately 9,739,000,000 pounds of milk were produced in Minnesota during 1958.

As a dairy farmer myself, I represent a district composed of 12 counties in southeastern Minnesota which depend on dairying for a substantial part of the farm income. An estimated 1,327,000,000 pounds of milk were sold by farmers of the First District.

The supply and demand situation has so improved in the dairy industry that surplus stocks of butter and cheese have been drastically reduced. Production of milk was reduced this last year rather than increased which occurred in the previous years.

This, coupled with the fact that our population continues to grow, giving us new consumers for milk, gives hope for further improvement in the entire dairy industry and the support price no longer needs to be down at the lowest possible level.

WABASH VALLEY COMPACT

Mr. BOYLE. Mr. Speaker, I ask unanimous consent that the gentleman from Indiana [Mr. WAMPLER] may extend his remarks at this point and to include a copy of a bill introduced by him.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. WAMPLER. Mr. Speaker, I am introducing legislation today which would grant the consent of Congress to the States of Indiana and Illinois to enter into a Wabash Valley Compact.

As stated in article I of the measure, Mr. Speaker, the States of Indiana and Illinois have found that the Wabash Valley has suffered from a lack of comprehensive planning for the optimal use of its human and natural resources and that under-utilization and inadequate benefits from its potential wealth are likely to continue until there is proper organization to encourage and facilitate coordinated development of the Wabash Valley as a region and to relate its agricultural, industrial, commercial, recreational, transportation, development, and other problems to the opportunities in the valley.

To this end it is the purpose of the party States to recognize and provide for such development and coordination and to establish an agency of the party States with powers sufficient and appropriate to further regional planning for the valley.

If for no other purpose than to establish the necessary organizational machinery to devise a master flood control plan for the protection of the people, and their agricultural and property interests, the proposed compact would be of inestimable value.

By way of illustration, Mr. Speaker, there appeared in the Sunday, March 8, 1959, edition of the Terre Haute (Ind.) Tribune an article titled "Reservoirs Needed on Upper Wabash," which statistically documents, in terms of human lives, agricultural acreage and property lost, a portion of the tragic waste and devastation suffered in the Wabash Valley as a result of perpetual flooding.

The story states that—

> The 1913 flood, the worst in the State's (Indiana) history, resulted in damages amounting to $11 million, the 1943 flood damage was $10,660,000 and the loss of six lives, and the 1950 flood resulted in four deaths and damage of $1,662,000.
>
> The 1958 agricultural flood loss of acreage along the Wabash tributaries, including the White River, amounted to 262,500 acres and 224,700 acres in 1957. Total losses in crop value in this area was $10,190,000 in 1958 and $8,874,000 in the previous year.
>
> The lower Wabash in which this area is located lost 174,000 acres of crops valued at $8,340,000 in 1958 and 142,000 acres valued at $6,300,000 in 1957.
>
> The upper Wabash area lost 83,068 acres of crops valued at $3,683,790 last year and 78,267 acres valued at $2,350,948 the year before.
>
> Indiana highway losses due to floods in 1958 cost the counties and the State $602,770 in road repairs and $912,754 in bridge repairs. The 1957 State flood loss figures were $502,187 for roads and $113,417 to replace washed out or damaged bridges.
>
> In Vigo County alone, the financial bill for repair of flood damaged roads in 1958 was $34,605 and $30,000 the year before, with $98,463 being spent on bridge repairs last year and none in 1957.

Mr. Speaker, the losses sustained during the recent 1959 floodings are still being totaled.

I hope my colleagues will appreciate to the fullest extent the absolute necessity for the approval of this measure, which is identical to bills which have been introduced by the gentleman from Illinois [Mr. SHIPLEY], and Senator HARTKE, of Indiana.

Mr. Speaker, under unanimous consent I insert the text of my Wabash

Valley Compact bill at the conclusion of my remarks:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is hereby given to the States of Illinois and Indiana to enter into the Wabash Valley Compact in the form as follows:

"THE WABASH VALLEY COMPACT

"Article I. Findings and purpose

"The party states find that the Wabash Valley has suffered from a lack of comprehensive planning for the optimal use of its human and natural resources and that under-utilization and inadequate benefits from its potential wealth are likely to continue until there is proper organization to encourage and facilitate coordinated development of the Wabash Valley as a region and to relate its agricultural, industrial, commercial, recreational, transportation, development and other problems to the opportunities in the Valley. To this end it is the purpose of the party states to recognize and provide for such development and coordination and to establish an agency of the party states with powers sufficient and appropriate to further regional planning for the Valley.

"Article II. The Valley

"As used in this compact, the term 'Wabash Valley' shall mean the Wabash River, its tributaries and all land drained by said river and tributaries, to whatever extent they lie within the party states.

"Article III. The Wabash Valley Interstate Commission

"(a) There is hereby created an agency of the party states to be known as the Wabash Valley Interstate Commission (hereinafter called the Commission). The Commission shall be composed of seven Commissioners from each party state designated or appointed in accordance with the law of the state which they represent and serving and subject to removal in accordance with such law. The federal government may be represented without vote if provision is made by federal law for such representation.

"(b) The Commissioners of the party states shall each be entitled to one vote in the Commission. No action of the Commission shall be binding unless taken at a meeting in which a majority of the members from each party state are present and unless a majority of those from each state concur, provided that any action not binding for such a reason may be ratified within thirty days by the concurrence of a majority of each state. In the absence of any Commissioner, his vote may be cast by another representative or Commissioner of his state provided that said Commissioner or other representative casting said vote shall have a written proxy in proper form as may be required by the Commission.

"(c) The Commission may sue and be sued, and shall have a seal.

"(d) The Commission shall elect annually, from among its members, a chairman, a vice chairman, and a treasurer. The Commission shall appoint an executive director who shall also act as secretary, and who, together with the treasurer, shall be bonded in such amounts as the Commission may require.

"(e) The Commission shall appoint and remove or discharge such personnel as may be necessary for the performance of the Commission's functions irrespective of the civil service, personnel, or other merit system laws of any of the party states.

"(f) The Commission may establish and maintain, independently or in conjunction with any one or more of the party states, a suitable retirement system for its employees. Employees of the Commission shall be eligible for social security coverage in respect of old-age and survivors insurance provided that the Commission takes such steps as may be necessary pursuant to federal law to participate in such program of insurance as a governmental agency or unit. The Commission may establish and maintain or participate in such additional programs of employee benefits as may be appropriate to afford employees of the Commission terms and conditions of employment similar to those enjoyed by employees of the party states generally.

"(g) The Commission may borrow, accept, or contract for the services of personnel from any state or the United States or any subdivision or agency thereof, from any interstate agency, or from any institution, person, firm, or corporation.

"(h) The Commission may accept for any of its purposes and functions under this compact any and all donations, and grants of money, equipment, supplies, materials, and services, conditional or otherwise, from any state of the United States or any subdivision or agency thereof, or interstate agency, or from any institution, person, firm, or corporation, and may receive, utilize, and dispose of the same.

"(i) The Commission may establish and maintain such facilities as may be necessary for the transacting of its business. The Commission may acquire, hold, and convey real and personal property and any interest therein.

"(j) The Commission may adopt, amend, and rescind bylaws, rules, and regulations for the conduct of its business.

"(k) The Commission annually shall make to the Governor of each party state, a report covering the activities of the Commission for the preceding year, and embodying such recommendations as may have been adopted by the Commission which report shall be transmitted to the legislature of said state. The Commission may issue such additional reports as it may deem desirable.

"Article IV. Finances

"(a) The Commission shall submit to the executive head or designated officer or officers of each party state a budget of its estimated expenditures for such period as may be required by the laws of that jurisdiction for presentation to the legislature thereof.

"(b) Each of the Commission's budgets of estimated expenditures shall contain specific recommendations of the amount or amounts to be appropriated by each of the party states. Subject to appropriation by the respective legislatures the Commission shall be provided with such funds by each of the party states as are necessary to provide the means of establishing and maintaining facilities, a staff of personnel, and such activities as may be necessary to fulfill the powers and duties imposed upon and entrusted to the Commission.

"(c) The Commission may meet any of its obligations in whole or in part with funds available to it under Article III(h) of this compact, provided that the Commission takes specific action setting aside such funds prior to the incurring of any obligation to be met in whole or in part in this manner. Except where the Commission makes use of funds available to it under Article III(h) hereof, the Commission shall not incur any obligations prior to the allotment of funds by the party jurisdictions adequate to meet the same.

"(d) The expenses and any other costs for each member of the Commission shall be met by the Commission in accordance with such standards and procedures as it may establish under its bylaws.

"(e) The Commission shall keep accurate accounts of all receipts and disbursements. The receipts and disbursements of the Commission shall be subject to the audit and accounting procedures established under its bylaws. However, all receipts and disbursements of funds handled by the Commission shall be audited yearly by a qualified public accountant and the report of the audit shall be included in and become a part of the annual report of the Commission.

"(f) The accounts of the Commission shall be open at any reasonable time for inspection.

"Article V. Advice and cooperation

"(a) The Commission shall establish a technical advisory committee which shall be composed of representatives of such departments or agencies of the governments of the party states as have significant interest in the subject matter of the Commission's work: *Provided,* That if pursuant to the laws of a party state a representative of any such department or agency serves as a member of the Comission said department or agency need not be represented on the technical advisory committee. The Commission shall provide under its bylaws for procedures for the reference of questions to such committee.

"(b) The Commission may establish other advisory and technical committees composed of private citizens, expert and lay personnel, representatives of industry, labor, commerce, agriculture, civic associations, and officials of local, state and federal government, and may cooperate with and use the services of any such committee and the organizations which they represent in furthering any of its activities under this compact. The Commission shall encourage citizen organization and activity for the promotion of the objectives of this compact.

"Article VI. Functions

"The Commission shall have power to:

"A. Promote the balanced development of the Wabash Valley by

"(1) Correlating and reporting on data significant to such development.

"(2) Recommending the coordination of studies by the agencies of the party states to provide such data.

"(3) Publishing and disseminating materials and studies which will encourage the economic development of the Valley.

"(4) Recommending standards as guides for local and state zoning and other action which will promote balanced development by encouraging the establishment of industrial parks to facilitate industrial development, the reservation of stream bank and lake shore areas for recreation and public access to water, the preservation of marshes and other suitable areas as wild life preserves, the afforestation and sustained yield forest management of submarginal lands, the protection of scenic values and amenities and other appropriate measures.

"(5) Preparing in cooperation with appropriate governmental agencies a master plan for the identification and programming of public works.

"(6) Cooperating with all appropriate governmental agencies in the encouragement of tourist traffic and facilities in the Valley.

"B. Recommend integrated plans and programs for the conservation, development and proper utilization of the water, land and related natural resources of the Wabash Valley, including but not limited to:

"(1) Encouraging the classification of Valley lands in terms of appropriate uses.

"(2) Cooperating in the development of appropriate plans for flood protection, including but not limited to the construction of protective works and reservoirs.

"(3) Developing public awareness of the need for flood plain zoning and in cooperation with the appropriate agencies of the party states and their political subdivisions evolving standards for the implementation and application of such zoning in the Valley.

"(4) Reviewing the need for and appropriate sources of suitable water supplies for domestic, municipal, agricultural, power, industrial, recreation and transportation purposes.

"(5) Encouraging a pattern of land use and resource management which will increase the natural wealth of the Valley and promote the welfare of its inhabitants.

"(6) In cooperation with appropriate agencies, analyzing the recreational needs and potential of the Valley and developing a program for the use and maximization of recreational resources.

"C. Secure the necessary research and developmental activities by:

"(1) Correlating such research and developmental activities as are placed within its purview by this compact. The Commission may engage in original investigation and research on its own account or secure the undertaking thereof by a qualified public or private agency.

"(2) Making contracts for studies, investigations and research in any of the fields of its interest.

"(3) Publishing and disseminating reports.

"D. Make recommendations for appropriate action to:

"(1) The legislatures and executive heads of the party states and the federal government

"(2) The agencies of the party states and the federal government.

"E. Undertake such additional functions as may hereafter be delegated to or imposed upon it from time to time by the action of the legislature of a party state concurred in by the legislature of the other.

"Article VII. Enactment and withdrawal

"This compact shall become effective when entered into and enacted into law by the states of Illinois and Indiana. The compact shall continue in force and remain binding upon each party state until renounced by legislative action of either party state.

"Article VIII. Construction and severability

"The provisions of this compact shall be severable and if any phrase, clause, sentence or provision of this compact is declared to be unconstitutional or the applicability thereof to any state, agency, person, or circumstance is held invalid, the constitutionality of the remainder of this compact and the applicability thereof to any other state, agency, person or circumstance shall not be affected thereby. It is the legislative intent that the provisions of this compact be reasonably and liberally construed."

SEC. 2. A Federal representative to the Wabash Valley Interstate Commission shall be appointed by the President, and he shall report to the President either directly or through such agency or official as the President may specify. Such representative shall have no vote on the commission. His compensation shall be in such amount, not in excess of $100 per diem, as the President shall specify, but the total amount of compensation payable in any one calendar year shall not exceed $10,000: *Provided*, That if the Federal representative be an employee of the United States he shall serve without additional compensation: *Provided further*, That a retired military officer or a retired Federal civilian officer or employee may be appointed as such representative, without prejudice to his retired status, and he shall receive compensation as authorized herein in addition to his retired pay or annuity but the sum of his retired pay or annuity and such additional compensation as may be paid hereunder shall not exceed $12,000 in any one calendar year. The Federal representative shall be entitled to travel expenses, he shall also be provided with office space, stenographic service, and other necessary administrative services. The compensation of the Federal representative shall be paid from available appropriations for the White House Office or from funds available to the President in connection with special projects. Travel expenses, office space, stenographic, and administrative services shall be paid from any available appropriations selected by the head of such agency or agencies as may be designated by the President to provide such expenses.

SEC. 3. The Wabash Valley Interstate Commission constituted by the compact shall make an annual report to Congress not later than sixty days after the beginning of each regular session thereof.

SEC. 4. The right to alter, amend, or repeal this Act is expressly reserved.

FARM HEARINGS FOR NEW MEMBERS OF CONGRESS

Mr. BOYLE. Mr. Speaker, I ask unanimous consent that the gentleman from North Carolina [Mr. COOLEY] may extend his remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. COOLEY. Mr. Speaker, I take this time to announce to the House, and particularly to the new Members of the House, that the Committee on Agriculture has set aside next Wednesday and Thursday, March 18 and 19, for the purpose of hearing Members of Congress who desire to appear before the committee and present their views concerning farm problems and programs. We want all Members of the House and especially the new Members to know that we shall be delighted to hear them or to receive statements from them.

The agricultural dilemma that faces the Nation was an important issue in many elections last fall and numerous new Members of the House and Senate were elected on the basis of platforms which included important new proposals for farm legislation.

The Committee on Agriculture is interested in all proposals and anxious to have the new Members of Congress, reflecting as they do the thinking of the people in their districts, make available to the committee such ideas as they may have with reference to agricultural legislation.

The hearings will be held by the full Committee on Agriculture and will start at 10 a.m., in the Agriculture Committee Room, 1310 New House Office Building. The hearings will be open to the public. Members who desire to appear are requested to notify the clerk of the Committee on Agriculture and indicate which of the 2 days, the 18th or the 19th will be most convenient to them.

If the Member desires to submit a written statement, either as part of or in addition to his oral presentation, the committee will be glad to receive it and it will appear in the printed hearing. If a written statement is to be presented, it is suggested that the Member make approximately 50 copies available to the committee at the time he appears, for the use of committee members and for distribution to the press.

TUNISIA

Mr. BOYLE. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. POWELL] may extend his remarks at this point in the body of the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. POWELL. Mr. Speaker, I wish to salute today His Excellency, Habib Bourguiba, President of Tunisia, and His Excellency, Mongi Slim, the Ambassador to the United States, on their country's third anniversary of independence from France on March 20.

Although Tunisia is a young nation and is small and far from wealthy, the country is important for the place she occupies in the heart of the Mediterranean. Fate has given Tunisia a privileged position in the center of the sea which has nurtured civilization. From her favorable position looking both toward Europe and the East, Tunisia has traditionally welcomed men and ideas from either direction. President Bourguiba emphasized a few years ago that Tunisia's responsibilities in the modern world are dictated by her location:

> Never to close her door on men of good will bringing spiritual or material help to offer peaceful cooperation to her neighbors; to be the conciliator between the Arab and Western World.

Let it not be forgotten that Tunisia can also be a barrier standing between them. President Bourguiba advises:

> In a world which has great and obvious need for mutual understanding Tunisia stands out as a land of reconciliation and fraternity between men, religions, and nations.

Although Tunisia has a population of only four million inhabitants and the country itself is no larger than the State of New York, its people have no feeling of timidity when mingling with large Western nations for theirs is an ancient nation whose cohesion and personality have been established for many centuries past. To which ancient cultural heritage has been forged the modern civilization of Arab culture enriched by drawing elements from Islam and the West.

Agricultural production still provides the main part of resources, which as elsewhere is subject to fluctuations and subjects the country to severe repercussion on standards of living and on foreign trade. Therefore, the country is eager to engage in other development to offset the uncertainty and disequilibrium of an agrarian economy and make the necessary economic progress in the modern world. President Bourguiba has announced his country's policy of "total freedom for capital and benefit transfers" for foreign investments in Tunisia. Moreover, he added, mineral resources abound and supply raw materials for industry and agriculture throughout the world. Though he readily admits that natural resources of energy are limited, he informs that labor is abundant and economic development is based on confidence and liberalism. Tunisia realizes she cannot raise the new industries and therefore the President has appealed to foreign investments announcing new and sub-

stantial guarantees providing investors security.

The President has announced that Tunisia desires free, dignified, and loyal cooperation; that Tunisia is modest but proud and will not stoop to begging.

If we of the United States would but study, give thought and react to the wise admonition of President Bourguiba on this Tunisian birthday anniversary which is stated below our position as an ally and friend of all the Afro-Asian countries might be strengthened:

It is incumbent upon the United States, as the responsible leader of the West, to review its policy and to chart a bold new course.

Alliances are only as strong as its members. If certain members bring to the alliance weakness and imperialistic tendencies, the vitality of all the alliance as a whole is undermined. The alliance courts failure, also, if it props up, by artificial means, regimes which command neither the confidence nor the loyalty of their people. We find examples of this today in the Middle East.

There is today among the Arab people an elite which, in the main, is not attracted by the blandishments of Russia or communism. If this elite nevertheless compacts with the Soviet Union, it is with the simple purpose of countering the support which the United States and Great Britain have tendered certain unpopular, corrupt, and tyrannical monarchies and certain vestiges of colonialism.

I am compelled to reiterate the warnings which I have sounded during the last 2 years in my weekly speeches to the Tunisian nation: The United States runs the risk, as the leader of the free world, of losing the battle with Russia by persisting in backing and in indulging those who violate the principles of human liberty and dignity, and the respect for nations.

American policy has been subject to ambiguities. While Soviet intervention in Hungary is strongly criticized, France is supplied with airplanes and bombs for use in Algeria. In the Middle East as elsewhere, the West continues to prop up regimes already in the shadow of extinction, thus bringing upon the Western Alliance the deepening hostility of all the forces of change.

The United States must put an end to such ambivalence and no longer support either France in her actions in Algeria, or regimes similar to the one which existed in Iraq, for the mere sake of agreements and pacts. These allies, instead of strengthening the Western Alliance, are in fact robbing the group of its vitality and creating dangerous vacuums along the peripheries of the free world.

A choice must be made. The United States would do better if, instead of entering into fruitless and propagandistic summit meetings, it would have serious heart-to-heart talks with thoes among its own allies who still harbor imperialistic ambitions at a time of the awakening of all nations to liberty and freedom. America has it in its power to chart a bold new course for the West. America is mighty and her allies could not do without her: The life, security, and prosperity of these allies are bound inextricably to the power of the United States. Only by adopting the new approach, and by obliging its allies to follow suit, can the United States shore up the swaying structure of the free world and command the respect and loyalty of freedom-loving people everywhere.

American policy toward Tunisia is a case in point. Democracy in Tunisia has deep roots and is popular with its people. But the United States, understandably perhaps, continues to be deferential to French opinion. It is needless to invoke here the martyrdom of the Algerian people. The bloodshed in Algeria continues partly because the United States, while sincerely wishing an end to this strife, has failed to use firm and imperative language with its French ally—to oppose the errors and wanderings of passion.

U.S. policy has met failure in the Middle East—the failure which may clear way for greater Russian influence in that area. Yet, there are always lessons in defeat. Out of the setbacks and the disappointments in the Middle East may emerge the guidelines for a new policy, a new and broad course of action.

Such a fresh policy must be carefully conceived and firmly carried out. It must be designed to erase some of the errors of the past and to destroy, by positive action, the misconceptions which have beguiled millions of oppressed people in their craving for liberty. So long as the status of these people remains unchanged, communism will continue to beckon to them as the only salvation from the feudal tyranny of their own regimes and from the domination of imperialistic forces from without.

The alternatives are grim for all concerned, and especially for us. Should the United States lose heart in the defense of the Middle East and Africa and withdraw altogether from its overseas bases which have been the targets of so many irresponsible attacks—should it abandon all its allies including France and Great Britain—not a day would pass before Russian armies would sweep over Western Europe.

The free world owes its existence to the protection of the powerful United States. I state this blunt fact as the chief of state of a nation who is responsible for the security of his people. While we may not hesitate to criticize the United States whenever necessary, we cannot deny the fundamental facts of our survival. To deny them is to yearn secretly for the advent of communism and for the destruction of liberty and dignity everywhere.

ESTABLISHMENT OF TEMPORARY COMMISSION TO STUDY VETERANS' PROGRAM OF THE UNITED STATES IN THE PHILIPPINES

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I have today introduced the following joint resolution:

JOINT RESOLUTION TO ESTABLISH A TEMPORARY COMMISSION TO STUDY THE VETERANS' PROGRAM OF THE UNITED STATES IN THE PHILIPPINES

Whereas many citizens of the Republic of the Philippines served valiantly as nationals and members of the Armed Forces of the United States during World War II;

Whereas notwithstanding the sacrifices of these people in the combat with the common enemy were as great as those of other members of the Armed Forces of the United States, certain benefits are denied these veterans which are now provided other veterans who performed comparable service;

Whereas the problems encountered by Filipino veterans in the matter of benefits under laws administered by the Veterans' Administration and other agencies of the United States have been one of the causes for the demand in the Philippines for a reexamination of the existing relations and agreement between the United States and the Republic of the Philippines; and

Whereas the immediate solution of these problems is necessary to maintain the harmonious relations which have heretofore existed between these two nations: Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby established a Commission on Filipino Veterans' Benefits (hereafter referred to as the "Commission"), to be composed of five members appointed by the President.

SEC. 2. (a) Any vacancy in the membership of the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

(b) The Commission shall elect a Chairman from among its members.

(c) Three members of the Commission shall constitute a quorum.

SEC. 3. (a) It shall be the duty of the Commission to conduct a thorough and comprehensive investigation and study of the entire veterans' program of the United States in the Republic of the Philippines with a view to determining a just and equitable solution of all problems relating to or growing out of such programs.

(b) Within six months after the date of enactment of this joint resolution, the Commission shall submit to the President and to the Congress a full report of its findings, together with such recommendations as it deems appropriate.

(c) Sixty days after the submission of its report under subsection (b), the Commission shall cease to exist.

SEC. 4. (a) Each member of the Commission shall receive $50 per diem when engaged in the performance of duties vested in the Commission plus reimbursement for travel, subsistence, and other necessary expenses incurred by him in the performance of such duties.

(b) The Commission may appoint and fix the compensation of such personnel as it deems advisable, subject to the civil-service laws and the Classification Act of 1949.

SEC. 5. (a) The Commission may, in carrying out this Act, hold such hearings and take such testimony, and sit and act at such times and places (within the United States and the Republic of the Philippines), as it deems advisable.

(b) The Commission may secure directly from any department, agency, or independent establishment of the Government information, statistics, data, suggestions, and other matter for the purposes of this joint resolution. Each department, agency, or independent establishment shall furnish any of the foregoing matter directly to the Commission upon request of the Chairman.

SEC. 6. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this joint resolution.

TIGHT MONEY AGAIN

The SPEAKER pro tempore. Under the previous order of the House the gentleman from Texas [Mr. PATMAN] is recognized for 30 minutes.

Mr. PATMAN. Mr. Speaker, this is tight money again. Very tight money.

Raising the discount rate as the Federal Reserve did last week has no meaning in and of itself. This is a point that is frequently misunderstood.

The discount rate is kind of a signal or a barometer. It is a signal of what the Federal Reserve has already done and what it is doing. And, more than that, it is a pretty definite sign that the Federal Reserve expects to continue for some time doing what it has already done. It has tightened money to the extent that within a very few days or weeks we will hear the effects from the

grassroots. The effects have already taken place in the money market and in practically all loan rates.

Since the first of the year, up until March 4—the last report date—the Federal Reserve has reduced its contribution to member-bank reserves by $2 billion. This is a reduction of two billion high-powered dollars. In other words, it reduces the lending power of the private banks by $14 billion.

This reduction in credit was accomplished principally by reductions in the Open Market Committee's portfolio of Government securities. The Open Market Committee has unloaded more than $1 billion worth of Government securities on the open market since the first of the year. We can assume that all or substantially all of this reduction was in Treasury bills. Under its "bills only" policy, the Open Market Committee uses these bills almost exclusively to expand and contract bank credit.

Now can we say just how tight money is?

The Federal Reserve authorities themselves look at what are called net free reserves in the member banks. This is what they consider the best barometer of the degree of credit ease or restraint they are maintaining.

Net free reserves are arrived at this way: You take the total excess reserves in the banking system and subtract the amount of the loans outstanding from the Federal Reserve's banks.

Excess reserves are those on which the member banks can normally make loans or buy securities. In a gross way they measure the banking system's lending power.

Furthermore, in a quite limited sense the borrowings of member banks from the Federal Reserve banks are also bank reserves, because the member banks can make loans or purchase securities on these, too.

The fact is that these borrowed reserves are borrowed for quite brief periods. The Federal Reserve banks lend them not just because member banks want to borrow and are willing to pay the discount rate, but because the member bank is in an emergency situation. The Federal Reserve banks keep member banks having these borrowed reserves under constant pressure to pay them back. This is by regulation and long practice.

So the Federal Reserve authorities look upon loans from the Federal Reserve banks as an offset or as a subtraction from the member banks' excess reserves. When the borrowings from the Federal Reserve bank exceeds the excess reserves in the banking system, this means the banks do not have enough reserves to pay back the reserves they have borrowed, and yet they are under constant pressure to pay them back.

A position of negative or minus free reserves means very stringent credit. Free reserves were minus last Wednesday, the last report date, by $177 million, and this was approximately the same position the Federal Reserve System had the banking system in at about this time in 1957, when the Federal Reserve was then openly admitting and advertising that it was following a very tight-money policy.

MONEY LOOSENED WHEN NOT NEEDED, TIGHTENED WHEN NEEDED

Early last year, at the depth of the recession, the Federal Reserve gave reserves to the private banks. It gave them all told $3.5 billion in reserves. It gave them $1.5 billion through reductions in required reserves and $2 billion through Open Market Committee operations. The banks could create money on these reserves at the rate of $7 of new money for each dollar of reserves. In other words, on this $3.5 billion of reserves the banking system could have created up to $24.5 billion of new money with which to make loans or buy securities. The money was not needed then, because in the recession the demand for business credit was falling. More than that, at the lower interest rates then prevailing in the bond market many of the big corporations were paying off the bank loans they already had outstanding and were going to the bond market for money on a long-term basis.

So what happened was that the private banks used the money-creating power given them last year to buy $10.4 billion worth of Government securities. This was a free gift from the Federal Government of $10.4 billion to the private banks.

In the first part of the present year, however, business recovery has been under way and more bank credit is needed to allow this recovery to take place. So the Federal Reserve System has contracted credit. By reducing its credit to the member banks by $2 billion this year, it has taken back $14 billion of the $24.5 billion of money-creating power it gave the banks earlier last year.

As I have said, the level of the discount rate is an indication, a kind of gage, of how tight the Federal Reserve is making money. So the increase to 3 percent last week brings us back to a rate which the Federal Reserve maintained in the first 7 months of 1957. As you know, that was a very tight-money period. It certainly helped to bring on the recession which began in August of 1957. And many economists think it was solely responsible for the recession.

Now, how have the money market operators and the bond market operators interpreted the 3-percent discount rate?

On Monday, the Treasury held its regular Monday auction of 91-day Treasury bills. The yield on these bills jumped to 3.062 percent, which was the highest since December of 1957. It jumped from a rate of 2.816 percent on the previous Monday, and from a rate of 2.589 percent on the Monday before that. It is principally with these bills that the Federal Open Market Committee regulates the amount of credit available in the banking system, though, of course, when the rates on very short-term securities go up, the rates on long-term securities go up, too.

ALL INTEREST RATES WILL COST CONSUMERS BILLIONS

You may have noted that the Wall Street Journal reported on Monday that 4-percent yields on U.S. Government bonds are now freely available. The Treasury's new 4-percent bonds maturing in 1980 dropped by a full point last Friday following the Federal Reserve's announcement, and dropped another quarter of a point on Monday. In other words, this bond dropped in the open market by $1.25 on the 100 between Friday morning and Monday night.

On Monday, dealers in bankers' acceptances raised their rates by one-fourth of 1 percent and dealers in open market commercial paper raised their rates by one-eighth of a point. The papers for this morning report that the New York banks expect shortly to raise their prime rates. This is the rate which is charged on large bank loans to business firms with preferred credit ratings. The rate is now 4 percent, and we can probably expect it to be raised to 4¼ percent within a few days.

This new tight-money program means that the Treasury will have to pay higher interest rates, and it is confronted with refunding at least $28 billion of the debt this year, not counting Treasury bills and savings bonds. Also this does not count the new financing that will be necessary because of the large Federal deficit this year.

This new increase in interest rates will cost in the neighborhood of a billion dollars a year just in interest charges on the Federal debt. And it will cost consumers many times that amount in increased carrying charges on personal debts and in higher prices, whether or not they buy on credit.

This new tight-money policy means that a heavy damper and huge wet blanket is being put on the business recovery.

The new report on unemployment became available last night. Unemployment did not drop in February as had been widely predicted. Unemployment almost always does drop in February because of seasonal factors. But last month unemployment actually increased by 25,000 people. People who have been unemployed for more than 15 weeks now number more than a million and a half.

Speaking in the most conservative terms I can think of, putting on a new credit squeeze at this time is a shocking thing to do. It is utterly indefensible.

FEDERAL RESERVE SYSTEM FIGHTING "PSYCHOLOGY"

In fact, it is difficult to find any rational excuse for a new credit squeeze at this time. The only halfway plausible excuse that I have seen is one advanced by Miss Sylvia Porter in her column today. It is her thesis that the Federal Reserve System is fighting psychology. And this may be true. By the processes of elimination, the System certainly is not fighting inflation. There is no inflation to be fought and no signs of any. But it is true, as Miss Porter points out, there is considerable "psychology of inflation" in the country. But if this is what the Federal Reserve System is fighting, then it is fighting a psychology which the Federal Reserve people themselves have helped to create. Chairman Martin himself has recently been making public statements of the same kind which President Eisenhower and other administration spokesmen have been making so

freely and which would have us believe that a real and monstrous inflation is upon us, big as life, or is certainly just around the corner. All of this propaganda has frightened a lot of people.

So, if it is true that this new tight-money, high-interest squeeze is merely to fight a psychology, then I say it is too bad that practically the whole Nation has to suffer—everybody except the bankers and big-money lenders—in order to fight an imaginary bogeyman which the administration and the Federal Reserve authorities have themselves created.

Miss Porter's column, or such portions of it as appeared in the Washington Evening Star today, March 12, is as follows:

PSYCHOLOGY OF INFLATION

(By Sylvia Porter)

The Federal Reserve Board has tightened credit again.

It did this by increasing the interest rate it charges the Nation's banks for loans from the System. Thereby it gave the signal to its member banks to charge more for loans they in turn make to you as a businessman or as an individual consumer and it set the stage for another round of borrowing rate increases up and down the line.

Why?

This a strong anti-inflation step. Why this move at a time when unemployment is uncomfortably close to 5 million and a Governor of the Federal Reserve Board openly admits the high level of joblessness is a social, political, and economic problem today?

The first key point is that the Federal Reserve System is not fighting actual, serious inflation. There isn't any actual, serious inflation now.

More specifically, the prices we pay at retail for food, most major products, have been holding steady in a comparatively narrow range and there have been few big upswings in other price areas. There's lots of excess capacity in many lines of industry and most corporations could turn out more goods if the demands were present. There are no signs that consumers are taking off on a buying splurge, no signs that business will boost its spending on new plants and equipment for some time. The auto industry is hardly booming, housing isn't in a runaway advance.

And then there is unemployment, dismayingly high in some key areas. And even in regions which are prospering, there is proper worry about the general economic impact—as well as simple human meaning—of millions of jobless at this stage of a business advance, and of no prospect for a big drop in the totals until the economy is considerably boomier.

No. Regardless of what you may think the White House is saying about inflation or how you interpret the repeated warnings of leading Washington policymakers, actual inflation is not our problem today.

What, then, is the explanation for the tightening of the credit screws at this date?

The answer is that the Federal Reserve System is trying to fight a psychology of inflation—a spreading conviction among increasing numbers of businessmen and wage earners that prices and wages soon are going into another leapfrog upswing and the dollar is doomed to lose buying power rapidly and steadily.

It is this psychology which has been behind much of the indiscriminate buying in the stock market in recent months. In a sense, this buying has represented a flight from the dollar, and it is unreasonable, it is dangerous, it is destructive. It is this psychology which has caused investors to be indifferent to new Government securities. It is this psychology which analysts fear may lead to unsound increases in wages, prices, wild buying.

Reserve Board Chairman Martin has stated flatly that the "inflammable tinder" of inflation is "all around us" and the speculative psychology so clearly evident could spark an inflation blowoff at any time. He has said that only proper public and private actions could avert this blowoff.

Thus the tightening of the credit screws. It is a signal that the Reserve System intends to fight aggressively the psychology of inflation, that it is determined to get in position to combat inflationary forces themselves whenever they emerge. It is a warning to all to act with caution.

THE LATE LT. GEN. FLOYD L. PARKS

The SPEAKER pro tempore. Under the previous order of the House, the gentleman from New Jersey [Mr. CANFIELD], is recognized for 10 minutes.

Mr. CANFIELD. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. CANFIELD. Mr. Speaker, Lt. Gen. Floyd L. Parks, who died at Walter Reed Army Hospital early Tuesday morning, was one of the most unforgettable men I have ever met.

While I have long known of the general's outstanding record both in time of war and peace, I never came to know him closely until I was a fellow patient at Walter Reed last September and October. While I was convalescing from surgery, I would join him for breakfast, luncheon, and dinner, and I developed tremendous admiration and affection for him because of his obvious love for his fellow men. Hour after hour, he would relate most interesting stories of extraordinary experiences and always he was wont to speak well of others.

When the general's old alma mater, Clemson, played Maryland on the gridiron last fall, he insisted that I have a front seat with him for the television set in his room.

He was so proud of his family, and I was privileged to meet Mrs. Parks during my stay at Walter Reed. He talked much of his daughter and three sons, one a graduate of West Point and one now a Cadet at the Academy, and the other a lieutenant at Ft. Belvoir.

Last night, when I was a guest of the National Rifle Association at a buffet supper at the association's new headquarters on 16th Street, a guide took me into the general's office, and on his desk was a striking picture of his family. On the walls were framed pictures of his fellow American military commanders, one of them from General Eisenhower, who, in an autographed picture, had paid compliment to "my devoted friend of 38 years."

Phil Casey, staff reporter of the Washington Post and Times Herald, yesterday wrote a story of the passing of this great American, and it reads as follows:

GENERAL PARKS IS DEAD AT 63

(By Phil Casey)

Lt. Gen. Floyd L. Parks, who achieved with ease the unlikely feat of being an Army news boss and popular at the same time, died early yesterday at Walter Reed Army Medical Center.

General Parks will be buried with full honors Thursday, after funeral services at 3 p.m. at Fort Myer Chapel.

The 63-year-old soldier rose from private to general during his 38-year military career with distinguished service in World War II.

Affable and humorous, he became something of a press corps darling during his tenure as Chief of Army Information, most of the time from 1946 to 1953.

SHUNNED CENSORSHIP

The newsmen respected his ability, fairness, and straightforward desire to let the people know. He'd had no news experience, but he had the right impulses, or, at least, the impulses newsmen like. He knew news is news, even if it's bad.

Newsmen who dealt with him in that difficult post, during the years when Chief of Staff Dwight D. Eisenhower was being rumored as a presidential possibility, not only on one but both tickets, found him unfailingly courteous, able, and helpful as he could be.

Recognized as one of the Army's top strategists and field soldiers, holder of a Distinguished Service Medal with oak leaf cluster, and numerous other decorations, he also could tell a good story.

One of them was on him and about Mr. Eisenhower. The two had been old friends, beginning when Ike was a colonel and he was a captain.

"I hadn't seen him for 23 years," General Parks recalled one day, "and I ran into him in England in 1944. He said, 'Hello, Floyd. What happened to your hair?' "

AIRBORNE COMMANDER

A veteran of Army service during World War I, the general took the first airborne troops into Germany in World War II, and after the war was a sort of Mayor of Berlin, with the title, "Chief Kommandator," presiding over meetings of the combined British, French, and Russian commanders of the occupational forces.

"We'd start off like a sandlot baseball team," he said once. "Each speaking his own language. It was a lucky thing for me the British speak English."

Later, he'd have the day's problems written in the three languages. When he pointed to one of the written problems and its suggested answer, what he got was "Da," "Oui," and "Quite right, old man."

The only trophy he picked up in Germany was a wastebasket of Hitler's that he found in the bombed chancellery. It used to sit next to his study desk at Fort Meade, while he was commander of the Second Army from 1953 to 1956.

He was an avid golfer, and a good one, better than his celebrated golfing companion, President Eisenhower. In 1957, he was Middle Atlantic senior champion, and he served as president of the Middle Atlantic Golf Association. He founded a junior golf tournament at Fort Meade.

NATIVE OF KENTUCKY

Born in Louisville, he passed much of his youth in South Carolina, and was graduated from Clemson College there. He enlisted as a private in World War I and later won a commission.

He won his Distinguished Service Medal with the oak leaf cluster for his work as Chief of Staff, Army Ground Forces, early in World War II, and for his service in Europe. There, he was Chief of Staff of the First Allied Airborne Army, taking part in the massive air assault in Holland and the Rhine River crossing. He took command of the First U.S. Airborne Army in May 1945, and led the first American troops into Berlin.

General Parks made all administrative arrangements for the Potsdam Conference in

July 1945, and received an official commendation from President Truman.

In later years, he had been critical of Defense Department supervision over public information on the Military Establishment. His philosophy was that as few impediments as possible be placed in the way of the public's right to know.

DIRECTED NRA

After retiring from service in 1956, he was named executive director of the National Rifle Association, and reaction to him there was just what it had been in the Army and among the press corps here.

A woman who worked with him in the association echoed the warm words of veteran political and golfing writers: "He was one of the nicest people I've ever known."

He is survived by his wife, Harriet M. Parks; a daughter, Edwyna Ann Strain, of Poughkeepsie, N.Y.; three sons, Floyd L. Parks, Jr., a student at the University of Maryland; Cadet Basil M. Parks, now at the U.S. Military Academy; and Army Lt. William R. Parks, of Ft. Belvoir, Va.; and a granddaughter.

Washington's three daily newspapers yesterday carried these editorial tributes:

[From the Washington Post, Mar. 11, 1959]

FLOYD L. PARKS

Lt. Gen. Floyd L. Parks was a fine soldier with an exceptional understanding of the importance of public information. This graduate engineer who served with armored and paratroop forces had a splendid wartime record as Chief of Staff at headquarters of the Army ground forces in Washington, as Chief of Staff of the 1st Allied Airborne Army in Europe, and later as commander of the 1st American Airborne Army and commanding general of the United States sector in Berlin. He led the first American troops into Berlin, helped restore public services in that devastated city, and made administrative arrangements for the Potsdam Conference. Afterward he served two tours as Army chief of information, as deputy Army commander in the Pacific and as commanding general of the 2d Army at Fort Meade before his retirement 3 years ago.

But these cold statistics do not tell the full story about a warm and able man. Floyd Parks had an innate sense of the situation, and his judgment, whether in command or in his information activities, was almost invariably keen. He was a valuable counselor who made his impact felt at top levels. He was an expert golfer and rifleman who also loved a good story. His flair for putting the Army's best foot forward was recognized in the fact that he was twice brought back to the Pentagon as chief of information. His credo, as described in the Army Information Digest, was a simple one which bears much emulation:

"Many people mistakenly think that the primary public information mission is to suppress unsavory stories or at least counter them with favorable releases. In reality it is not possible to suppress news, whether good or bad, and it is poor policy to try. * * * Therefore if the story is bad, I admit it; if it is good, I try to see that the good points are known—and speedily."

In addition to the many military comrades who will miss Floyd Parks are a host of grateful newsmen who respected him as a good friend and ally.

[From the Washington Evening Star, Mar. 11, 1959]

GENERAL PARKS

Lt. Gen. Floyd L. Parks, dead at 63, had a distinguished career in the Army—in peace, in war, and in the difficult period which has beset the world since 1946. Both his competence as a soldier and his skills in the field of interallied administration were reflected in the many honors paid him by our own and other governments. But to newsmen in Washington, and indeed to many from other cities at home and abroad, General Parks occupied a special place of respect and affection. He did two tours of duty as the Army's chief information officer at the Pentagon and they were years of pleasant and productive harmony between that service and the press. On that level, General Parks was serving his country again in the finest tradition of a good soldier—an officer and a gentleman.

[From the Washington Daily News, Mar. 11, 1959]

FLOYD PARKS

Lt. Gen. Floyd Parks, who died here yesterday, was quite a soldier and an extraordinary Army public relations man—though he always insisted he knew nothing about public relations.

What he did know, or sense, was that the art of public relations is basically a strategy of dealing honestly and fully with the press and other outlets of public information.

Serving two terms in this job, covering 6½ years as Army information chief, General Parks constantly endeavored to get across the story of what the Army was doing. Always he had in mind that his audience was the millions of American parents and others whose sons and relatives made up the Army.

When former Defense Secretary Charles Wilson's office interposed authority over General Parks' department, the old paratrooper characteristically spoke up. He told a Congress committee that such interference was keeping him from informing the public of Army men's activities. He was no messenger boy or bookkeeper, he made clear.

As a soldier, General Parks was recognized as a top strategist and field leader. In 1945 he led the first American troops into Berlin as commander of the 1st U.S. Airborne Army. He was not a West Pointer, having come up from enlistment in World War I.

His versatility included many things—from a degree as master of science in mechanical engineering from Yale, to a hole-in-one golf shot while his old friend, President Eisenhower, looked on enviously.

Mr. Speaker, my heart goes out to Mrs. Parks and all the members of the general's wonderful family in their great loss and sorrow.

PASSENGER TRAIN AND FERRY SERVICE

The SPEAKER pro tempore. Under the previous order of the House, the gentlewoman from New Jersey [Mrs. DWYER] is recognized for 5 minutes.

Mrs. DWYER. Mr. Speaker, my colleague, the gentleman from New Jersey [Mr. WALLHAUSER] and I have introduced companion bills today which would amend the Interstate Commerce Act so as to require more adequate consideration of the public interest before passenger trains and ferries are permitted to be discontinued.

The situation which has prompted the introduction of this legislation is a matter of considerable urgency in the New Jersey-New York-Connecticut metropolitan area, as well as other areas of the country in which commuter rail service is important.

I would respectfully call the attention of the distinguished chairman and members of the Committee on Interstate and Foreign Commerce to this matter and urge them to schedule prompt consideration of the legislation.

Since enactment last year of the Transportation Act of 1958, a number of important commuter railroads have hurried to take advantage of a provision in that act making it considerably easier to discontinue passenger train and ferry service. This provision permits discontinuance of service 5 months following notification by the railroad unless the Interstate Commerce Commission orders the service to be continued within the 5-month time limit.

There is now pending before the Commission a total of 27 notices of intention to discontinue about 100 passenger trains. Many of these trains currently provide commuter service of critical importance to metropolitan New Jersey and New York. Discontinuance of the service, without thorough consideration of the public need and the potential impact on the economy of the area, could be disastrous.

Our legislation—which is identical to a bill presently pending in the other body—would assure full consideration of the public interest by the Commission in train discontinuance cases by requiring public hearings in the event of objections to proposed discontinuances, by eliminating the 5-month time limit, and by providing that the ICC make a positive finding that the public convenience and necessity permits of such discontinuance before authority to curtail the service is granted.

Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD by including the full text of a statement issued by my colleague from New Jersey and me, and I invite the attention and the support of all our colleagues.

The SPEAKER pro tempore. Without objection it is so ordered.

There was no objection.

(The statement referred to follows:)

We share the concern that has motivated our colleagues in the Senate to propose a way of assuring full and effective consideration of all the facts before the Interstate Commerce Commission authorizes railroads to discontinue train and ferry passenger service.

The speed with which some railroads in the metropolitan New Jersey-New York-Connecticut area, and in other parts of the country, have moved to use the Transportation Act of 1958 as authority to discontinue important commuter service is disturbing.

Many thousands of New Jersey residents depend on these rail facilities to travel to and from work. Major disruption of this service would seriously and adversely affect the economy of northeastern New Jersey, including the districts we represent.

We recognize that the commuter problem—in our own area as in other areas—is a complex one. It is not going to be solved completely by this single proposal or by any single agency. It is a problem that has accompanied the growth of metropolitan areas and has become more difficult over the past several years, as urbanization itself has intensified.

We have both proposed—and we desire to repeat that proposal here—that any long-range solution to this difficult situation requires the cooperation of the many levels of government involved, Federal, State, and local, and of the many private institutions affected, including rail and motor carriers, as well as the people themselves. We believe

that the Subcommittee on Intergovernmental Relations of the House Committee on Government Relations is an appropriate group to make at least a preliminary study of the possibilities of such cooperation, and we urge again that the subcommittee accept this responsibility.

In the meantime, however, there is need for immediate action.

Under present law, as provided in the Transportation Act of 1958, railroads may petition the Commission to discontinue passenger trains and ferries and 5 months after notification of such an intention—if the Commission has not ordered the service to be continued—the proposed discontinuance may go into effect automatically. No public hearings are required. No procedures requiring adequate consideration of possible objections, or of the need to maintain the particular service involved, are provided for at present.

Consequently, this particular provision has operated, in effect, as an invitation to railroads to abandon a great deal of their passenger facilities—considerably more than they might should they be required to sustain an affirmative case before the ICC that abandonment or discontinuance is in the public interest.

Twenty-seven notices of intention to discontinue about 100 passenger trains are currently pending before the Commission. In addition, some railroads are proposing further abandonments of service. It is, therefore, abundantly clear that the ICC is unable, administratively, to give the full procedural attention to these discontinuance cases necessary to assure protection of the public interest—within the 5 months limitation presently in force.

The bill we propose would add a new paragraph 19 to section 1 of the Interstate Commerce Act revising the procedures under which the Commission would consider railroad requests to discontinue the operation of passenger trains and ferry service.

Railroads would be given an option to apply for authority to discontinue service either to the ICC or the appropriate State agency where States have legislated on the matter. The Commission would be obliged to hold a hearing before acting on discontinuance applications, and all interested parties would be permitted to be heard. Thereafter, ICC procedures would be similar to those ordinarily followed in cases involving proposed abandonment of an entire railroad line. No time limit would be imposed within which the Commission would be required to make a decision. And the Commission would be empowered to set certain conditions in discontinuance cases which it found were required in the public interest.

We believe that such a procedure represents a fair compromise between the method in effect prior to passage of the Transportation Act of 1958 and the method instituted by that act. The interests of both the rail carriers and the commuting public—as well as the public at large—would be properly recognized, and any decisions regarding discontinuance of railroad passenger service would be made only after all relevant factors had received full consideration.

As we have indicated, we do not consider this proposal the last word on the subject, or the conclusive means for solving the present commuter crisis. But we believe that maintenance of adequate railroad commuter service is of critical importance right now, and no time should be lost in beginning hearings on this admittedly stop-gap proposal in both houses of the Congress.

PASSENGER TRAIN AND FERRY SERVICE

Mr. WALLHAUSER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. WALLHAUSER. Mr. Speaker, I have today introduced a bill proposing amendment of the Interstate Commerce Act to provide for thorough consideration and review by the Interstate Commerce Commission of applications for discontinuances of railroad passenger trains and ferries.

I consider this a highly important bill. It is a companion bill to one introduced here today by my distinguished colleague from New Jersey, Representative FLORENCE P. DWYER. It also is similar to a bill introduced in the other body by a bipartisan group of Members.

It is my sincere hope that many Members of this body will join with us in this action, through introduction of bills of their own, so that the weight and prestige of their numbers will impress upon the appropriate committee the immediate importance of this matter.

This bill is in the public interest, particularly for the many great metropolitan areas of our Nation. I believe its adoption is essential if we are to keep faith with those hundreds of thousands of people throughout the Nation who must depend upon railroad commutation service to carry them back and forth to work.

My bill would change a section of the Interstate Commerce Act amended last year. Since enactment of last year's amendment, railroads in many areas of the Nation have virtually leaped into action to seek the discontinuance of trains under the relatively soft terms of that amendment.

Presently there are 27 notices of intention to discontinue some 100 passenger trains pending before the Interstate Commerce Commission. It appears obvious that these are only the start of an avalanche of similar applications. Some railroads even have stated unequivocally that they will seek to completely wipe out commuter services on their roads.

Under terms of present laws, it is conceivable that this could happen rapidly. I cannot believe that this was foreseen in adoption of the 1958 amendment. If it does happen, it will have a catastrophic impact on many of the great metropolitan areas of our Nation.

The 1958 amendment has imposed an unreasonable time limit on the Interstate Commerce Commission in its consideration of discontinuance applications. It is obvious the Commission cannot now give full and needed consideration to all applications before it, and those that they may reasonably expect in the near future, under the time limit. My bill would correct this condition.

My bill also would make it compulsory for the Commission to hold public hearings on the discontinuance applications presented to it. The changes that I propose would in no way diminish the rights the railroads now enjoy under law. However, they would give greater rights to the public when the railroad services that are so essential to them are threatened with extinction.

I am keenly aware of the financial troubles of the railroads. But I am also keenly aware that we cannot permit rapid and wholesale discontinuances and abandonments of railroad services without giving full and deliberate consideration to the rights and needs of the general public.

I do not hold for a moment that my proposed amendment is a cure-all for the plight in which the railroad commuter finds himself because of circumstances beyond his direct control. At best what is proposed here is a mild antidote, but a sorely needed antidote.

It will prevent hasty action. It will serve to help prevent action wherein the rights of the railroads could be allowed to take precedence over the rights of the people.

It will provide added opportunity for the railroads and proper Government agencies to carry out their joint responsibility of finding a solution to the commuter service problem before it is too late.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. MCGINLEY, from 4 p.m. March 12 to 1 p.m. March 18, on account of official business in his district.

Mr. SMITH of Virginia (at the request of Mr. GARY), for the remainder of the week, on account of illness.

Mr. ROOSEVELT, for Friday, March 13, on account of official business in his district.

Mrs. KELLY of New York (at the request of Mr. KEOGH), for Thursday, March 12, 1959, and Friday, March 13, 1959, on account of death in family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. CANFIELD, for 10 minutes, today.

Mrs. DWYER, for 5 minutes, today.

Mr. ALGER, for 60 minutes, on Tuesday next.

Mr. CONTE, for 5 minutes, on Monday next, March 16, 1959.

Mr. BECKER (at the request of Mr. SMITH of California), for 1 hour, on tomorrow.

Mr. KING of Utah, for 45 minutes, on Monday, March 16.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mrs. GRANAHAN.

Mr. BUDGE.

Mr. POAGE.

Mr. SLACK.

Mr. PHILBIN and to include extraneous matter.

(At the request of Mr. SMITH of California, and to include extraneous matter, the following:)

Mr. WAINWRIGHT.

Mr. DORN of New York in two instances.

Mr. FLYNN and to include extraneous matter.

(At the request of Mr. BOYLE, the following Members were given permission to revise and extend their remarks in the RECORD:)

Mr. MULTER in two instances and to include extraneous matter.

Mr. FOGARTY and to include extraneous matter.

Mr. JENNINGS.

Mr. MCGINLEY in two instances and to include extraneous matter.

ADJOURNMENT

Mr. BOYLE. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 8 minutes p.m.) the House adjourned until tomorrow, Friday, March 13, 1959, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

701. A letter from the Director, Bureau of the Budget, Executive Office of the President, relative to the appropriation to the Department of Health, Education, and Welfare for "Indian health activities, Public Health Service," for the fiscal year 1959, has been apportioned on a basis indicating a need for a supplemental estimate of appropriation for pay increases granted by Public Law 85-462 for employees paid under this appropriation, pursuant to section 3679 of the Revised Statutes, as amended (31 U.S.C. 665); to the Committee on Appropriations.

702. A letter from the Administrator, General Services Administration, transmitting the report of the Archivist of the United States on records proposed for disposal under the law; to the Committee on House Administration.

703. A letter from the Secretary of Labor, transmitting a report prepared by the Administrator of the Wage and Hour Division, which sets forth information concerning the operation and effect of the act and statistical data provided by the Bureau of Labor Statistics, pursuant to section 4(d) of the Fair Labor Standards Act; to the Committee on Education and Labor.

704. A letter from the Comptroller General of the United States, transmitting a report on examination of the Department of the Air Force contract AF 33(600)-31100 with Avco Manufacturing Corp., Crosley Division, Cincinnati, Ohio; to the Committee on Government Operations.

705. A letter from the Governor, Canal Zone Government, transmitting a report of disposal of foreign excess property by the Panama Canal Company and Canal Zone Government for the year ended December 31, 1958, pursuant to the Federal Property and Administrative Services Act of 1949 (63 Stat. 398); to the Committee on Government Operations.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of Montana:

H.R. 5594. A bill to amend the Internal Revenue Code of 1954 to continue the exclusion, from the basis of certain excise taxes, of discounts and rebates for cooperative local advertising; to the Committee on Ways and Means.

By Mr. DEROUNIAN:

H.R. 5595. A bill for the relief of certain hospitals which received loans pursuant to the Federal Civil Defense Act of 1950; to the Committee on Armed Services.

By Mrs. DWYER:

H.R. 5596. A bill to amend the Interstate Commerce Act, as amended, so as to strengthen and improve the national transportation system, insure the protection of the public interest, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. FINO:

H.R. 5597. A bill to amend title II of the Social Security Act to provide that an individual's entitlement to child's insurance benefits shall continue, after he attains age 18, for so long as he is regularly attending school; to the Committee on Ways and Means.

By Mr. KOWALSKI:

H.R. 5598. A bill to authorize the President to issue posthumously in the name of George Washington a commission as General of the Army, and for other purposes; to the Committee on Armed Services.

By Mr. LIBONATI:

H.R. 5599. A bill to amend section 106 of title 38, United States Code, to provide veterans' benefits for female contract surgeons who served with the Armed Forces during World War I; to the Committee on Veteran's Affairs.

By Mr. McGOVERN:

H.R. 5600. A bill to increase and extend the special milk program for children; to the Committee on Agriculture.

H.R. 5601. A bill to provide that for the purpose of disapproval by the President each provision of an appropriation bill shall be considered a separate bill; to the Committee on the Judiciary.

H.R. 5602. A bill to amend the Federal Trade Commission Act, as amended, so as to equalize rights in the distribution of merchandise identified by a trademark, brand, or trade name; to the Committee on Interstate and Foreign Commerce.

By Mr. MACK of Illinois:

H.R. 5603. A bill granting the consent and approval of Congress to the Wabash Valley compact, and for related purposes; to the Committee on the Judiciary.

By Mr. MEYER:

H.R. 5604. A bill to increase the authorized maximum expenditure for the fiscal years 1959, 1960, and 1961 under the special milk program; to the Committee on Agriculture.

By Mr. NORBLAD:

H.R. 5605. A bill to amend the Internal Revenue Code of 1954 to make it clear that the tax on transportation of persons does not apply to ferry service provided by State-operated ferryboats; to the Committee on Ways and Means.

By Mr. PROKOP:

H.R. 5606. A bill to amend subchapter III of chapter 15 of title 38, United States Code, to provide pension for widows and children of World War I veterans at the same rates as apply in the case of widows and children of Spanish-American War veterans; to increase the income limitations applicable thereto; and to eliminate annuities in the compensation of such time; to the Committee on Veterans' Affairs.

By Mr. RHODES of Arizona:

H.R. 5607. A bill to provide for the preservation and development of the domestic fluorspar industry; to the committee on Interior and Insular Affairs.

By Mr. WALLHAUSER:

H.R. 5608. A bill to amend the Interstate Commerce Act, as amended, so as to strengthen and improve the national transportation system, insure the protection of the public interest, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. WAMPLER:

H.R. 5609. A bill granting the consent and approval of Congress to the Wabash Valley compact, and for related purposes; to the Committee on the Judiciary.

By Mr. HARRIS:

H.R. 5610. A bill to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act, so as to provide increases in benefits, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. ALGER:

H.R. 5611. A bill to provide for a survey of the production of fertilizer by the Tennessee Valley Authority, and for other purposes; to the Committee on Government Operations.

By Mr. ANFUSO:

H.R. 5612. A bill to create a Science and Technology Agency, and to transfer to it certain existing agencies and functions of the Federal Government; to the Committee on Science and Astronautics.

By Mr. BROWN of Missouri:

H.R. 5613. A bill to increase and extend the special milk program for children; to the Committee on Agriculture.

By Mr. COAD:

H.R. 5614. A bill to enable producers to provide a supply of turkeys adequate to meet the needs of consumers, to maintain orderly marketing conditions, and to promote and expand the consumption of turkeys and turkey products; to the Committee on Agriculture.

H.R. 5615. A bill to amend section 105(b) of the Agricultural Act of 1949, as amended, relating to price support for oats, rye, barley, and grain sorghums; to the Committee on Agriculture.

By Mr. COLLIER:

H.R. 5616. A bill to establish reciprocal import quotas upon the importation of confectionery and chocolate into the United States from foreign countries which impose quotas upon imports of confectionery and chocolate from the United States; to the Committee on Ways and Means.

By Mr. DINGELL:

H.R. 5617. A bill to repeal the cabaret tax; to the Committee on Ways and Means.

By Mr. DIXON:

H.R. 5618. A bill to recognize the authority of the States relating to the control, appropriation, use, or distribution of water within their boundaries, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. FARBSTEIN:

H.R. 5619. A bill to prohibit discrimination in employment because of race, religion,

color, national origin, or ancestry; to the Committee on Education and Labor.

By Mr. FULTON:

H.R. 5620. A bill to provide for the establishment of a Federal Advisory Council on the Arts to assist in the growth and development of the fine arts in the United States; to the Committeee on Education and Labor.

H.R. 5621. A bill to provide for the appointment of an assistant to the Secretary of State to assure joint policy and planning and equitable budgeting of exchange-of-persons programs and administrative cooperation between staffs engaged in carrying out such programs; to the Committee on Foreign Affairs.

By Mrs. GRANAHAN:

H.R. 5622. A bill to amend the act of June 10, 1955, as amended, so as to establish the hours of work for rural carriers, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. GUBSER:

H.R. 5623. A bill to amend title II of the Social Security Act to provide that disability determinations (for purposes of disability insurance benefits and the disability "freeze") shall hereafter be made by or under the direction of the Secretary of Health, Education, and Welfare rather than by State agencies; to the Committee on Ways and Means.

H.R. 5624. A bill to amend the Internal Revenue Code of 1954 to provide that the Secretary of the Treasury shall be bound by decisions of certain Federal courts; to the Committee on Ways and Means.

By Mr. JOHNSON of Colorado:

H.R. 5625. A bill to permit a woman who is the widow of two totally disabled veterans of World War I to receive benefits as the widow of either of such veterans; to the Committee on Veterans' Affairs.

By Mr. KING of Utah:

H.R. 5626. A bill to provide grants to the States to assist them in informing and educating children in their schools about the harmful effects of tobacco, alcohol, and other potentially deleterious consumables; to the Committee on Education and Labor.

By Mr. LESINSKI:

H.R. 5627. A bill to amend section 402 of the Federal Employees Uniform Allowance Act, approved September 1, 1954 (title IV, Public Law 763, 83d Cong.), as amended; to the Committee on Post Office and Civil Service.

H.R. 5628. A bill to amend section 402 of the Federal Employees Uniform Allowance Act, approved September 1, 1954 (title IV, Public Law 763, 83d Cong.), as amended; to the Committee on Post Office and Civil Service.

H.R. 5629. A bill relating to increases in compensation granted to wage board employees; to the Committee on Post Office and Civil Service.

H.R. 5630. A bill to amend section 9(a) of the Civil Service Retirement Act, relating to computation of annuities; to the Committee on Post Office and Civil Service.

By Mr. METCALF:

H.R. 5631. A bill providing for payments as incentives for the production of manganese; to the Committee on Interior and Insular Affairs.

By Mr. MONAGAN:

H.R. 5632. A bill to extend by 6 months the period for which additional benefits may be paid under the Temporary Unemployment Compensation Act of 1958; to the Committee on Ways and Means.

By Mr. MULTER:

H.R. 5633. A bill to amend the District of Columbia Income and Franchise Tax Act of 1947 with respect to the deduction of medical expenses; to the Committee on the District of Columbia.

By Mr. STAGGERS:

H.R. 5634. A bill to establish a program of economic relief for distressed areas through a system of loans and grants-in-aid; to the Committee on Banking and Currency.

H.R. 5635. A bill to authorize a 5-year program of grants and scholarships for collegiate education in the field of nursing, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. WAINWRIGHT:

H.R. 5636. A bill to amend the War Claims Act of 1948, as amended, and the Trading With the Enemy Act, as amended, and to provide for the payment of certain American war damage claims; to the Committee on Interstate and Foreign Commerce.

By Mr. WILSON:

H.R. 5637. A bill to amend section 217 of the Social Security Act to provide that certain military or naval service not now creditable toward benefits under title II of such act may be counted toward such benefits if such service is not used in determining entitlement to, or the amount of, military retired pay; to the Committee on Ways and Means.

H.R. 5638. A bill to provide that in determining the amount of retired pay, retirement pay, or retainer payable to any enlisted man, all service shall be counted which would have been counted for the same purposes if he were a commissioned officer; to the Committee on Armed Services.

H.R. 5639. A bill to amend section 410 of title 38, United States Code, to provide that all retired members of the uniformed services who served not less than 25 years on active duty, or who were retired for disability in excess of 50 percent, and who die after 1956 shall be considered to have died service-connected deaths; to the Committee on Veterans' Affairs.

By Mr. MILLS:

H.R. 5640. A bill to extend the time during which certain individuals may continue to receive temporary unemployment compensation; to the Committee on Ways and Means.

By Mr. SIMPSON of Pennsylvania:

H.R. 5641. A bill to extend the time during which certain individuals may continue to receive temporary unemployment compensation; to the Committee on Ways and Means.

By Mr. HULL:

H.J. Res. 304. Joint resolution to establish a commission for the celebration of the 100th anniversary of the birth of Gen. John J. Pershing; to the Committee on the Judiciary.

By Mr. McGOVERN:

H.J. Res. 305. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. TOLLEFSON:

H.J. Res. 306. Joint resolution designating the daffodil as the national flower of the United States; to the Committee on House Administration.

By Mrs. ROGERS of Massachusetts:

H.J. Res. 307. Joint resolution to establish a temporary commission to study the veterans' program of the United States in the Philippines; to the Committee on Veterans' Affairs.

By Mr. SIKES:

H. Con. Res. 103. Concurrent resolution to commemorate the quadricentennial anniversary of Florida and to recognize the quadricentennial anniversary commission of that State; to the Committee on the Judiciary.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By Mr. JOHNSON of Colorado: Joint memorial of the Senate and the House of Representatives of the State of Colorado memorializing the Congress of the United States to enact legislation to bring the State of Colorado under the provisions of section 218 (d)(6)(C) of the Federal Social Security Act; to the Committee on Ways and Means.

By Mrs. ROGERS of Massachusetts: Memorial of the Commonwealth of Massachusetts memorializing the Congress to establish a Federal domiciliary hospital in New England; to the Committee on Veterans' Affairs.

By the SPEAKER: Memorial of the Legislature of the State of Alaska, memorializing the President and the Congress of the United States relative to requesting immediate enactment of Senate bill No. 1, pertaining to Federal grants to needed aviation facilities; to the Committee on Interstate and Foreign Commerce.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADAIR:

H.R. 5642. A bill for the relief of Anastacio de Vaga; to the Committee on the Judiciary.

By Mr. ADDONIZIO:

H.R. 5643. A bill for the relief of Epamionnda Eddie Marsal; to the Committee on the Judiciary.

By Mr. BARR:

H.R. 5644. A bill for the relief of Mr. Albert Keil; to the Committee on the Judiciary.

By Mr. BOSCH:

H.R. 5645. A bill for the relief of Christopher J. Mulligan; to the Committee on the Judiciary.

By Mr. DEROUNIAN:

H.R. 5646. A bill for the relief of Jolanda Ferretti; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H.R. 5647. A bill for the relief of Wong Gee Sing; to the Committee on the Judiciary.

H.R. 5648. A bill for the relief of Chan Choy Kam; to the Committee on the Judiciary.

By Mr. OSMERS:

H.R. 5649. A bill for the relief of Marie Haiadjian; to the Committee on the Judiciary.

By Mr. POWELL:

H.R. 5650. A bill for the relief of Antonio Valenti; to the Committee on the Judiciary.

H.R. 5651. A bill for the relief of Antonio Testoni; to the Committee on the Judiciary.

By Mr. RIEHLMAN:

H.R. 5652. A bill for the relief of Marko Klapan; to the Committee on the Judiciary.

By Mr. SANTANGELO:

H.R. 5653. A bill to confer jurisdiction upon the U.S. Court of Claims to hear, determine, and render judgment upon the claim of Henry G. Mathusek; to the Committee on the Judiciary.

By Mr. SMITH of Mississippi:

H.R. 5654. A bill for the relief of Leo Shoenholz, Tobias Kaplan, the Kroger Co., and Cleveland State Bank, all of Cleveland, Miss.; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Repeal of the Hiss Act

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 12, 1959

Mr. MULTER. Mr. Speaker, today I presented my statement in support of H.R. 578 which I introduced to repeal the so-called Hiss Act before the House Post Office and Civil Service Committee.

My statement was as follows:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, OF NEW YORK, BEFORE THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE, THURSDAY, MARCH 12, 1959, IN SUPPORT OF H.R. 578

Mr. Chairman, allow me to express my appreciation for this opportunity to explain the purpose of my bill, H.R. 578 and to urge its careful consideration by this committee.

The purpose of the bill is quite simple to explain. It is to repeal in its entirety Public Law 769 of the 83d Congress—the so-called Alger Hiss Act. This act, as you know, prohibits the payment of annuities or retired pay to retired civilian officers and employees of the Federal Government and to retired military officers and enlisted men who are or who ever have been convicted of certain criminal offenses or who commit certain acts in the future.

It is my firm belief that not only is repeal the simplest way to handle what promises to develop into a very complicated problem, but that it will prove to be the most effective and the cheapest way of doing it. I say this because, first, the law is grossly unfair to the great majority of persons to whom it applies and should, therefore, be either abolished or amended so as not to apply to them. Second, as regards the other individuals to whom it applies, the law is subject to attack on a number of constitutional grounds, and if allowed to stand it will be the subject of endless litigation with the probable result that its provisions will gradually be chipped away by the courts.

First, I would like to discuss the broader policy aspects of the law.

This law was passed during what might be termed the witchcraft era on Capitol Hill. When I say this I do not mean to imply that I do not think that we have never had a national security problem in this country or that we might not have one in store for us. However, looking back to the year 1954, I think that our increased concern with this problem made us lose sight of its true dimensions. In such a setting, the Hiss Act passed the House of Representatives, unchallenged and undebated. And this despite the warnings of Civil Service Commission officials that the legislation's language was so general and vague that numerous inequities and hardships would result from it.

From the reports I have seen and heard, a good number of these hardship cases have already presented themselves. To date some 200 civil service retirees have been denied annuities approximately some $300 million in benefit rights. I do not claim familiarity with all of these cases.

I have heard of some, however, which demonstrate the extreme injustices which can result from the provisions of the act. For example, a study undertaken by the Federal Bar Association in 1956 disclosed that 51 out of the 64 cases that had arisen at that time involved offenses that had been committed prior to the law's enactment. Thirteen of these 51 cases—more than 25 percent—concerned employees who had been hired or rehired by the Government after they had been convicted and punished for the offense for which their annuities were later denied.

The Government, in other words, employed these persons with full knowledge of their past convictions. They were allowed to work for years, making contributions to the civil service retirement fund with the expectation of retirement benefits for themselves and their families when they reached the eligible age. Out of a clear sky, this law appeared on the statute books and their plans and dreams for a secure old age vanished into thin air. This, I submit, is not in keeping with the American concept of justice and fair play.

The Hiss Act, like charity, it might be said, covers a multitude of sins. About one-third of the crimes for which a person can lose his retirement rights are misdemeanors. Thus, a very valuable property can be lost for a minor offense. It has been reported that one employee lost an annuity valued at over $49,000 for a conviction in which the court saw fit not to impose any fine or imprisonment. Another case involved a person who in his youth stole a ham from the Army. This law, is seems to me, fails to comply with the basic principle of criminal law of trying to make the punishment fit the crime.

There are other proposals before this committee to amend Public Law 769 so as to eliminate many of the problems I have referred to. The administration, I understand, has finally realized the problems that have arisen because of this law, which it advocated in 1954. It now offers proposals to amend it to apply only to convictions for disloyalty reasons.

As I stated earlier, however, I believe that the problem would be best solved by repealing the statute entirely, as my bill, H.R. 578, would do.

I shall not undertake at this time to present a brief on the unconstitutionality of the law. That is a study which this committee is better equipped to undertake than I am. I am here only to point out that the subject deserves serious consideration.

Indeed one section of the act has already been declared unconstitutional by the U.S. Court of Claims. In the case of *Steinberg* v. *United States*, decided last July, the Court of Claims struck down the provision of the law denying retirement benefits to persons who refuse to testify on the ground of self-incrimination before a congressional committee, a Federal court, or a Federal grand jury. This provision, the Court declared, circumvents the fifth amendment guarantee against compulsory self-incrimination and indiscriminately links the innocent with the guilty.

To be sure, in the Steinberg case the Court was dealing with what is probably the most vulnerable section of Public Law 769, which does not even require a conviction but makes the simple exercise of a constitutional right grounds for withholding retirement benefits. It does point up, however, that the entire law was passed and adopted without careful scrutiny. Otherwise such an obviously invalid provision would not have been included in it. It also, I am afraid, portends the fate of other provisions of the act.

Those persons who were convicted of crimes before Public Law 769 was passed, but who will lose benefits if its provisions are carried out will attack it as ex post facto. The man whose name was made a part of its legislative history may well challenge it on the grounds that it is a classic bill of attainder.

Others may maintain that they are being deprived of vested property rights without due process of law. They will point to the concurring decision of Judge Whitaker in the Steinberg case and the recent decision of Judge Tamm, of the District Court of the District of Columbia, in the Nester case which involved social security benefits. If there ever was a piece of legislation which was destined for rough sledding in the courts, this is it.

The judiciary, of late, has often been charged with usurping some of our legislative functions. But what about the other side of the coin? Isn't it about time we admitted to ourselves that perhaps in passing Public Law 769 we were trying to exercise some judicial functions.

I think that Public Law 769 was a mistake—well intended, it may be true—but still a mistake. I sincerely hope this committee will take early action on my bill, H.R. 578, which would strike this provision from the statute books.

Whose Farm Program?

EXTENSION OF REMARKS
OF
HON. DONALD F. McGINLEY
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 12, 1959

Mr. McGINLEY. Mr. Speaker, I would like to bring to the attention of my colleagues a chronology of some statements made by the Secretary of Agriculture during the past 5 months. I will leave it to my colleagues to determine what the administration's position is on the farm program now in effect.

Washington Post, February 25, 1959—Joseph Alsop column:

Secretary Benson is ripe for the operating table because his farm program has finally got absolutely out of hand.

Letter to the editor of the Washington Post, March 11, 1959, by Secretary of Agriculture Ezra Taft Benson:

The farm program now in effect is not that of this Secretary of Agriculture. The Benson program has never been allowed to go into effect.

Omaha World Herald, October 9, 1958—interview with Secretary Benson at Nebraska City, Nebr., when the Secretary visited Nebraska on a campaign junket:

Mr. Benson said that his farm program has been in effect only since the fall of 1955 and that there had been a steady improvement in conditions since then.

Associated Press story of Secretary of Agriculture Benson's address to a luncheon of the National Affairs Forum sponsored by the Pittsburgh Chamber of Commerce which appeared in the Lincoln Journal October 8, 1958:

Secretary of Agriculture Benson says the American farmer "never had it so good."

H.R. 105 Endorsed by International Rescue and First Aid Association, Inc.

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 12, 1959

Mr. JENNINGS. Mr. Speaker, on the opening day of the 86th Congress I introduced H.R. 105 in the House. This bill is similar to a measure that I sponsored in the last Congress—H.R. 242—and would make volunteer fire departments and rescue squads eligible for donable surplus Federal property.

In the second session of the last Congress we approved a bill pertaining only to volunteer fire departments. However, this bill was not passed in the Senate prior to adjournment.

It is my sincere belief that both volunteer fire departments and rescue squads should be eligible for the surplus property that might be donated for their use. Each of these organizations performs a very vital public service

A few days ago the board of directors and executive committee of the International Rescue and First Aid Association—IRFAA—met in nearby Alexandria, Va. The members of this group went on record as endorsing and urging passage of my bill, H.R. 105.

During the IRFAA's convention last November, the membership reaffirmed the association's position as set forth in a resolution adopted at the 1956 convention. I include this 1956 resolution in these remarks for the benefit of my colleagues who have sponsored legislation similar to H.R. 105.

The resolution follows:

Whereas in recent years our great Nation has suffered enormously from the destructive forces of nature by virtue of hurricanes, floods, and tornadoes, which caused great tolls in loss of life and injury to thousands of our citizens as well as being most destructive to commercial establishments and residential structures; and

Whereas these catastrophies must be met by the immediate organization of disaster squads, equipped with articles from Federal surplus stockpiles, which would greatly enhance rescue, first aid and transportations so vital at said disaster areas; and

Whereas disaster squads should be organized, equipped and trained within the organizational planning of Armed Forces Reserve training centers, stations, and armories, Civil Defense, Civil Air Patrol, and organized civilian rescue-first aid squads; and

Whereas the release of said surplus Federal equipment would also enhance routine localized functions on a year-round basis and thereby greatly reduce death and injury tolls from the presently high rates; and

Whereas human misery could be relieved and alleviation of unwarranted delays could be achieved by trained and well-equipped squads which would provide the best in rescue, first aid, and transportation; and

Whereas within the past 2 years the eastern seaboard and the New England States have suffered high tolls in loss of life and billions in property losses, causing peril to our national security and public safety: Now, therefore, be it

Resolved, That this resolution be unanimously passed in concurrence and proper Federal authorities be notified.

This resolution outlines succinctly the need for this legislation; its statements are also applicable to the volunteer fire departments of the Nation.

Because of the important role IRFAA plays in community service in the Nation, I outline herewith the organization's purposes and objectives:

THIS IS THE IRFAA

The International Rescue and First Aid Association is an association of organized volunteer, paid, and industrial rescue squads, ambulance and first-aid crews, fire departments, and other comparable units equipped with all types of rescue and first aid apparatus and devices which can be carried in mobile units, either by vehicular, water, or air transport; county, State, and other associations; and individuals, both men and women, active or interested in the rescue and first aid movement.

The IRFAA membership thus is composed of individuals, organized units, and associations, and associate members in the United States, Canada, and other countries. This association was organized in 1948 at the first annual convention in Atlantic City, N.J. The IRFAA is incorporated under the code of the Commonwealth of Virginia as a voluntary nonprofit organization.

OBJECTIVES OF THE IRFAA

First. To promote the ideas of organized rescue and first aid work throughout the world;

Second. To promote and assist in the establishment and training of rescue and first aid organizations;

Third. To cooperate to the fullest possible extent with other organizations whose objectives are accident prevention, safety education, rescue and first aid work;

Fourth. To cooperate in, foster, and conduct research designed to advance the science and art of rescue and first aid work, and to encourage the desirable standardization of practice and equipment;

Fifth. To establish a system of mutual assistance both within the association and with other organizations to be used in the event of large-scale disaster;

Sixth. To develop and maintain a code of high ethical standards among rescue and first aid personnel;

Seventh. To promote the general good and welfare of the members of the association;

Eighth. To aid in bringing about and maintaining world harmony by developing a spirit of kinship among the people who are devoted to the cause of saving life and aiding the sick and injured;

Ninth. To bring together in a common association all organizations and individuals interested in the aforementioned objective.

ACTIVITIES

All activities of this association are designed and carried out to accomplish and forward the aforementioned activities. All elected and appointed officers are volunteers in their work in and for the association except the executive director who is employed to conduct the operations of the executive office and to serve as editor of the association's official magazine, the International Rescuer.

This association encourages plans of cooperative action and mutual assistance among its members; and on local, county, State, provincial, and other levels but it does not itself become operational in any emergency or disaster situation whether it be of a local, State, National, or international character. It does not order, dispatch, or request any member unit to go to the scene of any emergency or disaster of any type. Any unit, individual, or organization does not lose any autonomy or freedom of action through membership in this association.

Mr. Speaker, when surplus Federal property is available for donation purposes, it should be placed in the hands of those organizations performing a public service. The volunteer rescue squads and volunteer fire departments of America certainly meet this test.

The chairman of the Donable Property Subcommittee had advised me that when departmental reports are received on the pending bills that consideration will be given to hearings.

It is my hope that we can complete action on H.R. 105 in this session of Congress and make these organizations eligible to receive donable property.

Centennial Celebration of the Heffley & Browne Secretarial School

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 12, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to pay honor to Heffley & Browne Secretarial School of Brooklyn, N.Y., on the occasion of its centennial celebration. Brooklyn is proud and fortunate to have had the hundred-year influence on its youth of this school. It is vitally important that capable, modern and scientifically designed instruction in present day office procedures be given to our young men and women. Heffley & Browne have kept abreast of the times. The student body, alumni, and faculty are to be congratulated.

This is the year which marks the centennial of the Heffley & Browne Secretarial School, founded in 1859, and the oldest school of its kind in the East. It has graduated over 100,000 students, many of whom now serve in positions of responsibility and distinction in the Nation.

We in Brooklyn are glad to call attention to Heffley & Browne's record of achievement as a pioneer in commercial education, in training personnel to fill important positions in the business world, and as Brooklyn's only accredited, registered secretarial school.

The success of the school is due in large measure to the demonstrated ability of the many young men and

women who have emerged from our classrooms into the business world. We take pride in their accomplishments and feel deeply appreciative of the renown and distinction which these graduates, now in government, industry and the professions constantly, through their ability and outstanding service, are bringing to this institution.

Congratulations to St. Catherine's High School Basketball Team of Racine, Wis., Champions of Wisconsin State Catholic Conference

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 12, 1959

Mr. FLYNN. Mr. Speaker, it is with a deep sense of satisfaction that I rise to inform this august body of the fact that my high school alma mater, St. Catherine's, of Racine, Wis., has again in 1959 as in 1958 won the State basketball championship in the Catholic Conference of Wisconsin. This team, under the skilled leadership of Coach John McGuire and the tutelage of a most personable athletic director, to wit: the Reverend Cletus V. Uhen, has amassed the outstanding record of 26 wins and 3 losses for the 1958 to 1959 season and 51 won and 5 lost in the last 2 years. I might state that St. Catherine's High School in Racine, Wis., is one of the finest secondary scholastic institutions in the State, that a large building project recently completed has tripled its student capacity but that, with these enlarged facilities, the recognition of its valuable effect on the community and the good work of its Dominican Sisters who comprise its teaching staff and the hard work of its president, Rev. S. B. Whitkowiak, is such that its expanded facilities are already overcrowded to a point where the school is teaching on a two-platoon basis. The school is outstanding for its part in the development of a Christian attitude and a good moral character among the students in addition to its scholastic training.

High on the agenda of the school activities, however, is its athletic program. It has repeatedly won the State championship in both football and basketball. It is also active in track and other sports.

The basketball team has been invited by Georgetown University to participate in the first national Catholic basketball conference to be held here in Washington, D.C., on Friday, Saturday, and Sunday of this week, to wit: March 13, 14, and 15, 1959. The members of the St. Catherine team are: Jim May, Jim Poulsen, Joe Gammell, Jim Olley, Tom Schilke, Chuck Wood, Bob Letsch, Don Tempesta, Rocke Calvelli, and Todd Pettit.

I predict that this fine group of midwesterners will leave Washington on Sunday next with the national Catholic basketball crown tucked securely in their suitcase and I issue to all of you who enjoy watching basketball, played by artists in their field, to join me at Georgetown University Gymnasium in watching the Catholic invitational basketball tournament during this coming weekend.

TVA Generator Award

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 12, 1959

Mr. PHILBIN. Mr. Speaker, when the award was announced, I strongly protested to the President and Mr. Herbert D. Vogel, head of TVA, to withdraw the recent order for a 500,000-kilowatt turbogenerator for the Tennessee Valley Authority awarded to a British concern. The contract price was some $13 million.

There are concerns in my district and State which employ our fellow citizens and taxpayers with highest capability of performing this large Government contract.

It is neither just nor wise to displace American labor and penalize American business by giving out contracts to foreign competitors which result in depriving American industries of business and taking bread out of the mouths of American working people.

Most of us are willing to help our allies of the free world as much as we reasonably can. In the past 18 years, we have spent well over $100 billion for this purpose overseas.

In addition, we have allowed a flood of competitive goods to come into the United States to undermine standards of employment and industrial vitality.

This law is threatening to infect our whole economic structure. Industry after industry is being hit.

The practice of purchasing overseas government procurement items that can be purchased in this country, cannot be justified. Whether it technically complies with the Buy American Act or not, it is to say the least, ill-advised, unsound economic policy.

In any event I believe that this turbine-generator bid should be rejected and the order canceled and readvertised so that American industry can qualify to get the work.

The Buy American Act formerly was interpreted to prohibit purchases overseas when the price range was within 25 percent. In my opinion, 25 percent is not enough in most cases to reflect the wide wage differentials between foreign and domestic labor let alone other cost factors.

Moreover, the Government has by administrative ruling, reduced the former 25 percent differential requirements to about 6 percent, and that literally opens the floodgates that could well permit foreign bidders to have a picnic at the expense of American producers and workers in the American market.

I also question heavy overseas purchases by the Armed Forces.

The offshore procurement policy, so-called, is another example in the assortment of huge financial subsidies we are heaping upon foreign nations at the expense of our own economic machine.

There are instances where it is feasible to purchase certain goods in foreign aid and military aid programs, but there are also instances where it is an extremely unsound, costly practice. The most recent instance of this practice was the purchase by the U.S. Navy of 7,000 tons of steel from Japan.

Mr. Speaker, I am preparing legislation to amend the Buy American Act, calling for the study and adoption of sound methods to bar large overseas purchases harmful to American industry where monopolistic or excessive costs are not in question.

Obviously Congress must protect the Government as well as the consumer against monopolistic or unfair trade practices.

The shortsightedness of the purchase is shown by the fact that servicing and repairing of this TVA foreign-made equipment estimated over a period of years will unquestionably raise the original purchase price very considerably above the bid price. If this additional cost were taken into account, it would prohibit the purchase under any fair interpretation of the Buy American Act, because it would bring the price within a prohibitory range.

The situation is the more indefensible because of the status of TVA, a taxpayer-supported public utility, grossly competitive with private enterprise utilities, having the temerity as a recipient of huge Government largesse, to award a contract to a foreign company and leave American workers in the lurch.

There is also a very serious security aspect to the award. What will the situation of TVA be in the event of war or emergency should this electricity-producing equipment break down and require parts replaced or technical aid from overseas?

I am astonished that any responsible Government agency would be willing to put its seal of approval on a deal so unfair to American industry and its employees.

H.R. 5633—To Amend the District of Columbia Code With Reference to Income Taxes

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 12, 1959

Mr. MULTER. Mr. Speaker, I have today introduced H.R. 5633 to amend the District of Columbia Code with reference to income taxes.

I am hopeful that by the enactment of this bill we will give to residents of the

District of Columbia the same privileges as granted to all citizens in connection with the filing of their income tax returns with the United States. It is intended to equalize those exemptions and benefits.

At the same time it should put residents of the District of Columbia at least on an equal basis with residents in Maryland and Virginia in that connection.

The benefits will inure principally to our aged citizens 65 years of age and older and those who are called upon to pay large medical, dental, and hospital expenses.

Secretary Benson Dissents

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 12, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include an interesting letter written by the Secretary of Agriculture, Ezra Taft Benson, in reply to one of Joseph Alsop's columns. The letter which was printed in the March 11, 1959, issue of the Washington Post and Times Herald newspaper follows:

SECRETARY BENSON DISSENTS

My attention has been called to the February 25 column, "Operating on Ezra," by Joseph Alsop.

Mr. Alsop's article is based on the premise that the farm program operating today is my program. The farm program now in effect is not that of this Secretary of Agriculture. The Benson program has never been allowed to go into effect.

Today's program is a holdover from a Democrat administration, modified grudgingly to the limited degree to which Congress has been willing to grant our requests for changes. If it were my program we would not be asking Congress to make the far-reaching changes contained in the President's recent farm message to the Congress.

It is true that the Government will have $9 billion invested in price-support commodities (as of July 1, 1959) and that it will cost over $1 billion a year for storage, interest, and transportation on these stocks. However, these stocks consist mainly of wheat, corn, and cotton accumulated under programs we inherited and have tried to change with but little success.

The President has pointed out these facts. The Secretary of Agriculture has called attention to these facts. These facts are a visible demonstration of the bankruptcy of the old program. We have recommended changes to the Congress.

Mr. Alsop says a proposed production payment plan will cost "half the cost of subsidies requested by Benson." Our figures based on studies by career economists show the Talmadge-Brannan payment program will cost annually about $5.4 billion, for payments for the basic commodities alone. In addition we would still have the present tremendous stocks and attendant costs, the special surplus disposal programs and the soil bank, etc.

Mr. Alsop cites a $2 billion figure for the Brannan proposals. This is the first time that I've seen this figure. It is fallacious.

Congress refused to adopt this program when submitted by my predecessor, Secretary Brannan. It would have these undesirable effects:

1. Require drastic controls of production to keep costs within reason.
2. Will limit opportunity of new farmers to enter into the production of these crops.
3. Unless extended to livestock (which would boost the cost to even higher levels) could create extremely serious problems for livestock producers.
4. Will lead to international repercussions because U.S. surpluses would be dumped on world markets.
5. Would make farmers even more dependent than now on Government appropriations for farm income (quite obviously this payment approach would be a step away from our efforts to balance the budget).

We want a farm program which will give farmers a satisfactory level and stability of income consistent with a balanced and expanding consumption of agricultural commodities here and abroad and the most rational use of resources. Our alternative suggestions to achieve this goal already have been submitted to Congress. The type of farm program we will have in the future will depend upon the action Congress takes.

Unless Congress makes changes in the present unworkable and unrealistic farm program, we are bound to have costs in the future of the size Mr. Alsop cites regardless of who is Secretary of Agriculture.

EZRA TAFT BENSON,
Secretary of Agriculture.

WASHINGTON.

Distribution of Obscene Literature Through the Mails

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 12, 1959

Mrs. GRANAHAN. Mr. Speaker, it is indeed a sad commentary on our sense of values when we cannot distinguish between objects of art which are a matter of national pride and the use of such objects as lures to the theater box office.

There is a great deal of difference between the student of anatomy at a great university who is engaged in its study for the sake of humanity and the student of anatomy in the front row of a burlesque theater. It is high time that something is done to zero-in our thinking on this important moral issue.

The American public—American fathers and mothers—have a right to resent the use of themselves and their families as a captive audience to be bombarded through the avenues of the U.S. postal service by material to which they object plainly calculated to undo years of training they have devoted to their children.

Mr. Speaker, as the House has directed our committee to look into the use of the mails to send obscene literature, I wish to announce that the Postal Operations Subcommittee, of which I am chairman, intends to take immediate action to thoroughly explore the situation as it now exists. We are watching with interest the present efforts of the Postmaster General to protect the rights of patrons of the postal service. We hope that his arm is strong enough to properly enforce what we believe to be the wishes of the public. If not, we intend to develop and recommend legislation which will give him the necessary tools.

It is unfortunate that the American theater should line itself up in this situation with those who seek to corrupt the morals of our country by sending obscene material through the U.S. mails. Obviously, the attempt to send through the mails the advertisement of the now notorious stamp portraying a nude painting was not intended to raise the dignity of the stamp or the painting. It was intended solely for the profit of the owners of the film.

The Mikoyan Salesmanship

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, March 12, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD two articles dealing with Deputy Premier Mikoyan's visit to the United States.

The first article by Harrison E. Salisbury was published in the New York Times of January 11, 1959, and is entitled "Mikoyan's Success."

The second article is one which I prepared for the North American Newspaper Alliance.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Jan. 11, 1959]

MIKOYAN'S SUCCESS—SOVIET VISITOR MAKES DEEPENING IMPACT DESPITE WASHINGTON'S HANDS-OFF ATTITUDE

(By Harrison E. Salisbury)

SAN FRANCISCO, January 10.—Anastas I. Mikoyan brought his Soviet good will mission to the Pacific coast today. There were signs in each city that the First Deputy Premier has visited of a deepening impact resulting from his blunt words, crackling wit, and unfailing good humor. For a man who has spent most of the last 35 years high in the ranks of the Kremlin leadership, Mr. Mikoyan has displayed outstanding gifts of public relations. He has campaigned in Cleveland, Detroit, Chicago, and now San Francisco with the skill of a veteran of the American political hustings.

In fact, his whirlwind trip has acquired much of the flavor—but few of the amenities—of a national presidential campaign tour. However, Mr. Mikoyan is not running for American political office—not yet, at least.

He is running for peace at every point, in every city, before every kind of audience—before workingmen in the River Rouge powerplant of the Detroit Edison Co., before the bankers of Cleveland, the furniture salesmen of the Chicago Merchandise Mart, the lawyers of the Middle West. To every American he can reach with his message, Mr. Mikoyan is saying: Let's argue, let's dispute, let's compete, but let's not fight.

SEES NO GOLDEN AGE

He is not holding out hope of a golden age in which the capitalist lion and the Communist wolf shall lie down together. But he is saying with every modulation of his quick-witted Armenian temperament that this is one world and that Russians and Americans must live in it together, at least as peacefully as, for instance, General Motors and Ford inhabit the environs of Detroit.

Mr. Mikoyan's speech has not been completely uninhibited. But he has been saying the kind of things that Americans are not used to hearing from Kremlin spokesmen. He is talking in pithy terms of men whose names so long have been headline words in the United States—Lavrenti P. Beria, former police chief; Vyacheslav M. Molotov, former Foreign Minister; Nikolai A. Bulganin, former Premier.

He is talking about these men not in the cliches of Pravda but in salty language of his own. And the American audiences, made up of influential business, industrial, and banking leaders, are reacting positively. Their warmth surprises Mr. Mikoyan and sometimes, it seems, even his listeners as well.

U.S. HANDS-OFF ATTITUDE

No Soviet statesman has ever attempted anything like Mr. Mikoyan's campaign before. In fact, few foreign leaders of any country have taken to the road in the United States in the manner in which he has done. Few would care to tackle the odds against which Mr. Mikoyan has been working thus far with startling success.

The way in which Mr. Mikoyan's campaign has developed has brought into critical focus State Department policy with respect to the Soviet visit. The State Department has maintained an official hands-off attitude, taking the line that Mr. Mikoyan is here on a private visit that must not be dignified by official arrangements.

It has accepted minimum security responsibility for Mr. Mikoyan's movements, but nothing more. It has done nothing to facilitate his visits to United States cities. It has provided no official host of liaison for his party. It has refused to offer advice to local officials as to how Mr. Mikoyan should be treated, whom he should see or what he should be shown.

Under the circumstances, the White House statement expressing hope that Mr. Mikoyan would be afforded every opportunity to see American life at its best has a somewhat dubious ring to correspondents who have observed the Mikoyan visit.

The fact is that Mr. Mikoyan is seeing a good deal of the United States and is making a decided impact on many leading Americans. But he is doing this in spite of the State Department.

The impression given to Mr. Mikoyan is that there is a deep split between official Washington, on the one hand, with its narrow definition of protocol and deep-freeze approach, and the attitude of powerful business interests of the country. In contrast to the Government, big business has acted with traditional warmth.

It would appear that the State Department once again was caught off balance by Soviet initiative. It seems probable that Washington, despite repeated advice from Llewellyn E. Thompson, Jr., Ambassador to Moscow, underestimated the force and vigor of Mr. Mikoyan's personality and the energy that he would dedicate to the cause of convincing Americans that it is time to end cold war.

The seeming discourtesy of the State Department, the constant harassment by Hungarian pickets and the erratic arrangements of the local police, who in Chicago spent more time fighting newsmen than holding back demonstrators, have produced a barrage of negative publicity for the United States in Europe.

Mr. Mikoyan's trip is being covered in minute detail by a corps of foreign correspondents. Many of their dispatches have been couched in acid terms as far as official America is concerned. And Mr. Mikoyan is getting the highest marks for ability to maintain equilibrium under trying circumstances.

Mr. Mikoyan's talks have not been a mere collection of platitudes about good relations. He has been advancing a consistent line for United States-Soviet relations. This is simply: Let us stop arguing about the past and concentrate on negotiating our way out of present difficulties.

Mr. Mikoyan insists that the Soviet position on Berlin will not be changed. But at the same time he has given repeated and clear hints that, like all Soviet positions, this is in fact negotiable.

With regard to United States-Soviet relations in the United Nations, he has said:

Let us stop making the United Nations a propaganda forum. There is no useful purpose served in rolling up majority votes against the Soviet Union. This settles nothing.

Instead let us negotiate. Let us seek to reach agreements. If we cannot get an agreement, let the question lie over for 6 months or a year while the diplomats work at it. Perhaps after a year they will come up with a solution. Meanwhile, do not bring the issue up for a vote, which may go against the Soviet Union but certainly will not solve the issue.

MIKOYAN'S VISIT SPELLS FURTHER SOVIET SALESMANSHIP ON TRADE AND BERLIN, SENATOR HUMPHREY STATES

Anastas Mikoyan's tour of the United States added up to—

1. A new chapter of Soviet supersalesmanship to win the American "market" of public opinion.

2. A signal of additional Soviet overtures to come so as to break the diplomatic impasse over Berlin.

In appraising the coast-to-coast Mikoyan tour, too many people jump to one or the other conflicting conclusions to the effect that the overall result was a success or a failure, that it changed nothing, or changed a great deal.

Actually, Soviet diplomacy is relentless and is based on the most intricate long-range planning. It rarely consists of "one-shot" trys. Successful or not, each step fits into an unending pattern of probe and thrust. That means, constantly feeling for weak spots and then exploiting every point which may yield to pressure.

Throughout his travel, the shrewd First Deputy Premier evaded, in effect, all the embarrassing $64,000 questions, such as the martyrdom of enslaved Hungary and what if anything he would concede as being wrong today in Russia. Instead, he seized the offensive and boldly sought to appeal over the heads of U.S. officials. His aim was a psychological breakthrough, especially on the trade, Berlin, and other key fronts.

How successful his effort was, only the future can really confirm or deny. But these facts seem evident:

(a) Mikoyan's deft public relations, his "soft sell" salesmanship did pay off in favorable reaction in some quarters. The fact which is obvious, now even to the Soviets, is that their traditional "hard sell"—bluster and threats—wins few, if any, friends or converts here. But some Americans do react to Soviet "soft sell."

(b) The Soviets may now be expected to offer a new alternative formula looking toward disengagement in central Europe. Mikoyan's comments at the luncheon of the Senate Committee on Foreign Relations indicated that the road to any agreement on troop rollback from the Elbe is still a hard one, but that it is nonetheless a possibility which the Soviets are seriously offering.

(c) Mikoyan did bring home at least part of the bacon for the 21st Congress of the Communist Party of the Soviet Union, which opens next Tuesday. Khrushchev, in dispatching Mikoyan here was, I believe, determined to be able to report thereby to the assembled comrades that Khrushchev and company are making some progress toward settlement of the serious Berlin crisis. I am convinced Mr. Khrushchev is extremely concerned as the May 27 "ultimatum—which was not an ultimatum" approaches for Allied forces to get out of Berlin. The Soviet Premier knows that the Allies remain united in rejecting the ultimatum, and he has somehow to get off the hook of his own making.

(d) Mikoyan did, I believe, considerably jolt American opinion in high circles. He forced the State Department to think through whether our old, tired formula of weak counterpunching to the flurry of Soviet cold war proposals will suffice. The vigorous, imaginative Soviet diplomacy such as Mikoyan represented can hardly be contested effectively except through far greater vim, imaginativeness, and initiative on our own part. But these are qualities which have often been conspicuous by their absence in recent U.S. diplomacy.

(e) Mikoyan has impelled American opinion and the American Government to answer the question of, "What, indeed, is our policy toward expansion of U.S.-U.S.S.R. trade?" To date, our attitude toward such enlarged trade has been neither "fish nor fowl."

We had better make up our minds whether (a) we, in effect, regard all such trade as needlessly strengthening world communism, or (b) whether we feel there should be such expanded trade aside, of course, from materials usable in military weapons.

We cannot underestimate how zealous the Soviets are to trade in heavy items, especially those like petrochemical equipment and pipelines, which are crucial to the success of their ambitious 1958–65 7-year plan.

This was an impression which I gained in my December 1 talks in Moscow with Khrushchev, Mikoyan, and with Trade Expert Kuzmin, whom Khrushchev had specifically suggested I see. Khrushchev went all out for trade. "We desire mutually beneficial trade, not gifts," he told me. "We trade with 70 countries. Our firm is a good one."

The Premier, however, did not hesitate to add that if we refused to sell various needed items Russia would produce them, anyway. "By refusing to sell items to us you do not prevent us from producing them; you simply cause a delay which we overcome because we are forced to rely on our own resources," he told me.

In any event, a priceless opportunity was, in my judgment, lost when Mikoyan visited the U.S. Commerce Department. There, we could have offered him before the eyes of the world a long list of consumer items which the Soviet people do desperately want (in contrast to the heavy industry goods) which alone interest the Kremlin.

It was Berlin, however, which was on Mikoyan's mind most of all.

Russia had confidently expected that her 6-month ultimatum would precipitate fissures and pressures inside Allied ranks, but Big Four unity has held firm. Instead, there is evidence to believe that the threat of a May 27 deadline has, like previous Soviet saber rattling, actually caused alarm within the Soviet hierarchy itself. Among all governing people, the crafty leaders of the presidium are, perhaps, least of all willing to permit Khrushchev and company to risk an all-out war over Berlin or on any other local issue, however important.

Inevitably, the Soviet Premier has been getting more and more impatient for a Berlin settlement. "What are your counter-

proposals on Berlin?" Khrushchev had asked me, just as Mikoyan kept probing for some new formula and U.S. concession.

All in all, the Soviets feel that if the Mikoyan visit did set the stage for a U.S.-U.S.S.R. agreement on Berlin, it might establish a basis for further globe-changing decisions. These might bilaterally alter the map of spheres of influence. The implication here is: Let's you (the U.S.) and us (the U.S.S.R.) talk; just ourselves; no one else. This is a theme which I had heard repeatedly, in effect, from the Soviet Premier. But we are not buying it. The United States has no intention of violating genuine partnership with its allies by unilateral decisions without their consent.

For resolving world policy problems, Premier Khrushchev apparently divides people and nations into two categories: those with supreme power, or access to it, and those who lack such supreme power or access. He is interested basically in deals only with the powerful. He has no time for anyone else. "We're competing only against you, the United States," he told me. This was in the context of his pointing out a contrast between the Soviet Union and Red China. Here, he was referring to the latter's assertion that in 15 years, Peiping would surpass the steel production of the United Kingdom. To surpass Britain might be considered a feat for the Chinese Reds, but to the Soviets, there is only one big league team worth competing against, and that is the United States.

The "world series," so to speak, is the contest for the entire globe. It is a contest which the Kremlin would like to win peacefully through what I described to Khrushchev as its Operation Nibble. Khrushchev chuckled at the characterization, but did not refute it.

Peace was his refrain, just as it was Mikoyan's.

MIR—peace—is constantly on Khrushchev's and Mikoyan's lips, just as it was on the lips of Russians in all walks of life whom I encountered during my week in Russia.

Khrushchev knows what world war III would mean, for during our discussion, he indicated in turning to a large polar map, a virtual East-West inventory of possible U.S. and Soviet thermonuclear targets.

But talk of the possibility of war is never too far from the lips of the Soviet hierarchy. It is determined to impress us with the fact that it is not panic stricken by the thought of conflict. Khrushchev, for example, told me, bluntly it will be war "if you attack the forces of the German Democratic Republic. We will not permit the liquidation of a Socialist state."

I do not doubt that Khrushchev feels that his whole house of cards in Eastern Europe might indeed collapse if the very survival of the misnamed East German "State" were endangered. And that is one reason why he is determined to get the "Berlin bone" out of his "throat." For Free Berlin, apparently, does represent a critical threat to the puppet regime of Walter Ulbricht. The astonishing 10-year total of 3,500,000 refugees who had previously fled from East Germany through the Free Berlin escape hatch is supplemented each month by an additional 20,000 refugees. How long, many observers have wondered, can a state like East Germany continue to hemorrhage in this fashion, losing its lifeblood—its people, particularly its top specialists like doctors and engineers?

Naturally, Khrushchev in his talk with me did not acknowledge that this embarrassing dilemma is the crucial reason for the Soviet's wanting so-called internationalization of West Berlin. Instead, Khrushchev pointed his fire at Allied occupation troops there, pretending that their presence constitutes a danger of aggression.

This camouflage of real reasons is characteristic of Soviet doubletalk and feint. Disguise, together with attempted outwitting—these are Soviet stock in trade.

It was not without significance that Khruschev recalled another memory from experiences at the key city of Kharkov during World War II. He mentioned how, anticipating the German onslaught toward that vital objective, the Red army had laboriously built up extensive lines of defense. But a tour de force in Nazi strategy completely outflanked the defenses.

Khrushchev has not forgotten that and a lot of other tricky lessons.

"We will outflank your NATO—it is obsolete," he told me. "We will surpass you economically." And I believe that he is determined to do exactly that, particularly in the area of the world which has far too little concerned us—the emerging areas of Asia, Africa, and the Middle East.

Yet NATO is not obsolete if it can be transformed from a straight military alliance to a fountainhead of free world economic, political and social strength. Therein is a key to U.S. success in competitive coexistence.

Administration's Failure To Promote Industrial Uses of Farm Products

EXTENSION OF REMARKS

OF

HON. DONALD F. McGINLEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 12, 1959

Mr. McGINLEY. Mr. Speaker, city dwellers often ask midwesterners why we disagree so firmly with the administration's policies on the farm program. And sometimes we wonder if, indeed, we are unfair.

But then other facts come to light which confirms our basic position that the administration should be working to improve the plight of agriculture which is one of the basic industries of the Nation.

A story told to me privately by J. Leroy Welsh and later told to a House Agriculture Subcommittee recently which was studying industrial uses of agriculture products further reaffirms our suspicion of the administration.

Welsh, of Omaha, is well known for his efforts as Chairman of President Eisenhower's Bipartisan Commission To Study Utilization of Farm Products for Industrial Purposes.

He said that he and other members of the Commission visited the Federal research laboratory in Peoria, Ill., that has been working for years in this field of agricultural products.

VISIT LABORATORY

While there, Welsh and others were told that 100 million bushels of corn could be utilized annually in the manufacture of paper if one problem could be solved.

By adding 5 percent starch to woodpulp in paper manufacturing, a better quality paper could be produced. It would be economically feasible since the cost of the starch would be competitive in price to that proportion of woodpulp it replaced.

This use of starch has been tried, but it developed that something in the starch caused it to become brittle and caused brown spots to appear on the paper after a time.

This was the problem.

Welsh asked the Peoria people if that could be solved. After some discussion, the Peoria people agreed that by intensifying their effort on the project it could certainly be done within 2 years—maybe 2 months. Two million dollars would be the most it would require to do the job.

ACTION PLANNED

Welsh went to the Secretary of Agriculture and other members of his staff and related the story. It was agreed that it was a wonderful plan. The $2 million could come from the money Congress made available to the Secretary for just such projects.

A man was named in that meeting as the person who would have the responsibility of working out the starch research project.

Welsh in visiting with the Secretary 7½ months later found that nothing had been done.

When Welsh testified this past week to the Agriculture Subcommittee, he reported that it was now a year and a half from that meeting in which the project was set to go. As far as he knows nothing has yet been done.

The Secretary of Agriculture has a fund now of $300 million which comes from import duties earmarked by the Congress for use in financing a program for industrial use of agriculture projects. The Congress has authorized an additional $500 million for the same purpose.

And yet the Secretary insists that the new agency that is being considered in legislation pending before the Congress should be under the Department of Agriculture.

WHAT MOTIVE?

It is difficult to determine the administration's motives. It also raises the question if the administration provides the incentive needed to carry out this program which would be a boon to agriculture and reduce the ever-increasing burden on the taxpayer.

It has all the authority and all the money needed to have initiated a program within the framework of the Department of Agriculture.

However, I submit that the Department officials indicate that they do not realize that our present need is to push wholeheartedly for programs in utilization research, instead of continued attention to means of increasing production.

Hon. John V. Lindsay on the Passport Question

EXTENSION OF REMARKS

OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 12, 1959

Mr. WAINWRIGHT. Mr. Speaker, the Republican Party from time to time produces a young, adventurous crusader

who can be likened to the bright star of the future. The new Representative from New York's 17th District, JOHN V. LINDSAY, falls squarely into this category. Typical of his courageous, forthright and intelligent appraisal is a recent address he delivered in New York on the passport question. While not in complete sympathy with Mr. LINDSAY I feel that his approach deserves public hearing and should be set forth in the RECORD.

The address follows:

One of the most important subjects of legislative concern to the 85th Congress, and I suspect it will be to the 86th, is passport legislation. It is important because it involves the question of a citizen's right to travel—not only the question of whether there is such a right, but its metes and bounds. These questions have been cast into special prominence by the Kent, Briehl, and Dayton cases, decided by the Supreme Court of the United States in June of 1958. The Court did not decide these cases on constitutional grounds. It held only that Congress had not given the Secretary of State authority to withhold passports from citizens because of their beliefs or associations. This put it up to Congress. What kind of legislation do we want, if any? What kind of balance should we strike between competing interests?

When the Supreme Court said that the Congress had not given the Secretary of State authority to do what he was trying to do in these cases, it said a mouthful. The word "authority" is a big word. And when one is talking about the sovereign and its powers, the word "authority" means different things under different circumstances. What does it mean here?

We start with a pretty broad hint from the Supreme Court. The Court said this: "We deal here with a constitutional right of the citizen, a right which we assume the Congress will be faithful to respect." And this: "The right to travel is part of the liberty of which a citizen cannot be deprived without the due process of law of the fifth amendment." Now this may give us the dimensions of the ball park but it doesn't tell us much about the ground rules of the game.

In July 1958, the President and Secretary of State sent to the Congress proposed passport legislation with accompanying messages. The legislation was introduced and received considerable bipartisan backing, but not enough to get it through. It has been reintroduced in the 86th Congress, although to date there has been no comment from either the White House or the State Department. The proposal spells out the authority that the Secretary of State would have in respect of the issuance of passports. The chief difficulty I have with it lies in two short provisions.

One gives the Secretary authority to withhold passports from citizens where it is "determined upon substantial grounds that their activities or presence abroad or their possession of a passport would * * * (ii) seriously impair the conduct of the foreign relations of the United States, or (iii) be inimical to the security of the United States." The other would permit the Passport Hearing Board of the Department of State, in determining an application for a passport, to consider nonrecord (undisclosed) information. The Board would be required to furnish a résumé of the confidential information to the applicant and certify that it is a fair résumé. The findings, conclusions and recommendations of the Board would be transmitted to the Secretary of State, who would make a final determination. The Secretary, if he should deem it in the interest of the national security or the conduct of foreign affairs, also would be empowered to consider nonrecord information, whether or not contained in the résumé. Presumably, under the general rules and regulations of the Department of State, the Secretary is not obliged personally to consider the case but may delegate the authority, including that of resorting to confidential information, to a subordinate officer. There is provision for appeal to the U.S. District Court for the District of Columbia, but the court is not given access to undisclosed information and must accept the résumé provided by the Board. There is no definition of the circumstances under which confidential information may be used, such as on certification by a senior officer of the State Department that its disclosure would expose so-called double or buried agent of tested and known reliability, that the case cannot be decided without the use of such information, and that the decision as to the need for both its use and its secrecy has been made by a top officer of the Department of State. And, as I have stated, the court would not have access to the information. The power thus reserved to the Department is sweeping and final; its exercise is not subject to scrutiny by applicant or judicial tribunal. On what ground, then, does the Department of State predicate its request for such authority?

In an important address last November before the Veterans of Foreign Wars, a State Department spokesman made a strong plea for this proposed legislation. He cited examples where the Department of State had been required, as a result of the Supreme Court decisions, to issue passports to known members of the Communist Party. One of two were admitted members with long histories of attendance at various international Communist meetings and functions. Undoubtedly true, and certainly distressing to us all. But let's take a look at the proposed cure. The spokesman stated that personal communication by travel is the most effective way for any person or group to do business, whether it be the United States Government, United States Steel Co., two individuals trying to make a contract for the sale of paper clips, or members of the international Communist Party. What is needed, therefore, it was argued, is authority in the State Department first, to refuse to issue passports on the broad ground that their issuance would impair the conduct of foreign relations or be inimical to national security, and, second, to act as sole judge, in many cases, of what impairs or what is inimical, because neither the applicant nor a court would be allowed to know what the evidence is. The rationale for this approach is stated as follows: "By so doing we can very seriously hinder the effective operation of the Communist Party both here and abroad by making it difficult for the supporters of that party to depart from the United States." In other words, put a crimp into communication.

Like every American who bears allegiance to this country, I loathe and detest communism. It is not only dangerous, but as a philosophy it is repugnant to a freeman's sense of ordinary decency and fairness. Its trained agents and obedient servants in this country are detestable, mainly because they lie to you and to me in their daily lives. They use us and our institutions while their total allegiance is to a foreign power. They are mere pawns, and their objective is to use us in the same fashion. Undoubtedly, this raises a question of security. Here, then, is a competing interest which may call for some careful, limited restrictions on personal freedoms in certain cases in the interest of safeguarding the whole. But, to quote Justice Frankfurter, "let's not throw out the baby with the bath." The way to fight the disease is not to kill the patient with the cure, but to strengthen the body with the same nourishment that made it strong in the first place—by holding high the torch of liberty and rekindling its fires. Important as the need for vigilance is, let us not be so overcome by fear and mistrust that we lose precious ground gained in the ancient struggle for freedom. It is our duty to etch out legislative standards which, while giving due regard to the dangers of the international Communist conspiracy, preserve and safeguard to each individual his most precious liberties.

What is the right to travel? In my book it is one of the most fundamental liberties that we have. The Supreme Court tells us that it is "part of the 'liberty' protected by the due process clause of the fifth amendment." The Solicitor General of the United States conceded as much in his argument before the Court in Kent and Dayton. But I would suggest also that it is conjoint with, and a part of, the first amendment—freedom of speech and assembly. Of all the freedoms that we have, the one I should most hate to lose is freedom of speech. Speech is communication, and communication this modern day is impossible without locomotion. Speech is meaningless unless thought of in the context of the physical and social aspects of human existence. The social aspect suggests that speech is not effectively exercised when a man talks to himself; speech implies communication. The physical aspect renders communication impossible under some circumstances—or possible only through certain means. The social aspect may in turn attach connotations to the physically possible means, rendering all but one appropriate. The Supreme Court has repeatedly recognized the interaction of these aspects in its interpretation of free speech and has held that denial of the appropriate means of communication may abridge free speech.

The abridgement of free speech is precisely what is sought to be accomplished by this legislation. Let's recognize it for what it is, and then see how far we should or can go. In other words, let's find the balance.

Now let me make it absolutely clear that we are not here talking about anyone who is under indictment for the commission of any crime, or is under restraining order of any kind by any court, or has been stripped of any right or liberty by due process of law. There may well be risks inherent in allowing a member of the Communist Party, or one identified as such by our intelligence units, free exit from our shores to travel abroad. But it is necessary to point out that this is true when Communists travel from Chicago to New York, or from New York to the Bahamas, or from Dallas to Mexico, or from San Francisco to Buenos Aires, or to any other South American country, none of which places requires a passport for exit or entry. It should be pointed out also that under the McCarran-Walter Act we are required to deport alien members of the Communist Party and we go to elaborate efforts to secure their removal after they have been traveling freely in this country for years. Well and good enough. Yet under our passport procedures, until the Supreme Court decided otherwise, we have insisted that it is essential to the national security to keep citizen members of the party confined to our shores. The point is that there could possibly be something wrong with our reasoning; and when we are dealing with limitations on constitutional rights it is important that our reasoning be compelling and logical.

The elimination of passports between this country and Canada, and Central and South America, and all of the contiguous islands is a good thing and is consistent with the several statements that the President has made about the need for facilitating travel. In the last Congress, for example, following an administration request in support of greater ease and freedom of travel, the requirement of fingerprinting was eliminated from the McCarran-Walter Immigration Act for all

transients and temporary visitors. Under modern means of travel and communication, and the expectation of greater miracles to come, the world has shrunk and distances mean nothing. It means little more to fly from New York to Paris or Vienna than it does to fly to San Francisco. Therefore, until passports are abolished under reciprocal arrangements with all countries—a development much to be hoped for—passports remain important.

What, then, is the nature of the passport? Passports have only been fashionable with our Government since World War I. Prior to that time we got along without them mainly becaues they were not a requirement of travel abroad. After World War I the citizen's request for a passport was generally regarded as nothing more than a request for a service from his Government to facilitate his travel in other lands—something which governments have an obligation to do for all citizens.

The right to a passport has always been assumed to be subject to the general war power. Few would argue that in the case of armed hostilities there are not extraordinary powers lodged in the sovereign to place limitations on all of our constitutional liberties, limitations which in the absence of the war power would be unconstitutional. The history of limitations over the right of exit goes back in the common law to the writ ne exeat regno under which the English kings could prohibit a man's departure or recall him if he had gone abroad. It was identified with war and service in the King's armies. In more modern times it became a credential to facilitate travel. But since 1941, the crucial function of the passport in this country has been control over exit. The earlier purpose of the passport—to facilitate travel—is not only subordinate but has in fact become an appendix which we have appropriately gotten rid of in some areas in order to facilitate travel.

Let's go back to the first amendment. Although constitutional sources do not reveal that the first amendment was framed specifically to preserve a right to travel, they do not reveal the contrary. They strongly suggest, at least, that early Americans recognized a freedom to move beyond national frontiers. However uncertain its basis may have been, however unclear its limitations, the English recognized that freedom long before they crossed the Atlantic. The people of the Colonies, moreover, evidently took the freedom for granted: witness the constant movement between Colonies and to the West. That may explain why the freedom was not more clearly recognized in writing. The Declaration of Independence goes no further than to list as a grievance the restrictions which George III placed upon emigration. The Articles of Confederation merely guaranteed free movement between different Colonies, though the Colonies, not yet joined in a more perfect Union, were more like foreign countries to each other than the United States are today. Perhaps the most direct documentary evidence is to be found in the Pennsylvania constitution of 1790 which declared "that emigration from the State shall not be prohibited."

These sources, taken together, and viewed in the light of the ninth amendment, warrant the assumption that omission of the words "right to travel" was not intended to eliminate the right. Nor is the omission inconsistent with a specific intention to include the right in free speech. The Constitution was designed to guide the United States for an indefinite period of time. It would have been impossible to enumerate the variety of ways in which free speech might be abridged—and the framers recognized this in the generality of the first amendment's language.

It is equally fundamental that the liberty guaranteed by the Constitution is not absolute. "Civil liberties," says the Supreme Court, "imply the existence of an organized society maintaining public order without which liberty itself would be lost in the excesses of unrestrained abuses." Freedom to travel, like other liberties, is subject to reasonable regulation and control in the interests of the public welfare. I am not sure that it is possible to draw up absolutely fixed rules which will in advance strike a proper balance which will meet the exigencies of every case, protect the public interest, and yet stay within constitutional limitations. Circumstances and the times vary and due process of law has never been a term of fixed and variable content. But the following general rules I would deem to be guideposts which should guide the Congress in its consideration of this subject:

First. The right to travel—to communicate—is a constitutionally protected right which may not be abrogated by the State except under the general war power, which normally may be invoked only in time of extreme emergency, usually involving armed conflict between nations. The right is a concomitant of, and conjoint with, the first amendment of the Constitution. A denial of a passport, therefore, may result in violations of both the fifth and first amendments.

Second. Neither the right of the citizen to have issued, nor the right of the Secretary of State to deny issuance of, a passport is an absolute right.

Third. A general standard under which the Secretary of State is authorized to deny the issuance of a passport whenever he finds that its issuance would seriously impair the conduct of foreign relations or be inimical to the national security of the United States probably is too indefinite a standard when applied to a right as firmly grounded among our basic liberties as is freedom of speech and assembly. In the past we have too often seen examples of executive arbitrariness under the umbrella of "the national security" and "the conduct of foreign relations."

Fourth. A refusal to issue a passport may not rest upon confidential, undisclosed information, under a blanket, unlimited authority to use the same. Such a refusal would, in all probability, be a denial of due process of law under the fifth amendment. The authority to use confidential information in the administrative process, under imprecise standards, coupled with the power to delegate the authority to subordinates, can result in a breeding ground of arbitrariness in the course of which innocent people may suffer. I have spoken here of blanket, unlimited authority. There may be room for an exception to cover the hard-core Communist case, under which the Secretary of State or the Under Secretary, personally, will certify that disclosure will expose a double or buried agent of tested and known reliability, that such exposure will be prejudicial to the national interests, and that the case may not be decided without resort to such evidence. But even then, full access to the evidence in question should be given to the court, under seal, for examination by the court in camera.

I have not in this discussion tried to spell out an entire code to govern the issuance of passports, or to draft legislation. My purpose here has been only to state my views on some of the fundamentals, and I would hope that consideration of this matter in the Congress would be guided by those fundamentals. Neither have I touched upon the whole subject of area restrictions, except indirectly. Here, I would recommend the report of the special committee to study passport procedures of the Association of the Bar of the City of New York, an excellent report, prepared by a distinguished committee of lawyers. Its conclusion on the subject of area restraints is as follows:

"Travel abroad by all U.S. citizens may be prohibited in areas where the Secretary of State determines that such prohibitions should be imposed in the national interest, but only in situations of exceptional gravity. The imposition of area restrictions should be accompanied by a statement by the Secretary of State setting forth the reasons therefor. Exceptions to general area prohibitions, permitting travel by particular individuals or groups, may be made by the Secretary of State in his discretion."

In closing, I should like to make a reference to a document of great importance, which is too seldom invoked. It is the Universal Declaration of Human Rights, which this year celebrates its 10th anniversary. Article 13 of the declaration reads as follows:

"ART. 13. (1) Everyone has the right to freedom of movement and residence within the borders of each state. (2) Everyone has the right to leave any country, including his own, and to return to his country."

The United States along with the other member nations, has pledged itself to achieve, in cooperation with the United Nations, the promotion of universal respect and observance of the human rights and fundamental freedoms set forth in the declaration. Let us in the United States be faithful to our pledge.

Speech and Hearing Bill

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 12, 1959

Mr. FOGARTY. Mr. Speaker, I rise to speak for the 15 million Americans handicapped with hearing and speech defects who cannot speak for themselves or hear your answer to their pleas for help.

It is no wonder that over 3 million of these are children, since more children are handicapped from hearing and speech defects than from any other single cause. Many of these children have neither heard their mother's voice nor learned about God. Yet they have received scant attention from the public because their plight is not dramatic. Since they neither speak nor hear they are considered dumb and stupid. Other physical ailments, being self-evident, have attracted sympathy and received considerable help from individuals and agencies, yet those children who live in a silent noncommunicative world have had little thought or opportunity given to them.

Ten thousand children are forced to leave grammar schools each year because of hearing or speech defects. The rehabilitation potential of those pupils makes this waste a national tragedy.

The problem is far-reaching. The economic loss alone is staggering. Servicemen, particularly those flying the jets, veterans, labor in the noisy industries, and certain research workers, are debilitated from hearing losses. With the present lack of facilities, many of the above persons receive no help. Consequently, many are forced to retire or change jobs. It is conceivable that these losses could affect our defense effort. To

say the least, millions of dollars are required to train new personnel.

The effects of hearing and speech defects are also widely felt in medicine and dentistry. No program for the treatment of cerebral palsy, polio, mental health, cleft palate, hairlip, and some other diseases can function adequately without a companion hearing and speech program.

There is necessarily great interest in the aged at this time, 10 percent of whom have an incapacitating hearing loss. Cancer takes a toll of 2,000 or more voices each year, necessitating the removal of the vocal box. These laryngectomized patients can talk again, provided you give them the means.

I am advised that there are only 4,000 professionally trained audiologists and speech pathologists in this country, many of whom are without adequate training. It is conservatively estimated that 20,000 additional postgraduate students need education training in this field. Until this figure is approached, hearing and speech centers will be unable to expand and few new centers will be established. Until expansion is possible, research for the numerous problems discussed above, will continue to lag, the teaching programs for this needed graduate personnel will remain under par and the growing rehabilitation problem cannot be met.

With the purpose of alleviating this situation I have introduced a bill which would make grants to institutions of higher learning for the instruction of graduate students in the field of hearing and speech. The bill provides that the program is placed under the direction of the Secretary of Health, Education, and Welfare. The Secretary will be assisted in determining policies and programs by an advisory committee serving without compensation and appointed by the Secretary with the approval of the President of the United States. This committee is to consist of outstanding individuals from specific groups, competent to render advice.

Institutions would be required to meet certain standards as outlined in the bill in order to participate in the program. Funds granted to institutions, meeting requirements as may be determined by the Secretary and the advisory committee, shall use funds in a hearing and speech program as defined in this bill solely for: first, salaries for members of the faculties teaching graduate students; second, payment of stipends to college graduates who are awarded fellowships; third, the acquisition of equipment as needed for teaching purposes; and, fourth, the administration of such a program. The bill also would make it possible for persons in allied fields, such as many branches of medicine, physics, psychology, and so forth, to receive training.

With the broad concept of this bill the great needs of approximately 10 percent of our population, those people handicapped with hearing and speech defects, would be served.

Mr. Speaker, I plead for urgent passage of this measure. In addition to the great humanitarian need, immediacy is important to the Nation. The lack of trained personnel is largely responsible for: first, the discontinuation of over a thousand pupils from public schools monthly; second, incurable deafness in a number of children living noncommunicable lives who should have received treatment before the age of three, if they were to be enabled to communicate with other people; third, the failure to rehabilitate 80 percent of the remedial cases of children who daily are becoming less able to absorb training because of age; fourth, the lack of one or more comprehensive speech and hearing centers in many States; fifth, labor, veterans, members of the aged, research men and women, industry, the Government, and society as a whole, are daily paying heavy penalties through the lack of an effective program of assistance.

The precepts of this bill are humanely just and economically sound. Prevention of deafness and restoration of millions of individuals to usefulness is cheaper than any form of charitable maintenance. A normal life, including the ability to pay taxes, is their right and their wish.

Chronic Unemployment Needs Action

EXTENSION OF REMARKS
OF
HON. JOHN M. SLACK, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 12, 1959

Mr. SLACK. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to insert and call the attention of my colleagues to testimony which I submitted yesterday before the House Banking and Currency Committee which is presently considering measures designed to benefit depressed areas and encourage area redevelopment.

The statement follows:

The general topic under consideration before this committee is second to none in national importance, and the actions to be taken as a result of these hearings will have far-reaching consequences. The economic redevelopment of those areas which have lost step in the forward march of our national progress is no longer a matter of interest to a few Members of Congress or to a relatively small percentage of our citizens.

It is demonstrably a national challenge, arising out of national and even international trends, and of increasing interest to more persons every year. The manner in which it is approached, and the extent to which it is recognized for what it actually is, will go far toward encouraging or discouraging national unity of thought and purpose in our struggle to maintain economic leadership among the peoples of the world.

Our people today pay high taxes, and with their money we support and maintain foreign aid programs of many kinds, reciprocal trade agreements, international barter arrangements, world-wide activities through the United Nations, foreign development programs and overseas information services. All of these activities are perhaps worthy of support, and are possibly a necessary part of our role in the world situation of today, but they are a mockery and a sham if we do not first and foremost adequately protect our own people here at home. For no matter how generous our intentions abroad, no nation overseas has a prior claim on us above and beyond that of our own people for food and shelter and the right to an opportunity to earn a decent livelihood.

At first glance it seems strange indeed that we must consider legislation of this kind at all. As a Nation we are generally prosperous today. At the end of 1958 our gross national product had reached an annual rate of $453 billion, an all-time high and an increase of $13 billion over the previous year. Personal income hit a new high also, reaching a rate of $362.3 billion annually in January, an increase of $13.5 billion over the preceding year. Construction and new housing are increasing, and the indications are that, with the exception of a few industries and a few areas, most of the ground lost during the 1958 recession has been regained.

Total unemployment has declined slightly, to 4,724,000, and constitutes 6 percent of the labor force, as against 7.6 percent a year ago.

In the face of these figures, however, we must acknowledge that there are areas which do not respond to the upturn of the business cycle, but remain dormant or continue to decline as our economy progresses. These areas are the victims of a special situation, and their recent history marks them as forerunners of serious trouble in the future. Their circumstances underscore the need to begin action to solve their special problems now, that we may learn today on a pilot basis the procedures which will be effective wherever the situation may develop tomorrow.

On the basis of facts established there is little disposition to dispute the causes of chronic unemployment in particular areas. It is directly traceable to technological advancement by industry. We in the Congress support and actively encourage the increase of technical skill and productivity in business and industry. Much has been said recently about the threats from our enemies overseas, and fear has been expressed that they will surpass us in technical skills. All of us know that we as a Nation cannot afford to be second best in the international race for top industrial skill.

But some by-products of this progress are, as in this case, problems in terms of displaced human beings. The advance of the machine adds muscle power to our national strength, but at the same time forces some of our people into permanent idleness. They become casualties of the battle for international survival, with none of the protection afforded the casualties of any other type of conflict or disaster.

We are actively encouraging programs designed to increase and accelerate the education of scientists and engineers. Their efforts will be reflected throughout our economic life in the years to come, and the pace of technological advance must inevitably quicken as their knowledge is brought to bear on existing methods and processes.

Already, however, the rate of technical progress has created a pool of chronically unemployed. It has happened gradually but steadily over a period of years, and in the face of growing national prosperity. The trend is established, and knows no state or industry boundaries. I call your attention to some findings of a special study of postwar job loss published recently in U.S. News & World Report:

"Since the close of World War II, the output per worker has increased 19 percent in the steel industry. As a result, the steel industry in 1957 employed only 536,000 workers. If output per man had been the same as in 1947–49, steel companies would have needed 637,000 workers to produce the same tonnage.

"In automobiles the loss during the past 10 years because of higher output per man is

estimated at 132,000 jobs. An additional 48,000 jobs were lost because of the importation of foreign cars.

"In the oil refining industry there is an estimated loss of 71,800 jobs during the past 10 years.

"In coal mining there has been an estimated 46 percent increase in efficiency due to mechanization. In 1958 there were 195,000 employees in bituminous mining, but for the same output, as produced in 1948, there would have been required 95,000 more workers than are needed today."

You have heard from many other sources the details of the effect of mechanization on the coal industry which, on an industry-wide basis, has been first and hardest hit. I do not intend to review those details. I offer for your serious consideration, however, the knowledge that only a few weeks ago in my own State of West Virginia a mechanized mine was opened which will produce 50 tons of coal per day per man, as compared with the average of 10 tons per day by conventional pick and shovel operation.

This is technological advance run rampant. Yet, mine owners must mechanize to survive. They must be competitive nationally and internationally or they will lose markets to other fuels. What has been happening to coal will evenually happen throughout industry as we develop increasingly efficient machines and processes. It has been happening in other industries already—in textiles, leather products, and railroading, to name a few.

Recently a spokesman for the Michigan Unemployment Compensation Commission stated that, although the production of passenger cars is 12 percent ahead of a year ago, automotive employment is down 30,000 from that date, and stated further that the city of Detroit has developed a hard core of about 200,000 unemployed who just aren't going back to work in the plants.

The Wall Street Journal cites countless examples of increased productivity per man-hour, in everything from television to paper products and from floor wax to camera parts. The industrial drive for greater man-hour productivity is unceasing, and is a recognized part of the enterpriser's plan for success.

The trend is not confined to this country; it is not based on national characteristics but rather on the forces which drive an industrial economy. Recently the A. V. Roe Corp. of Canada laid off 15,000 men on 5 hours notice, and suspended the production of the Avro Arrow, Canada's finest supersonic interceptor plane. There was nothing wrong with the product or the workers, but the Arrow had been superseded by a new missile which is cheaper and more efficient.

If this can happen in supersonic aircraft, what industry or industrial region can feel certain about its status a year hence?

The foregoing statements add up to just one conclusion: The coal industry is far from alone in this situation. It has been first to feel the effects of technological advance, and its employees have seen the by-products of that advance left unattended, with the result that temporary idleness has hardened into chronic unemployment with no hope for a return to work in the future. The condition of the unemployed miner today point dramatically to the need for pioneering in the field of economic redevelopment.

For the temporarily unemployed there are programs of assistance, but for the displaced and dispossessed worker there is nothing. He is consigned to a permanent dole, and it is the permanence of his condition that I wish to emphasize most strongly.

Several weeks ago, in an attempt to pinpoint the areas in which chronic long-term unemployment has hardened into a way of life, I requested from the Department of Agriculture a tabulation of counties in which 15 percent or more of the population received surplus agricultural commodities as needy persons. Persons in this classification are necessarily unemployed, and have been unemployed for a sufficient time to exhaust unemployment compensation benefits, have generally been certified for direct relief, have little or no income, and few other food sources.

The resulting tabulation which I received emphasizes the national scope of the problem. It reported that there were 210 counties, 7 percent of the counties in the United States, in which 15 percent or more of the population received surplus commodities under the classification of needy persons. These counties are distributed through 24 States, and are in the districts served by 75 Members of the House of Representatives.

In one county 51 percent of the population received these commodities, while in numerous others between 40 percent and 49 percent are in similar condition. The average for the 210 counties was 21.8 percent of the population.

I call these figures to your particular attention because of two conclusions resulting from a study of three of these counties in my own Sixth West Virginia District:

1. Reviewing the monthly percentages during the past 2 years, we found that the number of persons receiving commodities seldom rises or falls more than 1 percent in any month. In short, the trend has been growing slowly for a long time, and cannot be reversed overnight.

2. Employment experts in my district estimate that 72 percent of those persons now receiving commodities are unemployed employables.

As proof of the relentless growth and permanent nature of the trend, I offer you these statistics from the Department of Agriculture:

Needy persons in family units receiving commodities

Fiscal year:	
1956	3,170,000
1957	3,485,000
1958	4,665,000
First half of 1959	5,230,000

Surplus foods are distributed to needy persons in 45 States, although the percentage of recipients is notably small in some. The percentages are excessively high in some other States, however, and it is noticeable that those are the very States which have been hardest hit by chronic unemployment due to technological progress. The top 10 States, according to number of recipients, are as follows:

Total needy persons receiving surplus commodities

State:	
Pennsylvania	829,550
Michigan	538,385
New York	348,871
Mississippi	331,441
West Virginia	278,223
Kentucky	254,377
Oklahoma	246,960
Arkansas	219,354
Tennessee	154,551
Louisiana	137,713

Statistics of this kind are helpful, but they must not cause us to lose sight of the human element they represent. The bald statement that a needy person receives surplus agricultural commodities means that he receives currently just five items—butter, dry milk, rice, flour, and cornmeal. The commodities distributed are controlled by previous legislation enacted by the Congress, and the Department of Agriculture has no responsibility to conduct a welfare program, or authority to purchase foods to help States or communities operate welfare programs for the needy.

In the areas of chronic unemployment thousands of families exist on these commodities alone, and in my own district I have talked with families who have not had fresh milk, eggs, meat, or citrus juices for periods ranging up to 2 years. These Americans actually exist on a diet less than half as nutritive as that provided for the occupants of displaced persons camps in Europe after World War II. From a nutrition standpoint they are slightly below the level of common laborers in the Soviet Union, as reported by Senator ALLEN ELLENDER last year after a visit to Russia, when he stated that the largest proportion of Soviet citizens in the common laboring class subsisted on a diet of black bread, cabbage, potatoes, beets, and tea.

To give you an idea of the situation that is developing, the Bureau of Nutrition of the West Virginia State Health Department reviewed the diet of persons existing on surplus commodities and announced that the average family of four would receive, for 1 month, 20 pounds of flour, 10 pounds of corn meal, 9 pounds of powdered milk, 2 pounds of rice, and 4 pounds of butter. This would give them only 26 percent of the calories they need each month, 36 percent of the proteins, and 46 percent of the calcium considered necessary for good health. In other words, a protracted diet of this kind will create a group of persons who will soon not be able to work, and will rear children condemned to be a permanent charge on the community.

This condition is destroying home and family life. Children quit school and migrate without being prepared to work, fathers desert their families so the families will become eligible for relief, crime is on the increase, but these desperate people steal food, not money, according to local enforcement officials.

Only one conclusion is supportable in the face of the evidence—our mode of industrial advance is cannibalizing our own people. Technical progress, without attention to its by-products and effects on human beings is building a massive complex of industrial skill based on a pile of human bones and operating to the tune of wailing, hungry children.

We are already working around the edges of the problem. This year we will again appropriate funds for more surplus foods for needy families, and for school-lunch programs. We will, no doubt, extend the supplemental unemployment relief measure set up by the last Congress. In these and other ways we will spend millions of dollars to deal temporarily with the undesirable aspects of the problem without undertaking a general assault on the core of the problem itself.

This piecemeal approach cannot be effective. The problem is too great and its origins are too complex. It can only be overcome by a bold program of action in several areas simultaneously:

1. Liberalization of the surplus commodities program as a temporary measure to maintain life and health among those who have been displaced by the growth of machine efficiency.

2. An economic redevelopment measure to place the Federal Government in support of efforts to correct the situation, and to lend the power and prestige of the Federal Government to such efforts as a recognized Federal policy.

3. Public works activity in these areas where economically justifiable, on a priority basis, particularly where such public works will improve the attractiveness of such areas to industry.

I am not speaking here in behalf of any particular measure already introduced. Indeed, it may well be that this committee will, after hearing the testimony, conclude that a

new and inclusive measure should originate with the committee itself.

Further, I am not proposing a massive spending program. But when we use that word "spending" it is only fair to remember a few facts: We are currently spending at the rate of $6½ billion per month, or $40 per month for every man, woman, and child in the United States. Would it be unreasonable to embark on a program to recoup the fortunes of the dispossessed at the rate of $10 per month for each of the 4 million unemployed employables? This would add up to $480 million a year.

I do not propose this figure as a basis of consideration, but only as a spending yardstick, if the program is to be considered as a spending measure. Certainly some money must be spent, but it will be self-liquidating through the return of these people to full status as citizens, able to bear their share of the tax burden. I have talked with dozens of them, and they want work, not handouts. Money itself is not the answer.

The answer would appear to lie in recognition of the trend as a growing national economic peril, of which the situation in these districts is but a forerunner; in placing the strength of the Federal Government behind a definite program of evaluation and correction; in activities which will increase job opportunity by creating conditions which will be attractive to industry and lead to long-term economic stability in these areas; in short, an investment in the future of a growing segment of our people.

The Congress has faced similar specific problems before and has acted to control them. When nuclear energy was born, the Atomic Energy Commission was devised to deal with its development and use. When space flight began to seem possible, the National Aeronautics and Space Administration was created. This problem deserves similar treatment on a long-range basis, or we will be caught unprepared in the years to come.

The alternatives are brutal and unthinkable. Condemn a growing number of Americans to a starvation diet, without hope for the future, or tell them to uproot themselves and be scattered across the continent, seeking work as best they can, destroying home ties and family loyalties. This would indeed mark a low point in the development of the American heritage, and constitute a damage to national morale far more serious than could be created by an enemy with a bomb.

I am confident that this committee will grasp the implications of the problem, and will demonstrate the resourcefulness in meeting it for which the Congress is world-famous, in war and in peace. And I believe that when the record of this Congress is written, and the pages are studied in future years, it will be unanimously agreed that your efforts to deal with this problem will stand as a high point of accomplishment for this congressional session.

USDA Barter Regulations Depress Our Commodity Markets

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 12, 1959

Mr. POAGE. Mr. Speaker, the awkward regulations which surround the Public Law 480 barter program have had the unfortunate effect of cutting world prices on U.S. agricultural commodities, seriously disturbing trade operations and preventing the movement of our farm products into some of our normal export areas.

As a result of the so-called modified barter regulations, instituted last fall by the Department of Agriculture, this program lacks the flexibility which would enable it to supplement our cash sales and to meet competition from the Soviet bloc. In fact the Department has publicly admitted that it is more difficult to move commodities under their present regulations than it was under the old ones, which the Congress had sought to liberalize under the new law.

Two years ago, over $350 million in surpluses were moving into export annually through barter, at discounts or commissions to exporters averaging only one-half to 1 percent, and with no disruption of world prices or normal trade operations. Now, as a result of the new regulations, we are moving commodities at a rate of less than a hundred million dollars a year, at discounts ranging from 7 to 12 percent, or even higher. And these discounts are beginning to have a serious effect on normal commercial sales and world prices.

I want to emphasize that the present high discounts on exported commodities are not taken out of the price paid to the CCC. They are made possible only because the private traders are able to capitalize on temporarily depressed minerals markets. In some cases, they are buying material at distressed prices. Were it not for the fact that stockpile materials can be purchased at 10 percent or so below world prices, it would be difficult, if not impossible, to negotiate barter deals under the present regulations. We are doing business now only because we can take advantage of the misfortunes of others.

Of course the American farmer, and the foreign producers too, are hurt by the big discounts, because they have the effect of cutting both the prices and the quantities of agricultural commodities that are sold abroad. Foreign buyers, in a desire to buy their stocks at a reduced price, may hold off buying in hopes of getting a discount.

In place of a good barter program which supplements and stimulates our cash sales, such as we had before these restrictions were instituted, we now have an operation which invites unfortunately large discounts on the small amount of goods that are being bartered.

There is absolutely no doubt in my mind that the procedures required under the so-called modified barter regulations are responsible for the present high discounts. These regulations make it so difficult to dispose of our farm surpluses overseas that those with materials to barter are having to pay these unreasonable commissions in order to barter at all. All the responsible contractors I talked with have affirmed this, and I believe that the experts in the Department of Agriculture would also affirm it.

I would like to explain, as I understand it, how the barter regulations are creating this situation. Although the matter is somewhat technical, briefly it amounts to this: in order to deliver goods into the big "A" and "B" markets—the countries which would be the best outlets for our surplus—a contractor must specify ahead of time the commodities and the country into which he intends to sell and from which he must secure the materials covered by the barter contract. By the time he gets approval from the Department of Agriculture, which takes up to 3 months, the contractor may find that the market he counted on no longer exists. In this situation, if he were permitted to dispose of the commodities into any of the free world countries, he could move the surplus into some other market; but under the present regulations he has to sell the commodities within the specified country. Under these circumstances there is a great risk that he may be forced to reduce his price or even to take a heavy loss. Thus the reason for the high discounts.

These regulations are creating the unfortunate situation they are supposed to prevent. They depress our cash commodity markets. They cripple our barter program. They are a real hindrance to our efforts to distribute our tremendous agricultural surplus.

We urge the Department of Agriculture to modify or abolish these regulations which now frustrate the barter program.

Address of Hon. Arthur S. Flemming

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 12, 1959

Mr. DORN of New York. Mr. Speaker, on Sunday, February 22, 1959, the Stanley H. Miner Memorial Pavilion of the Methodist Hospital, of Brooklyn, N.Y., was dedicated. We were very fortunate in having as our principal speaker the Secretary of Health, Education, and Welfare, the Honorable Arthur S. Flemming. I believe his remarks on the occasion of that dedication are worthy of the attention of my colleagues, and I incorporate them herewith:

Mr. Diefendorf, those who are associated with the ministry of this great hospital, and the friends of this hospital, I can assure you that I appreciate more than I can express adequately in words, the opportunity of participating in this manner in this dedication. I am sure that it is difficult for you to understand just how much those words from Dr. Marshall mean to me. After one listens to such words, he should be very sure of the fact, to use a Government expression, that he has a system of checks and balances operating in his own life. Through the years I discovered that the best guarantee for that is to have some children in your household. About 10 years ago, I was about to be inaugurated president of Ohio Wesleyan. Mrs. Flemming and I were walking down the main street of Delaware, Ohio, with my then 8-year-old daughter. We had just visited the grave of Bishop and Mrs. Baxter. Bishop Baxter was one of the early presidents of Ohio Wesleyan. During the course of conver-

sation, Mrs. Flemming said to Susie, "You know daddy is about to become the ninth president of Ohio Wesleyan." Without a moment's hesitation, came the response, "Yes; and there'll be a 10th." Somehow, she was right, because there is a 10th right now, having just recently assumed the duties and responsibilities of that office.

One of the fine things about the position I now occupy is that as the incumbent of this position you are given the privilege from time to time of sharing in the victories that take place in the fields of health, education, and welfare. Surely, the dedication of these marvelous facilities is a victory, a victory over the temptation that so easily besets all of us. They want to turn aside from the opportunities to participate in the ministry of healing and to "pass by on the other side of the road."

I also want to express my gratitude to those who planned this program for making it possible for Arthur Flemming to participate in the program. This is a very special hospital as far as I am concerned. It is a hospital that was founded and has been supported by the members of the denomination with which I have always been and always will be proud to be associated. It is a hospital that for almost 20 years had the benefit of the leadership of a good minister of Jesus Christ who gave me, as he has already indicated in his introductory remarks, the right hand of fellowship as I joined Trinity Methodist Church in Kingston, N.Y., and whose life of dedicated service has always been and always will be an inspiration to me.

It is a hospital that now has as its chaplain a man who gave me and thousands of other Ohio Wesleyan students an insight into the Gospel of Jesus Christ that we will never forget as he occupied the pulpit of the Williams Street Methodist Church in Delaware, Ohio, the home of Ohio Wesleyan University. It is a hospital that had as one of its trusted leaders and outstanding benefactors a truly great man whose friendship it was my privilege to enjoy over a period of the last 6 years. Ellis Phillips has left an indelible mark on my life just as I know he has on the lives of countless other persons. I am not surprised that he and Mrs. Phillips decided to give this chapel. Certainly it is a source of inspiration to those of us who have the privilege of being here this afternoon and will continue to be a source of inspiration and comfort to countless thousands of persons down through the years. The reason I am not surprised is that it was their idea that religion and education should be linked together in the beautiful building that they gave to Ohio Wesleyan University. It is providing the setting for what will be some of the most meaningful services of worship that take place on the Ohio Wesleyan campus.

Finally, this is a hospital that my father remembered in his last will and testament. I know that he remembered because of his conviction that the money that he had earned would be used in such a manner as to strengthen the hospital's ministry of healing. I am likewise sure that his bequest was his way of expressing his gratitude for a friendship that meant as much (if not more) to him as any other friendship that he enjoyed throughout his life, the friendship of Chester C. Marshall. These are the reasons that prompt me to say "Thank you" for inviting Arthur Flemming to participate in this program.

The tenth chapter of Acts provides us with an account of the visit of Peter to the town of Cornelius the centurion. Within that chapter, nine verses are set aside for the purpose of presenting to us what in effect is a Reader's Digest life of Christ as told to Cornelius by Peter. In that brief account Peter felt that it was very necessary to include this statement, "Now he went about doing good and healing all that were oppressed by the devil, for God was with him."

Have you ever thought how strange it is that an expression that Peter lifted up in order to describe one aspect of the Master's ministry is used so often in our day to express contempt for some of our fellow human beings? When men and women turn the spotlight on human needs and insist on action to meet those needs so often their efforts are dismissed by their expression, "Oh, well, they're just a group of do-gooders." It is these "do-gooders" that I would like to think about with you for just a few minutes on this very important occasion.

I'm sure that if we can engage in a conversation about this expression someone would say something like this, "I really don't intend to express my contempt for such persons. I'm simply trying to point out that they're not practical. They seem to think that money grows on trees. They just don't seem to realize that all of these needs can't be met." Frankly, I think that you and I are simply trying to appease our own consciences. We are trying to rationalize our own insistence on indulging in the luxuries of life in the midst of human need. We are trying to justify our failure to use the time, energy and resources that have been entrusted to us in order that we may go about doing good.

Today, as a result of the experiences that I have had since assuming the duties of my present office 6 months ago, I'm more thankful than ever before in my life for the "do-gooders". I'm glad that they are focusing our attention on cancer, heart disease and many other diseases that are causing suffering and heartache, and are insisting on the fact that there must be a way out.

A few weeks ago, I spent the better part of the day at the clinical center of the National Institutes of Health out in Bethesda, Md. One section of this clinical center is set aside for the research activities that center around children with leukemia. The doctors and nurses talked with me about the research activities that are under way. They told me that because of certain developments, it has been possible for them to extend the lives of the children who come to that center, not by years, but by a few weeks or by a few months. They told me about their hopes that while the lives of these children are being extended in this way, a breakthrough might take place that would make it possible for those children and many others to look forward to normal lives. That breakthrough hasn't taken place. I am convinced that as a result of the dedication that is taking place all over this Nation, on the part of men and women who are determined to stage such a breakthrough that it will ultimately take place. One cannot become acquainted with activities of this kind with the dedicated spirit that accompanies these activities on the part of doctors and nurses and research workers without being thankful for the "do-gooders" who insist on staying with this problem until there is a breakthrough.

I am glad and increasingly so that there are do-gooders in our midst who insist on focusing our attention on the opportunities that we have missed and are missing in the field of education. We haven't provided the opportunities we should provide for retarded children, for exceptional children, and for those who fall in between. As a society we haven't provided the educational opportunities we should provide for our children and young people without regard to race, color or creed.

Not long ago I was talking with a former distinguished resident of Brooklyn, Branch Rickey, about this particular problem and I wish that you could have heard him underline his convictions in this particular area. All we have to do is to look around us in order to realize that we are paying the penalty for sins of omission in the field of education.

I am likewise thankful for the do-gooders who are constantly reminding us of what we can do in our communities through the use of both public and private funds to help those who are ill, those who are handicapped, those who are in need of food and clothing, those who are imprisoned, and those who can profit from competent counseling. Yes; I'm thankful for the more than 6,000 do-gooders who have made this great building possible. As I think of the relationship that all this has to some community, some place in this Nation; and as I think of the tremendous opportunities for service that exist in these communities, I feel that there are times when we should hang our heads in shame when we do not follow the lead of the do-gooders at least to the extent, for example, of meeting our goal in a united fund or community chest drive.

Also, I am glad the do-gooders are pointing out what can be done to replace despair with hope by providing those who are handicapped with the medical care and with the training that enables them to once again become productive members of our community. When one begins to realize and appreciate what can be done in this area, he cannot help but wonder why we are so timid about investing our resources both public and private in vocational rehabilitation programs.

Sometimes we shrug off the do-gooders by saying something like this, "They think that government is the only institution in society that can deal adequately with these pressing human needs. Because they think this way, they constitute a real threat to our way of life." I believe that this is an unfair characterization of the persons we are talking about. Most of those who persist in focusing our attention on these pressing human needs put it this way: let's determine what we need in order to meet these needs; then, let's determine what constitutes a fair share for both public and private groups; then, let's do everything we can to persuade public and private groups to accept their fair share. In other words, the do-gooders primary concern is that we face up to the human needs that confront each one of us and resolve to do something about meeting those human needs. This kind of person I'm talking about isn't going to take very much time arguing about the method.

"Now he went about doing good and healing all that were oppressed by the devil, for God was with him." Let's all of us become better acquainted with the "do-gooders" who in our day seek to follow in the footsteps of the Master. They will prick our consciences, they will challenge us not to pass on the other side of the road in order to avoid the needs of our fellow human being. Let's not only become better acquainted, with the "do-gooders" of our day, but let's strive to be "do-gooders" ourselves. In our striving, however, let's realize that no matter how fine our resolutions may be, we will not succeed in doing good unless God is with us. During this Lenten season may we develop a far better understanding than we have ever had of the strength that God, revealed to us through His Son, Jesus Christ, can bring into our lives so that it will be possible for us to "go about doing good."

This hospital has had a great history because thousands of persons have looked upon it as a medium through which they could serve the needs of their fellow human beings; and they have never been disappointed. The resources that have been entrusted to this hospital have been used

wisely and well. I am convinced that the greatest days for this hospital and for other comparable institutions throughout our Nation lie ahead of us. Never before, I am convinced, have men and women been as willing to give of their time, energy, and resources to serve others. More and more men and women want to join that great company of "do-gooders." This is why, personally, as I look to the future, I do so not with a feeling of pessimism, but with a feeling of optimism. I am convinced that as more and more join the great company of "do-gooders" that we are setting into motion those spiritual forces throughout this world that will ultimately provide us with the kind of spiritual breakthrough that will lead us into the pathway of peace.

HOUSE OF REPRESENTATIVES

FRIDAY, MARCH 13, 1959

The House met at 12 o'clock noon.

Rev. Charles W. Holland, Jr., pastor, Fountain Memorial Baptist Church, Washington, D.C., offered the following prayer:

The Psalmist has said, Psalms 34: 3: *O magnify the Lord with me, and let us exalt His name together.*

Merciful and omniscient God, we do thank Thee for Thy great and tender mercy.

We know that even when a sparrow falls to the ground Thou art mindful of it.

We thank Thee, therefore, Heavenly Father, for the routine necessities of life, food, shelter, clothing, and all that enters into our daily existence. May we never accept these gifts nonchalantly; but remember that they come through Thee.

We thank Thee for wisdom and solicit Thy continued guidance for this great law-forming body of men and women.

These thanks we give, and requests we make, through Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Ratchford, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. McGown, one of its clerks, announced that the Senate had passed a joint resolution of the following title, in which the concurrence of the House is requested:

S.J. Res. 47. Joint resolution providing that certain communication activities at the IX Plenary Assembly of the International Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934 or any other law.

EXPENSES OF CONDUCTING STUDIES AND INVESTIGATIONS INCURRED BY COMMITTEE ON AGRICULTURE

Mr. FRIEDEL. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged resolution, House Resolution 156, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That, effective January 3, 1959, the expenses of conducting the studies and investigations authorized by H. Res. 93, Eighty-sixth Congress, incurred by the Committee on Agriculture, acting as a whole or by subcommittee, not to exceed $50,000, including expenditures for the employment of accountants, experts, investigators, attorneys, and clerical, stenographic, and other assistants, shall be paid out of the contingent fund of the House, on vouchers authorized by such committee, signed by the chairman of such committee, and approved by the Committee on House Administration.

SEC. 2. The official committee reporters may be used at all hearings, if not otherwise officially engaged.

The SPEAKER. The question is on the resolution.

The resolution was agreed to, and a motion to reconsider was laid on the table.

BASIC COMPENSATION OF EXPERT TRANSCRIBERS

Mr. FRIEDEL. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged resolution, House Resolution 197, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That the basic compensation of the eight expert transcribers, office of the official committee reporters, and the seven expert transcribers, office of the official reporters of debates, shall be at the basic per annum rate of $3,450 each, effective March 1, 1959.

The SPEAKER. The question is on the resolution.

The resolution was agreed to, and a motion to reconsider was laid on the table.

COMMITTEE ON BANKING AND CURRENCY

Mr. FRIEDEL. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged resolution (H. Res. 198), and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That, effective January 3, 1959, in carrying out its duties during the 86th Congress, the Committee on Banking and Currency is authorized to incur such expenses (not in excess of $5,000) as it deems advisable. Such expenses shall be paid out of the contingent fund of the House on vouchers authorized by such committee, signed by the chairman thereof, and approved by the Committee on House Administration.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. FRIEDEL. I yield to the gentleman from Iowa.

Mr. GROSS. When did all this start?

Mr. FRIEDEL. The $5,000 for the Committee on Banking and Currency?

Mr. GROSS. Yes.

Mr. FRIEDEL. In the 85th Congress they received $5,000 also.

Mr. GROSS. Were these bills on the whip notice to come up today?

Mr. FRIEDEL. Yes; it was cleared with the leadership.

Mr. McCORMACK. Mr. Speaker, if the gentleman will yield, not on the whip notice, because they are preferential matters. They are not included in the whip notice because they have a preferential status.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

COMMITTEE ON WAYS AND MEANS

Mr. FRIEDEL. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged resolution (H. Res. 206) and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That the expenses of conducting the studies and investigations authorized by House Resolution 182, Eighty-sixth Congress, incurred by the Committee on Ways and Means, acting as a whole or by subcommittee, not to exceed $300,000, including expenditures for the employment of experts and clerical, stenographic, and other assistants, effective January 3, 1959, shall be paid out of the contingent fund of the House on vouchers authorized by such committee or subcommittee, signed by the chairman of the committee, and approved by the Committee on House Administration.

The resolution was agreed to.

A motion to reconsider was laid on the table.

CODE OF ETHICS FOR GOVERNMENT SERVICE

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged resolution (H. Con. Res. 15) and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved by the House of Representatives (the Senate concurring), That there shall be printed as a House document the "Code of Ethics for Government Service" as adopted by the Congress in H. Con. Res. 175, Eighty-fifth Congress. Such code shall be run in two colors and gold from letterpress plates reproducing engrossed artwork, hand lettered and appropriate for framing and office wall display. Stock for prints shall be one hundred and sixty pound white, size twelve and one-quarter inches by sixteen and one-quarter inches flat. Prints shall be inserted in white envelopes inside mailing brown envelopes of twenty-eight pound brown kraft, flaps sealed or tucked in with one corrugated board protector. In addition to the usual number, there shall be printed a sufficient number of extra copies to provide twenty-five copies for use and distribution by each Senator and each Representative. For the purposes of this resolution, the Delegate from Hawaii and the Resident Commissioner from

Puerto Rico shall be considered as Representatives.

Mr. JONES of Missouri. Mr. Speaker, will the gentleman yield?

Mr. HAYS. I yield to the gentleman from Missouri.

Mr. JONES of Missouri. Mr. Speaker, I asked for this time because I am going to have to oppose this resolution, and I do so with some reluctance. I have talked to the author of the resolution. The Congress did adopt this code of ethics at the last session. The reason I feel disposed to oppose the resolution is that this is just one instance of many in which the Congress has authorized the printing of many things which have little value. Many of these projects like this start as a very small item. I think this one calls for maybe $2,900, which, of course, is a very small amount. It does set another precedent. We print so many things around here and order a limited distribution to Members that are never used and are sold as waste paper. Now, this code of ethics had been circulated among many departments of Government and among many employees by those departments of Government. This proposal here today calls for a very attractive piece of printing. It is a rather expensive piece of printing. As I say, it is with some reluctance that I oppose this resolution, but I am going to have to do it, and from time to time I expect to oppose other proposals like this. Somewhere along the line we are going to have to accept some responsibility and to give more attention to the use to which this printing is made. We are spending several million dollars here in the Congress for reports and other pieces of printing that to me is entirely a waste of the taxpayers' money.

As another example we have, for instance, a calendar. I think the distribution is something like 10 to 25 calendars to each Member of Congress. Actually, to many of us it is more of a nuisance than a help, because they do not come in sufficient quantity to do a great deal of good. We could save I do not know how much money; I do not know what they cost. But this item before us I think we could dispense with, and for that reason I am going to vote against the resolution.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. HAYS. For a question.

Mr. GROSS. Was a sample of this proposed printing sent around to the various offices?

Mr. HAYS. I believe so, yes.

Mr. GROSS. Then it is a rather expensive piece of printing, is it not?

Mr. HAYS. I believe the gentleman said that it was going to cost $2,976.

Mr. GROSS. I know; for how many copies?

Mr. HAYS. The regular printing plus 25 copies for each Member.

Mr. GROSS. So it is an expensive piece of printing. What we need around here is not to print copies of a Code of Ethics, but to do something about the so-called ethics that we practice, in view of some of the things that have happened recently. I want to join the gentleman from Missouri [Mr. JONES] in opposing this sort of thing.

Mr. HAYS. Now that the gentleman has joined with him, I might say that in my opinion this is a document which might do some good. The gentleman has raised the point that there is some need for some ethics. Maybe this document will promote some. I hope so. I might say to him that the Committee on Printing has 3 resolutions here this morning and has turned down 6 others. So it has been rather selective about what is to be printed.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

HOUSE REPORT NO. 41, COMMITTEE ON UN-AMERICAN ACTIVITIES

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged resolution, House Resolution 187, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That there be printed for the use of the Committee on Un-American Activities eleven thousand five hundred additional copies of House Report Numbered 41, current session, entitled "Communist Legal Subversion."

Mr. HAYS. Mr. Speaker, I should like to make a brief statement on this resolution. This resolution was the object of some comment by a columnist some time back in February. I think his column appeared somewhere around the 20th of February. In that column he said that no copies of this document could be obtained because the Committee on Printing was dragging its feet, and he intimated, if not alleged, that we were trying to keep any documents about communism from being printed.

This column appeared, as I have said, around the 20th of February. Actually the resolution for the printing of this document was only introduced by the gentleman from Pennsylvania [Mr. WALTER] on March 2. It was heard by the subcommittee of which I have the honor to be chairman on the 5th of March, and reported out of the full committee the day before yesterday, and is up for consideration here today. I consider that rather expeditious handling.

Mr. WALTER. Mr. Speaker, will the gentleman yield?

Mr. HAYS. I yield to the gentleman from Pennsylvania.

Mr. WALTER. Mr. Speaker, I am very much surprised that anybody should make the sort of attack on the gentleman from Ohio that he has just described because, actually, he has been most cooperative. It is because of his interest in the work of the Committee on Un-American Activities that we have been able to supply the tremendous demand for these pamphlets. I wish to take this opportunity to thank the gentleman publicly for his cooperation.

Mr. HAYS. I thank the gentleman for his statement.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

GOVERNMENT PROGRAMS IN INTERNATIONAL EDUCATION

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administration, I call up House Resolution 175 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That there be printed with certain minor editorial, grammatical, and typographical changes, two thousand five hundred additional copies for the use of the Committee on Government Operations of House Report Numbered 2712, Eighty-fifth Congress, entitled "Government Programs in International Education."

The resolution was agreed to.

A motion to reconsider was laid on the table.

MUTUAL SECURITY PROGRAM—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 97)

The SPEAKER laid before the House the following message from the President of the United States, which was read, referred to the Committee on Foreign Affairs, and ordered to be printed:

To the Congress of the United States:

A year ago in concluding my message to the Congress on the mutual security program I described it as of transcendent importance to the security of the United States. I said that our expenditures for mutual security are fully as important to our national defense as expenditures for our own forces. I stated my conviction that for the safety of our families, the future of our children, and our continued existence as a nation, we cannot afford to slacken our support of the mutual security program.

The events of the intervening year have vividly demonstrated the truth of these statements. In this one year there have been crises of serious proportions in the Middle East, in the Far East, and in Europe. In each of these the strength built by our mutual security program has been of immeasurable value.

At the time of the difficulty in Lebanon the uneasy balance of the Middle East would have been far more seriously endangered if it had not been for the stability of other Middle Eastern countries which our mutual security program had helped build. Without our mutual security aid, Jordan, under severe pressures, would have faced collapse, with the danger of flaring conflict over her territory.

In the Far East, the firm stand of the Republic of China against the Communist attack on Quemoy would not have been possible without the arms and training furnished by our mutual security program and by the high morale promoted by the economic progress we have

helped forward on Taiwan. This successful local defense blunted an aggression which otherwise could have precipitated a major conflict.

In Europe today the Soviet Union has made demands regarding the future of Berlin which, if unmodified, could have perilous consequences. The resoluteness with which we and our allies will meet this issue has come about in large measure because our past programs of economic and military assistance to our NATO allies have aided them in strengthening the economies and the military power needed to stand firm in the face of threats.

While our mutual security program has demonstrated a high value in these tense moments, its military and economic assistance to other areas has undoubtedly had an equal value in maintaining order and progress so that crises have not arisen.

REALITIES OF 1959 AND AHEAD

I believe that these events of the past year and the stern, indeed harsh, realities of the world of today and the years ahead demonstrate the importance of the mutual security program to the security of the United States. I think four such realities stand out.

First, the United States and the entire free world are confronted by the military might of the Soviet Union, Communist China, and their satellites. These nations of the Communist bloc now maintain well-equipped standing armies totaling more than 6,500,000 men formed in some 400 divisions. They are deployed along the borders of our allies and friends from the northern shores of Europe to the Mediterranean Sea, around through the Middle East and Far East to Korea. These forces are backed by an air fleet of 25,000 planes in operational units, and many more not in such units. They, in turn, are supported by nuclear weapons and missiles. On the seas around this land mass is a large navy with several hundred submarines.

Second, the world is in a great epoch of seething change. Within little more than a decade a worldwide political revolution has swept whole nations—21 of them—with three-quarters of a billion people, a fourth of the world's population, from colonial status to independence—and others are pressing just behind. The industrial revolution, with its sharp rise in living standards, was accompanied by much turmoil in the Western World. A similar movement is now beginning to sweep Africa, Asia, and South America. A newer and even more striking revolution in medicine, nutrition, and sanitation is increasing the energies and lengthening the lives of people in the most remote areas. As a result of lowered infant mortality, longer lives, and the accelerating conquest of famine, there is underway a population explosion so incredibly great that in little more than another generation the population of the world is expected to double. Asia alone is expected to have one billion more people than the entire world has today. Throughout vast areas there is a surging social upheaval in which, overnight, the responsibilities of self-government are being undertaken by hundreds of millions, women are assuming new places in public life, old family patterns are being destroyed and new ones uneasily established. In the early years of independence, the people of the new nations are fired with a zealous nationalism which, unless channeled toward productive purposes, could lead to harmful developments. Transcending all this there is the accompanying universal determination to achieve a better life.

Third, there is loose in the world a fanatic conspiracy, international communism, whose leaders have in two score years seized control of all or parts of 17 countries, with nearly 1 billion people, over a third of the total population of the earth. The center of this conspiracy, Soviet Russia, has by the grimmest determination and harshest of means raised itself to be the second military and economic power in the world today. Its leaders never lose the opportunity to declare their determination to become the first with all possible speed.

The other great Communist power, Red China, is now in the early stages of its social and economic revolution. Its leaders are showing the same ruthless drive for power and to this end are striving for ever increasing economic output. They seem not to care that the results—which thus far have been considerable in materialistic terms—are built upon the crushed spirits and the broken bodies of their people.

The fact that the Soviet Union has just come through a great revolutionary process to a position of enormous power and that the world's most populous nation, China, is in the course of tremendous change at the very time when so large a part of the free world is in the flux of revolutionary movements, provides communism with what it sees as its golden opportunity. By the same token freedom is faced with difficulties of unprecedented scope and severity—and opportunity as well.

Communism exploits the opportunity to intensify world unrest by every possible means. At the same time communism masquerades as the pattern of progress, as the path to economic equality, as the way to freedom from what it calls "Western imperialism," as the wave of the future.

For the free world there is the challenge to convince a billion people in the less developed areas that there is a way of life by which they can have bread and the ballot, a better livelihood and the right to choose the means of their livelihood, social change and social justice—in short, progress and liberty. The dignity of man is at stake.

Communism is determined to win this contest—freedom must be just as dedicated or the struggle could finally go against us. Though no shot would have been fired, freedom and democracy would have lost.

This battle is now joined. The next decade will forecast its outcome.

The fourth reality is that the military position and economic prosperity of the United States are interdependent with those of the rest of the free world.

As I shall outline more fully below, our military strategy is part of a common defense effort involving many nations. The defense of the free world is strengthened and progress toward a more stable peace is advanced by the fact that powerful free world forces are established on territory adjoining the areas of Communist power. The deterrent power of our air and naval forces and our intermediate range missiles is materially increased by the availability of bases in friendly countries abroad.

Moreover, the military strength of our country and the needs of our industry cannot be supplied from our own resources. Such basic necessities as iron ore, bauxite for aluminum, manganese, natural rubber, tin, and many other materials acutely important to our military and industrial strength are either not produced in our own country or are not produced in sufficient quantities to meet our needs. This is an additional reason why we must help to remain free the nations which supply these resources.

The challenge that confronts us is broad and deep—and will remain so for some time. Yet our gravest danger is not in these external facts but within ourselves—the possibility that in complacent satisfaction with our present wealth and preoccupation with increasing our own military power we may fail to recognize the realities around us and to deal with them with the vigor and tenacity their gravity requires.

We have the national capacity and the national program to surmount these dangers and many more. We have the strength of our free institutions, the productivity of our free economy, the power of our military forces, a foreign policy dedicated to freedom and respect for the rights of others, and the collective strength of our worldwide system of alliances.

The effectiveness of all these in meeting the challenge confronting us is multiplied by our mutual security program—a powerful and indispensable tool in dealing with the realities of the second half of the 20th century.

I should like to outline how the principal elements of this program will serve the vital interests of our country in fiscal year 1960.

THE MUTUAL SECURITY PROGRAM FOR FISCAL YEAR 1960

The mutual security program which I propose for fiscal year 1960 is in the same pattern and has the same component parts as the program which the Congress enacted at the last session. To carry forward this program I ask $3,929,995,000.

I ask these funds to attain the two basic objectives of the mutual security program: military security and economic and political stability and progress.

THE MILITARY SHIELD

In view of the maintenance by the Communists of armed force far beyond necessary levels and the repeated evidence of willingness to use a portion of that force where the Communist leaders believe it would be a successful means to a Communist end, it is rudimentary good sense for the peoples of the free

nations to create and maintain deterrent military strength. We do this not through choice but necessity. It is not in our nature to wish to spend our substance on weapons. We would like to see these outlays shifted to the economic benefit of our own Nation and our friends abroad striving for economic progress.

Because the need for military strength continues, we seek to build this strength where it can most effectively be developed, deploy it where it can most effectively be used and share the burden of its cost on as fair a basis as possible. To this end, we and over 40 other nations have joined together in a series of security pacts. Some of our allies and close friends have joined in other supporting agreements. We have also made certain individual undertakings such as the Middle East resolution.

Each of the free nations joined in this worldwide system of collective security contributes to the common defense in two ways: through the creation and maintenance of its individual forces; through the support of the collective effort.

For our own military forces, which form a major element in the total security pattern, I have asked the Congress to make available $40.85 billion, to which must be added approximately $2.8 billion for atomic programs, largely for defense purposes. For our contribution of military materiel and training assistance to the collective security effort, I now ask the Congress to make available $1.6 billion. This amount is far below that needed for our share of the cost of improving, or even providing essential maintenance for the forces of our allies. It is a minimum figure necessary to prevent serious deterioration of our collective defense system.

These two requests, one for our own defense forces, the other for our share in supporting the collective system, are but two elements in a single defense effort. Each is essential in the plans of the Joint Chiefs of Staff for our national security. Each is recommended to you by the same Joint Chiefs, the same Secretary of Defense, and the same Commander in Chief.

Dollar for dollar, our expenditures for the mutual security program, after we have once achieved a reasonable military posture for ourselves, will buy more security than far greater additional expenditures for our own forces.

Two fundamental purposes of our collective defense effort are to prevent general war and to deter Communist local aggression.

We know the enormous and growing Communist potential to launch a war of nuclear destruction and their willingness to use this power as a threat to the free world. We know also that even local aggressions, unless checked, could absorb nation after nation into the Communist orbit—or could flame into world war.

The protection of the free world against the threat or the reality of Soviet nuclear aggression or local attack rests on the common defense effort established under our collective security agreements. The protective power of our Strategic Air Command and our naval air units is assured even greater strength not only by the availability of bases abroad but also by the early warning facilities, the defensive installations, and the logistic support installations maintained on the soil of these and other allies and friends for our common protection.

The strategy of general defense is made stronger and of local defense is made possible by the powerful defensive forces which our allies in Europe, in the Middle East, and the Far East have raised and maintain on the soil of their homelands, on the borders of the Communist world.

These military forces, these essential bases, and facilities constitute invaluable contributions of our partners to our common defense. On our part we contribute through our military assistance program certain basic military equipment and advanced weapons they need to make their own military effort fully effective but which they cannot produce or afford to purchase.

As we move into the age of missile weapons, this plan of collective security will grow in importance. Already intermediate range ballistic missiles are being deployed abroad. Our friends on whose territory these weapons are located must have the continued assurance of our help to their own forces and defense in order that they may continue to have the confidence and high morale essential to vigorous participation in the common defense effort.

The funds I now ask for military assistance are to supply to these partners in defense essential conventional weapons and ammunition for their forces and the highly complex electronic equipment, missiles, and other advanced weapons needed to make their role in the common defense effective.

As already pointed out these funds are asked on a minimal basis. Continuation of a sufficient flow of materials and of sufficient training for the year can be attained only by some additional cannibalizing of the pipeline, already reduced to a point where flexibility is difficult.

To summarize, through the mutual security program our friends among the free world nations make available to us for the use of our forces some 250 bases in the most strategic locations, many of them of vital importance. They support ground forces totaling more than 5 million men stationed at points where danger of local aggression is most acute, based on their own soil and prepared to defend their own homes. They man air forces of about 30,000 aircraft of which nearly 14,000 are jets, 23 times the jet strength of 1950 when the program started. They also have naval forces totaling 2,500 combat vessels with some 1,700 in active fleets or their supporting activities.

Over the years of our combined effort, these allies and friends have spent on these forces some $141 billion, more than 6 times the $22 billion we have contributed in military assistance. During calendar year 1958 they contributed $19 billion of their own funds to the support of these forces. On our part we have created and maintain powerful mobile forces which can be concentrated in support of allied forces in the most distant parts of the world. We know it would be impossible for us to raise and maintain forces of equal strength and with the immeasurable value of strategic location. Without the strength of our allies our Nation would be turned into an armed camp and our people subjected to a heavy draft and an annual cost of many billions of dollars above our present military budget.

Because the military assistance program is a vital part of our total defense, and to be certain that it serves its intended purpose fully and effectively, I have appointed a bipartisan committee of prominent Americans of the highest competence to examine this program and its operation thoroughly. I have asked them to make a report of their findings on the program, including its proper balance with economic assistance. Since its formation in late November of last year, the Committee has been vigorously pursuing its study, including personal visits to all major areas where military assistance is being rendered. The committee has already indicated to me that it will recommend an increase in the level of commitments for vital elements of the military assistance program, primarily for the provision of weapons to the NATO area. I expect to receive its written interim report shortly. I will, of course, give this report my most careful attention and will then make such further recommendations as are appropriate.

MAINTAINING ECONOMIC STABILITY

While our own and our allies' military efforts provide a shield for freedom, the economic phases of our mutual security program provide the means for strengthening the stability and cohesion of free nations, limiting opportunities for Communist subversion and penetration, supporting economic growth and free political institutions in the newly independent countries stimulating trade, and assuring our own Nation and our allies of continuing access to essential resources.

Two of these programs, defense support and special assistance, are specifically directed toward helping maintain order, stability, and, in certain countries, economic progress, where these are of material importance to the welfare of the United States itself.

Defense support: For most of our allies and friends the cost of the share which they bear of the common defense effort constitutes a heavy burden on their economies. Our NATO allies in Western Europe bear this entire economic burden themselves, receiving from us only advanced weapons and other essential items of military equipment and certain training. But for others the burden of defense vastly exceeds their limited resources. They, therefore, are forced to turn to us for economic help in maintaining political and economic stability.

We supply this assistance through our defense support program to 12 nations in which we are helping to arm large military forces. Eleven of these nations—Greece, Turkey, Iran, Pakistan,

Thailand, Laos, Cambodia, Vietnam, the Philippines, the Republics of China and Korea—lie along or are narrowly separated from the very boundaries of the Sino-Soviet bloc, subjected daily to the pressures of its enormous power. Several of them are also the sites of major U.S. military installations. The twelfth, Spain, is the strategically located site of other bases used by the United States. Together, these 12 nations are supporting 3 million armed forces—nearly one-half of the total forces of the free world.

Despite their proximity to Communist forces, most of these nations have pledged themselves to the worldwide collective defense plan. Greece and Turkey are among our NATO allies. Pakistan, Thailand, and the Philippines are among our SEATO allies and Cambodia, Laos, and Vietnam are protected through SEATO. Turkey, Iran, and Pakistan are active members of the Baghdad Pact which forms a connecting link of free world defenses between NATO and SEATO. Korea, the Republic of China, and the Philippines are joined with us in special mutual defense agreements.

For defense support, to make possible the needed contributions of these 12 nations to the common defense, I ask $835 million. I ask the Congress to recognize these economic needs of our partners and to provide the full amount I request.

Over two-thirds of this sum will be used for Turkey, Vietnam, Taiwan, and Korea. These courageous and strategically located nations—three of them the free areas of divided nations—are directly faced by heavy concentrations of Communist military power. Together they contribute nearly 2 million armed forces in the very front lines of the free world's defenses. These nations depend for survival on our defense support program. The remaining third of the funds will be for the eight other nations which rely on this help to enable them to make their valuable contributions to the common defense without serious harm to their economies.

These nations are contributing heavily to the defense effort in keeping with their abilities. Reducing the defense support we provide them will compel a reduction in the forces we wish them to maintain in our common defense or place a heavy additional burden on the already low standards of living of their people.

Special assistance: There are a number of other nations and areas of the world whose need is so great and whose freedom and stability are so important to us that special assistance to them is essential. In North Africa, for example, the newly independent Arab nation, Tunisia, is struggling to improve the economic and social conditions of its people while under strong external pressures. Its neighbors, Morocco and Libya, are also striving to build economic progress upon their newly acquired political independence. Another new nation, the Sudan, is an important link between the Arab world and rapidly growing central Africa and is intently working to maintain its independent course of progress in the face of strong Communist and other outside pressures. These nations are all new outposts of freedom in whose success we are deeply interested.

During the last year, as I have mentioned, Jordan has been subjected to severe pressures. Should Jordan be overwhelmed, the peace and stability of the Middle East would be endangered. But with its very limited internal resources, Jordan desperately needs continued substantial outside help.

West Berlin is a solitary outpost of freedom back of the Iron Curtain. In addition to the firm support which we and our NATO allies have assured West Berlin in the face of current Soviet threats, it is important that we show our support of its people by continuing our economic assistance to the beleaguered city.

Programs for health: I have on several occasions during the recent past sought to focus public attention on the great opportunity open to the United States in the field of health. The United States will continue to support and promote the accelerating international fight against disease in the coming fiscal year. The great campaign to eradicate the world's foremost scourge, malaria, is moving into its peak period of activity and need for special assistance funds. Of more than a billion people formerly exposed to the disease, half have now been protected and the movement is gaining strength and momentum as a true international effort. The substantial progress of this campaign as well as modern medical potential generally have opened new vistas of the conquest of mass disease through pooling of efforts.

I ask the Congress to make available funds to continue the program for development of medical research programs begun last year by the World Health Organization with the help of a grant from the United States. I also propose that the United States explore whether practical and feasible means can be found whereby progress can be made toward equipping those nations whose needs are greatest to provide in a reasonable time pure drinking water for their people as a method of attack on widespread waterborne diseases.

Added to the health programs now being carried on by our bilateral programs and through our voluntary contributions to the United Nations, these new programs will raise the health activities proposed for fiscal year 1960 under the mutual security program to a total value of some $84 million, exclusive of loans by the Development Loan Fund in this field. The total effort of the United States in the field of international health, including among other activities those conducted by the Department of Health, Education, and Welfare, will approximate $100 million.

For the nations I have mentioned and several others, for West Berlin, for such programs as those for health, for support to certain of our American sponsored schools abroad and for our contribution to the United Nations Emergency Force I ask $272 million in special assistance funds. I believe that the close examination which I expect the Congress to give each of these special needs will show that this request is conservative.

AIDING ECONOMIC PROGRESS

The request for funds for defense support and special assistance which I have outlined thus far are directed primarily at maintaining political and economical stability. But in our dynamic world of multiple revolutions this is far from enough.

In many nations of Asia and Africa per capita incomes average less than $100 a year. Life expectancies are half those of the more advanced nations. Literacy averages 25 percent. Affected by the revolutionary drives which are sweeping their regions, the peoples of the areas will tolerate these conditions no longer—and they should not. They are intently determined to progress—and they deserve to do so. If they cannot move forward, there will be retrogression and chaos, the injurious effects of which will reach our own shores. These newly independent peoples look to their present generally moderate governments for leadership to progress. If they do not find it, they will seek other leadership, possibly extremists whose advent to power would not only endanger the liberties of their own people but could adversely affect others, including ourselves.

Above all, these people must have hope that they can achieve their economic goals in freedom, with free institutions and through a working partnership with other citizens of the free world.

The leaders of the Soviet Union and Communist China are intently aware of the great revolutionary surges in these less developed areas, many of which are on the borders of the Communist bloc. Seeing in these new trends a historic opportunity, they have reversed their attitude of hostility to all nations not under their direct control. Five years ago they entered on a great diplomatic and economic campaign of wooing the new nations of Asia and Africa, even attempting to push their drive into Latin America. I reported on this campaign of trade and aid in my message to the Congress last year. It has increased in intensity in the intervening time. Communist bloc military and economic credits to 17 selected nations exceeded a billion dollars in 1958 alone, bringing the present total to $2.4 billion. The number of technicians supplied to 17 countries of Asia and Africa rose from 1,600 in 1957 to 2,800 in 1958.

Our own programs of technical cooperation and capital assistance are not mere responses to Communist initiatives. The reverse is true. This year will mark the 10th anniversary of our point 4 program. Capital assistance for development has been flowing to nations needing our help for many years. Even if the Communist bloc should revert tomorrow to its previous icy treatment of all free peoples, we would continue the warmth of our interest in and help to their determined efforts to progress.

Nevertheless, it is imperative that we understand the real menace of the Communist economic offensive. The great contest in half the globe, the struggle of a third of the world's people, is to prove that man can raise his standard of living and still remain free—master of his individual destiny and free to choose those who lead his government. The

Communist economic offensive presents the grave danger that a free nation might develop a dependence on the Communist bloc from which it could not extricate itself. This must not happen. We and other nations of the free world must provide assurance that no nation will be compelled to choose between bread and freedom.

The United States is determined to do its part in providing this assurance. For this purpose, in addition to channels of private investment and existing financing institutions, we have created two carefully designed instruments of national policy: the technical cooperation program and the Development Loan Fund.

Technical cooperation: To carry on our technical cooperation program some 6,000 skilled American men and women are now working in 49 countries and 9 dependent territories which have asked our help. They are advising high officials on problems of administering new governments. They are helping farmers raise their incomes by teaching them better methods of cultivation, irrigation, and fertilization and by introducing more productive seeds, poultry, and livestock. They are planning with local scientists for uses of atomic power and isotopes. They are attacking disfiguring and debilitating diseases and helping to increase the health and vigor of untold millions. They are helping to organize the educational systems which will bring literacy and the knowledge which is the power for progress.

In order to transfer our modern technical knowledge even more effectively, we will bring next year over 10,000 of the rising leaders of the less developed areas to study in the United States or in specially developed training programs in other countries.

To provide for the work of our technicians abroad and for these training programs I ask $179.5 million for fiscal year 1960. The increase in this sum over the current year is to expand programs recently begun in the newly independent and emerging countries of Africa, to intensify activity in Asian nations and to augment substantially cooperative programs with countries of Latin America.

I also ask $30 million to be available for our contribution to the companion technical cooperation and special projects programs of the United Nations, initiated by our own Government. I anticipate that increasing contributions by other members in the year 1960 will call for this increased contribution on our part.

As in recent years, I believe we should continue our annual contribution of $1.5 million to the technical cooperation program of the Organization of American States.

The Development Loan Fund: Administrative and technical skills, though essential to economic growth, cannot of themselves make possible the rate of progress demanded of their governments by the peoples of the newly independent nations. For this progress they must have capital—capital for the roads, telecommunications, harbors, irrigation, and electric power which are the substructure of economic progress and for the steel mills, fertilizer plants, and other industries which are fundamental to general economic growth.

Just as in the early decades of our own national development we depended upon the more highly developed nations of that period—England, France, and others—for capital essential to our growth, so do the new nations of this era depend on us and others whose economies are well established.

Two years ago the Congress, the executive branch, and several distinguished private organizations reexamined the needs of the newly independent nations for outside development capital and of the then existing sources. The independent but unanimous conclusion of these studies was that existing sources were and for the foreseeable future would be inadequate to meet even the most pressing needs. They recommended that there be established a new institution to provide long-term credits on flexible terms.

In the light of these findings, I recommended to the Congress and it established the Development Loan Fund, an agency of the U.S. Government especially designed to advance loans on a business-like basis for sound projects which cannot find financing from private or established governmental sources.

The Development Loan Fund in its little more than a year of active operation has established the sound and useful position that was foreseen for it. In this short time it has taken under consideration $2.8 billion in screened requests for loans. It has later determined that some $600 million were unacceptable or more appropriate for private or other public financing. Of its total capital of $700 million thus far made available by the Congress, it had by mid-February 1959, committed $684 million for loans to projects in 35 countries. For all practical purposes it is now out of funds for further loan commitments and has before it applications totaling over $1.5 billion with more being received almost daily.

In order that the Fund may continue to meet the most urgent needs of the nations depending on us, I have asked the Congress for a supplemental appropriation of $225 million to be available in the fiscal year 1959. This appropriation is under authorizations previously made but not used.

When I made my original recommendation to the Congress in 1957 for the establishment of the Development Loan Fund I urged that it be provided with capital for 3 years of operation and stated that based on observation of its progress within that period I would ask for longer term capitalization commencing in fiscal year 1961. The Congress chose to authorize capital initially for 2 years of operation. I now ask that the Congress authorize and appropriate $700 million to become available in fiscal year 1960, the third year of the fund. This sum will allow the Fund a level of activity no higher than it established in its first year of operation.

Consideration should continue to be given to capitalization procedures that will allow better long-range planning.

Private investment: These governmental programs of technical cooperation and capital financing of course only augment the investment in progress which comes from private sources. But they are indispensable and probably will be for a number of years because private investment, though very significant in the Western Hemisphere, does not and cannot in the near future be expected to supply more than a fraction of the capital needed by the new nations of Asia and Africa.

In order to encourage increased private investment in these areas, our Government has already undertaken a system of guarantees against loss from nonconvertibility of foreign currency receipts and from expropriation, confiscation, and war. To further stimulate such investment, I now request that legislation be enacted to allow similar guarantees against risks of revolution, insurrection, and related civil strife. I propose also that the Congress double the availability of such guarantees.

CONTINGENCY FUND AND OTHER PROGRAMS

The experience of this year has shown, as in the past, that there will arise each year contingencies for which funds will be urgently needed—but which cannot be foreseen at all or with sufficient clarity to program in advance. For the current year I asked $200 million for such eventualities. Heavy demands, arising from the crises in the Middle East and from needs elsewhere, have already been made on the $155 million appropriated—with several months of the fiscal year remaining. I still believe that $200 million is the smallest sum which safety and prudence recommend and I ask that this sum be provided for fiscal year 1960.

I recommend that we continue our support of the United Nations Children's Fund, our help in the resettlement of refugees from communism, our program of atoms-for-peace, and certain other small programs we are now engaged in. The International Cooperation Administration will need an increase in its administrative funds, particularly to help obtain more persons of high qualifications for service abroad and to strengthen our representation at key posts in Africa and Latin America. For all these purposes I ask $112 million.

SOME FISCAL CONSIDERATIONS

The total sum I request for the mutual security program for fiscal year 1960, $3,929,995,000 is slightly less than I asked last year. Each category and item in it has been weighed in terms of the contribution it will make to the achievement of the important objectives the program is designed to serve. The total amount is well under 1 percent of the gross national product our country will enjoy in the coming year. It is approximately 5 percent of our national budget. The greater part will go for military equipment to our allies and for economic support directly related to defense. The remainder, for aid to the economic growth we are most anxious to promote amounts to less than 2 percent of our national budget, under one-third of 1 percent of our national production. At the end of the present fiscal year the military assistance pipeline will be at the

lowest level in its history and will be further reduced by next year's expenditure which will substantially exceed the new appropriation I am now asking. The economic assistance pipeline will, as in recent years, be barely enough to keep the program flowing without serious interruption.

The true measure of this national security program is what we have gotten and will get for our expenditures and what the cost would be without it. Over the years we have received returns many times the value of our investment.

Our first great work, the Marshall plan, cost less than projected, ended on time, and revived Western Europe from the destruction of the war to a group of thriving nations, now among our best customers and strongest allies, many of whom are now joining with us in assistance to the newly independent nations.

Our military and economic aid has been indispensable to the survival and gradual progress of nation after nation around the perimeter of Asia from Greece to Korea and others in Africa and our own hemisphere. When I hear this program described as a giveaway or aid to foreigners at the expense of domestic programs, I wonder what sort of America we would have today—whether any funds would be available for any domestic programs—whether all of our substance would not today be devoted to building a fortress America—if we had not had such a program: if the key nations of Europe had been allowed to succumb to communism after the war, if the insurrectionists had been allowed to take over Greece, if Turkey had been left to stand alone before Soviet threats, if Iran had been allowed to collapse, if Vietnam, Laos, and Cambodia were now in Communist hands, if the Huks had taken control in the Philippines, if the Republic of Korea were now occupied by Communist China.

That none of these tragedies occurred, that all of these nations are still among the free, that we are not a beleaguered people is due in substantial measure to the mutual security program.

CONCLUSION

The realities of this era indicate all too clearly that the course of our country will be deeply affected by forces at work outside our borders. These forces if left to exploitation by extremists will inevitably lead to changes destructive to us. Yet with wisdom and tenacity it lies within our power to frustrate or to shape these forces so that the peoples directly concerned and our own Nation may be benefited.

We cannot safely confine Government programs to our own domestic progress and our own military power. We could be the wealthiest and the most mighty Nation and still lose the battle of the world if we do not help our world neighbors protect their freedom and advance their social and economic progress. It is not the goal of the American people that the United States should be the richest Nation in the graveyard of history.

In the world as it is today—and as it will be for the foreseeable future—our mutual security program is and will be both essential to our survival and important to our prosperity. It not only rests upon our deepest self-interest but springs from the idealism of the American people which is the true foundation of their greatness. If we are wise we will consider it not as a cost but as an investment—an investment in our present safety, in our future strength and growth, and in the growth of freedom throughout the world.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *March 13, 1959*.

COMMITTEE ON WAYS AND MEANS

Mr. MILLS. Mr. Speaker, I ask unanimous consent that the Committee on Ways and Means may have until midnight tonight to file a report, including any supplemental views, on the bill H.R. 5640.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

ON THE QUESTION OF SUBSIDIES

Mr. JONES of Missouri. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. JONES of Missouri. Mr. Speaker, we hear a lot about subsidies these days, and most of the criticism appears to be directed at the so-called subsidies to farmers. Some of those who have been most vocal in their criticism appear to have little conception of what a subsidy is, and have confused loans which are repaid with interest as being subsidies.

I have just read, Mr. Speaker, where the Federal Maritime Board has announced that the American Export Lines will get a construction subsidy of 48.3 percent of the cost of four new cargo vessels. According to the announcement, the subsidy is based on comparative costs in Japanese shipyards for vessels of similar size and speed.

To be specific, this one company will receive a subsidy in excess of $20 million for four ships which will be constructed by a California shipbuilding corporation, the low bidder on four ships costing $10,894,997 each, whereas the Board determined that vessels of the type planned for American Export Lines would cost approximately $5,555,000 each if built in Japan.

At the same time that one department of this administration is approving a subsidy of more than $20 million for just one company of an important and widespread industry, another branch of the Government, with the approval of the Secretary of Agriculture has approved the manipulation of the parity index in such a way as to take from one segment of American agriculture, namely the cotton producers of this Nation, some $60 million.

Without criticizing the Federal Maritime Board for looking after the interests of those it has the responsibility of representing, I would like to ask who in this administration is looking after the best interests of the farmer? Certainly, it is not the Secretary of Agriculture.

DAIRY PRICE SUPPORTS

Mr. BYRNES of Wisconsin. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. BYRNES of Wisconsin. Mr. Speaker, everyone in the Nation's dairyland will be pleased at the announcement of the Secretary of Agriculture yesterday that current dollar support prices for manufacturing milk and butterfat will be continued through the marketing year which begins on April 1.

It is particularly pleasing to note that this action was based upon a decided improvement in the dairy picture during the current marketing year. Milk production is down. Total use of milk products has increased, and Government purchases have been substantially less.

The support prices announced by the Secretary represent an increase in the support rate to 77 percent, based on the March parity price, from the current 75 percent level.

This action by the Secretary gives the lie to those who have so loudly been proclaiming that his only interest is in driving farm prices lower. The Secretary's goal is to develop markets for farmers by moving farm products into consumption rather than Government warehouses, and his action yesterday is thoroughly consistent with that objective.

DIVERSION OF WATER FROM LAKE MICHIGAN

Mr. BLATNIK. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 1) to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 1, with Mr. SISK in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday the gentleman from Minnesota [Mr. BLATNICK] had 44 minutes remaining, and the gentleman from Washington [Mr. MACK] had 44 minutes remaining.

The Chair recognizes the gentleman from Minnesota [Mr. BLATNIK].

Mr. BLATNIK. Mr. Chairman, I yield 4 minutes to the gentleman from Ohio [Mr. COOK].

Mr. COOK. Mr. Chairman, I am opposed to the passage of H.R. 1, princi-

pally because of its effect on navigation. Coming from a district which borders Lake Erie and contains some of the largest industrial ports on the Great Lakes, any proposal which would result in a decrease in the shipping so vitally necessary to our economy must be vigorously fought.

I am sympathetic with the needs of the Chicago area for the proper disposal and treatment of sewage wastes but it is not fair for one city to use the natural resources of the Great Lakes to solve a problem when no other city does so.

H.R. 1 would provide for a diversion of 1,000 cubic feet per second at Chicago in addition to the present diversion of 1,500 cubic feet per second plus domestic pumpage. This amount may not sound very large to the layman but measured in terms of gallons it would amount to 236 billion gallons per year. The present diversion alone is about 3,300 cubic feet per second made up of the 1,500 cubic feet per second permitted under a court decree and the estimated average annual domestic pumpage which amounts to about 1,800 cubic feet per second. Adding the additional 1,000 cubic feet per second which would be legalized by H.R. 1 would make the total diversion 4,300 cubic feet per second, or more than 1,000 billion gallons a year. There is no question in my mind but that 1,000 billion gallons a year taken from Lake Michigan would cause an appreciable lowering in the lake levels.

Although the bill provides for temporary diversion of 1 year only, there is no question in the minds of those who oppose it that this would be a "foot in the door." In fact, even the last sentence in the bill states that—

> The report * * * shall contain recommendations with respect to continuing the authority to divert water from Lake Michigan into the Illinois Waterway.

In fact, there would be no point in making a study with an actual diversion unless it were to form the basis of a permanent diversion, which might even be of greater amount.

If we are to have an additional diversion of 1,000 cubic feet per second, with a subsequent lowering of lake levels, experts have stated that the carrying capacity of the United States and Canadian Great Lakes fleet would be reduced by more than 1 million tons a year with a direct economic loss to the vessel industry of better than $2 million per year. This is not hard to understand when we are told by shipping experts that 1 inch of difference in lake levels represents 100 tons of cargo per vessel. I have no breakdown as to what this loss would be for the three major harbors in my district, Ashtabula, Fairport Harbor, and Conneaut, but I am sure it could represent a substantial blow to the economy. The situation becomes particularly paradoxical when it is considered in the light of the tremendous sums of money which are being spent to provide for the St. Lawrence Seaway and to deepen the connecting channel of the Great Lakes. The U.S. portion alone of the cost of the St. Lawrence Seaway is $140 million and the cost of dredging the connecting channels is about the same, making a total of almost $300 million without even considering the proposed deepening of the various harbors of the Great Lakes to accommodate the deeper draft traffic. The total investment for navigation might easily run into the neighborhood of a half a billion dollars. Should this huge investment be jeopardized by permitting the diversion of water for the use of one city?

I have not mentioned the losses in hydroelectric power production which the experts have testified will occur on the St. Lawrence River and at Niagara to both the Canadian and U.S. plants, since they do not directly affect my district, but they certainly should be taken into account in reaching a decision on H.R. 1.

As a final argument, I understand the Canadian Government has recently expressed its opposition to this diversion. It would be most unwise, in my opinion, for the United States to permit unilaterally such a diversion without first negotiating with the Canadian Government and arriving at some equitable arrangement for payment of damages to Canada.

For the foregoing reasons, I am obliged to oppose the passage of H.R. 1.

Mr. MACK of Washington. Mr. Chairman, I yield such time as he may require to the gentleman from Pennsylvania [Mr. VAN ZANDT].

Mr. VAN ZANDT. Mr. Chairman, my opposition to H.R. 1 is based on the following letter dated February 9, 1959, from Attorney General Anne X. Alpern, of the Commonwealth of Pennsylvania, which I should like to read at this time:

COMMONWEALTH OF PENNSYLVANIA,
DEPARTMENT OF JUSTICE,
Harrisburg, February 9, 1959.

DEAR CONGRESSMAN: I wish to call to your attention the very serious adverse effects upon Pennsylvania of H.R. 1, introduced into the House by Mr. O'BRIEN of Illinois and referred to the Committee on Public Works. This bill would permit the Metropolitan Sanitary District of Chicago to divert out of the Great Lakes 2,500 cubic feet per second of water for a period of 12 months.

At the present time, the Metropolitan Sanitary District diverts 3,500 cubic feet per second from the Great Lakes Basin pursuant to a decree of the U.S. Supreme Court, in addition to diverting an unknown quantity of water for domestic pumpage. The right to divert domestic pumpage is now being tested before the U.S. Supreme Court by the Commonwealth of Pennsylvania and the other Great Lakes States.

The additional diversion which would be authorized by this bill would lower the level of Lake Erie 1½ to 2 inches. While this may appear to be but a slight matter, it would affect adversely all riparian landowners and seriously interfere with the operations of the Port of Erie. Much effort and money have been expended to maintain a deep channel at this port. The lowering of the lake level vitiates this work.

Moreover, the lowering of the lake level would result in a loss of 1 to 1½ million tons of shipping each year for each inch by which the lake level is lowered. The Great Lakes barges, which carry so much of the commerce of this region, are loaded to the nearest inch. Consequently, the maintenance of lake levels is of utmost importance to the shipping industry and the commerce of the Great Lakes area. This commerce is a significant factor in Pennsylvania's economy.

The lowering of the lake level also affects the power potential at Niagara. Since a large section of Pennsylvania will be among the preferred users when the hydroelectric power is developed, this potential loss of cheap power also affects Pennsylvania adversely.

The diversion of water, one of our most precious natural resources, out of its watershed area in order to benefit some other area, constitutes a new and dangerous principle of law.

Very sincerely yours,

ANNE X. ALPERN,
Attorney General.

Mr. Chairman, as Attorney General Alpern states, if H.R. 1 is enacted the level of Lake Erie would be lowered from ½ to 2 inches and the loss to harbors, utilities, shipping, and so forth, would run into millions and millions of dollars. Since these losses represent a significant factor in Pennsylvania's economy, as a member of the Pennsylvania delegation in Congress I am unable to support H.R. 1.

Mr. MACK of Washington. Mr. Chairmain, I yield such time as he may desire to the gentleman from New York [Mr. OSTERTAG].

Mr. OSTERTAG. Mr. Chairman, I rise in opposition to H.R. 1, and ask unanimous consent to revise and extend my remarks. This bill would authorize the diversion of additional waters from the Great Lakes, St. Lawrence system. I have voted against this bill when it was previously before the House, and it is my intention to vote against it again. As a Representative from the great State of New York, I feel it is incumbent upon me to vigorously oppose any legislation which would deprive the people of the State of New York of their full and established rights in the natural resources of the Great Lakes, of Lakes Erie and Ontario and the Niagara and St. Lawrence Rivers. I cannot favor legislation that is designed to help the Metropolitan Sanitary District of Greater Chicago with its problem of sewage at the expense of the people of New York State or of the other Great Lakes States.

The Corps of Engineers has conducted a thorough study of this matter and has reported its findings. The corps' study shows clearly that increased diversion would have a very definite and harmful effect on navigation and power.

I would like to point out, Mr. Chairman, that the Government of the United States and the Government of the Dominion of Canada have both expended, and are expending, large sums of public funds in the development of the St. Lawrence Seaway. I believe that this development will be considerably injured if existing lake levels are impaired.

Further, diversion of water from the Great Lakes to other areas would not only materially injure the interests of 50 million people who today reside in the Great Lakes area and who are today the beneficiaries of this great natural resource, but would also reduce the amount of water available to the New York State Power Authority, which has recently put into operation its project on the St. Lawrence River and commenced construction of its project on the Niagara River to use all of the waters at Niagara Falls made available to the United States for power development under the 1950 treaty with Canada.

As Governor Rockefeller pointed out in his statement presented to the Public Works Committee, the New York State Power Authority is financing the abovementioned projects by borrowings without State or Federal credit. Its bonds are backed by the revenue it receives from the sale, at no profit, of electric power. These projects were financed on the basis that the power authority was entitled to use the flow of the Niagara and St. Lawrence Rivers undiminished, except as provided in the 1930 decree of the Supreme Court. Any reduction in the amount of water available for power will reduce the revenue to the power authority which necessarily will increase the cost of electricity to consumers. Thus, the monetary benefits which H.R. 1 will give to the Sanitary District of Greater Chicago will be paid in part by the people of the State of New York and this cost will exceed the entire benefit received by the Sanitary District of Chicago.

The Supreme Court has jurisdiction over water diversion. It can grant permanent or temporary relief to Chicago when the need is shown, and has done so. The Court, as recently as 1956, granted Chicago temporary increases in diversion. Obviously, only lack of merit keeps Chicago from going to the Court for the diversion authorized in this bill.

Mr. Chairman, in the interests of the people of New York State and the people of the Great Lakes States, I urge the defeat of H.R. 1. It is an unconstitutional deprivation of the rights of the people of those States. If there is a need for further sewage treatment by the city of Chicago, it is the responsibility of that great municipality.

Mr. MACK of Washington. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. BALDWIN], a member of the committee.

Mr. BALDWIN. Mr. Chairman, although because of the position taken by the Canadian Government, I feel it is necessary for me to oppose this bill. I want to be among those who recognize the very fine and diligent efforts that have been carried on by the gentleman from Illinois [Mr. O'BRIEN], the author of this bill. I would like also to recognize the diligent and able efforts by the gentleman from Illinois [Mr. KLUCZYNSKI] in our committee in pressing for enactment of this bill. As was pointed out yesterday, the Canadian Government has taken a position in opposition to this measure. There was some discussion yesterday as to whether the position of the Canadian Government was taken in good faith and whether it was stimulated by the Department of State. However, it seems to me, we have to accept the objection of the Canadian Government on its merits. It is a sovereign government and we have to consider that if it registered its objections in a proper message to our Government, these objections must be considered as being in good faith. There was some question raised yesterday as to whether under the treaty of 1909, the Canadian Government has the right, that is the legal right, to register objection to any diversion of water from Lake Michigan. Perhaps, the best way to determine the position of the Canadian Government on this point is to quote from its own message. I would like to quote one paragraph which appears on page 15 of the committee report. This is the second paragraph in the message submitted by the Canadian Government on February 20, 1959, to our State Department. This is what they say:

> While recognizing that the use of Lake Michigan water is a matter within the jurisdiction of the United States of America, it is the considered opinion of the Canadian Government that any authorization for an additional diversion would be incompatible with the arrangements for the St. Lawrence Seaway and power development, and with the Niagara Treaty of 1950, and would be prejudicial to navigation and power development which these mutual arrangements were designed to improve and facilitate.

These are the basis upon which the Canadian Government has founded its case in recording its objection to this bill. We are now, Mr. Chairman, at a period of time in our history when our relationship with other governments is very important to us. Last year we had some vivid demonstrations in South America of what happens when we neglect to some extent proper relationships with our sister countries in this hemisphere. These sister countries when they have found that they are neglected, have reacted adversely to us. That was demonstrated by numerous riots and other demonstrations last year during the trip of the Vice President of the United States to South America. Now we have had some of the same kind of things happen with Canada in the last year. We have had Canada pointing out that we have not given very careful consideration to their needs by some of our steps relative to tariffs. This bill is another case where Canada in good faith is reporting to us their views on an issue on which they feel that they are properly concerned. So the question is: Are we going to ignore these views or are we going to give proper consideration to a friendly nation immediately to the north of us whose good will in the years to come is very, very important to us.

I realize the interest of the city of Chicago in this bill, and they are rightly interested in it; they have a real problem; there is no question about it. I do not think we should minimize it.

Mr. O'HARA of Illinois. Mr. Chairman, will the gentleman yield?

Mr. BALDWIN. In just a moment, as soon as I complete my statement.

I do not think we should minimize that problem. At the same time we are at a critical stage of world problems, and the friendship of neighboring nations on this continent is extremely important to us. For these reasons it seems to me that the position of the Canadian Government, as far as my own personal vote is concerned, must prevail. I therefore feel I must vote against this bill.

I now yield to the gentleman from Illinois.

Mr. O'HARA of Illinois. I wonder if the gentleman would inform me whether our State Department regards the Dominion of Canada as part of the American hemisphere or as part of Europe; does the gentleman know?

Mr. BALDWIN. I am not a member of the State Department. I have never asked them that question.

Mr. O'HARA of Illinois. I think the gentleman would find out and it might interest him to learn that our State Department regards Canada as part of Europe, even to such an extent that in our Committee on Foreign Affairs the Inter-American Subcommittee does not have jurisdiction of Canada; Canada is under the jurisdiction of the European Subcommittee. With that knowledge perhaps the gentleman will begin to understand a little better the shifting position of Canada as regards what Chicago desperately needs at this time. The spirit of hemispheric solidarity, which would prevail if divorced from European influences, certainly would not permit Canada to be put in the position of blowing hot and cold on something so vital to the health and welfare of the people of Illinois and which if not done might result in a frightful plague of disease.

Mr. BLATNIK. Mr. Chairman, I yield such time as he may require to the gentleman from Pennsylvania [Mr. WALTER].

Mr. WALTER. Mr. Chairman, a moment ago my distinguished friend, the gentleman from Pennsylvania [Mr. VAN ZANDT], referred to a letter from the attorney general of Pennsylvania in which it was stated that the enactment of this legislation would result in a significant lowering of the level in Lake Erie. I asked for this time for the purpose of ascertaining whether or not the statements made by the attorney general of Pennsylvania are well founded.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. WALTER. I yield to the gentleman.

Mr. YATES. As I remember the statement that was made by the attorney general of Pennsylvania it was to the effect that the proposed study would result in lowering the level of Lake Erie by at least 2 inches.

Mr. VAN ZANDT. One to two inches.

Mr. YATES. This statement is an example of the misinformation which is being spread by opponents of the bill. It seeks to convey the impression that a permanent diversion is sought in this bill. That is not true.

The Corps of Army Engineers is an objective body and certainly has no ax to grind in connection with this bill. I now read from the report of the Corps in Washington dated May 1, 1958, entitled "The Effect on the Great Lakes and the St. Lawrence River of an Increased Diversion of 1,000 Cubic Feet Per Second by the City of Chicago for 1 Year," and from that report, paragraph 2, which is headed "Effects on Lake Outflows and Levels," I read the following: "Lakes Michigan-Huron, one-fourth of an inch," would be the resulting maximum lowering of the level.

"Lake Erie, three-sixteenths of an inch"—less than one-quarter of an inch.

"Lake Ontario, three-sixteenths of an inch."

There is no effect at all on Lake Superior.

You will remember the debate in the House both yesterday and today on what effect this will have on navigation be-

cause of the lowering of the levels. The Corps of Army Engineers in the same report states that the effects on navigation would be as follows:

The effect on navigation of lowering the levels of Lakes Michigan, Huron, and Erie would be small. The levels of Lakes Michigan and Huron would be lowered between 0.01 and 0.02 foot during two and a fraction navigation seasons; those of Lake Erie would be lowered by the same amount during one and a fraction navigation seasons.

These small temporary lowerings of lake levels, although they would tend to adversely affect navigation except during very high lake stages are not considered to have any measurable effect on Great Lakes navigation.

Mr. WALTER. I thank the gentleman.

The CHAIRMAN. The gentleman from Pennsylvania has consumed 3 minutes.

Mr. BLATNIK. Mr. Chairman, I yield 4 minutes to the gentleman from Wisconsin [Mr. FLYNN].

Mr. FLYNN. Mr. Chairman, it is with mixed emotions that I arise on behalf of the cities of Racine and Kenosha in the State of Wisconsin and on behalf of the State of Wisconsin as a whole to discuss with you the question of the request of the city of Chicago to divert 1,000 cubic feet of water per second from Lake Michigan into their sanitary canal.

My emotions are mixed because I know from firsthand experience, from observation and not from hearsay the disastrous effects upon Wisconsin that the present water diversion is having and I know the calamity that will befall my home State if Chicago is permitted to divert further water from the Great Lakes. On the other hand, there are in this body from the city of Chicago, Representatives appearing in favor of the diversion for whom I have the highest respect and admiration. Chicago being as close to my hometown as it is, I have a tendency to lovingly look upon it as my foster home. I have enjoyed many good times there. I have many friends and relatives living in that city. So it is with deep concern that I rise to protest to my friends and to point out to them that their proposal would cause lasting and irreparable harm running into untold multimillions of dollars to my home district and to the people living in the other congressional districts of Wisconsin and the Great Lakes States.

Instead of talking of the anticipated future damage as so many of my colleagues have done or about the Canadian objection which has been so emphatically stated in the record, or about whose pressure is affecting whom, let me discuss with you the untold and serious damage that already exists from present diversion. Damage which will be multiplied many times if further diversion were to be permitted. In this regard I might state that the city of Chicago already diverts 1,500 cubic feet of water per second for industrial use and 1,800 cubic feet of water per second for human consumption. This, with the consent and permission of the Supreme Court of our land. The Court through referees has studied the problem and realized that further water cannot be diverted without causing serious and irreparable harm to Chicago's neighbors. Chicago is now in effect appealing to this Congress from an adverse decision of the Supreme Court. This is an old trick that many astute lawyers have often tried. Today we even see reckless people who would abolish the Supreme Court in order that they might accomplish their end on matters where the Court does not agree with them. Fortunately the vast majority of Americans have full faith and confidence in the integrity, the ability, and the sincerity of the Highest Court in our land and they are willing to give full credence to its decisions and they are not willing to permit its authority to be weakened by those who would avoid its mandates.

The existing water diversion of 3,300 cubic feet per second in my home district, the First of Wisconsin, and in particular in the cities of Kenosha and Racine, has caused great damage. In Racine the deep river inlet of the harbor which should be used by deep-draft oceangoing vessels operating through the St. Lawrence Seaway has been lowered a total of 21 feet. Twice already existing pilings and piers have had to be driven further down for the reason that as originally installed with the drop in the water level, the pilings were exposed and as a result were deteriorating and the piers were so far above the water level that they could not be used. At the present rate, it will not be long until we again have to drive our pilings and piers along our river harbors and inlets further into the ground. The result is that nothing but the shallowest of boats could possibly navigate our harbor and we will not be able to accommodate deep-draft oceangoing vessels. This will be a tremendous loss in the years ahead for the reason that our greatest leaders have envisioned the St. Lawrence Seaway as a source of commerce, wealth, and new prosperity for the American heartland.

The entire concept of the waterway is based upon a deep-draft navigable channel to the sea. The channel, however, cannot be used unless we have harbors to load and unload our ships and 1 inch in the middle of the lake means many feet in the river inlets and harbors and means ruination of the harbor for shipping.

This is just one of the many losses it has caused. The rivers of my area, where, as a boy, I went swimming in 8 to 10 feet of water, have been caused to dry up in the summertime to a point where in many places you can walk across the creeks and river bottoms without getting your shoes wet. This is not an idle statement. It is a fact that exists largely because of existing diversion of water by Chicago.

In Kenosha where the city harbor authority built ramps along the river inlet to the harbor for the use of pleasure craft, we see today an awesome sight, and I can produce pictures to back this up, of boat ramps set high on the banks resting many feet above the water level of the harbor; absolutely no use to the boatowner. While this exists the water level continues to get ever lower. Imagine what will happen when another thousand cubic feet per second is removed from the Great Lakes by the city of Chicago.

Even these damages to my home district, which I presume are multiplied many times over in the other lake cities, are insignificant when compared to the damage that is caused by the inability to use these inland rivers for either commerce, shipping, or pleasure and because of the fact that the lowering of the water level in the rivers, in the harbors, and in the Great Lakes results in a general lowering of the water table for the entire area. Water cannot rise above its source, and after the water level goes down, so goes down the water table and I need not explain to those farmers among you the effect of an ever-lowering water table on agriculture.

Time does not permit me to protract into the future the many severe economic losses upon my district that the further diversion of water will make but may I close by admonishing you that the ramifications of Chicago's request are varied, are many and are serious, that it is a matter already in the hands of the Supreme Court of our Nation. A Court which has already granted Chicago all that she is entitled to and all that can be granted without irreparable harm being caused surrounding cities and foreign nations. Does this body want, under circumstances such as these, to reverse the decision of the Supremc Court, and in addition to the lawmaking power with which this Congress is vested to take over the law interpreting powers which is vested in the courts of our land.

In closing may I say that we of Wisconsin value deeply our friendship and our social and economic intercourse with Chicago and its citizens, but we find ourselves much in the position of the farmer who living peacefully side by side with his neighbor for 40 years and who regarded the neighbor's children as his foster children, finally after many years found himself in court with his neighbor fighting over a lot-line dispute over where the fence belonged on the back 40 acres. We find this dispute with Chicago most distasteful and we ask you in the interests of both Chicago and the Great Lakes' States and Canada, to give this matter your serious, your deep, your honest consideration, and do unto us as you would that we, under similar or like circumstances, would do unto you.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. FLYNN. I yield to the gentleman from Illinois.

Mr. YATES. Does the gentleman attribute this drop entirely to the diversion at Chicago?

Mr. FLYNN. Not entirely, but the great bulk of it is due to diversion at Chicago.

Mr. SCHERER. Mr. Chairman, will the gentleman yield?

Mr. FLYNN. I yield to the gentleman from Ohio.

Mr. SCHERER. The gentleman just stated that there is a diversion of 1,800 cubic feet per second for domestic pumpage at Chicago.

Mr. FLYNN. That is my understanding.

Mr. SCHERER. That is right. There is a 1,500 cubic feet per second diversion for navigation purposes.

Mr. FLYNN. That is correct.

Mr. SCHERER. If this additional 1,000 cubic feet per second is granted, that will make a total diversion for the city of Chicago of 4,300 cubic feet per second.

Mr. FLYNN. That is right.

Mr. SCHERER. Does the gentleman know how much that is in gallons per day? That is 286 million gallons per day, which is twice the flow of the Delaware River.

Mr. FLYNN. I thank the gentleman for his contribution.

Mr. MACK of Washington. Mr. Chairman, I yield 5 minutes to the distinguished gentlewoman from Illinois [Mrs. CHURCH].

Mrs. CHURCH. Mr. Chairman, this is the fourth time that I have risen in this House to express the need not only of the city of Chicago but of what we call the Chicago urban area, and even farther, for this 1,000 cubic feet per second additional, which would result in an almost infinitesimal lowering of the lake level, as attested by the Army Engineers.

I am not first of all going to review the history of the legislation or of our efforts; I am not going into the technical points that are involved, though I think that we have them on our side; but I am going to speak first about one feature that has bothered me yesterday and so far today. I could understand that Ohio, a large part perhaps of Indiana, and New York State might be able to claim that the sanitation involved is a matter of so-called local interest to Chicago and its immediate environs.

But, as one whose district runs from the northern limits of the city of Chicago up to Wisconsin, it is incredible to me that any Congressman who has a district bordering on Lake Michigan, either in Michigan or Wisconsin, should fail to see the difficulties, the dangers, the dire effect that would come to his district, also, if pestilence hits Chicago because necessary and sufficient water is not allowed. Such danger, at the present moment, is not imminent, I hasten to say. I, too, have a district, I remind you, north of Chicago. There were one or two people in the northern part who once felt, perhaps, that this legislation was not needed; but they were soon converted when they realized that the population along the southern and southwestern end of Lake Michigan is contiguous and that the effects of anything that happened in Chicago would spread up right through my district to Wisconsin and even to Michigan, where so many Illinois people already own summer homes. I would like to say to the gentleman from Wisconsin that pestilence does not stop at the State line. If it should hit Waukegan, Zion, and Winthrop Harbor, it would soon be up in Kenosha and Racine. In addition, I have had close personal experience with varying lake levels of Lake Michigan. It has not been lake diversion which has caused the present lower level of Lake Michigan. I have been up in Wisconsin within the last 8 years when the lake level was so high that you could not find a mooring post for small boats in the harbors, that was not under water. I definitely feel, gentlemen, that we should keep this contest on a basis of fact and not on a basis of claiming that 1,000 cubic feet per second more could bring terrific damage to an area. Man cannot control nature, when it comes to lake levels; and what controls the level of Lake Michigan is very definitely the progress and the proceeds of natural action. No lake diversion at any spot on the Great Lakes could be held accountable for what has been fortunately a decrease from that recent time of high level during which we had to rescue people, with their goods and chattels, because Lake Michigan was exceeding its normal boundaries.

As I have said, this is the fourth time that I have joined with my colleagues from the Chicago area of the State of Illinois in pressing on this floor for enactment of legislation authorizing the testing of the effect of increased diversion of water from Lake Michigan into the Illinois Waterway. In the 82d Congress—and in each succeeding Congress—I have introduced a companion bill to that introduced by the gentleman from Illinois [Mr. O'BRIEN], the dean of the Illinois delegation; and I have once more this year introduced such companion bill to H.R. 1.

We who know full well the need of the State of Illinois for the proposed action are grateful to this House for its previous votes of approval on this legislation.

The need for this increased diversion has grown over these years during which we have sought enactment of the necessary legislation; and now, more than ever, we need prompt congressional action and prompt Presidential approval of H.R. 1.

As I have done in the past, I would emphasize particularly the need for increased water diversion in order to protect the health and life of the growing population in the Chicago area and along the Illinois Waterway.

The authorized diversion from Lake Michigan into the Illinois Waterway is still limited by law to only 1,500 cubic feet of water per second—despite the fact that there has been a population increase of well over 1 million people in the area since 1933, when the existing limit was originally set. At the time that the 1,500-cubic-feet limitation was set in 1933, it was stated in the report as follows:

> It does not appear possible to arrive at a conclusive determination whether this flow will afford suitable sanitary conditions on the waterway after the sewage purification plants at Chicago have been completed and placed in operation.

Since 1950, the Sanitary District of Chicago has been providing the complete treatment for substantially all of its sewage. However, the Sanitary District now testifies that there is serious pollution in the upper 50 to 60 miles of the Illinois Waterway and that there can be no marked improvement until more fresh water is available.

Competent authorities feel that the enactment of this legislation before us in this 86th Congress would be of great benefit to the people of Chicago and the State of Illinois in permitting an adequate study to be made of the effect of such increased diversion on both sanitation and navigation.

Furthermore, although it has been alleged by adversaries of the program that lake levels will be so materially reduced through such increased diversion as to effect and reduce hydroelectric power, the report sent by Major General Itschner, Chief of Engineers, U.S. Army, to the Secretary of the Army under date of January 29, 1957, stated that a temporary increased diversion of water from Lake Michigan into the Illinois Waterway would have very little if any effect as regards navigation and power production in the Great Lakes area. This opinion was similarly expressed in an earlier report, dated June 14, 1955, of the International Ontario Board of Engineers of the International Joint Commission.

I would point out, moreover, that this particular bill under discussion—H.R. 1—provides at this time only for a 1-year-trial period of actual increased diversion of 1,000 cubic feet per second in water diversion from Lake Michigan, in place of the 3-year period of increased diversion proposed in previous legislation.

I once again join with my colleagues from the Chicago area in hoping and expecting that H.R. 1 will not only receive congressional approval—but Presidential approval as well. I am, of course, hoping that as a first vital step, this House once again will give its prompt approval to this legislation which—I repeat—is vitally needed to help solve the sanitation problems of a rapidly expanding metropolitan area.

Mr. MACK of Washington. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. DOOLEY], a member of the committee.

Mr. DOOLEY. Mr. Chairman, I regret very much to be at issue with the distinguished chairman of my subcommittee, the gentleman from Minnesota [Mr. BLATNIK], and with the distinguished gentlewoman from Illinois [Mrs. CHURCH], but I rise in opposition to H.R. 1 because of the effect this experiment would have on the Niagara power project and because I believe it represents an imposition on the riparian rights of lake shore communities in this country and in Canada.

As Robert Moses, New York State's most distinguished hydroelectric power authority, said in a statement made through one of his assistants who testified for him before the Public Works Committee, "The diversion is unnecessary." He did not add, but he implied, that since the navigational requirements of the Illinois Waterway were met by the present cubic-feet-per-second flow, the additional flow now sought is actually to take care of sewage in the canal, the treatment of which should be properly provided for by the Sanitary District of Chicago.

Mr. Moses' other arguments are equally convincing. He claims that an additional flow of 1,000 cubic feet per second would deprive the power authority of legal and esential rights and put an unfair burden on the consumers of Niagara and St. Lawrence power.

It would set a precedent for actions which would adversely affect the power authority's interests as well as those of a large area of the Nation.

Also, it is debatable whether Congress has the authority to grant, as this bill would have it do, to the Metropolitan Sanitary District of Greater Chicago—at the expense of other interests in the Great Lakes-St. Lawrence system, including the interests of the power authority, its bondholders and its customers—this special privilege.

It would nullify the decisions of the International Joint Commission which have been approved by the Governments of the United States and Canada.

The power authority as a licensee of the Federal Power Commission for the construction of the St. Lawrence and Niagara power projects is entitled to use all the United States share of the St. Lawrence and Niagara Rivers water available for power. This means that the power authority has the right to use one-half of the available water of the St. Lawrence and one-half of the available water of the Niagara, less 5,000 cubic feet per second. On the basis of its licensed right to use such waters the power authority has constructed the St. Lawrence power project at a cost of $350 million, according to Mr. Moses, and has borrowed from private investors and is in the process of constructing the Niagara project at a cost of more than $700 million. Both projects are being financed without State or Federal credit. The power authority, a nonprofit public corporation, is entirely dependent upon the revenue from the sale of power to pay off its bonds. Any reduction in the amount of water available reduces the power which can be generated and sold and such loss of revenue must be borne by the power users.

In accepting its licenses, in financing these projects and in fixing the rates for the sale of power to cover the costs, the Power Authority relied on the decree of the Supreme Court of April 21, 1930, limiting the amount of water that can be diverted from the Great Lakes-St. Lawrence system at Chicago to 1,500 cubic feet per second in addition to domestic pumpage. That decision in *Wisconsin* v. *Illinois*, 281 U.S. 696, decreed that it was the power authority's licensed right to use the United States' share of the water available for power and the legal right of the State of New York as a downstream riparian State to benefit by the natural flow of the Niagara and St. Lawrence Rivers.

The full effect of the additional diversion at Chicago, which this bill would authorize would not be experienced in the Niagara and St. Lawrence Rivers for at least 4½ to 5 years. Under this bill there would be no increase in diversion for 18 months after it becomes law and it takes about 3 to 3½ years for a temporary diversion to reach its maximum effect after which the effect gradually diminishes over a period of 15 years. By the time such a diversion would reach its maximum effect both of the power authority's projects will be in full operation.

Moreover, under this bill the diversion is not required to be uniform. The only limitations are that the total annual average diversion shall not exceed 2,500 cubic feet per second as stated on page 2 of the bill, and no water shall be allowed to be diverted during times of flood.

This means that great quantities of water can be diverted during the dry season just so long as the total annual average does not exceed 2,500 cubic feet per second and that the maximum effect of such diversion will be felt in the Niagara and St. Lawrence Rivers 3 years later in the dry season when water is most needed for power development.

If, as made plain in the "Aide Memoire," dated January 6, 1958, setting forth Canadian views with respect to this additional diversion, the effect of the diversion is to be offset by diversions into the Great Lakes Basin from the Canadian Long Lac-Ogoki works, but such additional water diverted into the Great Lakes system is to be available only to Canadian interests, the power authority will suffer the full loss of the additional water diverted at Chicago.

The power authority has based its marketing arrangements on the historic flow of the Niagara and St. Lawrence Rivers, and on the sale of virtually all of the kilowatts produced in any one month. If the power authority is deprived of the historic flow of these rivers by a 1-year additional diversion at Chicago of 1,000 cubic feet per second and Canadian power interests do not share the loss, it will suffer a total revenue loss of $1,038,000.

Added diversion at Chicago will not benefit navigation in the Illinois Waterway. It will adversely affect navigation on the Great Lakes. It will benefit the Sanitary District. And it will adversely affect the power authority and its customers to a far greater extent than the benefit to the district. There is, therefore, a serious question whether Congress has the constitutional power to authorize such additional diversion. Proponents of the legislation are well aware of the history of the litigation which preceded and followed the decree of the U.S. Supreme Court on April 21, 1930, in *Wisconsin* v. *Illinois* (281 U.S. 696), which I mentioned previously, and Congress is conscious of the doubt which that litigation casts on the power to enact legislation having such consequences as I have indicated.

If not unconstitutional, it certainly is unfair to deprive navigation and downstream power interests of their rights solely for the monetary benefit of the Sanitary District of Chicago.

On July 2, 1956, the International Joint Commission issued an order setting forth a broad plan for the regulation of flows from Lake Ontario which had been approved by the Governments of Canada and United States. On July 14, 1958, it approved a method of regulation recommended by the International St. Lawrence River Board of Control. The criteria stated in the plan of regulation which had to be met by the method of regulation requires that the levels of Lake Ontario be controlled during navigation season. This criteria was based on the historic flows from the other Great Lakes. If the supplies of water are to be depleted by additional diversions at Chicago these determinations of the International Joint Commission will be nullified. This would give rise to "questions of matters of difference" between the United States and Canada "involving the rights, obligations, or interests of either in relation to the other or to the inhabitants of the other," because it would affect Canadian navigation and power interests downstream from Lake Ontario. Therefore, the question of the effect of an added diversion at Chicago is one which should be referred to the International Joint Commission pursuant to the provisions of article IX of the Boundary Waters Treaty of 1909.

In the light of all the circumstances and particularly in view of the effect additional diversion would have on New York's power project, I vigorously oppose this increase and hope it will meet the same legislative fate as it did on previous occasions. To enact this bill into law will be to impose on the riparian rights of down lake residents, and also to deprive an important power project of waterpower and revenue.

Mr. KLUCZYNSKI. Mr. Chairman, I yield 2 minutes to the gentleman from Pennsylvania [Mr. DENT].

Mr. DENT. Mr. Chairman, I would not inject myself into this debate except that I served for many years in Pennsylvania as chairman of the Great Lakes Compact Committee and, therefore, have had some experience with this problem before.

If this were a permanent diversion we were making today I would necessarily have to oppose it, but I think the gentlewoman from Illinois put her finger on the main argument that should be discussed here, and that is the direct need of the city of Chicago at this moment. I doubt very much, and I say this from knowledge of the past, if Chicago will be able to meet the need it will have 1 year from now without some additional diversion; but at this moment it is imperative to the health of the city.

Mr. SCHERER. Mr. Chairman, will the gentleman yield for a question on that point?

Mr. DENT. I yield to the gentleman from Ohio.

Mr. SCHERER. That very question of a possible pestilence facing the Chicago area from pollution was put to the counsel for the committee of the Sanitary District of Chicago. He said that in his opinion if such a situation was faced by the Chicago area, the Supreme Court would grant relief upon application by the city of Chicago.

Mr. DENT. The Supreme Court, if I am not mistaken in past history, did grant relief and granted it in a figure 50 percent greater than the request now made by H.R. 1 in this Congress.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. DENT. I yield to the gentleman from Illinois.

Mr. YATES. The gentleman is exactly correct. The fact the Supreme Court granted such relief does not mean

the Congress cannot also consider the question.

Mr. DENT. That poses a question. I have heard it said we have no right as Members of Congress to give this right of diversion to the State of Illinois.

That, of course, poses the question as to whether the Supreme Court or the Congress, or both have the right, or neither one has the right. I believe that the Congress has the right.

The CHAIRMAN. The time of the gentleman from Pennsylvania [Mr. DENT] has expired.

Mr. KLUCZYNSKI. Mr. Chairman, although we are pressed very much for time, the gentleman from Pennsylvania [Mr. DENT] is making such a splendid statement that I must yield him 2 more minutes.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. DENT. I yield.

Mr. YATES. Inasmuch as it has been consistently contended by opponents of this bill that the Supreme Court alone has jurisdiction and that the Congress does not, may I read to the gentleman from the decision of the Supreme Court of the United States in the case of *Wisconsin* v. *Illinois*, 281 U.S. 179, in which Justice Holmes said the following:

> All action of the parties and the Court in this case will be subject, of course, to any order that the Congress may make in pursuance of its constitutional powers and any modification that necessity may show should be made by this Court.

So that Congress does have the authority to consider this matter and to act.

Mr. SCHERER. Mr. Chairman, will the gentleman yield?

Mr. DENT. I yield.

Mr. SCHERER. The case that the gentleman cited says that with reference to navigation, Congress does have the power.

Mr. DENT. Well, the question of the relative importance of navigation over sanitation is one that you will have to discuss with someone who is wiser in such matters than I am. Personally, I think that the sanitation angle is of greater importance to the membership of this Congress at this moment than any future profit or nonprofit from the St. Lawrence Seaway or any other navigation project. This is a matter of extreme importance to the whole citizenry of the State of Illinois let alone the city of Chicago or the Great Lakes Compact Commission. It has done a magnificent job meeting the demands on its sanitary canal up to this moment. But the question of economics and time cannot be set aside by any Supreme Court decision or any action of this Congress. We have to give the relief now on the basis of need and the need is as has been testified to over the years in our compact agreements and I, for one, believe this Congress would be derelict if it did not give the city of Chicago this right, a modest request in face of the problem.

Mr. MACK of Washington. Mr. Chairman, I yield to the gentleman from Wisconsin [Mr. BYRNES].

Mr. BYRNES of Wisconsin. Mr. Chairman, I do not believe in giving preferential treatment to one community to the detriment of the rest of the country.

I am therefore opposed to H.R. 1, the Chicago water diversion bill.

It has been clearly established that this bill would cause serious financial damage. It would injure American and Canadian shipping by about $2 million annually and decrease power output at the Niagara and St. Lawrence hydroelectric plants by over $1 million annually.

Furthermore, the lowering of the water level in the Great Lakes by H.R. 1 would partly negate the costly dredging in connection with the St. Lawrence Seaway and would also multiply damages resulting from the present low water cycle of the lakes.

Besides being harmful to other interests on the Great Lakes, this bill is unnecessary.

Although the only stated purpose of the bill is to study the effect of increased diversion upon navigation, the Corps of Engineers has already testified that increased diversion would not improve navigation upon the Illinois Waterway but would adversely affect navigation upon the Great Lakes. The Supreme Court and recognized authorities have agreed.

Moreover, the Corps of Engineers is now making another study of the effects of Chicago diversion and to my knowledge has never expressed any desire for additional diversion to aid in this study.

Another reason why congressional action is unnecessary is that this issue is now and has always been within the jurisdiction of the Supreme Court and is in fact the subject of litigation at the present time.

If the Supreme Court is overruled and congressional approval is given to one community to drain water from the Great Lakes, then on what grounds can we deny other communities in the basin the same right?

In fact, if this bill is enacted, how are we to answer those who are proposing uses for Great Lakes water outside the basin itself?

And what about those who want to use Great Lakes water for regulatory purposes on the Mississippi? Or those who want it for overcoming salinity in the New Orleans water supply?

It should also be remembered that the passage of this bill would provide a basis for Canada to divert water from the Columbia River into the Fraser River as has been proposed. It has been pointed out that such a diversion would reduce the flow of the Columbia into the United States by 25 percent with consequent serious effects upon the many power projects and shipping and fishing interests on the American end of the river.

We are not against the use of Great Lakes water for any legitimate purpose. That water is being used by many cities and industries right now. However, the important thing is that every user returns the effluent to the Great Lakes with the exception of Chicago which discharges it down the Mississippi and into the Gulf of Mexico.

The real or imagined problems of one community on the Great Lakes should not be permitted to take precedence over the welfare of all of the people dependent on the preservation of the present character of the Great Lakes Basin.

We in the Great Lakes States protest this attempt to deprive us of one of our most precious assets—the waters of the Great Lakes—without our consent and against our will and without giving consideration to all the problems such an action would create.

Of course, it is obvious why Chicago would rather go to the Halls of Congress than argue the merits of her case in the nonpolitical atmosphere of the Supreme Court.

The real reason behind the perennial demand for additional diversion is simply that Chicago wants more water to flush out her sanitary canal. It is a lot cheaper for Chicago to use the free water from the Great Lakes than to construct adequate sewage treatment facilities as every other city must do.

If Chicago is really interested in seeking a solution to her sewage problems, a survey can be conducted without H.R. 1. Additional drainage of water from Lake Michigan is not needed to show what is wrong with Chicago's sewage treatment facilities.

For years Chicago has been demanding Lake Michigan water on nearly every pretext imaginable. She has argued she needs water for recreation, for community use, for agriculture, for restoration of fisheries, for public health, for atomic power, for navigation, and for war production purposes.

This year's demand is for a $545,000 experiment with the Federal Government footing the bill. It supposedly is of a temporary nature, but it doesn't take much insight to know Chicago intends the bill to be an opening wedge. There would be no point in conducting a test unless something permanent were in mind. It is pertinent to give some consideration to the size of the camel which is trying to put his nose into the tent. As damaging as would be 1 year of increased diversion, continued acceptance would be disastrous.

The most important thing about this bill, in my opinion, is that it would open a Pandora's box of dangerous precedents.

I would like to call the attention of the House to a resolution adopted by the Legislature of the State of Wisconsin. It is as follows:

> JOINT RESOLUTION MEMORIALIZING CONGRESS REGARDING THE DIVERSION OF WATER FROM THE GREAT LAKES
>
> Whereas the city of Chicago and its suburbs attempted, prior to 1900, to dispose of their sewage by digging the Chicago sanitary canal across the Continental Divide and diverting water from Lake Michigan to discharge the sewage into the Mississippi watershed; and
>
> Whereas the U.S. Supreme Court restrained this diversion in 1930 and required the area to develop other means of sewage disposal, but since then a veritable parade of other reasons for directing water from the Great Lakes have been proposed, including the desire to reduce the salty content of the lower

Mississippi by diverting water from Lake Michigan; and

Whereas the program of the Great Lakes-St. Lawrence Basin is rapidly shaping up into a plan which will enhance the economic life of that area; and

Whereas the persistent efforts of the advocates of diversion to make inroads into the Great Lakes water supply are disrupting and in fact nullifying any long-range plan for the development of the waterways of the Great Lakes; and

Whereas the U.S. Supreme Court has provided an equitable plan for the allocation of the waters of the Great Lakes which is subject to modification whenever the advocates of diversion can provide the necessary data to cause the Court to modify its order of 1930 and 1956: Now, therefore, be it

Resolved by the assembly (the senate concurring), That Congress be and it hereby is petitioned to refrain from disrupting the longstanding order of the Supreme Court because:

1. The authorization of increased diversion of waters from the Great Lakes must of necessity affect the development of lake ports and lake shipping adversely;

2. The issue which involves engineering decisions and international considerations should be made by means of the judicial process; and

3. The valuable resources contained in the waters of the Great Lakes ought not to be disposed of without the consent of the States abutting thereon; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States; to the Committee on Public Works, U.S. Senate, and to the appropriate committee of the House of Representatives; to Senators and Representatives from the State of Wisconsin; to the attorneys general of the Great Lakes States opposing water diversion; to the Great Lakes Harbors Association; to the Great Lakes Compact Commission; and to the Lake Carriers Association.

_____,
President of the Senate.
LAWRENCE R. LARSEN,
Chief Clerk of the Senate.
GEORGE MOLINARO,
Speaker of the Assembly.
NORMAN C. ANDERSON,
Chief Clerk of the Assembly.

Mr. MACK of Washington. Mr. Chairman, I yield such time as she may desire to the gentlewoman from Washington [Mrs. MAY].

Mrs. MAY. Mr. Chairman, I appreciate the fact that this controversy has existed for a number of years and has been thoroughly aired in committee and I would like to thank the Honorable RUSSELL MACK for his excellent consideration and treatment of this vital subject.

I am opposing passage of H.R. 1 because State Department witnesses in testimony before the House Public Works Committee have stated that passage and approval of this bill would give Canada an excuse and a precedent for diverting water from the Columbia River in Canada to the Fraser River in that country.

The Bureau of Reclamation, Bonneville Power, and the U.S. Corps of Engineers had invested $1,900 million in facilities along the Columbia River below the Canadian border which would be adversely affected by any diversion from the Columbia in Canada. Such action would cause damage amounting to millions of dollars annually, including power production in the Columbia River Valley of the United States. Any such action would cause untold hardships from which the people of this vast section of the United States could never recover.

If Canada should divert the Columbia River water, thus lowering the level of the river in the lower stretches, navigation would be imperiled and shipping would be seriously crippled.

I believe the people of the United States are concerned over any precedent action such as the Chicago plan, which would give Canada an excuse to divert Columbia River water.

Certainly this is no time to upset our relationship with the people of Canada. The people of the United States and Canada and their chosen representatives must approach the mutual questions involved in the development of the Columbia River Basin in the same spirit, realizing that their problems are mutual and call for wise solutions. Only in this way, can people on both sides of this international boundary be assured of maximum benefits from this great river.

Canada and the United States are dependent upon each other, both militarily and economically. Our people have an estimated $14 billion invested in Canada and its future. Frankly, the United States has unnecessarily irritated our Canadian friends.

The critical time is here for complete and permanent agreement to the end that we may share in friendship the wonderful benefits of these river resources in terms of navigation, hydroelectric power, atomic energy, irrigation and reclamation, fisheries, flood control, and recreation.

Mr. MACK of Washington. Mr. Chairman, I yield 3 minutes to the gentleman from New York [Mr. ROBISON].

Mr. ROBISON. Mr. Chairman, in the few minutes allotted to me I will be unable to give as much time as I would like to a further discussion of the many and compelling reasons why this legislation—H.R. 1—should be defeated or, at the least, returned to committee. I can only summarize those reasons.

As a Representative from the State of New York, I join with my colleague on the committee, the gentleman from New York [Mr. DOOLEY], in asking you to consider the probability that the implementation of this legislation, in its implied, long-range and intended, if not so stated, effect, will place in jeopardy the benefits which will arise not only to the people of the State of New York but to all the American people as a result of the imminent completion of the St. Lawrence Seaway.

The seaway will become a reality in a matter of months. Millions of dollars have been spent in construction of this great project, and millions of dollars have been, are being, and will be spent to deepen the connecting lake channels and the lake ports themselves. As an example, this year's Federal budget includes more than $2 million for further deepening work in Buffalo's harbor. Any lowering of lake levels will add to these costs or nullify such expenditures to the amount of many millions of dollars, as well as inflict an even greater loss upon the navigation interests using these waters.

As for hydroelectric power, the New York Power Authority has completed the so-called St. Lawrence power project at a cost of $350 million, and is now constructing the Niagara project at an estimated cost of $700 million. Both projects are being financed without State or Federal credit. The private investors who have loaned their savings to the authority have done so relying on the good faith of this Government, through the Federal Power Commission, in giving the authority the license right to use all of the historically available U.S. share of the waters of the St. Lawrence and Niagara Rivers. It would, therefore, be manifestly unfair, if not unconstitutional, for this Congress to impair, by this legislative method, the property rights of the authority and of its investors, acquired by virtue of such license.

This body has, I believe, the duty to consider the constitutionality of its acts. To my mind, there is serious doubt that the power given this Congress to regulate commerce between the States gives it the power to destroy such commerce, as might well be done here, as well as a strong possibility that the proposed diversion constitutes a taking of the property of the downstream owners and proprietors in the Great Lakes chain. Should we act in the face of such doubt, when this very matter is now pending before the Supreme Court, the proper body to consider the legal rights impaired and liabilities incurred by the proposed additional diversion?

I recognize that the objections I have been summarizing up to this point are of particular concern to the people of my State, and of the other Lake States. Perhaps we are inclined to overstate them because of our proper provincial concern. But even if so, there is a still more compelling and urgent reason for the defeat or delay of H.R. 1.

I am referring, of course, to the aide memoire handed by the Canadian Government to our State Department under date of February 20, 1959. Some mention was made here yesterday of political influence having been brought to bear, somehow, to induce Canada to file her note of protest, and that the protest represents a change in the heretofore Canadian attitude toward this diversion problem.

It does not seem to me, Mr. Chairman, that we, here, have the right to even speculate about why Canada has protested, or why she has changed her mind, if indeed she has. All we can and should consider is that Canada now says that any authorization for an additional diversion from Lake Michigan at Chicago would, in her opinion, be incompatible with the arrangements for St. Lawrence Seaway and power development, and with the Niagara Treaty of 1950, and would be prejudicial to navigation and power development which these mutual arrangements were designed to improve and facilitate.

This official protest is fact not fancy. We should not, we cannot ignore it without running the risk of seriously and adversely affecting our relations with our great and good neighbor to the north. Is 1959, Mr. Chairman, the time for us to risk losing even a small measure of the historic Canadian-American friendship? It seems to me that, like human next-door neighbors, friction usually develops between nations, as next-door neighbors, over small incidents, unintentional slights, and inconsiderate behavior. All of us have noted, I presume, with some concern the recent instances when there have been brief periods of strain between our Government and Canada. Let us not add to this situation.

It was also argued yesterday that Canada has no real, no valid basis for her objections. Perhaps that is so, but she has the right to protest, and to have the merits of that protest duly considered, not here in this legislative body, but in a proper tribunal of an international judicial nature, or by the International Joint Commission established by the Boundary Treaty of 1909.

Let us also remember, Mr. Chairman, that irrespective of our treatment of our neighbor, the manner in which we will act here will be watched by the entire world community to see if we are ready to depart from the traditional manner in which we have, heretofore, scrupulously honored our international obligations and good manners to the letter.

I submit there is no reason, no justification for us to be urged to pass this bill today in the face of this international question. Our committee only concluded its hearings on H.R. 1 a few days ago, the committee report was only available yesterday morning, the minutes of the hearings are not yet available for even the members of the committee to study, to say nothing of my colleagues who are not members of the committee and have had little or no opportunity to be advised of or consider the serious implications hidden in this seemingly simple and innocent-appearing legislation. I hope and trust H.R. 1 will be defeated or returned to our committee for further consideration.

Mr. KLUCZYNSKI. Mr. Chairman, I yield such time as he may desire to the gentleman from New York [Mr. DULSKI].

Mr. DULSKI. Mr. Chairman, the fresh water bodies of the Great Lakes are one of nature's generous gifts to America, and in no way can be considered as municipal in scope, to be exploited, polluted, or plundered, without due regard for the rights of everyone concerned. To cover up for the years of past neglect and poor planning and operation of its sanitary district, Chicago is now attempting to foist its problem onto the backs of all of its neighbors bordering the Great Lakes without as much as a "by your leave" in regard to the damages it may cause.

Mr. Chairman, over 3 years ago Buffalo was instrumental in creating a port authority. The city of Buffalo turned over $28 million worth of assets, extended loans to the authority, and so forth, having faith that we would become a seaport on the St. Lawrence Seaway. The Army Corps of Engineers received appropriations of some millions of dollars for deepening the harbor.

Buffalo, one of the great milling centers in the world, is also known for its huge steel mills and, as a great railroad center, knows that with the St. Lawrence Seaway becoming a reality, it must make some sacrifice. Some of the grain vessels are now being diverted from our port but again there will be other areas of shipping which will be attracted to the Buffalo port.

Our neighbor across the way, Canada, has stated its views as follows:

> While recognizing that the use of Lake Michigan water is a matter within the jurisdiction of the United States of America, it is the considered opinion of the Canadian Government that any authorization for an additional diversion would be incompatible with the arrangements for the St. Lawrence Seaway and power development, and with the Niagara Treaty of 1950, and would be prejudicial to navigation and power development which these mutual arrangements were designed to improve and facilitate.
>
> The point has been made repeatedly by Canada that every withdrawal of water from the basin means less depth available for shipping in harbors and in channels. Additional withdrawals would have adverse effect on the hydroelectric generation potential on both sides of the border at Niagara Falls and in the international section of the St. Lawrence River, as well as in the Province of Quebec, and would inflict hardship on communities and industries on both sides of the border.

All of the other agencies drawing water from the Great Lakes Basin are thankful for the blessings of this great body of water and have the courtesy of returning the volume of water, after use, back into the same basin of water from which it was drawn—but not Chicago. It wants to take the water from Lake Michigan, use it, and then let it flow into the Illinois Waterway rather than pump it back, after treatment, to Lake Michigan, for this is an economic matter costing money, which is objectionable from the viewpoint of those who benefit from this water diversion, if they are able to pass the bill and its resulting problems along to their neighbors in the way of lower water depths with ensuing navigational problems, receding shorelines, damaged recreational areas, and a reduced water flow over Niagara Falls—all damages which are either irreparable, or of a nature that would take years to overcome.

The people of Chicago who are responsible for sanitary matters in that area have long cast an envious eye upon the great body of fresh water bordering it for a great many years now to the point where, I think, it has destroyed their incentive and initiative to solve their problems by paying their own bills and rendering their neighbors harmless from their depredations.

I say to the Members of this great body in Congress that how well we care for the resources afforded us by the Great Lakes will depend the future happiness and prosperity of the people in the communities bordering these Great Lakes.

I reiterate my firm conviction that as a matter of public policy, any water diverted from a basin should be returned, after use, to the same basin from which it was drawn, to maintain present standards and balances, and to protect and preserve the well-established rights and equities of all parties concerned with the waters of the Great Lakes.

Mr. KLUCZYNSKI. Mr. Chairman, I yield such time as he may desire to the gentleman from Illinois [Mr. MURPHY].

Mr. MURPHY. Mr. Chairman, as a supporter of H.R. 1, the lake diversion bill, I should like to make the following statement regarding the diversion of water from Lake Michigan by the Metropolitan Sanitary District of Chicago.

It is quite apparent that this question involves several issues which are definitely not pertinent to the purpose of the survey. The question has been before the Congress during several sessions, and as I view the purposes as set out in H.R. 1 and the numerous arguments pro and con as to the effect of the diversion of an additional 1,000 cubic feet of water per second from the Great Lakes, which is primarily requested for the improvement of sanitation conditions and the elimination of pollution from the Illinois Waterway, the engineers have stated, and it is the consensus, that the diversion of water for over a period of 3 years might have a tendency to lower the level of Lake Michigan to the extent of five-eighths of an inch. This, I understand, is definitely theoretical and based on a preliminary survey.

H.R. 1 suggests and recommends a definite survey for a period of 1 year. The first 6 months of this survey will not require the diversion of any additional water from Lake Michigan; also, in the 6 months' period immediately following there will be no increase in the authorized diversion.

I should like to call attention to the great increase in the population in the metropolitan area of the city of Chicago, which, naturally, causes additional sewage passing through the treatment plants in order to remove pollution. This cannot be done without additional water.

The numerous objectors to this survey have only the fear as to what might happen if the diversion actually occurred and should prove to affect the level of the Great Lakes. This, however, is not contemplated and I see no reason, as a matter of public safety and public health, that the immense population living along the Illinois Waterway should not be given the benefit of this survey and the benefits to be derived therefrom.

Representing the Third Congressional District of Illinois in the city of Chicago, and having been affiliated for a number of years in an official capacity with the city of Chicago, I know of where I speak and know how my district has increased in population with the building of many new residential and commercial areas in order to keep abreast of the changing times.

I firmly hope that this survey will be permitted and prove that the additional diversion of water will in no way affect our neighbors from adjacent States.

I further believe that this is predominantly one of the most essential surveys, from the point of public health, that is presently before the Congress and it should not be considered, as some of the

opponents of the bill infer, a matter of personal convenience to the electric power generating stations on the waterway.

Mr. KLUCZYNSKI. Mr. Chairman, I yield 5 minutes to the gentleman from Ohio [Mr. VANIK].

Mr. VANIK. Mr. Chairman, there has been a great dispute about the effect of diversion on lake levels, and you have heard many conflicting figures cited. I think it is extremely regrettable that the record of the testimony and the hearings are not available to the Committee and will not be available for 10 days. It seems to me that we should save the expense of printing these proceedings since they will serve no useful purpose to this Congress.

Mr. Chairman, I want to express my vigorous opposition to this proposal to legalize the taking of more water from Lake Michigan and the Great Lakes Basin for the purported sanitary needs of Chicago, the navigational needs of the Cal-Sag Canal, and the power facilities at Lockport. By this action Congress is asked to deny and contradict the basic riparian rights of all the States and communities which abut the Great Lakes drainage system and artificially create new rights in these waters all along the Mississippi Basin to the Gulf of Mexico.

Mr. Chairman, the issue involved in this debate transcends the local conflict between the Chicago area and the many communities of the lower lakes which are competing for use of the Great Lakes waters. It also transcends the traditional competition between the seaboard ports and the ports of the Great Lakes. The question is, Should one section of the country, for its own purposes, be permitted to withdraw water from the Great Lakes, which are the property of this Nation, Canada, and the citizens of the several States?

The issues involved transcend personal respect and devotion for the sponsors of this legislation—for whom I have the highest regard. The issue is simply this: Shall the Congress of the United States be used to raid the riparian or waterside rights of all the co-tenants of the Great Lakes Basin?

There have been conflicts in Congress before over water. On this subject no individual Member can feel indifferent to the issues involved. The harmful and wrongful precedents established by this legislation will, at some time or another, or in some way, affect every single Member of this House.

On this issue almost all Ohioans in Congress are joined in opposition. Our attorney general has protested the further withdrawal of Great Lakes water at Chicago. The Governor of the State of Ohio—the widely known and respected Michael V. DiSalle, today renewed his plea in opposition to diversion in the following message:

> The persistent efforts of those who would divert water from the Great Lakes are disrupting and nullifying any long-range plan for the development of the waterways of the Great Lakes.
>
> Ohio is greatly interested in the Great Lakes-St. Lawrence Seaway which is rapidly advancing and expanding the economic life of this area. Ohio will use every resource possible to prevent further diversion of water from the Great Lakes. The State of Ohio is against H.R. 1.

At this point, I want to take opportunity to commend the splendid efforts of my distinguished colleague, the Honorable GORDON SCHERER, of Ohio, for his splendid efforts and leadership in opposition to this proposal.

Mr. Chairman, to the people who constitute the wealth of this land, the freshwater supplies are America's prime asset and must be guarded.

Increasing water needs and falling water table of the several States are rapidly approaching a national crisis. Ohio, Indiana, Pennsylvania, New York, and even Illinois are threatened with reduced water tables, along with an increase in their populations. As a matter of fact, more and more communities as far away as 100 miles from the Great Lakes are looking to the day when they can tap the Great Lakes for a water supply for life, for industry, and for their very sustenance. We can anticipate a tremendous development of urban growth along the New York Thruway and the Pennsylvania, Indiana, and Ohio Turnpikes. Someday three will be one continuous band of cities along these highways. These new communities are going to need water, and the only source for that water is the Great Lakes Basin.

Secondly, the commerce of the Great Lakes cannot be placed in jeopardy by the self-interest of one city. In Cleveland the huge ore-carrying vessels drag their bottoms in the mud of a shallow river in order to reach their unloading berth. We cannot afford any loss of water in this part of the Great Lakes. We have tremendous investments in shipping facilities, and we would be exposed to the adverse effect of a lowered level if this legislation were to become law. It would have a disastrous effect along the entire Great Lakes Seaway, as has been previously indicated.

Chicago's need for water is not for life but for waste. To permit that city to flush its industrial wastes into the lower Illinois and Mississippi downstate areas is a wrongful act, and those people in the lower areas who believe they will enjoy a bonanza of water for commerce will soon discover they have received an increased gallonage of pollution and refuse too dense to sail boats in.

Along with other Great Lakes cities, my city has spent millions of dollars for expanded port facilities. The prospect of lowered lake levels through this contemplated action is disheartening indeed to every Great Lakes city preparing for seaway commerce.

This private bill—and that is what it is—seeks to divide America, attracting seaboard support in the hope that lower lake levels will hurt seaway commerce, luring the South with more water for Mississippi Basin commerce, luring private power support on the promise of more water for private power at Lockport and less for public power in New York. It dissolves the traditional unity and common purpose of the Great Lakes cities in the Great Lakes region.

I hope this legislation is defeated.

Mr. MACK of Washington. Mr. Chairman, I yield such time as he may desire to the gentleman from New York [Mr. LINDSAY].

Mr. LINDSAY. Mr. Chairman, I wish to commend the gentlemen from New York [Mr. ROBISON and Mr. DOOLEY] for the excellence of their remarks and to associate myself with those remarks.

The State of New York has a great deal at stake in this legislation and can be seriously prejudiced by its enactment. However, to me the compelling and overwhelming argument is the one that was made, particularly by the gentleman from California, Mr. BALDWIN, to the effect that where there is a pending protest from a neighboring nation now is not the time to act hastily or precipitously in this fashion.

I would, therefore, vote against the legislation on those grounds alone, quite apart from the position of my own State of New York.

Mr. MACK of Washington. Mr. Chairman, I yield 2 minutes to the gentleman from Ohio [Mr. SCHERER].

Mr. SCHERER. Mr. Chairman, earlier in the debate today on this issue there was some discussion of the testimony of the assistant attorney general from the State of Pennsylvania. It was indicated that this young lady was in error in her testimony.

As has been stated, these hearings are not available, but I have a rather distinct recollection of her testimony before the committee. As I recall, she did not say that the granting of this 1,000 cubic feet per second diversion for 1 year would lower the lake level from 1 to 2 inches, or more. Everybody knows it would not do that. What she did point out in her testimony is that Chicago today has a 3,300 feet per cubic second permanent diversion. That water is never returned to the lakes, and that permanent diversion, to which will be added, if this legislation is passed, an additional 1,000 cubic feet, will cause a lowering of the lakes of more than 2 inches. And, the testimony of the assistant attorney general of Pennsylvania in that respect has been supported by other testimony. Today, with Chicago's diversion of approximately 3,300 cubic feet per second, it has already permanently lowered the lake level approximately 2¼ inches.

Mr. YATES. Mr. Chairman, if the gentleman will yield, does not the testimony show that the diversion by Canada from the Albany region has increased the level by 5 inches, so that the diversion by Chicago of its amount has not affected the Lake Michigan level?

Mr. SCHERER. Will the gentleman from Illinois deny the fact that the permanent diversion that Chicago has now, which no other city or State on the Great Lakes has, namely, 3,300 cubic feet per second, which amounts to more than 2 billion gallons of water a day, has permanently lowered the level of the lake by more than 2 inches?

Mr. YATES. I will say that the testimony shows that Chicago's diversion has been offset by the diversion by the Canadians into Lake Superior. The levels of the lakes are higher as a result

of the Canadians' diversion and the withdrawal of the water by Chicago has not equaled it.

Mr. SCHERER. There is no doubt but that your last statement is right, but Canada can stop that diversion any time she wants to.

Mr. YATES. Can you imagine Canada stopping its diversion?

Mr. SCHERER. Oh, yes.

Mr. YATES. On the contrary, Canada would like more water to feed her powerplants at Niagara and the St. Lawrence.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. KLUCZYNSKI. Mr. Chairman, I yield to the gentleman from Illinois [Mr. GRAY].

Mr. GRAY. Mr. Chairman, I rise in support of H.R. 1. As a member of the Committee on Public Works, I have listened to this argument concerning lake diversion for the past 4 years. I honestly believe that the opposition to this legislation is more traditional than real. The legislation is badly needed by the city of Chicago. It does not affect my district in downstate Illinois therefore I can speak as an impartial observer. Chicago is now diverting water from Lake Michigan without damage to the Great Lakes States or shipping and I cannot possibly see how any damage would result from an additional 1,000-cubic feet-per-second diversion. I also fail to see why my friends from the West fear Canada will be angry and want to divert water from the Columbia River when they already have a precedent set by present diversion if they want to use that as an excuse. I cannot stretch the imagination to believe that lake ports or shipping will be hurt by lowering lake levels one-fourth of an inch by the additional diversion. This is the figure the U.S. Army Corps of Engineers gave us as the amount of affected level. All the bill does anyway, is to study the effects of additional diversion, therefore I cannot see why anyone would want to stop Chicago from getting this valuable information and submitting it back to our committee and the Congress. I urge immediate passage of this legislation.

Mr. KLUCZYNSKI. Mr. Chairman, I yield to the gentleman from Illinois [Mr. LIBONATI].

Mr. LIBONATI. Mr. Chairman, the diversion bill incorporates the plea of a hard-pressed community to petition the Congress for help to meet its needs for studying the present precarious problems; for the treatment of sewage and waste, so necessary for the health of millions of people within the environs of Chicago and Cook County.

It is purely a crisis brought about by the increase of services so necessary in a growing community.

The U.S. Supreme Court in a previous ruling set up a 1,500 cubic feet per second diversion. The present act sets up a thousand cubic feet per second for a complete study to be conducted by the Army engineers, such diversion limited to a period of 1 year.

The study will determine navigation and water pollution problems and a systematic analysis of water conservation and the study of the continued lowering of water tables during the past 15 years.

The factors involved may be the answer to flood control and distribution of excess waters.

One thing is certain, no community can afford in its conscience to deny the needs of persons of another community in this great land.

The fresh water facilities and natural water areas belong to all of the people—and just because some communities have no such interest or problems does not dictate to good conscience of the citizenry to disregard and deny people of another community the cooperation to make possible the solution of a problem that threatens the lives and well-being of its people's very lives.

The health of a community is everyone's concern. To obstinately refuse to cooperate to bring about its protection is un-American.

If the Congress refuses to help the people of Chicago—then perhaps the U.S. Supreme Court will, by its own edict, carry out the purposes for which its previous decision was written. Then we may suppose that the same objectors will wail out the old wolf cry that the Supreme Court is legislating again.

The rights of the people of Illinois to take sufficient water to meet their moderate needs is as right as the law of survival—so be it—and with the help of God-fearing Congressmen and Senators who love all Americans equally, this study must be made, the crisis is now, the long-range effects of any experiment is for tomorrow. No great harm can result from this program. At most a lowering of five-eighths of an inch in the Great Lakes Basin can result.

Mr. KLUCZYNSKI. Mr. Chairman, I yield to the gentleman from Illinois [Mr. BOYLE].

Mr. BOYLE. Mr. Chairman, I rise in support of H.R. 1 introduced in the House, in this session of the 86th Congress, by the dean of the Illinois delegation, Congressman O'BRIEN.

The House Public Works Committee has held extensive hearings in the 82d Congress—H.R. 6100—Sheehan bill, 83d Congress—H.R. 3300—Jonas bill, 84th Congress—H.R. 3210—O'Brien bill, and the 85th Congress—O'Brien bill—H.R. 2—on legislation similar to H.R. 1 and said committee has heretofore approved all of the aforesaid bills.

The bill in its present form—H.R. 1—specifically limits the increased diversion to 1 year. The provisions of the instant bill follow the principles approved at the Senate hearing of its Subcommittee on Public Works of the 2d session of the 85th Congress on H.R. 2. They were then approved by the Bureau of the Budget, the Department of Health, Education, and Welfare, the Army Engineers and the State Department. Canada earlier stated it had no objection to a proposed 1 year temporary increase in diversion of 1,000 cubic feet per second.

H.R. 1 specifically divides the 3-year proposed study period into the following four phases or periods:

First phase: A 6-month period of study to develop study plans, and so forth—no increased diversion.

Second phase: A 12-month period of the stream survey in the field to establish existing conditions—no increased diversion.

Third phase: A 12-month study under conditions of the increased diversion—annual average increase of 1,000 cubic feet per second diversion for 1 year.

Fourth phase: Six months required to prepare the final report to the Congress—no increased diversion.

This bill—H.R. 1—authorizes the State of Illinois and the Metropolitan Sanitary District of Greater Chicago, under the supervision and direction of the Secretary of the Army, to temporarily withdraw from Lake Michigan at Chicago, for a period of 1 year, an additional amount of water of 1,000 cubic feet per second—over the presently authorized diversion of 1,500 cubic feet per second—to enable the Department of Health, Education, and Welfare, in cooperation with the Secretary of the Army—acting through the Chief of Engineers—to study, over a 3-year period as above detailed, the effect thereof in the improvement in navigation conditions and other improvements along the Illinois Waterway resulting from such increased diversion and to report to the Congress the results of such studies and their recommendations before June 1, 1962.

The Illinois Waterway—a Federal navigable waterway—was opened for navigation March 1, 1933, and Colonel Sultan, Army district engineer, Chicago district, in his report on the matter, House Document No. 184, 73d Congress, 2d session, September 1933, stated that the 1,500 cubic feet per second of water diverted from Lake Michigan at Chicago—authorized in the U.S. Supreme Court decree of April 21, 1930, as "necessary for the purpose of maintaining navigation in the Chicago River as a part of the port of Chicago" and subsequently authorized for navigation of the Illinois Waterway by the River and Harbor Act of 1930—plus the Chicago treated sewage, was sufficient for the direct, or flotation needs of the Illinois Waterway, but that there was some doubt whether this would provide decent conditions for workers on or about the waterway.

Colonel Sultan recommended, in his report, that after the treatment plants of the sanitary district were completed and in service, navigation conditions should be observed for about 2 years. He said:

> Then, and then only, can it be determined with reasonable certainty whether any additional diversion is necessary in order to provide decent and healthful living conditions for boat crews and river terminal operators.

This test has never been made. It is the test contemplated in the similar legislation passed by the 83d Congress in 1954—H.R. 3300—and in the 84th Congress in 1956—H.R. 3210. Both measures were vetoed by the President. It was also the test provided in H.R. 2 of the 85th Congress—the O'Brien bill—which passed the House but failed to pass in the Senate in the closing days of the 85th Congress. It is the test now specifically provided in H.R. 1 with the actual

diversion limited to 1,000 cubic feet per second for 1 year.

The entire problem of testing would become a duty of the Army and the Public Health Service, who would have the responsibility, under H.R. 1, of reporting and making their recommendations thereon to Congress.

I have no fear but the sanitary district engineers and those of the Illinois Division of Waterways will cooperate in every way possible in conducting the tests.

FACTUAL AND LEGAL ASPECTS OF DIVERSION

I have no desire at this late hour to impose upon this House a lengthy dissertation on the question of lake diversion. Both the proponents and the opponents have heretofore repeatedly presented their views on this subject and a repetition here would be of no avail.

There is one outstanding engineer of recognized national standing in the field of hydraulics and Great Lakes levels, whose professional views are uniformly respected. He is Horace P. Ramey, chief engineer of the Metropolitan Sanitary District of Greater Chicago. A half century of Mr. Ramey's professional engineering activities have been devoted in this particular field.

Chief Engineer Ramey is therefore amply qualified to speak with unquestioned authority of this subject of diversion. At previous hearings of this House committee his noteworthy paper on "Great Lakes Levels and Their Changes" was submitted. For this study he was awarded the Octave Chanute Medal by the Western Society of Engineers.

On June 20, 1957, Chief Engineer Ramey delivered another scholarly presentation on "Diversion of Water" before the Illinois section of the American Society of Civil Engineers.

Opponents to the various diversion bills heretofore considered have repeatedly stressed that questions as to an increase in diversion or otherwise should be presented to the Supreme Court of the United States and not to the Congress.

Contrary to this view the supporters of H.R. 1, and its predecessors, have always insisted that Congress has plenary power over navigation and navigable waters.

In support of this legal phase, I submit that a brief on this subject filed as amicus curiae in the Supreme Court of the United States by the Chicago Association of Commerce and Industry documents that we have that right. The legislative history of the River and Harbor Act of 1930 further demonstrates that we have the legal right to legislate in this area.

OPPOSITION OF THE LAKE STATES

It is recognized that the consistent opposition of the Lake States to an increase of water from Lake Michigan at Chicago, of any nature or for any purpose, whether temporary or permanent, has not diminished.

In December 1957 the State of New York filed a motion in the Supreme Court of the United States, in the so-called Lake Level cases, asking for a modification of the decree of that Court of April 21, 1930. They sought, among other matters, to require the Metropolitan Sanitary District of Greater Chicago to return to Lake Michigan the water taken therefrom as domestic pumpage.

This was followed by an application of similar effect filed by the States of Wisconsin, Minnesota, Ohio, Pennsylvania, and Michigan, in which the State of New York also joined.

Both actions attempted to require the Chicago area to dump its sewage-treated effluent into Lake Michigan, the same source from which its drinking water is drawn, thereby threatening the pollution of the water supply, instead of emptying such effluent into the canals of the sanitary district and thence into the Illinois Waterway. The latter procedure has been followed since 1900 and is as authorized by the Supreme Court's decree of April 21, 1930, and by the River and Harbor Act of July 3, 1930, for navigation purposes for the Illinois Waterway.

The action instituted in the Supreme Court in December 1957 was also an apparent attempt to frustrate the proposed action by the 85th Congress with regard to the enactment of H.R. 2, as at the time of the above attempt by the Lake States to invoke action by the Supreme Court of the United States, H.R. 2 had been passed by the House of Representatives in the 1st session of the 85th Congress, May 22, 1957, and was then pending before the Senate subcommittee.

The application of the Lake States and the motion of New York were in effect a rehash of their traditional arguments presented previously at the congressional hearings on diversion. They were replete with legal errors, factual misstatements, and unsupported preposterous allegations which have unfortunately ofttimes heretofore characterized their opposition.

Among other matters considered in that action before the Supreme Court, initiated by the Lake States, were the constitutional provisions and the legal authorities—including the decisions in the various Lake Level cases—which we assumed demonstrated the exclusive right of the Congress to act in matters affecting navigable waters, such as those here involved pertaining to a Federal waterway.

The consideration of this problem by the Supreme Court was again made necessary because the Lake States in their application to the Supreme Court sought a presumptuous declaration that legislation such as that proposed by H.R. 2 would be in effect a nullity. This was an attempt to secure an unheard of type of relief, requesting a statement or determination from the Supreme Court that an anticipated action of Congress within its proper sphere would be unconstitutional.

The State of Illinois and the Metropolitan Sanitary District of Greater Chicago filed a joint brief in opposition to the action of the Lake States and the Solicitor General, at the request of the Supreme Court, filed an amicus curiae brief.

After a consideration of the briefs of all the parties, this flagrant attempt of the Lake States, seeking to enlist the aid of the Supreme Court, to interfere with the exercise of congressional jurisdiction or to delay Congress in the proper exercise of its constitutional functions was appropriately disposed of by a summary denial of the relief—with the right to renew their application if substantial facts were later presented—sought by New York and the other Lake States in the order of March 3, 1958, entered by the Supreme Court. This dismissal order, in our judgment, demonstrated the refusal by the Supreme Court to act in such a way as to interfere with the exclusive control by Congress over Federal waterways.

Subsequent to the Supreme Court order of March 3, 1958, however, the Lake States again attempted to frustrate the action of Congress by anticipating the introduction of H.R. 1, now pending before the House Committee on Public Works. They filed, on November 3, 1958, a so-called amended application. This document is essentially a rehash of the earlier documents summarily dismissed, on March 3, 1958, by the Supreme Court of the United States. All of the allegations made in this new amended application and their supporting brief have been answered by the joint brief of the State of Illinois and the Metropolitan Sanitary District of Greater Chicago. Despite the many conflicting speeches and the heat engendered over the years between the advocates and those opposing this legislation, a calm analysis of the actual questions involved should demonstrate to unbiased observers that the issue is, in effect, fundamentally simple. And its solution by the same token, is likewise simple.

The residents of Illinois have demonstrated their good faith and their basic reasonableness, in the compromises which have been suggested from time to time and are now incorporated in H.R. 1. This bill would enable a scientific study to be made. It would be made by trained, impartial men.

The repeated myth as to puffed up anticipated losses to navigation and by the power interests, if any diversion from Lake Michigan is authorized by the Congress, can by no stretch of imagination be applicable to the temporary 1-year increased diversion of 1,000 cubic feet per second authorized by H.R. 1.

On August 1, 1958, Major General Itschner, Chief of Engineers, transmitted to Senator DOUGLAS—pages 373–375, Senate subcommittee hearings on H.R. 2, July 28, 29, and August 7, 1958—the report of the division engineer of the north central division at Chicago, evaluating the effects on lake levels and power of an increase of 1,000 cubic feet per second at Chicago for a period of 1 year. A summary of this study estimated that the maximum resulting lowerings of Lakes Michigan and Huron to be one-fourth of an inch and that it was not practical to evaluate the effects because of the small amount of the lowering. As to estimated losses of dependable hydroelectrical capacity at the Niagara and St. Lawrence plants, the study found that they were of such temporary nature and small magnitude that replacement of the loss or substitution of the gain in capacity would not be justified.

One point, the author of the bill, the gentleman from Illinois, Congressman O'BRIEN, wishes to make abundantly clear and repeats is that the State of Illinois and the Metropolitan Sanitary District of Greater Chicago do not seek the additional temporary diversion provided in H.R. 1 as a substitute for the proper treatment of sewage of Chicago's metropolitan area.

The sanitary district collects and treats to a very high degree, in three modern major sewage-treatment plants and several new smaller plants, more than a billion gallons of sewage daily. No other metropolitan area in the world has equal facilities or performs a comparable efficient operation. The American Society of Civil Engineers in 1955 selected our sewage-treatment system as one of the "seven wonders of American engineering." I respectfully urge that H.R. 1 be passed by this House today.

Mr. KLUCZYNSKI. Mr. Chairman, I yield 4 minutes to the gentleman from Michigan [Mr. DINGELL].

Mr. DINGELL. Mr. Chairman, it is with a great deal of personal sorrow that I find myself on the opposite side of any issue with the distinguished gentleman from Illinois [Mr. KLUCZYNSKI] and with the distinguished dean of the Illinois delegation [Mr. O'BRIEN]. We have heard it said that this is a piddling amount of water. It is not. The people of Chicago want to divert from our Great Lakes—and they are ours as much as theirs—what would be the equivalent of a river 10 feet deep, 20 feet wide, and all the way across the United States, in just 15 days. That is just how much water they want to take from the people of the Great Lakes Basin area. They are now taking 3,300 feet per second of water. In addition to that, they propose to add an additional 1,000 cubic feet. For comparison, the whole State of Illinois contributes exactly *500 cubic feet* per second of water to the Great Lakes.

So you can see they are doing far better than any of their neighbors on the Great Lakes Basin, and are taking a resource belonging to all of us to their own sloth in handling their sewage problem.

There is presently pending a proceeding before the Supreme Court of the United States, an open decree subject to Court review on application of any party. If there were any merit in what the Chicago Sanitary District seeks to do, I am sure the Supreme Court would be more than glad to honor their wishes and accord them relief, and would have done so a long time ago if there were any merit to their case. They would take this course instead of coming before the Congress every 2 years to have legislative relief. In due course of time, however, this will be matter vetoed.

I assume that my colleagues from Chicago will recognize the name Frank W. Chesrow. He is president of the Chicago Sanitary District. He was quoted on January 29 of this year as saying:

More diversion of lake water is not needed—

I want to emphasize that word "not"—

is not needed for sanitation purposes but solely for navigation purposes on the Illinois Waterway.

This is witnessed by what the Corps of Engineers in the person of General Itschner, Chief of that corps, had to say; and on many occasions he or another person speaking on behalf of the corps has said that there is no necessity for any additional water for navigational purposes. Indeed, they have pointed out that the amount of domestic pumpage plus the present diversion is more than adequate even when the Chicago ship canal or the Illinois Waterway is "double tracked" to handle upbound and downbound traffic in separate canals.

The real situation here is this: The Illinois Waterway is the largest chamber pot in the world, and it is probably the worst smelling.

Mr. Chairman, let me tell you what goes on here. The sanitary district does not properly treat its sewage. They have a two-State system of collection. When it rains Chicago floods their storm runoff together with their sanitary sewerage in one system and dumps the whole volume of sewage, flowing directly into the Illinois Waterway, with little or no treatment. This is why the sad situation in the waterway.

In addition to this, there is no attempt by Chicago or by any of its agencies to meter any of its industry and its industry is not watched at all. As a result, very large amounts of industrial waste go directly into this waterway without any scrutiny or examination by any person whatsoever.

Mr. Ramey, speaking on behalf of the sanitary district, said that its efficiency dropped to 87 percent or less in 1955–56. And he went on to state that—

About 10 tons per day of solids went into the canal in 1955 and more than 18 tons per day in 1956.

This is in addition to 80 tons which go into the waterway in a form which Chicago says is impossible to strain out under existing processes.

This last contention I deny. Milwaukee and other cities treat their waste, municipal and industrial waste to 95-percent purity. Indeed, one may safely drink the sewage effluent of Milwaukee. I challenge any Chicagoan to drink the sewage effluent of that city.

Let me tell you what was said by a Mr. William Dundas, of the Chicago Sanitation District, in an article appearing in the Engineering News Record, a national publication:

The 900-square-mile metropolitan area feeds about 1,200 million gallons of sewage a day into the sanitary district plants for treatment. From 800 to 900 million gallons per day flows to the southwest works, carrying from 600 to 650 tons of solids. Another 100 tons of solids are pumped daily to the southwest plant from the North Side works.

This adds up to 700 to 750 tons of solids to be disposed of daily at the southwest works. Present facilities, however, according to William A. Dundas, general superintendent, can handle adequately only 450 to 500 tons per day. This leaves 200 to 250 tons for disposal by other means.

(Sludge is the consolidated sewage solids settled out of sewage in either the primary or secondary settling tanks.)

Mr. Dundas' other means is simply dumping into the sanitary and ship canal all 200 to 250 tons a day of sewage solids to be flushed downstream on the unfortunate neighbors to the south.

Now let us characterize the state of this miracle of sanitary engineering system by the state of the sanitary and ship canal near the southwest sewage plant. I quote from the remarks of Mr. Milton Adams, nationally known sanitary engineer, member of the President's Pollution Control Board and head of the Michigan Water Resources Commission, who said:

Some of you may wish to learn from Mr. Dundas what he means by those last three words "by other means" and what effect this has on the sanitary quality of waters of the so-called sanitary and ship canal serving the southwest works. Unless sludge handling capacity is balanced to receive solids accumulations from daily sewage flow, either raw or partly treated sewage, or the sludge itself must be bypassed.

May I now submit a personal observation of downtown river conditions indicating inadequacy of the district's collection system or its maintenance. At noon on last Friday, the 13th, I was crossing the river into the Loop on the north sidewalk over the West Jackson Street Bridge. Looking over the rail to the north, I spied three floating objects along the west bank—some seven or eight near the east bank in a pool of suds and broken feces and other flotsam common to raw sewage. It so happens that most sewage and pump station screen rooms collect these objects. The point is these objects are invariably a telltale of the presence of sewage. But here they were in the river bobbing along on a dry day winking at me and catching an occasional ray of sunlight as it came through the clouds.

Now I ask you how these could be in the Chicago River where sewage is all faithfully collected and treated by the district. Another incident, shall we say of a faulty sewage collection system or regulator? Additional diversion from the lake cannot remedy this problem—study or no study.

Finally, as a member of the Federal Water Pollution Control Advisory Board I was called on to discuss the Chicago diversion controversy at their May 1957 meeting in Washington. There was already talk of the Public Health Service being called upon by the Corps of Engineers to make a study in the event H.R. 2 of the 85th Congress was enacted. I told the members our Michigan convictions, the Illinois position as I understood it, and that of the other States.

Following the meeting, I suggested to the Surgeon General's Chief of Water Supply and Water Pollution Control, "Mac, maybe you better have your Chicago boys have a look-see at this Chicago area problem if you can. You may have to make an estimate of a survey for higher authority one of these days and you ought to know what you are getting into."

Now it so happens a single river trip was made early last fall on these waterways and water samples collected and analyzed. This single exploratory trip was all the Division had resources to finance. No written or published report of findings is available. A summary sheet I have been able to examine showed "zero" oxygen and septic condition in the Chicago River north of the Loop. Water coming in from Lake Michigan with its 100 percent saturation of dissolved oxygen dropped almost immediately to zero after reaching the Chicago River. The oxygen continued to drop progressively as the trip

progressed downstream. Little was found below and none in the Calumet Sag Channel samples.

Should this finding be representative of formal survey results, it can mean but one thing to this engineer. The collection and interception of sewage before it reaches the waterway is so far from adequate that septic conditions are created even in the upper waterways despite the amount of sewage intercepted and treated at the district plant.

The CHAIRMAN. The time of the gentleman from Michigan [Mr. DINGELL] has expired.

Mr. MACK of Washington. Mr. Chairman, I yield such time as he may require to the gentleman from Oregon [Mr. NORBLAD].

Mr. NORBLAD. Mr. Chairman, I am opposed to this legislation.

I am vigorously opposed to H.R. 1 which would permit an additional diversion of 1,000 cubic feet of water per second for a period of 1 year into the Illinois Waterway. There is no question but that this additional diversion would set a very dangerous precedent in our relationships with Canada. The Canadian Government contends that such additional diversion would produce material injury to the navigation interests on the Canadian side of the boundary. If we were to enact this legislation permitting additional diversion of Lake Michigan water into the Illinois Waterway our Government would be placed in a most untenable position to resist Canadian efforts to divert additional water from the Niagara River, the St. Lawrence River and the Columbia River Basin. Canada still insists on its right to divert the Columbia River. Canada still reserves its right under the treaty of 1909 with respect to the proposed Chicago diversion contemplated by H.R. 1. Canada, in its most recent aide memoire, has protested against the proposed Chicago diversion on the ground that such diversion would adversely affect navigation and hydroelectric interests in the Great Lakes Basin. Surely, if this proposed diversion were permitted in spite of Canada's protests, and Canadian navigational and hydroelectric interests suffered, Canada might very well take the position that our ignoring their protests would give Canada sufficient justification for diverting water from the upper Columbia River Basin. Those of us from the Pacific Northwest know full well the dangerous effects additional diversion of water from the Columbia River would have on irrigation and hydroelectric projects in our area. These projects are extremely important to the economy of the Pacific Northwest and to my State of Oregon. If their full potential were to be impaired by additional diversion of water from the Columbia River by Canadian interests, it would be a serious blow to the economic welfare of our people in Oregon whose livelihood depends on employment in industries that necessarily must secure their water from the Columbia River.

If this legislation is enacted, Canada might very well use it as an excuse to divert water from the upper Columbia River in Canada to the Fraser River in Canada. If such a diversion is made not only would irrigation and hydroelectric projects on the American side of the Columbia River be adversely affected, but also the level of the lower Columbia River would be lowered which would imperil shipping which uses this river. While I am sympathetic with the sanitation problem confronting the people of Chicago it seems to me that it would be sheer folly to divert water from Lake Michigan to solve their problem thus setting a precedent whereby Canada could divert water from the Niagara, the St. Lawrence, and the Columbia Rivers which would result in tremendous financial losses and jobs to those people employed in industries which utilize the water and waterpower from these rivers. The pollution in the Chicago River can be removed by sewage disposal plants such as are used by nearly every large city in the country. Why should the proposed diversion method be used when it very likely will disrupt our good relations with Canada, set a very dangerous precedent with respect to diversion from other rivers in which both our people and the Canadians have an interest.

I shall vote against this unwise and unsound legislation which if enacted could ultimately have such disastrous effects on the economy of the Pacific Northwest.

Mr. MACK of Washington. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. BROOMFIELD], a member of the committee.

Mr. BROOMFIELD. Mr. Chairman, it seems as if the matter of draining additional water from the Great Lakes through the Illinois Waterway has become a subject of congressional concern as regular as the first robin of spring.

Quite frankly, I consider this newest plan contained in the provisions of H.R. 1 for the mockingbirds.

We are being asked to toss aside the interests of States bordering the Great Lakes for the selfish gain of one of these States. We are being asked to ignore the protests of a neighboring nation which has been our friend and valiant ally in two world conflicts.

We are asked to set aside the fruits of some 30 years of work in Congress and the Canadian Parliament, of thousands of men who labored through cold, bitter winter weather to construct the St. Lawrence Seaway in order to complete it on schedule this year.

We are asked to narrow our connecting channels and make our lake beds shallower, to pose possible added dangers to navigation and the largest volume of ship traffic in the world.

We are asked to overthrow a decision of our Nation's Supreme Court; to bypass one of its rulings.

All this is sought for the possible gain of one American city and for the possible disadvantage of dozens of others.

Now, this situation would be bad enough if it stopped right there. But very few of the majority members of the House Committee on Public Works appear to have taken into consideration the later repercussions of this bill and its implications. If we can divert water from the Great Lakes, why can't Canada? And if we can divert water from the Great Lakes, why can't Canada divert water from rivers and streams which have their headwaters in her territory and flow into our Northwestern States and our newest State of Alaska?

If it is right for us to tell Canada that she has no business in voicing an opinion on a matter of such great concern to her people, then has not Canada the right to tell us to go soak our collective heads on her own plans for water diversion?

If fair play and international courtesy are not to be considered by the proponents of this bill, then possibly they will yield more readily to self-interest and realize the Pandora's box of mishaps they are opening on our Nation's waterways.

The proponents of this bill are going to say that this is only a proposal for a 1-year test. If their words are slightly muffled and distorted, I imagine it is because they are having difficulty in speaking with their tongues in their cheeks. There is no doubt in my mind that if this bill is passed, we will be asked next year to extend the provisions of H.R. 1 for an additonal 2-year period, so that the full effects of this diversion can be studied.

We are told by the Army Engineers that it will take some 15 years for the Great Lakes to build up to previous levels once diversion is completed. Now, what if this diversion is more serious than our engineers first figured? After all, this is a test, or so the proponents claim. If such is the case, then the results are merely a matter of conjecture at this point. If the results are known, as the proponents of H.R. 1 claim, then there is no need for a test.

But our Army Engineer estimates, for every 1 year of such testing, it will take 5 years to completely undo any ill effects of such tests. That is too great a risk to take with one of the most important waterway systems in the world.

If the Chicago Sanitary District can have its way in this matter of Great Lakes water diversion, then why can't any other city—American or Canadian—have the same privilege?

If the United States can take unilateral action on this issue, then why cannot Canada exercise the same right?

Let us not put one obstacle in the path of the St. Lawrence Seaway and the great benefits our Nation will derive from its completion. Let us not mark the anniversary of the completion of this great engineering project by action which may limit its effectiveness. Let us defeat H.R. 1 and live up to our obligation to the people of the Midwest, the rest of our Nation and our good neighbor, Canada.

Mr. Chairman, as a part of my remarks I include the following article from the Detroit News of February 9, 1959:

NEW ROUND IN CHICAGO WATER STEAL—THE STORY BEHIND SEVEN-STATE BATTLE AGAINST DIVERSION

(By Stoddard White)

Without its water—surrounding seas, inland jewels, lifegiving underground reservoirs—what would the Water Wonderland be?

Alarm over new plans to steal more of one of Michigan's most precious and famed resources has caused State officials to marshal their allies around the Great Lakes in a new battle before the U.S. Supreme Court.

So important is the problem of water supply to the whole Nation that J. Lee Rankin, Solicitor General of the United States, has called a conference for the early part of March.

He will invite Illinois to tell its future plans in the historic Chicago water diversion from Lake Michigan, and the other seven Lake States to state their opposition to what has happened and what might happen.

Led by Wisconsin, the other States have been fighting for almost 40 years to check Chicago's system of turning Lake Michigan water westward without returning any of it.

Chicago uses lake water for its sewage system, sending the result westward toward the Mississippi—and to maintain navigation for barges and tugs on the Illinois Waterway.

MARCH SHOWDOWN

For almost the first time, Illinois' opponents have been placed on the defensive. In March they must reply to a suit by that State, acting for a small water authority centered at Lombard, one of Chicago's western suburbs.

That water authority proposes to draw water—though only a tiny fraction of that taken at Chicago—from the big lake and, after using it 25 miles inland, send it down the Mississippi side of a watershed.

Michigan and the other States contend that, after purification in a sewage disposal system, the water should be returned to the Great Lakes.

Their protest cast a cloud over the Lombard bond issue. Now Illinois, on behalf of the Lombard authority, is suing for a Supreme Court order to make Michigan and the others stop these tactics.

Nicholas V. Olds, assistant Michigan attorney general in charge of the water case, calls the Lombard plan "only the precursor of a flood of such demands."

"Lombard wants to grow at our expense," he says. "Its area is running out of well water for homes, commerce, and industry. So it is in the position of being in danger of overdrawing your bank account and going to another bank for money."

WORLD'S GREATEST

Olds and Attorney General Paul L. Adams head a fight to protect every drop of water in the Great Lakes Basin—the largest freshwater basin in the world.

If they do not protect it, they say, the lake States will lose invaluable quantities of water, and Federal and local governments will lose the millions of dollars they have spent to maintain navigation channels, beaches, recreation areas, and water supplies.

Other water-thirsty communities, behind the divide and watching their own wells dry up, view the lakes with longing eyes. They would like to pump lake water over the divide—whence it never would be returned.

By virtue of its position in the center of the basin, Michigan is the only State which can abstract water from the lakes and automatically return most of it to them. Any other community, except a small one on the very lakeshore, would send it down the outside of the divide, never to return.

Other States are not being dogs in the manger, however. A proposal by Youngstown and other communities in southeastern Ohio to take Lake Erie water for their own use was slapped down by their own State government.

NO EXCEPTIONS

Every important municipality—American or Canadian—on the lakes, except Chicago, returns to the lakes the water which it has extracted, used, and purified through treatment plants.

"We see no reason why Chicago should not be made to do likewise," Adams and Olds told the State Department, which must consider the damage to Canadian areas.

"Chicago's only excuse is that it would cost money to do so. But, by using Lake Michigan water, its per capita cost for sewage treatment is well below that of much smaller communities.

"It has such a large revenue-collecting base that it could well afford to construct and operate the works necessary."

What are the objections to Chicago's water diversion? The State lawyers say these are the principal damages:

1. To navigation and commercial interests:

Taking more than 1,800 cubic feet a second for domestic use has lowered Lakes Michigan and Huron 2 inches and Lakes Erie and Ontario an inch each. Harbors and channels are affected correspondingly.

THE BIG INCH

An inch of water permits a large lakes freighter to load nearly 100 tons of cargo. It increases the annual tonnage of the whole lakes fleet by 1,500,000 gross tons. Lost water levels cost the fleet $4 million in annual revenue and increase transportation costs on the cheapest transportation system in the world.

The Federal Government dredges 100 of the 400 lakes harbors. Diversification nullifies costly Federal improvements, as well as costly improvements by local governments and individuals—many millions of dollars.

Value and utility of the huge bulk freighters is impaired; accordingly, the welfare and prosperity of the population of the complaining States are injured.

Additionally, yachtsmen, fishermen, and other small boat owners operate their boats only with difficulty during low-water periods.

2. To riparian (waterside) property:

Hundreds of miles of shoreline in lakes States has been substantially damaged. Large investments have been hurt in commercial and private summer properties. Extensive damage has been caused to fishing and hunting grounds, spawning beds, and open marshes.

3. To the rights of the States themselves:

These States suffer damage to parks, camps, and fish hatcheries on the lakeshore. They suffer as consumers of lake-borne coal for public buildings and State institutions.

4. Specifically, to New York State and its citizens for power losses in the Niagara and St. Lawrence Rivers:

New York citizens lose a potential revenue of $1,027,841 a year because the water goes west instead of east and over Niagara Falls or down the St. Lawrence to hydroelectric powerplants. This figure is doubled if Canada's equal share is considered.

THE ISSUE

Illinois' opponents among the Lakes States ask the Supreme Court to halt the discharge of treated sewage into the Chicago Sanitary and Ship Canal and to require that it be returned, purified, to the Great Lakes Basin

They suggest that the Court appoint a "special master"—a powerful investigator for itself—to take testimony and report on Chicago's compliance with an order to return its water to the lake.

(Former Chief Justice Charles Evans Hughes was such a "special master" in 1929. The High Court affirmed his findings of great loss to the other States. In 1930 it ordered the diversion held down to 1,500 cubic feet a second, in addition to domestic pumpage, that water ordinarily needed for home, commercial and industrial use. This order still stands.)

Solicitor General Rankin, at his March hearing, will attempt to inquire how Chicago is coming with its sewage treatment program.

Chicago's opponents contend that the efficiency of the treatment plants has dropped in 6 years from about 95 percent to about 85 percent.

Missouri and other States into whose waters Chicago's treated sewage is discharged, complain that treatment is inadequate. A leading engineering publication says that, of 700 to 750 tons of solids to dispose of daily, Chicago's plants can handle only 450 to 500 tons.

CITIES OBJECT

This means, according to the engineers, that 200 to 250 tons of solids a day must be disposed of by other means. Many of these are flushed down the Chicago and Illinois Rivers.

Smaller communities along these rivers between Chicago and the Mississippi object to the sewage. Their alternative is a greater flow from Lake Michigan, which often floods their towns. The third proposition is that of the opposing States—that Chicago be made to spend the money to purify its sewage and return it to Lake Michigan.

International complications enter the picture. Ontario, at least, had asked its Federal Government to protest to the United States against Chicago diversion.

"There certainly is real ground," Michigan's lawyers told the State Department, "for fearing that Canada will use (Chicago diversion) against us in case we get into a disagreement with Canada over its intentions to divert the waters of the Columbia River."

(The Columbia passes through both Canada and the United States. The right of Canada to use some of the water before it gets to this country and empties into the Pacific Ocean is a subject of current controversy and study.)

The opposing States also worry about the growth of Chicago and its water problems. It already has the world's largest sewage treatment system.

HUGE GROWTH SEEN

In 1930—when the present Court order was issued—the sanitary district of Chicago covered 450 square miles. By 1957 this had grown to 920 square miles—and it had become known as the metropolitan sanitary district.

Chicago has bragged that it will grow to supply filtered water to 3 million people not now receiving it. This figure does not even consider industrial demand.

Chicago serves not only itself, but 85 adjoining suburbs. Estimates are that within our time its population will exceed 15 million people. In 17 years, the opponents say, the ordinary diversion of water for domestic pumpage will double and lower the lake another 2 inches.

Michigan and the other contestants worry lest they are not moving fast enough.

Sovereign States are exempt from what lawyers call the doctrine of laches—the doctrine that it is the complainant's fault if he fails to protest against a wrongdoing.

Olds says this is something like publishing the banns in a church—in effect, speak now or forever hold your peace.

MUST ACT NOW

But courts, from time to time, have refused relief to municipal or other sovereign entities which failed to assert their rights.

"We insist that we might wake up 20 years hence and find the Supreme Court convinced that we did not protest enough and therefore are not entitled to relief," Olds says.

Another ancient doctrine is that of riparian (shoreside owner) rights. That doctrine says that only the riparian owner has the right to take water—and that the right even then belongs only to the land user and the benefit must go to the land itself.

To answer this argument, Chicago argues that the whole State of Illinois is the riparian owner of Chicago's waterfront.

Michigan's lawyers say, however, a basic doctrine of riparian rights is that the user must return a reasonable amount of what he has taken from the stream or lake.

The first bill in the 1959 Congress called for an extra 1,000 cubic feet a second at

Chicago for other improvements, including navigation and sanitation.

TWO VIEWS

Chicago argues that 1,800 cubic feet for domestic pumpage is needed to sustain navigation on the sanitary-ship canal. This is one of America's most important inland waterways, connecting Chicago with the Mississippi and the Gulf of Mexico.

But Gen. Emerson R. Itschner, Chief of the Army's Corps of Engineers, says that the present 1,500 cubic feet is ample.

The canal is what is known as slack water, and water is needed only to open and close the locks to permit the passage of boats.

It is worse than slack water, Michigan authorities declare. They call it a cesspool, and say that its use as a dumping area for sewage only postpones the day when Chicago will be compelled to adopt Michigan's solution—treating the water and returning it to Lake Michigan.

"The canal has become a fetid mess," Adams and Olds say. "As long as the sanitary district insists on using it as a cesspool for untreated industrial wastes and inadequately treated sewage, there will be clamor for more diverted water from Lake Michigan."

MILLIONS SPENT

General Itschner says that even if duplicate locks were built in the future to handle increased traffic on the busy waterway, 1,750 cubic feet of water a second would be ample.

"The Federal Government spends millions of dollars annually in maintaining adequate depths in connecting channels and shallow areas of the Great Lakes and the St. Lawrence Seaway," the Michigan attorneys told Rankin. "Our ports and cities spend large sums for the same purpose.

"It is illogical to spend money on one hand so that proper depths can be maintained and then allow a diversion which militates against the maintenance of such depths—particularly when the diversion can be stopped by requiring (Illinois) to return its treated effluent to the lake."

SKIP COURTS, CARRIERS ASK

American and Canadian steamship companies propose that the Chicago water diversion controversy be taken out of the courts—even the U.S. Supreme Court—and adjudicated by an international body.

Their proposal came at a recent joint convention of Lake Carriers' Association and its Canadian counterpart, the Dominion Marine Association.

The two groups propose that the matter be studied by the International Joint Commission. This body was created in 1909 by the United States and Canada and has almost extraterritorial powers over such boundary disputes as this.

HOW CHICAGO TURNED TIDE

Chicago diverts water from Lake Michigan by what once was considered an engineering miracle.

Until 1900 the Chicago River flowed east into the lake. Then its course was reversed to bring in fresh water, after a series of severe typhoid outbreaks resulted from sewage polluting the drinking water intakes in the lake.

The State of Missouri sought an injunction to prevent opening of the Chicago Sanitary Canal. It feared that Chicago's wastes would imperil the St. Louis water supply.

But the sanitary district reasoned that, once started, the flow would be hard to stop—even by a court order. So it quietly ordered a dam knocked out on January 2, 1900, before the order could be issued, and turned the waters of the Chicago River westward.

LITTLE DROPS ADD UP

Though vetoed by President Eisenhower, a bill passed by Congress last year would have permitted Chicago to increase by 1,000 cubic feet a second the Lake Michigan water it uses.

The new figure of 2,500 so aroused N. G. (Ance) Damoose, city manager of Traverse City, Mich., that he wrote a conversion of "this innocent little figure" into quantities that "people can visualize." Other engineers confirm his figuring:

Diversion of 2,500 cubic feet of water a second is diversion of more than a million gallons a minute—1.6 billion gallons a day.

This would permit Chicago to waste as much water in 6 hours as all Detroit used in a day.

The amount Chicago could have diverted in 1 day would have filled, to a depth of 10 feet, a trench 20 feet wide stretching from Traverse City nearly to Kalamazoo.

At the rate of 2,500 cubic feet a second, Traverse City could be covered with a foot of water in 1 day. In a month, downtown Traverse City would be inundated "to the height of the new street lights."

In 3 minutes Chicago would take enough water from Lake Michigan to supply Traverse City for a whole day.

Three hours of 2,500-foot diversion at Chicago would take enough water to supply Detroit and Michigan's nine other largest cities for a whole day.

Mr. KLUCZYNSKI. Mr. Chairman, I yield 3 minutes to the gentleman from Michigan [Mr. O'HARA].

Mr. O'HARA of Michigan. Mr. Chairman, this bill calls for a 1-year diversion and a study of its effects. A study is not necessary and its result is a foregone conclusion. It is not necessary for navigation. The Illinois Waterway is a slackwater system. All that is needed to determine navigation needs is a pencil and paper. This has already been done by the Corps of Engineers. It is not necessary to determine the effect upon lake levels. Again pencil and paper have sufficed. As for pollution, the principal difficulty results from a lack of dissolved oxygen in the water below Chicago. If you take an additional thousand cubic feet per second of fresh lake water and dump it into the sanitary canal, it is going to abate the pollution. The laws of biochemistry have not been repealed. The report will state that the diversion was helpful in combating pollution in the sanitary canal. This is what we dread in the State of Michigan. When we authorize this study, by implication we say that if it is successful further diversion will be authorized. The State of Michigan does not recognize the existence of a right in the Chicago Sanitary District to continue to divert this water over any period of time.

The facts regarding millions of dollars of loss to other Lake States from a permanent diversion are well known.

The loss of power to the New York Power Authority from a 1-year temporary diversion has been variously estimated at from $608,000 to $1,381,000. Add to this a cost of $545,000 for conducting the study, and the total cost of a 1-year temporary diversion is somewhere between $1,153,000 and $1,583,000, without including any loss of shipping or lakeshore property values that might result.

The Department of Health, Education, and Welfare has found that the same results with regard to pollution abatement could be achieved by construction and operation of additional facilities at Chicago. They estimate that such facilities could be installed for from $750,000 to $1,500,000 without diverting a single additional drop of Great Lakes water. The cost of doing this is about the same as the cost of a temporary increase in diversion. The question is, Who shall bear the cost, the Federal Treasury and the people of the Great Lakes States or the people of Chicago? If this Congress insists on helping Chicago, it should be honest about it and pass a private bill for the relief of the Chicago Sanitary District, build these alternative facilities, and leave the lake levels alone.

The Sanitary District of Chicago does have serious problems with regard to pollution of the Chicago Sanitary Canal. The State of Michigan and other States bordering the Great Lakes recognize this and have in the past consented to temporary increases in the diversion of Great Lakes water. But, we do not consent to the diversion proposed in this bill.

Shipping on the Great Lakes and connecting waterways is hindered by any lowering of levels of the lakes and connecting waterways however slight.

The resulting decrease in the flow of the Niagara and St. Lawrence Rivers would, as has been indicated, deprive the New York Power Authority of generative capacity.

The effects on lakeshore properties and watertable levels are difficult to estimate but would, nevertheless, be detrimental.

Chicago is the only Great Lakes city taking water from the Great Lakes Basin and permanently diverting it to another watershed. Every other city on the Great Lakes, including Milwaukee, Detroit, Cleveland, Erie, and Buffalo, returns the water it uses to the lakes after proper treatment. Chicago does not do so because its treatment facilities are not adequate to permit it to return the water it uses to the lakes without contaminating its own water supply.

The answer to this problem is proper treatment not increased diversion. The Department of Health, Education, and Welfare, in its report of April 1957, recommends four possible methods by which Chicago could obtain water quality in the sanitary canal that would compare favorably to that resulting from the increased diversion requested here. These alternatives involve improvement of Chicago's sanitary collection and treatment facilities and involve expenditures for improvements by the city of Chicago. These are the methods used by all other Great Lakes communities and all involve expense to the citizens of these communities for installation and operation. We ask only that Chicago recognize its obligation to take these steps, as we have, rather than attempting to solve its difficulties by diverting water to the detriment of other Great Lakes communities.

In brief, we feel that a 1-year diversion would be detrimental to Michigan's interests and we further feel that Chicago's problems can be better met by adopting one or more of the alternative methods proposed by the Department of Health, Education, and Welfare. We object to the implications of authorizing

a temporary increase in diversion for test purposes. We are convinced that once additional diversion is begun it will not be stopped. The last sentence of H.R. 1 says:

> The report * * * shall contain recommendations with respect to continuing the authority to divert water from Lake Michigan into the Illinois Waterway.

The passage of this measure authorizing a study makes no sense whatsoever unless Congress is prepared to take action based upon the results of the tests.

We oppose with all our might any recognition by this body that the Chicago Sanitary District can be authorized by Congress to disregard its obligation to adequately treat its waste by shifting its burden to other Great Lakes States. We ask you not to be deceived as to the ultimate objective of this bill which is to pave the way for a permanent and continuous withdrawal of water from the Great Lakes never to be returned.

Mr. MACK of Washington. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. GRIFFIN].

Mr. GRIFFIN. Mr. Chairman, we have been hearing much about the urgent necessity for passage of this bill because of the serious sanitation problems of Chicago and the dire consequences that would follow if we reject the bill. Many who are not familiar with the history of this legislation might think that this pressing problem is something new.

I should like to focus attention on an application made by the city of Chicago back in 1913 to the then Secretary of War, Henry L. Stimson, for approval of a proposal to divert Lake Michigan water. The reasoning used then, in 1913, by Secretary Stimson is still appropriate and even more compelling today. This is what he said:

> In a word, every drop of water taken out at Chicago necessarily tends to nullify costly improvements made under direct authority of Congress throughout the Great Lakes, and a withdrawal of the amount now applied for would nullify such expenditures to amount of many millions of dollars, as well as inflict an even greater loss upon the navigation interests using such waters.
>
> On the other hand, the demand for the diversion of this water at Chicago is based solely upon the needs of that city for sanitation. * * *
>
> The evidence indicates that at bottom the issue comes down to the question of costs. Other adequate systems of sewage disposal are possible and are in use throughout the world. * * *
>
> It is manifest that so long as the city is permitted to increase the amount of water which it may take from the lakes, there will be a very strong temptation placed upon it to postpone a more scientific and possibly more expensive method of disposing of its sewage.

Mr. Chairman, I should like to focus attention upon some of the underlying legal aspects of the bill.

It will be noted that this bill has been carefully drafted to make it appear that the proposed study is somehow related to navigation; no reference whatever is made in the bill to the principal and only purpose of the proposed study; namely, sanitation.

The reason for the careful draftsmanship is readily apparent if one studies the Supreme Court opinions in *Wisconsin* v. *Illinois et al.* (278 U.S. 367 (1928) and 281 U.S. 179 (1930)), which are the decisions under which Chicago is now permitted to divert water in the amount of 1,500 cubic feet per second.

In the 1928 case, the Supreme Court said:

> Insofar as the prior diversion was not for the purpose of maintaining navigation it was without legal basis because made for an inadmissible purpose. The sanitary district authorities relying on the argument with reference to the health of its people have much too long delayed the needed substitution of suitable sewage plants as a means of avoiding diversion in the future. Therefore, they cannot now complain if an immediate heavy burden is placed upon the district because of their attitude and course.

In the 1930 case, the Supreme Court said, at page 184:

> This Court held that diversion for sanitation is illegal and inadmissable.

And at page 185:

> Diversion to remove a nuisance created by the sewage of Chicago is not in aid of navigation.

With respect to the diversion then being made by the Chicago Sanitary District into the Chicago Drainage Canal, the Court had this to say, at page 196:

> The defendant State (of Illinois) and its creature, the sanitary district, were reducing the level of the Great Lakes, were inflicting great losses upon the complainants and were violating their rights, by diverting from Lake Michigan 8,500 or more cubic feet per second into the Chicago Drainage Canal for the purpose of diluting and carrying away the sewage of Chicago. The diversion of the water for that purpose was held illegal, but a restoration of the just rights of the complainants was made gradual rather than immediate in order to avoid so far as might be the possible pestilence and ruin with which the defendants have done much to confront themselves * * *. The defendants have submitted their plans for the disposal of the sewage of Chicago in such a way as to diminish so far as possible the diversion of the water from the lake * * *. They are material only as bearing on the amount of diminution to be required from time to time, and the times to be fixed for each stop, and therefore we shall not repeat the examination. It already has been decided that the defendants are doing a wrong to the complainants and that they must stop it. They must find out a way at their peril * * * it (the State of Illinois) can base no defenses upon difficulties that it has itself created. If its constitution stands in the way of prompt action it must amend it or yield to an authority that is paramount to the State.

In view of the Supreme Court's explicit holding that water diversion for sanitation purposes is illegal, and that water diversion can only be validly authorized for purposes of navigation, it is interesting to review the committee report and the available documents with respect to the relation of the proposed study to navigation.

It is particularly disturbing to those of us who oppose this bill that it should have been brought to the floor before printed copies of the committee hearings held by the Rivers and Harbors Subcommittee of the House Committee on Public Works are available. I have carefully reviewed the printed hearings held before that subcommittee during the last Congress and I should like to focus the attention of the Members upon the testimony of Brig. Gen. J. L. Person, who spoke for the Corps of Engineers, and said this:

> Recent studies of the present and prospective water requirements for navigation on the Illinois Waterway show that the present authorized diversion of 1,500 cubic feet per second plus domestic pumpage from Lake Michigan is adequate to meet navigation requirements. An increase of 1,000 cubic feet per second in the diversion would result in an average increase in velocity of about one-tenth of a mile per hour. This would tend to have a slight effect on navigaton in the Illinois Waterway, since about 85 percent of the commerce on the waterway is upbound, so there would be a slightly adverse effect.

Following that statement, at page 22 of the printed hearings there appears the following colloquy:

> Mr. BLATNIK. Thank you, General. Now that the Corps of Engineers report has been completed, are there, in your opinion, any further studies or investigations necessary before conclusions can be reached on the effects on this proposed diversion?
>
> General PERSON. Only insofar as the effect of the proposed diversion on the sanitary conditions of the waterway are concerned. As far as navigation and power effects are concerned, and effects on shore property, we feel that our report is complete.

In the committee report on this bill, at page 7, appears the following:

> The Department of the Army stated that the question as to whether the proposed legislation is necessary or desirable is one upon which the Department is not in a position to comment since the possible improvements in sanitary conditions arising from the diversion is a matter not within its jurisdiction, and that with respect to navigation, the Department has already submitted a report, printed as Senate Document No. 28 of the 85th Congress.

Mr. Chairman, each Member of Congress takes an oath of office to protect and uphold the Constitution of the United States just as do the members of the Supreme Court. Surely there is a heavy obligation resting upon each of us to consider seriously the constitutionality of bills presented to Congress. In recent years, we have heard a lot of criticism from Members of this body who contend that the Supreme Court has disregarded constitutional principles. I wonder how many of those critics will vote for this bill.

Mr. KLUCZYNSKI. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, we are coming to the close of this very, very important legislation; we are about to vote on it very shortly, and I am happy that we are coming to a close, because I have had to roll up my cuffs; we are pumping so much water I cannot keep them dry.

Mr. COLLIER. Mr. Chairman, will the gentleman yield?

Mr. KLUCZYNSKI. I yield to the gentleman.

Mr. COLLIER. I thank my colleague. I simply want to make this observation in connection with the statement he has

just made. We have heard here about the tremendous volume of water that is going to be diverted. The fact of the matter is that we are actually taking one quarter of an inch; that is the maximum by which the lake level might be lowered. It might be well to consider in this connection that the average annual seasonal variation of lake levels on the 5 Great Lakes is from 18 to 22 inches a year. I thank the gentleman.

Mr. KLUCZYNSKI. I thank the gentleman from Illinois.

Let us now review a little of the history of this bill, especially for the benefit of the new Members. We first introduced this bill in the 82d Congress, back in 1951.

We had a tough time getting it out of the Committee on Public Works because we did not explain it properly. It got hung up in the Rules Committee toward the close of the session.

In the 83d Congress H.R. 3300 was passed by the House and Senate, but, for some unknown reason, it was vetoed by the President. The same thing happened in the 84th Congress when our great leader from Illinois [Mr. O'BRIEN] introduced a bill. In the 85th Congress we passed this legislation in the House of Representatives, as you will all remember, but it was hung up in the Senate because the junior Senator from Wisconsin filibustered it to death, the fellow who is against rule 22 in the Senate, and he is against filibustering.

So, in the 86th Congress, H.R. 1 introduced by the gentleman from Illinois [Mr. O'BRIEN], was reported by the Committee on Public Works by a vote of 19 to 11.

Now, they are trying to scare you, especially the new Members. The oldtimers are used to this. They are telling you new Members that Canada is going to take a lot of water from the Columbia River. They are telling you that the President is going to veto this bill. I do not know where they got that information. The Lake Carriers Association is going to be put out of business, they say, and the power companies will have to hang up.

Mr. Chairman, you know what a great man the gentleman from Illinois [Mr. O'BRIEN] is. He would not want to harm anybody, and neither would I.

This bill, H.R. 1, Mr. Chairman, was prepared at the request of an Assistant Director of the Bureau of the Budget, who is now in the White House as one of the Presidential aids. This is the language that he suggested to the two Senators from Illinois, DOUGLAS and DIRKSEN, Democrat and Republican, and all the Members of the House from Illinois, Democrats and Republicans alike. We were all present.

This gentleman said if we would put this language in the bill for the 1-year study instead of the 3 we would have no opposition from the Bureau of the Budget the State Department, or from Canada. Mr. Chairman, we, the Members of the House and Senate from Illinois, have lived up to that agreement.

Now, it was claimed that we would steamroller this bill through the Committee on Public Works. So let us see what we did there. We had extensive hearings. We had a long list of witnesses, three or four sheets of them. We had the gentleman from Illinois [Mr. O'BRIEN] explain the purpose of the bill; we had the Honorable Mayor of Chicago before us. The gentleman from Illinois [Mr. O'BRIEN] spoke for all members of the Illinois delegation. Of course we had Senator PROXMIRE, of Wisconsin, who brought some water over. We asked him to drink some of the water he got from the drainage plant in Milwaukee, but he said he was not that thirsty.

We also heard from the attorney general of Michigan who said he did not have time enough to testify before our committee; so he came in with a prepared statement of 48 pages. Two weeks later he came in for a second hearing. A gentleman by the name of Milton T. Adams, executive secretary of the Water Resources Committee of the State of Michigan, a man who knew what this is all about, testified before our committee. He also came in the second time. That shows we did not steamroller the hearings. The committee had patience enough to listen to his testimony the second time. He showed pictures to the committee that he took while flying over Chicago. He took pictures of the canal and of the Chicago River.

And I looked at those pictures and I began thinking, Do I live in the city of Chicago, with all that debris and everything in that canal? So, I took a couple of pictures with me. I could not wait until the next morning so that I could take a ride out to Chicago and take a look at it. I also carried a little camera with me, but I did not see any debris or anything around the canal. I had to get some fieldglasses, and so away out yonder, I saw a couple of empty packs of cigarettes and some paper cups. This is the pollution that this gentleman spoke about.

This is very, very vital to the people of the State of Illinois and of Cook County. You have been very fair with us in the past by voting this legislation out of this august body, and I am going to plead with you to vote for H.R. 1 again. To you, the new Members, for the sake of TOM O'BRIEN and the Illinois delegation and all the people of the State of Illinois, I ask you to support H.R. 1.

Mr. Chairman, this bill authorizes an increase in diversion of water from Lake Michigan into the Illinois Waterway, in the amount of 1,000 cubic feet per second, in addition to the present amount of 1,500 cubic feet per second annual average now authorized by permit of the Secretary of the Army pursuant to the 1930 decree of the Supreme Court of the United States.

Under the provisions of the bill the Secretary of the Army shall at all times have direct control and supervision of the amounts of water directly diverted from Lake Michigan. In the event of any floods in the Illinois, Des Plaines, Chicago, or Calumet Rivers, the Secretary of the Army is authorized and shall not allow any water to be directly diverted from Lake Michigan to flow into the Illinois Waterway during such times.

This legislation has been before the House Committee on Public Works for a number of years and after serious and careful deliberations it has again been favorably reported by the committee.

H.R. 1 differs from previous bills authorizing the diversion of water from Lake Michigan at Chicago in that the reported bill would provide for a diversion of 1,000 cubic feet per second for only 1 year, whereas earlier bills provided for a 3-year period. H.R. 1 would also require specific studies made by the Departments of Health, Education, and Welfare and the Army to be coordinated and submitted to Congress. The bill establishes a timetable for the studies preceding and following the diversion. As a result of the decreased time of diversion provided in H.R. 1, the effect on lowering of the lake level would be less than in bills previously considered and consequently any losses or damages, either tangible or intangible, which might be claimed to result would be correspondingly less.

The suggestion was made by the Public Health Service and others for a joint study of the treatment of the sewage of Chicago, and also of the condition of the Illinois Waterway, to be financed equally by the Metropolitan Sanitary District of Greater Chicago and the Public Health Service.

The Metropolitan Sanitary District of Greater Chicago on January 1, 1958, entered into a contract with the outstanding sanitary engineering consulting firm of Greeley & Hanson, at a price of $125,000, to make an 18-month study of the present system, and to make recommendations for any necessary improvements and extensions. This study is near completion and will produce the information required in the suggestion.

I firmly believe that this legislation is in the best interests not only of the Cook County area, but of the entire Midwest.

The Illinois Waterway is steadily increasing in importance. It connects the two most important waterway systems in the Nation, namely the Great Lakes and the Mississippi River. An additional diversion of 1,000 cubic feet per second of water from Lake Michigan, in addition to the presently authorized 1,500 cubic feet per second, would provide a clean stream and improve navigation. It would result in a marked improvement in the Chicago sewage system.

Mr. Chairman, I yield 5 minutes to the gentleman from Illinois [Mr. PUCINSKI].

Mr. PUCINSKI. Mr. Chairman, I rise to speak in support of H.R. 1, sponsored by one of the most highly respected Members of this Congress, the Honorable THOMAS J. O'BRIEN, dean of the Illinois delegation.

We all heard Mr. O'BRIEN's impassioned plea for enactment of this legislation, which would permit the city of Chicago to divert an additional 1,000 cubic feet per second of water from Lake Michigan to improve navigation and bring other benefits to the Illinois Waterway.

This bill has been submitted by the senior member of the Illinois delegation

because it will not only serve the equivalent of 8½ million people of the Chicago area, but alsc because its beneficial effects will be felt along the entire route that this water flows, down to the mouth of the Gulf of Mexico in New Orleans.

Let us analyze the arguments voiced by opponents of this bill. I conclude that they submit two basic arguments:

First. That our neighbor to the north, Canada, opposes this legislation.

Second. That sponsors of this legislation are trying to get Congress to do something which the Supreme Court of the United States had refused to do.

I should like to address my remarks, first, to the statement that Canada objects to this legislation.

The basic water distribution agreement between the United States and Canada—water that flows through Niagara Falls—goes back to the boundary treaty negotiated by Secretary of State Elihu Root in 1908. This treaty provided that the United States and Canada shall each be allotted 36,000 cubic feet of water per second. Since the city of Chicago was already allocated 10,000 cubic feet per second, Root agreed that the rest of the United States would get only an additional 26,000 cubic feet per second.

This is important: Secretary of State Root was willing to give Canada an extra 10,000 cubic feet per second because Chicago already was allocated 10,000 cubic feet per second, but he stubbornly insisted that Lake Michigan be excluded from the treaty of 1908 because it is not a boundary body of water; it touches no part of Canadian territory.

But there are even more compelling reasons why Canada should not object to the legislation. In 1950, with the advent of power development along the entire waterway separating the United States and Canada, a new treaty was executed between the United States and Canada. Under this treaty, our Nation and the Canadian Government agreed to increase the total flow through Niagara Falls to 64,000 cubic feet per second for each Nation, with the proviso that if one nation did not use the allotment, the other nation could.

Gentlemen, the fact of the matter is that right now, today, the United States is drawing only 16,000 cubic feet per second of its authorized allotment of 64,000 cubic feet per second at Niagara Falls. Quite logically, you might ask "Why?" The answer is very simple. The American powerplant at Bucharris went out of operation due to a landslide, and we are unable to use the amount of water that we would normally use under the 1950 treaty.

Actually, then, Canada is using a great deal more water right now than the authors of the 1950 treaty ever intended for her to use.

We witnessed yesterday opponents of this legislation expressing great fears over the fact that if we approve this legislation, we might in some mysterious manner shatter hemispheric solidarity with our friendly neighbor to the north, Canada. I think we can all agree we want to enjoy Canada's continued traditional friendship. But the men who fear lest we in the United States do anything to ruffle the feelings of our friends in Canada should be reminded that the American people in the last 14 years have carried the major brunt of protecting the free world from international communism. We, as citizens of the United States, have poured $80 billion into various plans to help preserve the free world through foreign aid and military assistance, not to speak of the countless billions of dollars for our own national defense, which benefits the whole free world.

If it is true that Canada really objects to this legislation, then I submit that the Foreign Office of Canada is nowhere nearly as concerned about retaining hemispheric solidarity with the United States as opponents of this legislation have shown toward Canada.

I ask you in all humility if the time has not come when we should ask the Foreign Office of Canada if it is showing the same consideration toward the problems facing the great Midwest as the opponents of this bill are showing for Canada.

Opponents of this bill would have you believe that adoption of this bill would deteriorate the relationship between the United States and Canada. I doubt this particularly when we consider the more serious problems confronting the free world today: namely, May 27 in Berlin, and the entire spectrum of the cold war.

Now let us go to the second aspect: The opponents of this bill claim that the proponents of this bill are trying to do something in Congress which rightfully belongs to the Supreme Court of the United States. The fact of the matter is that this entire question of lake diversion for Chicago fell under Supreme Court jurisdiction only because prior to June of 1930, there was no legislation dealing with control of lake diversion. The original Supreme Court decree limiting Chicago to 1,500 cubic feet per second was entered on April of 1930—2 months before the Federal act was passed. We submit that since the 1930 Rivers and Harbors Act was passed by Congress taking jurisdiction over lake diversion, this entire matter now rests with the Congress of the United States, and those who try to confuse this issue know that sooner or later, under the 1930 act, the Congress will have to decide whether Chicago should get more water to protect the health of the entire Midwest. As a matter of fact the Supreme Court said in its 1930 decree that Congress may act on this matter.

I am urging passage of this legislation for many reasons but perhaps to me personally, the most compelling reason is that a part of the North Branch of the Chicago River flows through one of the most beautiful sections of my district. This river has created serious problems for thousands of my constituents. Added lake diversion would be of tremendous help to those people.

To those who oppose this legislation because they fear that added diversion provided in this legislation would reduce lake levels in their respective ports, let me remind them again and again that Army engineers have testified the net effect on lake levels would be a drop of one-quarter of an inch in a 15-year period. We ask for this added diversion for only 1 year and the Army engineers have testified that under this 1-year provision the drop in lake levels would be infinitesimal or practically nonexistent.

Mr. MACK of Washington. Mr. Chairman, I yield the balance of the time on this side to the gentleman from Florida [Mr. CRAMER], a member of the committee.

Mr. CRAMER. Mr. Chairman, it is not my intention to take all of that time, but there are some facts with regard to this bill that should be brought to the attention of the House, some of which have not been brought previously to the attention of the House and some of which are in the form of summarization.

Let me say first that this bill is of greater interest than merely to the adjoining States in the Chicago, Ill., area. As a matter of fact, the gentleman from Washington has very vigorously opposed this legislation in that the people of Washington are concerned about it as setting a precedent with regard to the diversion of water in their own State. I understand that even the Governor of that State has taken a position with regard to the diversion of water which is an indication that not only the adjoining States but other States in this Nation are equally interested from the standpoint of conservation and the question of water pollution.

Mr. MACK of Washington. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield to the gentleman from Washington.

Mr. MACK of Washington. I wanted to make a correction in your statement. The gentleman said that the Governor of our State came out against diversion of this water. The Governor has not. He has taken a rather wishy-washy position on it. In fact, I think our Governor has been asleep at the switch when it comes to recognizing the threat to the State of Washington and the Pacific Northwest power production and navigation on the Columbia River that is inherent in this legislation. I wrote to the Governor in the middle of February and requested that he be present or send his representative to testify against this proposed legislation. I expressed my fears, but the Governor did not respond to my letter until a day or so ago, or 17 days after I wrote him and not until after the hearings were completed.

In his letter to me, he said he regarded this bill as solely an Illinois problem. He said he was not going to take any part in debating it.

On the other hand, the gentleman from Oregon [Mr. NORBLAD] who represents the Oregon side of all the navigable part of the lower Columbia and I, who represent the Washington side of the lower part of the Columbia River, are both opposed to this proposed legislation.

Mr. Herbert West, who represents all the shipping interests on the Columbia River, the interests of Oregon, Washington, and Idaho, has written me strongly protesting against this legislation.

The users of the power on the Columbia River, the public utility companies, have written to me protesting against this legislation. Many of the granges of my district have written to me protesting this legislation. They feel that if this water is diverted from Lake Michigan at Chicago, the result may well be that Canada will use this as a precedent or as an excuse for diverting water from the Columbia River, which would cause millions of dollars of damage to their power generation of the dams on the Columbia River. If Canada diverts Columbia River water the stream levels of the Columbia River which serve such ports as Astoria and Portland, Oreg., and Longview and Vancouver in Washington State will suffer navigation losses.

Mr. CRAMER. Mr. Chairman, I think the gentleman has expressed more eloquently than I could the fact that there is a particular problem in his State, and their apprehension and the reasons therefor, concerning this legislation as exists in States other than those immediately in the Illinois area.

Mr. PELLY. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield to the gentleman.

Mr. PELLY. I would like to say that the city of Seattle's powerplant is located on the Skagit River where we have an arrangement with the Canadians in the matter of the backing up water into Canada. Seattle has a great interest in assuring that we work harmoniously with Canada in any disposition of water. The State of Washington's economy is tied in with any way that the United States handles the negotiations with our good neighbor, Canada. Therefore, I oppose this bil.

Mr. CRAMER. I appreciate the gentleman's further confirmation of the remarks I just made about the concern of other States with regard to this.

Let me bring out a few points some of which have not been brought out in the past debate.

The first is this: We do not have the hearings. They are not printed and not available, so we must rely on our memory as to what was testified before our Committee on Public Works.

The Department of Health, Education, and Welfare testified in effect that there is nothing in this bill with regard to the study except the question of drawdown.

There is nothing in this bill with regard to the question of pollution in the lake; there is nothing with regard to the question that the Department of Health, Education, and Welfare should legitimately be interested in, and that those of us who are interested in conservation, those of us who are interested in water pollution, those of us who have consistently supported water pollution legislation in this Congress, should be concerned with. There is nothing that would permit the Health, Education, and Welfare Department to go into that in this legislation. Equally important to draw down is the question of pollution, if not now, then sometime in the future if water diversion were approved as a permanent matter.

There is nothing in the bill about that. The Department of Health, Education, and Welfare refuses to take a position in support of this legislation because on further questioning they stated that if the study were properly made and did include the water pollution question, which it should include, it would cost an additional half a million dollars, bringing the total cost of this legislation to over a million dollars.

What is this expenditure for? This expenditure is for the benefit, and no one is kidding anyone else, of the Sanitary District of Chicago. We can understand that they have this problem. But they have a forum and a relief other than asking the taxpayers of this country to pay for it, a half a million dollars, a million dollars if it were properly done. That forum is the Supreme Court, the Federal court system for permission and local contributions through bond issues for costs. Yet they want the U.S. Congress now to inject itself into the question even though the courts presently have jurisdiction over it. What they really want—let us get down to the fact—is that they want the Federal Government to pay the bill. They want the taxpayers to pay the half million dollars.

As far as I am concerned, this is a dangerous precedent. I know of no similar, analogous authorizing legislation that has recently come out of the Committee on Public Works, certainly not since I have been a member of it in the last 5 years, which has required the expenditure of Federal money.

I call your attention further to the fact that there is no limitation in this authorization with regard to how much Federal money shall be used. There is no limitation whatsoever. It is just another deviation from the usual procedure of our Committee on Public Works, but in this particular legislation they have in effect asked for the expenditure of Federal money for the purpose of studying the effect of the local sanitary project, only the drawdown question. I think it is a deviation which we cannot afford and should not permit at this time. We simply should not set this as a precedent for future action of our Committee on Public Works.

The question has been raised, Will the President veto this bill? I think he will. I think logically he has no alternative but to veto it. If you look at the minority report on pages 12 and 13 you will see his reasons for vetoing it last time. You will find there is not one single change in this legislation that affects these major questions that he raised as a basis for his veto, and there are four of them. There is not one single change made in the bill with the exception of the time involved. They have changed it from a 3-year to a 1-year study. It has been changed to a 1-year study, but I can see no reason why the President would not veto it if it were a 1-year study, because the question of diversion, and the question of the general agreement of the States in the adjoining area, and the question of the Supreme Court retaining jurisdiction, and the question of the Canadian objection, are just as strong as before. So it appears to me this is as useless an action as it was in the first place.

Canada has objected. That has been strongly stated in the consideration of this bill.

There are many members on the Committee on Foreign Affairs who are asked to consider this bill now, which I do not have the privilege of serving on. It seems to me that committee would be equally concerned with us, with the President, with the State Department. The State Department has objected to this legislation. It appears to me that they would be equally concerned over the fact that the State Department objects to the legislation because there has been no agreement reached between the United States and Canada concerning it and the Foreign Affairs Committee has not had a chance to consider the bill. Therefore, I say to you the reasons for opposition to this bill are just as strong today as they were at the time the President vetoed it and we should not pass this bill.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. BLATNIK].

Mr. BLATNIK. Mr. Chairman, I yield to the gentleman from Wisconsin [Mr. KASTENMEIER].

Mr. KASTENMEIER. Mr. Chairman, I speak here today in a final appeal to my distinguished colleagues to vote against H.R. 1, a proposal to divert an additional 3,600,000 cubic feet of water each hour from Lake Michigan for a full year. This diversion of water creates some serious problems which I think all of us should consider fully before casting our votes.

I do not want to engage in a lengthy discussion of each argument, but let me summarize for you briefly the far-reaching effects of this legislation.

First. If the Chicago Sanitary District is permitted to divert additional water from Lake Michigan, it may well undo the years of efforts to promote the development of the St. Lawrence Seaway. Millions of dollars have been spent to complete the St. Lawrence Seaway project, and additional millions of dollars are being expended to deepen channels and harbors so that ocean-bound ships can use our Great Lakes ports. The water level may be lowered by this increased diversion the few inches necessary to prevent ocean-going ships from fully utilizing the Great Lakes ports.

Second. It is my considered opinion that established beyond all reasonable doubt has been the principle that no State or Nation can act unilaterally on a matter affecting an international water in a manner which will adversely affect some other State or Nation. The distinguished authority on international law, Lauterpacht, now a judge of the International Court of Justice, has stated that "the duty of the State not to interfere with the flow of a river to the detriment of other riparian States" is "one of those general principles of law recognized by civilized States which the Permanent Court is bound to apply to virtue of article 38 of its statute"—1 Oppenheim, "International Law," pages 346–347, 8th edition, Lauterpacht, 1955.

For those of you who wish additional evidence, I refer you to two publications: "Document on the Use and Control of Waters of Interstate and International Streams," a compilation of compacts, treaties and adjudications affecting the use of interstate and international waters, published in 1956 by the U.S. Department of Interior, and the "Principles of Law Governing the Uses of International Rivers and Lakes," the proceedings of the 10th conference of the Inter-American Bar Association held in 1957 in Buenos Aires, Argentina.

Third. If the Congress is to act unilaterally to divert greater amounts of water from the Great Lakes in the face of protests from the Government of Canada, we may well encounter a situation in the Pacific Northwest States which should be of paramount concern to my colleagues from that section of the country. The Canadian Government could take steps to unilaterally divert water from the Columbia River at points before it enters the United States.

Claims have been made by some proponents of increased diversion that Canada is not involved in this diversion, because Lake Michigan is not attached in any way to Canada. Let us not delude ourselves into this type of foolhardy thinking. For all water purposes the Great Lakes are one body, and any effect of Lake Michigan diversion is felt all the way to tidewater below Montreal.

Fourth. In addition, if Chicago is to be permitted to increase its diversion of Lake Michigan water by congressional action, then the precedent to allow other Great Lakes communities to divert water for other purposes will have been established. Consider for a moment the devastating results if this were to happen.

Fifth. The matter of diversion of Lake Michigan water is currently the subject of litigation before the Supreme Court of the United States, and congressional action at this time would have the effect of preempting the highest Court of our land.

In December 1958 the State of Wisconsin, and the State of Minnesota, and the State of Ohio, and the State of Pennsylvania, and the State of Michigan, and the State of New York—parties to the original action in the case of Wisconsin et al against Illinois and the Chicago Sanitary District, filed application with the U.S. Supreme Court to reopen the decree of April 21, 1930. By that decree the Supreme Court retained jurisdiction over the subject matter of H.R. 1. Wisconsin's present application is for the purpose of requesting the Court to appoint a special master to take evidence to determine whether Chicago should be compelled to follow the practice of all other Great Lakes cities and return its unused domestic pumpage, after it had passed through its waterworks and purification system, to the Great Lakes Basin. The State of Illinois and the Sanitary District have filed their brief in opposition to our application.

Sixth. To have the U.S. Public Health Service make this so-called year-long study of the effect of diversion is totally unjustified and an extravagant waste of Federal funds at a time when we are all concerned with Federal spending.

The Corps of Engineers has testified that it is fully satisfied that additional diversion will not improve navigation on the Illinois Waterway and that it will have an adverse effect on navigation on the Great Lakes. There has never been shown any evidence that a study would contribute any useful information to a better understanding of navigation consequences. Yet, the stated purpose of this bill is to seek information on the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation. The only remaining purpose that this study could serve is what additional diversion does for sanitation.

The U.S. Public Health Service, the Illinois Board of Health, the Chicago Board of Health and every other competent public health body have concluded that increased diversion is not necessary for improved sanitation or public health.

On the other hand, the most competent public health survey ever made of Chicago's sanitation problems, the U.S. Public Health Service's Chicago and Cook County health survey, called for a series of other recommendations to improve Chicago's sanitation. It specifically considered additional diversion, but failed to recommend it. I concede that this study was made 12 years ago, but no contrary findings have been reported since this study was concluded.

Furthermore, I believe this bill is unnecessary because the U.S. Supreme Court has established jurisdiction over diversion by Chicago for many years, and everything provided in this bill could be granted by the Supreme Court. The Court has been willing to grant Chicago temporary increases in diversion in the past, having done so as recently as 1956. Undoubtedly, increased diversion would be approved again if the situation merited it.

Obviously, only lack of merit keeps the Chicago Sanitary District from going back to the Supreme Court to seek the diversion authorized in this bill.

I do not question the fact that Chicago has an overwhelming sanitation problem. However, I feel it is wrong for this great Midwestern city to use water which belongs to all of us to flush away its sewage-disposal problems.

The effect of Chicago's using Great Lakes water to solve its own problem is much too far reaching. Let us take a sober second look before it is too late.

Mr. BLATNIK. Mr. Chairman, I yield to the gentleman from Vermont [Mr. MEYER].

Mr. MEYER. Mr. Chairman, although I recognize the needs and desires of the city of Chicago for more water, I must protest the possible passage of this bill.

The diversion of additional water from Lake Michigan will, according to reliable estimates and studies, adversely affect the most efficient production of St. Lawrence power. It may also create problems with Canada.

These results would not be in the interest of the people of Vermont.

Mr. KNOX. Mr. Chairman, I rise today as it is imperative that the membership of the House be informed so its action will not jeopardize the national interests in favor of a piece of local legislation.

This measure, H.R. 1, asks for an additional 1,000 cubic feet per second diversion of Lake Michigan water into the drainage system of the Metropolitan Sanitary District of Chicago in order to test the effect of this fresh-water supply and the oxygenation caused thereby on the drainage canal.

As the Representative of the 11th Congressional District of Michigan, which is surrounded by three of the Great Lakes; namely, Michigan, Huron, and Superior, and a shoreline of 1,000 miles, I am compelled to rise and voice my objection. However, I rise also to protect the interests of the country as a whole, as well as my district in particular.

Everyone here today knows the result when the plug is pulled in the bathtub. The advocates of this bill allege that when this is done the water will not run out—we all know better. So let us begin by agreeing that the diversion of an additional 1,000 cubic feet per second of water from Lake Michigan is going to cause this large body of water to recede.

I would like at this time to suggest to you just some of the many reasons why this is such a dangerous piece of legislation.

We have here before us a threat of the St. Lawrence Seaway project. The estimated construction cost of this country's share alone is around $125 million not to mention the millions of dollars that have been spent by Canada and the many, many port cities of the Great Lakes. The law of navigation demands that the water depth in the connecting channels and the harbors be 27 feet. If we allow this diversion it is quite possible that such a level could not be maintained in many of the harbors and the connecting channels. Doesn't it seem illogical to spend millions of dollars to create and maintain proper depths while at the same time allowing a diversion which would lower these depths?

Consider the effect that the lowering of the lake levels would have on Great Lakes' shipping, thus causing adverse economic repercussions on the whole economy of this Nation. If this area of transportation is hampered the result will be increased unemployment due to the reduced quantity of raw materials being delivered to the factories.

Should no consideration be given to the views of our neighbor Canada? I do not mean to suggest that the decisions of this Congress should be dictated by another country, but in view of the circumstances I believe that the Congress should not ignore the legitimate interests of our good friends to the north. The Canadian Government, while recognizing that the use of Lake Michigan water is the jurisdiction of the United States, is of the opinion that this additional diversion would be incompatible with the arrangements of the St. Lawrence Seaway and with the Niagara Treaty of 1950. Consider how we are going to react if Canada in turn allows added diversions in the Great Lakes and of the bodies of water in the great Northwest.

Before allowing any further diversions let us first permit the lake levels to return to a depth which will enable this Government to meet its present contractual obligations. The Federal Government had been unable to perform its part of a contract with an industry in my home town because of the extremely low level of Lake Superior. This problem makes it necessary for the industry to request the Federal Government to renegotiate the contract in order to relieve the burden of the cost involved for water usage. This is going to have a direct effect upon the Treasury of the United States.

I also find great difficulty in understanding why Chicago should be privileged to take water from Lake Michigan and not return it, while other cities using the waters of the lakes are so required.

I have mentioned only a few of the great dangers of this legislation. I fail to recognize how any Member of this Congress, who has the best interests of the country in mind can vote affirmatively on this measure.

Mr. REUSS. Mr. Chairman, there are a number of strong reasons why H.R. 1 should not be enacted. Among these are:

Jurisdiction over water diversion from Lake Michigan resides in the Supreme Court. If Congress takes over jurisdiction, as it would by enacting H.R. 1, the Congress will constantly be bedeviled with this problem, which the Court is eminently capable of handling.

H.R. 1 would benefit Chicago, at the expense of other Great Lakes cities and States.

Additional diversion would result in adverse effects on Great Lakes shipping and on power development.

Perhaps most important of all, our good relations with our fine northern neighbor, Canada, are at stake in this legislation.

Mr. Chairman, under date of February 20, 1959, the Canadian Government informed our Government again that it objects to increased diversion of water from Lake Michigan at Chicago.

I quote briefly from the latest Canadian Government memorandum on this subject:

> The point has been made repeatedly by Canada that every withdrawal of water from the (Great Lakes) Basin means less depth available for shipping in harbors and in channels. Additional withdrawals would have adverse effects on the hydroelectric generation potential on both sides of the border at Niagara Falls and in the international section of the St. Lawrence River, as well as in the Province of Quebec, and would inflict hardship on communities and industries on both sides of the border. The Government of Canada therefore protests against the implementation of proposals contained in H.R. 1.

Mr. Chairman, because of the Canadian position, and for other reasons, the Bureau of the Budget has recommended against enactment of H.R. 1, foreshadowing another veto of this legislation if it is passed. The Bureau of the Budget has further suggested two other courses of action that should be taken before any additional water diversion is authorized from Lake Michigan. Surely these suggestions should be thoroughly examined before H.R. 1 or any similar legislation is enacted.

Mr. GRIFFIN. Mr. Chairman, the bill under discussion, H.R. 1, would allow Chicago to withdraw an estimated 1 million gallons of clean water from Lake Michigan each minute and dump it, laden with sewage, into the Illinois Waterway and the Mississippi River.

The measure is innocuously labeled. The diversion of water sought is not termed such, but, instead, is called a study. The language used in defining the ostensible purpose of the measure is this:

> To require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation and other purposes.

Such phraseology, Mr. Chairman, cannot, however, conceal the true intent of the bill nor can it minimize the many dangers involved in its passage. This is but a poorly veiled attempt by one community to make others shoulder and finance its sanitary burdens.

This so-called study is not that, but actually is an authorization for the State of Illinois and the Metropolitan Sanitary District of Greater Chicago to withdraw vast additional amounts of water from Lake Michigan. As is most often the case in such measures, H.R. 1 contains every indication that the diversion would not end with the completion of the so-called study, even if that came to its promised conclusion.

There is nothing really new about H.R. 1 except its ostensible purpose. This Congress has been called upon to consider a long string of similar measures since the turn of the century and twice even approved the legislation called for. Fortunately, President Eisenhower vetoed the bills on both occasions.

The House Committee on Public Works, on February 6, 1959, sent out a notice announcing hearings on H.R. 1, and correctly pointed out that the committee had "held extensive hearings in the 82d, 83d, 84th, and 85th Congresses on similar legislation."

The notice also said that because of the attention given such legislation in the past, "only new engineering and economic data would be considered pertinent" to the measure sponsored by the gentleman from Illinois [Mr. O'BRIEN] this year.

I point this out, Mr. Chairman, only in order that all Members of this body may understand clearly that this bill is not new, despite the claims made by its sponsors that it is "a considerably modified version" of the measure heretofore vetoed by the President.

Mr. Chairman, 7 of the 11 counties I represent, border on Lake Michigan. Any measure which would lower further the water level of this body of water is of vital interest to the residents of those counties, as it is to the residents of other counties bordering the Great Lakes and the St. Lawrence Seaway.

Were the city of Chicago to drain from the Great Lakes no more than the 1,000 cubic feet per second, asked for in H.R. 1, perhaps the consequences might not be so serious. However, it should be kept in mind that a 1930 decree of the U.S. Supreme Court now authorizes the diversion of 1,500 cubic feet of water per second from the lake and, accordingly, the bill before us would actually make possible a diversion of 2,500 cubic feet per second, in addition to all domestic pumpage.

Disregarding domestic pumpage, the diversion would amount, as I have said, to more than 1 million gallons of water a minute.

Domestic pumpage, incidentally, amounts at present to nearly 2,000 cubic feet per second. Accordingly, the total diversion authorized, if H.R. 1 were to pass, would be approximately 4,500 cubic feet per second.

In addition to this enormous drainage, the State of Illinois also diverts the flow of three rivers from the Great Lakes into its waterway.

I strongly object to such a high rate of drainage because of the damage to freight traffic on the Great Lakes, which represents the very lifeblood of many American and Canadian communities. With the opening soon of the St. Lawrence Seaway, obviously this consideration is about to become even more important.

Lower lake levels mean lower harbor and canal depths. Extra and expensive dredging would be required. The beauty and recreational value of lakeshore property would be impaired to the injury of the important tourist industry. Every inch in lake level counts, particularly in this cycle when the level of the Great Lakes is already very low.

There can be no question but that the diversion of an additional 1,000 cubic feet of water each second from Lake Michigan would have an adverse effect upon shipping and to some extent would nullify the benefits of deepening the connecting channels as authorized by Congress.

With these facts in mind, Mr. Chairman, I think it is important for the Congress and the people to understand just why such a proposal has been placed before us.

Is it, as the title of the bill indicates, to facilitate navigation on the Illinois River and the Mississippi River?

Anyone familiar with the subject knows that there is no navigational problem on either of these waterways which could be solved by such an additional diversion. Witnesses from the Army Corps of Engineers have testified that water retaining works above Alton, Ill., designed for this specific purpose, will more than meet the navigational needs outlined in H.R. 1.

Obviously, then, the true motivation behind H.R. 1 rests in the phrase, ostensibly outlining its aims, which says, "and for other purposes."

Very simply put the other purposes amount to a desire by the Chicago Sanitary District and its supporters to spare themselves the cost of installing needed additional sewage disposal facilities.

The ever increasing population of the Chicago metropolitan area has run far ahead of its sewage disposal development.

In 1952, for instance, the percentage of solids removed from the area's sewage

was 91.1. By 1957, this had dropped to 80.6 percent.

There are two approaches to the problem. One is the installation of additional sewage disposal facilities. The other is to empty more clean water into the sewage system in order to flush the solids away.

Unlike other communities on the Great Lakes and elsewhere on our navigable waterways, the city of Chicago displays no inclination to install the needed additional sewage treatment facilities.

Chicago apparently is determined, if possible, to solve its waste disposal problem by taking more water from Lake Michigan with a callous disregard for the effect this action would have upon other States and upon our international relations.

The Presidential vetoes of similar measures in 1954 and in 1956 apparently have made no impact upon the sponsors of this legislation. Obviously, they are determined to press on with their public-be-damned effort in order, if possible, to escape their own civic responsibilities. The reasons for opposing this effort were well outlined by President Eisenhower in his last veto message on a similar bill. He said:

1. Existing diversions are adequate for navigation on the Illinois Waterways and Mississippi River.

2. All methods of control of lake levels and the protection of property on the Great Lakes should be considered before arbitrarily proceeding with increased diversion.

3. The diversions should not be authorized without reference to negotiations with Canada.

4. The legitimate interests of other States affected by diversion would be adversely affected.

In previous years, sponsors of diversion have stated openly that sanitation was behind their efforts, and pointed out that the city's population and industry are increasing. The Chicago Sanitary District presently has a sewer capacity of some 53,000 cubic feet per second. Very clearly, such a requirement cannot be met with an additional diversion of only 1,000 cubic feet per second.

If the solution of Chicago's future sewage problems are allowed to depend upon lake water diversion, rather than upon the construction of additional treatment facilities, there is no conceivable limit to the amount of water that eventually will be needed.

Obviously, such a path to the solution of Chicago's sewage problems can lead only in the direction of disastrous economic results for other Great Lakes States.

Passage of this measure would encourage similar demands by other communities on the Great Lakes which now dispose of sewage in a more civic-minded manner.

Even communities far removed from the Great Lakes might be expected to clamor for authority to divert lake water by other means, such as by pipeline.

I believe it is obvious that passage of H.R. 1 would set a dangerous and absurd precedent.

Surface levels of both Lake Michigan and its tributaries today are dangerously low and are dropping continuously. A decrease in the water level of the lakes by even so much as 1 inch has a drastic effect on shipping. Authorities have estimated that the lowering of the lake water levels by 1 inch can mean the loss of 1.5 million tons of shipping.

On the Great Lakes, more than half the ship load changes posted are within 1 inch.

I should add, Mr. Chairman, that opposition to the additional diversion of water by Chicago is not a partisan political matter. In this attempt to divert more water from the Great Lakes there lies a very real and serious danger to the Nation as a whole, and to our international relations.

In view of these considerations, I respectfully urge my colleagues to vote against this bill. Thank you.

Mr. BLATNIK. Mr. Chairman, I yield to the gentleman from Illinois [Mr. YATES].

Mr. YATES. Mr. Chairman, let me say at once that the gentleman from Florida is exactly wrong in almost everything he says. But before I answer him, let me yield to the distinguished gentlewoman from Illinois [Mrs. CHURCH].

Mrs. CHURCH. Mr. Chairman, I would like to say I was amazed that the gentleman from Florida, who is not a member of the Committee on Foreign Affairs, attempted to express the opinion of that committee on this subject. The House Foreign Affairs Committee has taken no action whatsoever on this matter—and I personally, as a member of that committee, strongly support this bill.

Mr. YATES. I thank the gentlewoman.

Mr. Chairman, the gentleman from Florida—all the opponents of this bill, for that matter—have presented their arguments upon the basis that this bill seeks to authorize the Metropolitan Sanitary District of Greater Chicago to withdraw permanently from Lake Michigan an additional 1,000 cubic feet of water per second, which of course is totally untrue. This bill has been called a diversion bill, but actually it would be more appropriate to designate it as a study, for that is what it really is. This bill proposes to authorize a 3-year study by the Corps of Army Engineers and the Department of Health, Education, and Welfare covering a number of important subjects. The additional 1,000 cubic feet of water per second would be used as an instrumentality in the studies, an additional factor to be considered under controlled conditions. And although the people of Chicago and of Illinois are the primary beneficiaries of the project, its important information would be of tremendous value to urban communities throughout the Nation. In concept it is a national project, not a local one, even though the study will be conducted within the confines of the area of the Metropolitan Sanitary District of Greater Chicago.

The Department of Health, Education, and Welfare has made clear that the study is a meritorious one as is shown by its letter dated March 9, 1959, which I received from Mr. Gordon E. McCallum, Chief of the Department's Water Supply and Water Pollution Control program, as follows:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
PUBLIC HEALTH SERVICE,
BUREAU OF STATE SERVICES,
Washington, D.C., March 9, 1959.

Hon. SIDNEY R. YATES,
House of Representatives,
Washington, D.C.

DEAR MR. YATES: In accordance with your telephone request, we are transmitting the attached report on types of information and its use by others which may be derived from the survey of the general types proposed for the Illinois Waterway.

Sincerely yours,

GORDON E. MCCALLUM,
Chief, Water Supply and Water Pollution Control Program.

BROAD KNOWLEDGE THAT MAY BE DERIVED FROM A STUDY OF THE GENERAL TYPE AUTHORIZED IN H.R. 1 [1]

(Prepared by Department of Health, Education, and Welfare, Public Health Service)

A study of pollution control in the Illinois Waterway covering (1) an analysis of the present and projected future water quality of the Illinois Waterway under varying conditions of stream flow and waste treatment and disposal; (2) an evaluation of municipal and industrial waste treatment and disposal practices including storm water overflows within the Metropolitan Sanitary District of Greater Chicago; (3) an evaluation of water quality needs of the entire Illinois River Basin; and (4) alternate means of solving sanitary problems, including additional treatment measures, will probably have broad application throughout the Nation in the following respects:

1. Many American communities are now faced with the problem of maintaining water quality for all legitimate purposes in the face of having a variable stream flow providing only a limited amount of dilution water at critical times. The critical problem in protecting water quality is that of discharging treated waste effluent into a watercourse having limited dilution capacity. This problem becomes especially acute when the community is providing the highest degree of waste treatment now feasible. The study will add much needed knowledge of dilution requirements under conditions existing at Chicago that could be applied elsewhere.

2. Out of the study may well come new or changed concepts dealing with:

(a) Diffusion of wastes in receiving waters.

(b) Bacterial death rates under varying conditions in streams.

(c) Fertilizing effects of sewage and industrial wastes upon troublesome aquatic growths.

(d) Reappraisal of factors affecting rates at which oxygen is used by sewage and industrial wastes in streams, and rates at which oxygen is supplied by natural and artificial means.

(e) Adverse effects of specific wastes, individually and in combination, upon the natural purification processes in streams.

(f) Effects of decomposing sludge deposits upon the overlying water quality.

(g) Field testing of automatic sampling and recording devices now being developed.

3. The study will reveal research needs designed to find practical ways of approaching higher degrees of purification of sewage and industrial wastes where necessary.

---

[1] Such new information, on the basis of past experiences, will be of value to and utilized widely by State and interstate water pollution control agencies, Federal agencies, river basin authorities, communities, industries, and universities.

4. The survey will afford a unique opportunity to correlate accurate measurement of pollution sources with accurate measurement of pollutional effects under varying conditions. Such complete sets of data become classics and when published are in great demand. The comprehensive study of the Ohio River, conducted in the late thirties by the Corps of Engineers and the Public Health Service, is an example of one such classic that has been of great value.

It is clear, Mr. Chairman, that this experiment will be very valuable. But its opponents say that its harmful consequences overshadow any benefits that might be derived from the study. And they cite as examples the damage which would accrue to the lake shipping interests and the power companies. They point out too, the disruptive effect which this bill might have upon friendly relations with Canada as an additional reason for its disapproval.

The chamber of horrors they have conjured up presumably representing the possible terrible consequences of this bill are actually projections based on a permanent withdrawal of water from Lake Michigan. It does not relate to the subject matter of this bill at all. Starting from the illogical premise that this bill must be a forerunner to a permanent diversion, they assume that it does provide for a permanent diversion. Thus beginning from that unreal and illogical premise, they reach their illogical conclusions and the horrible consequences they have stated.

As I listen to them hurl their lightning and thunder against Chicago like Jove of mythological fame, I thought of one of the favorite stories of Abraham Lincoln. Lincoln used to tell the story about the meek husband who was badly henpecked. One day he ran out of the house to escape the beating which his wife was giving to him, and he encountered a friend on the street who said: "Look here, John, I have always stood up for you but I refuse to do it any longer. Any man who quietly takes a beating from his wife deserves to be horsewhipped." John smiled and patted his friend on the back. "Do not be offended," he said. "Why, it hurt me hardly at all, and you have no idea what a powerful lot of good it did for my wife."

For decades, literally, Mr. Chairman, because it diverts water from Lake Michigan, Chicago has been the favorite whipping boy of the surrounding States. They object to Chicago's method of waste disposal. Instead of messing up the Great Lakes like her sister cities of Milwaukee and Cleveland, which dump their sewage after treatment, back into the lake, Chicago flushes its waste, after treatment, into the Chicago River and thence along the drainage canal into the Illinois Waterway. We do not pollute or contaminate the lake. But we do have a problem with adequate disposal of the sewage in the Illinois Waterway.

Their protests would have had some meaning and basis in fact if the sanitary district of Chicago withdrew 10,000 cubic feet of water per second permanently, as it did prior to 1931. At that time the surrounding States obtained a Supreme Court decree which over a period of 7 years required the city to curtail the amount it withdrew from Lake Michigan from 10,000 cubic feet per second to 1,500 cubic feet per second in addition to domestic pumpage—that is, the amount of water needed for drinking and industrial purposes. And that is the amount of water we have been withdrawing since 1938—even though there has been an enormous growth in our industrial and commercial development, and in our population.

But the objections of the sister States have not diminished since that time. Even though the protests are no longer based on fact, for we are not withdrawing 10,000 cubic feet per second, they are made nevertheless. Historical antagonisms are continued like a blood feud in the mountain States, even though the reason for the feud has long disappeared.

The testimony which the opponents of this bill rely on are the statements made by shipping and power interests. You can believe their statements, if you wish, but you must remember that the testimony comes from people who have an interest at stake.

Or you can believe the report of the Army Engineers which has no ax to grind. The Army Engineers made a study of the effect of a 1-year diversion at Chicago of an additional 1,000 cubic feet of water per second and concluded that such a diversion would have no effect at all on Lake Superior. The maximum reduction on the water level on Lakes Michigan and Huron would be one-fourth of an inch. The maximum effect on the water level of Lakes Erie and Ontario would be to reduce them by three-sixteenths of an inch.

Now how much damage do you think there would be to lake shipping interests if as a result of this diversion, the lake levels of four of the Great Lakes were to be lowered one-fourth of an inch or less, particularly when you keep in mind that the lake levels vary between 5 and 7 feet during each year?

And yet you will hear opponents of this bill complain about the tremendous damage that would occur if it were approved, to the St. Lawrence Seaway, to various harbors and shipping installations in the Great Lakes.

As for losses in power revenue, it is estimated that the American and Canadian power interests—both of these, mind you, would lose a maximum of $36,000 a year during the period when this diversion might have an effect—$36,000 a year to power companies which are taking in $100 million a year in total revenues—$36,000 a year as compared with $100 million a year. How true is the statement of the committee on page 3 of the report:

The value of helping to solve one of the most pressing problems of a great metropolitan area far outweighs whatever slight temporary loss, if any, might be sustained by adjacent areas.

That is the point—the value of the study will be great, the damage, little, if any.

The problem of waste disposal and water pollution is one that affects every community in this country, some to a greater degree than others. The large, long-established metropolitan communities have a tremendous stake in studies of this kind, and regardless of what Milwaukee and Cleveland and the other States may tell you, they, too, as well as communities like Philadelphia, Pittsburgh, New York City, Los Angeles—all the big cities can benefit from the study that is proposed in H.R. 1. That is made clear in the HEW letter to which I referred earlier.

The single most important remaining objection relates to the protest filed by the Government of Canada against this bill. This deserves our most serious consideration because we respect and esteem the friendship of our great neighbor to the north. There are many things that one can say about Canada's attitude toward the diversion at Chicago, but its protest to the proposed study is completely incomprehensible in view of the fact that only a few months ago the Department of State wrote me a letter which declared that the Government of Canada had no objection to this study and to the additional diversion of 1,000 cubic feet of water per second at Chicago.

Nothing has changed since that time. All the conditions are the same but for some unknown reason Canada has changed its position.

I suggest that Canada had not thoroughly analyzed this bill at the time it filed its protest. As a matter of fact, a significant amendment adopted by the committee was not in the bill at the time that the Canadian memorandum was received. That amendment appears at line 10 on page 3 of the bill and requires that funds first be made available for this study before it should commence at all. This amendment, in effect, makes this bill an authorization bill subject to the same conditions and contingencies that any public works authorization bill has. Even though the study may be authorized by passage of this legislation, it could not be undertaken unless and until it is given life by the allocation of funds.

Secondly, Canada cannot be serious in contending that its shipping and power interests would be injured by this study. As I have already declared, the proposed study would have a most insignificant effect upon lake levels and thereby upon shipping interests. The damage would be so small that the Corps of Army Engineers stated it could not even measure it.

As far as power is concerned, the total estimated power loss over the 15-year period during which time the proposed diversion is supposed to have some effect, would be $618,000 or $36,000 per year. How badly would Canadian power interests be hurt when it is remembered that the $36,000 per year should be compared with total power revenues accruing to Canadian and American interests of $100 million a year, which is the anticipated earnings of the combined plants? One can only repeat the statement made on page 3 of the majority report that "the value of helping to solve one of the most pressing problems of a great metropolitan area far outweighs whatever slight temporary loss, if any, might be sustained by adjacent areas. I suggest that the Government of Canada might very well reconsider its memorandum of protest and readopt the position expressed

last August that it had no objection to the bill.

For certainly the equities are all on the side of the people of Chicago and Illinois. By the Treaty of 1909 Canada was given a division of the waters of the Niagara River based upon the diversion at Chicago of 10,000 cubic feet per second. The decision of the Supreme Court of the United States in limiting such withdrawal to 1,500 cubic feet per second has since 1938 given Canada the benefit of an additional 8,500 cubic feet of water per second.

Mr. Chairman, I shall attach to my remarks the article entitled "Diversion of Water," by H. P. Ramey, which was delivered before the Illinois section of the American Society of Civil Engineers on June 20, 1957. Mr. Ramey's attitude toward Canada is a strong one but is very revealing.

Incidentally, it should be pointed out that Mr. Ramey's article was predicated upon an earlier bill filed by Congressman O'BRIEN, H.R. 2, which sought a 3-year diversion of 1,000 cubic feet per second at Chicago:

DIVERSION OF WATER

(By H. P. Ramey, chief engineer, the Metropolitan Sanitary District of Greater Chicago, for meeting, Illinois section, American Society of Civil Engineers, June 20, 1957)

The following are axiomatic truths presented as premises to our subject of discussion. Water is a natural resource, essential to all life. Its necessity to human welfare makes it desirable to use it where it will do the most good for the greatest number of people. Such better use may require its diversion from one water course to another. Diversion of water where most needed is not only sound engineering, but good economics.

PRINCIPLE OF DIVERSION

Diversion of water was practiced as early as the earliest civilization, of any consequence. As far back as 2100 B.C., the ancient Babylonians were diverting water from the Euphrates River, using it for irrigation and transportation and discharging it into the Tigris. Even earlier, the Egyptians diverted flood waters of the Nile into a storage reservoir, for later use during periods of low water, a practice similar in principle to that of diversion. This same principle is now being performed in the United States, on the Colorado, the Tennessee, the Missouri, and the Upper Mississippi Rivers.

The principle of water diversion is, of course, universal. Instances can be cited of diversions in the United States, Canada, Great Britain, Brazil, Egypt, India, Korea, Norway, Switzerland, and in Russia.

EXAMPLES OF DIVERSION

In the Hetch Hetchy project for the water supply of San Francisco, the headwaters of the Tuolumne River, a tributary of the San Joaquin River, are impounded 4,700 feet above sea level, 170 miles from San Francisco, from which place they pass through powerplants and through pipelines under the San Joaquin River and under the upper end of San Francisco Bay to the city of San Francisco. This water, diverted from the San Joaquin River Basin, ultimately reaches San Francisco Bay, as sewage.

Much of the water supply of Los Angeles and San Diego, Calif., is diverted from the Colorado River and reaches the Pacific Ocean directly from those cities, instead of its natural route through the Mexican waters of the Gulf of California.

In the Big Thompson project, in eastern Colorado, some of the headwaters of the Colorado River are impounded high up on the western slope of the Rocky Mountain, pumped up, across the Continental Divide, and allowed to flow down the eastern slope of the Rocky Mountains, through powerplants, and is then used for irrigation in semi-arid portions of Colorado and northwestern Kansas. This is a transcontinental diversion.

In the Sierra do Cubata power project, near São Paulo, Brazil, a diversion is made similar to the Big Thompson project. Headwaters of the Grand and Tiete Rivers (which naturally flow west into the Parana River, then southwest into the Paraguay River, then south into the Rio de la Plata, then east into the Atlantic Ocean, near Buenos Aires) are diverted east across the Sierra do Mar, a low mountain chain, and dropped through powerplants, through a head of 2,380 feet, in a comparatively short distance to the Atlantic. This water is diverted from undeveloped country and furnishes power to the most populous section of Brazil.

Water is diverted by Canada into Lake Superior, from the Ogoki and Kenogami Rivers, tributaries of the Albany River, which flows into Hudson Bay, and after transit through the Great Lakes, is used by the Canadians for power in the Niagara Falls and St. Lawrence River areas.

Water is diverted from the Connecticut River watershed and carried east, to augment the water supply of Boston.

New York City augments its water supply by the diversion of water from the Delaware River, which is the natural boundary between the States of New Jersey and Pennsylvania; and a river considered as belonging to those States.

Dozens of other cases of diversion of water could be cited. The instances mentioned have been cited merely to show that diversion is not unusual; and that where water has been diverted, it has been used for the most good for the most people. That is sound engineering.

THE CHICAGO DIVERSION

The diversion of water from Lake Michigan started a controversy which has lasted for 50 years and is still not settled.

This diversion, since 1900, has been made under permits granted by the Secretary of War to the Sanitary District of Chicago, which authorized diversion, as follows:

Permit May 8, 1899, to open canal, to 5,000 cubic feet per second flows.

Permit December 5, 1901, 4,167 cubic feet per second average flow.

Permit March 3, 1925, 8,500 cubic feet per second plus domestic pumpage.

Permit December 31, 1929, 8,500 cubic feet per second, including domestic pumpage.

Permit June 26, 1930:

On and after July 1, 1930, 6,500 cubic feet per second, plus domestic pumpage.

On and after December 31, 1935, 5,000 cubic feet per second, plus domestic pumpage.

On and after December 31, 1935, 1,500 cubic feet per second annual average, in addition to domestic pumpage.

No time limit was placed on this last permit, but it is revocable at the will of the Secretary of War; and is subject to such action as may be taken by Congress.

The presently authorized diversion of 1,500 cubic feet per second, annual average, is not sufficient to properly dilute the effluent from the treatment plants of the sanitary district (even after complete sewage treatment) and a condition of nuisance prevails, during the warmer months of the year, in the upper 50 miles of the Illinois waterway. For the past 5 years the sanitary district has been seeking an additional diversion of 1,000 cubic feet per second, average, for a period long enough to enable a study of conditions in the waterway, by Army Engineers and the U.S. Public Health Service, to determine what the ultimate solution should be.

BACKGROUND OF CHICAGO DIVERSION

Water has been diverted from the Lake Michigan watershed for the past 109 years. This diversion began in 1848, when water was pumped from the Chicago River, at Bridgeport (Ashland Avenue) to serve the navigation needs of the Illinois and Michigan Canal, built by the State of Illinois, under an act of Congress, 1827, and financed originally by the sale of 284,000 acres of the public land, granted to the State by the Federal Government for that purpose.

This diversion averaged about 250 cubic feet per second, from 1848 to 1870, and, being greater than the dry weather flow of the Chicago River, caused an inflow from Lake Michigan. The Chicago sewer system, built 1856–58, drained principally into the Chicago River; and the pumpage for the I. & M. Canal carried this sewage, diluted, into the I. & M. Canal. The I. & M. Canal was deepened, 1866–71, at the expense of the city of Chicago, to provide a gravity flow of 1,000 cubic feet per second from Lake Michigan and thus became, in part, a sanitary canal. This flow was obtained for 1 year; then the canal was silted up from a local flood in 1872; and the lake level dropped. By 1879 the maximum flow was estimated at 283 cubic feet per second.

The city of Chicago then built a new pumping station, at Bridgeport, capacity 1,000 cubic feet per second, by 1884, and caused the operation of the I. & M. Canal for the dilution of sewage, from 1885 until 1907. The average pumpage, over these years was 560 cublic feet per second, the maximum being 950 cubic feet per second in 1898.

CHICAGO DRAINAGE CANAL

The Chicago Drainage Canal was opened January 1900 and the following year 3,515 cubic feet per second of water was diverted from Lake Michigan through it. This was increased to 3,840 cubic feet per second in 1905, to 6,030 cubic feet per second in 1910, to 6,800 cubic feet per second in 1915, to 7,170 cubic feet per second in 1920, and to 8,190 cubic feet per second in 1924. It was less than 7,000 cubic feet per second in 1925, 1926, and 1927, but was 8,400 cubic feet per second in 1928, the maximum for any year. Subsequently this diversion was reduced, by Supreme Court decree, to 6,500 cubic feet per second for the years 1931 to 1935; to 5,000 cubic feet per second for the next 3 years; and to an ultimate of 1,500 cubic feet per second, annual average, from 1939 to date.

All these figures, for diversion, are in addition to domestic (or city) pumpage, which increased from 530 cubic feet per second in 1901, to 800 cubic feet per second in 1910, and 1,200 cubic feet per second in 1921. It was 1,700 cubic feet per second in 1930 and ranged between 1,600 cubic feet per second and 1,700 cubic feet per second for the next 36 years. In 1956 it was 1,697 cubic feet per second.

This domestic pumpage is mentioned separately because the right of any city to pump water for its necessary and domestic uses, and then dispose of such water, or sewage, wherever it desires, has never been questioned. Chicago is the only city on the Great Lakes, which is in the fortunate position of not having to drink its own sewage, or pass it on for others to drink. This aim, to which Chicago has adhered, since 1900, to keep sewage out of the lake, to keep its lake front clean, for water supply, for safe bathing, boating, and other recreations, has been the cause of much recrimination in other lake cities, not so fortunate.

LAKE LEVELS

A withdrawal of 10,000 cubic feet per second from Lake Michigan at Chicago would have a computed lowering effect, after 5 to 8 years, of about 6 inches on Lakes Michigan and Huron, and about 5 inches on Lakes Erie and Ontario. Such lowering can be figured only theoretically, because of the annual fluctuation of about 1 foot between the winter and summer levels of all the Great

Lakes, and the long-time fluctuations, from natural causes, of more than 5 feet on an annual average basis; more than 6.5 feet on monthly averages; and 2 to 3 feet more on daily averages; and 2 to 3 feet more than this on an hourly average.

The Chicago diversion, in continuous effect from 1900 to 1928, probably had, by the end of 1928, when the diversion was 8,400 cubic feet per second and domestic pumpage 1,565 cubic feet per second, total withdrawal 9,965 cubic feet per second lowered lake levels almost as much as 6 inches. By that time, outlet changes in the Detroit and St. Clair Rivers had lowered Lake Michigan and Huron more than 7 inches. Retention of water in Lake Superior, to increase its level, for navigation, had by 1925, lowered the levels of all the other Great Lakes, by 3 inches. These figures and specific instances are cited to show that the matter of lake levels has not, over the years, been considered sacred, by Government authorities.

The presently authorized diversion of 1,500 cubic feet per second of water, for the last 17 years, in effect since 1939, is estimated to have lowered the levels of Lakes Michigan and Huron about 1 inch. The domestic water pumpage at Chicago, about 1,700 cubic feet per second in recent years, has lowered such levels about 1⅛ inches. Hence the present total lowering effect is estimated at 2⅛ inches. The proposed additional diversion of 1,000 cubic feet per second for 3 years is estimated would lower levels of Lakes Michigan and Huron five-eighths of an inch, if continued indefinitely. The total estimated lowering effect of the three quantities since 1939 would therefore amount to 2¾ inches on Lakes Michigan and Huron, and slightly less on Lakes Erie and Ontario.

Introduction of water into Lake Superior from the Hudson Bay watershed, by Canadian interests, in amounts averaging more than 5,000 cubic feet per second, since July 1943, has raised levels of all the Great Lakes at least 3 inches. This has more than offset the lowering due to the diversion of water at Chicago and will more than offset the prospective diversion of 1,000 cubic feet per second more, sought in recent years.

In respect to these diversions from and into the Great Lakes system, the lake surfaces are fluctuating through their normal ranges, at levels slightly higher than their natural levels. Navigation interests receive the benefit of slightly greater depths thus created.

The foregoing statements are for information on the physical facts involved in this matter of the diversion of water from Lake Michigan.

HOW THE LAKE LEVEL CONTROVERSY BEGAN

The Sanitary District of Chicago was created by an 1889 act of the Illinois State Legislature; to divert the sewage of the Chicago region from Lake Michigan, the source of municipal water supply, and to dispose of this sewage by dilution with sufficient Lake Michigan water to prevent nuisance downstream. This legislative act specified the flow capacity of the drainage canal, 10,000 cubic feet per second, sufficient to carry away the greatest flood which could originate in the Chicago area. It also specified the dilution ratio, namely 3⅓ cubic feet per second of lake water for the sewage of 1,000 persons. This figures 3 million people (the 1920 population of the Sanitary District for 10,000 cubic feet per second of water, as the capacity of the canal for the disposal of sewage, by dilution. Industrial wastes were not considered.

Before construction of the drainage canal was started, the sanitary district informed the Chief of Engineers of its plans; and he informed the Secretary of War, who reported the matter to Congress, 1892. The canal was built 1892–1900 and its construction was viewed by the Chief of Engineers and the Secretary of War in 1898. The sanitary district requested and received permits from the Secretary of War, to improve the south branch of the Chicago River, to make it a proper supply channel for the drainage channel, then under construction. The sanitary district, April 1899, requested permission to open the drainage canal, for a flow of 5,000 cubic feet per second of lake water, and May 8, 1899, the Secretary of War granted a permit "to open the channel constructed, and cause the waters of Chicago River to flow into the same."

This was subject to a condition "that it is distinctly understood that it is the intention of the Secretary of War to submit the questions connected with the work of the Sanitary District of Chicago to Congress for consideration and final action, and that this permit shall be subject to such action as may be taken by Congress."

The drainage canal was opened January 17, 1900. This permit was amended, slightly, three times within the next 2 years, the final permit, December 5, 1901, limiting the flow to an average of 4,167 cubic feet per second.

All these permits mentioned the submission of the matter to Congress, for final determination, but this was not done by either the Secretary of War, or by the sanitary district. Hindsight shows this omission was detrimental to Chicago because Congress at that time would undoubtedly have authorized a diversion of 10,000 cubic feet per second, or the amount for which the channel had been built; and there would have been no lake level controversy.

The sanitary district trustees believed that since the drainage canal, constructed for navigation as well as for flood runoff and sanitation, would fit into the plans of the Government for a waterway between Lake Michigan and the Mississippi River, the use of such canal would never be questioned. Government engineers had been studying a waterway of greater capacity than the I. & M. Canal, since 1857. Nine separate reports on this matter had been made to Congress on surveys authorized by Congress, between 1857 and 1905. Lake Michigan was always assumed as the only logical source of water to supply this waterway, in all these reports and recommendations. The quantities of water, or diversion recommended, varied in amounts from 1,000 cubic feet per second to 10,000 cubic feet per second.

In 1907, the Secretary of War, Taft, questioned the authority of the Secretary of War, to regulate the diversion; and a friendly suit between the Government and the sanitary district was started, 1908, in the Federal district court, to determine jurisdiction. This suit was not pressed seriously.

By 1912 the sanitary district had improved the south branch of the Chicago River to a point where it had capacity to flow 10,000 cubic feet per second without currents obstructive to navigation; and applied to the Secretary of War for an increase in the diversion from 4,167 cubic feet per second to 10,000 cubic feet per second.

After a public hearing, in which opposition was expressed by the Lake States, Canada, shipping interests, etc., Secretary of War Stimson denied this request in a lengthy opinion, January 8, 1913. In this opinion Secretary Stimson stated that diversion of water from the Great Lakes was a matter for Congress to determine.

The sanitary district, however, did not seek action by Congress, but decided to have its rights decided in the Federal district court. This decision, which may now be considered a bad mistake, was caused by certain trustees of the sanitary district, who insisted that the disposal of Chicago's sewage by dilution, as specified in the Sanitary District Act of 1889, was the only method authorized.

Engineers of the sanitary district had been experimenting with sewage treatment, since 1909; and had recommended, 1911, that all sewage in excess of that from 3 million people, or equivalent, be given treatment. This was the original sewage treatment program of the district, to utilize the drainage canal to its capacity, and to provide treatment for all sewage in excess of that amount.

FEDERAL SUIT

Suit was filed October 1913, by the Government in the Federal district court to restrain the sanitary district from diverting more than the 4,167 cubic feet per second of water specified in the permit of 1901. The sanitary district contended that the Secretary of War had no right to limit the diversion and that as a State agency it had a right to use water to protect the health of its people, under the State's police power. The Supreme Court decided, however, Janury 1925, that the power of Government, in the regulation of interstate commerce, was supreme over any power of the State; and that the injunction should go into effect within 60 days.

Within this 60 days, the sanitary district obtained a permit, March 3, 1925, from the Secretary of War, for a diversion of 8,500 cubic feet per second of water, in addition to domestic pumpage, for 5 years, or until December 31, 1929.

LAKE STATES CASE

Then the Wisconsin suit, or Lake States case, was tried, in the U.S. Supreme Court, by Charles Evans Hughes, as special master. In this case, the State of Wisconsin sought to restrain the diversion of any water from Lake Michigan. Special Master Hughes, reported to the Court, November 1927, on both facts and the law. Some of the facts he found were:

The diversion of approximately 10,000 cubic feet per second of water had lowered the levels of Lakes Michigan and Huron 6 inches, and of Erie and Ontario about 5 inches.

The diversion had caused substantial damage to the navigation and commercial interests of the Lake States.

The diversion had provided 4 feet of the low water depth of 7 feet in the lower Illinois River Waterway project, from Utica to Grafton.

The diversion had provided about 1 foot of the low water depth of the Mississippi River, at St. Louis.

On the matter of law, Special Master Hughes concluded that Congress had the power to regulate the diversion; that Congress had conferred authority on the Secretary of War to regulate it, within reasonable limits; and that the permit of March 3, 1925 was valid. Special Master Hughes recommended that the bill of the Lake States, for injunction, be dismissed, without prejudice.

The Supreme Court, Taft opinion, January 1929, reversed Special Master Hughes in his construction of the law and in his recommendation for dismissal. This Taft opinion stated that "Insofar as the diversion was not for the purposes of maintaining navigation in the Chicago River, it was without any legal basis, because made for an inadmissible purpose."

The case was re-referred, for further hearing, to Special Master Hughes to determine (1) what works were needed to replace diversion of water for the disposal of sewage; (2) what time would be required to build sewage disposal works; (3) what reductions in diversion could be made, from time to time, pending completion of the sewage treatment works; and (4) what diversion of water from Lake Michigan would be "necessary for the purpose of maintaining navigation in the Chicago River, as a part of the port of Chicago after these sewage disposal plants are in full operation."

SUPREME COURT DECREE, 1930

Trial of the Lake States case resulted in the entry of the decree of the Supreme Court,

April 21, 1930, under which the diversion was geared to the time for the completion of various phases of the construction program, the dates for the reductions of diversion being (1) reduced to 6,500 cubic feet per second, annual average, July 1, 1930; (2) to 5,000 cubic feet per second, December 31, 1935; and (3) to 1,500 cubic feet per second, December 31, 1938. The Sanitary District was thus required to build works for the complete treatment of all its sewage during that period. The Drainage Canal could no longer be counted on for the disposal of the sewage of 3 million people. It still remains available for flood runoff, for the passage of the treated sewage; and for navigation.

SEWAGE TREATMENT BY SANITARY DISTRICT

Since 1950, the Sanitary District has given complete treatment to all of its sewage, except of course, the storm flow during major rains.

The highest degree of sewage treatment, on an annual average basis, which can be expected from the Sanitary District plants, or from any plant is 90 percent. The population of the Sanitary District (1955) was 4,500,000, and industrial wastes were equivalent to the sewage of 3,800,000 people, total 8,300,000. With 90 percent removal of biochemical oxygen demand, there still remains 10 percent of the BOD. Ten percent of 8,300,000 is 830,000. The remaining BOD, therefore, is equivalent to that from the sewage of 830,000, or from a city as large as Washington, D.C. The presently authorized diversion of 1,500 cubic feet per second, annual average, provides a dilution ratio of 1,500 cubic feet per second for the equivalent of the sewage of 830,000 people, or 1.8 cubic feet per second of water for the sewage of 1,000 people. This is only about half of the dilution ratio specified in the Sanitary District Act; and is not enough to prevent nuisance conditions in the stream.

Another approach is in the matter of solids. In 1955 the solids, in the sewage reaching the treatment plants of the Sanitary District, averaged 867 tons per day. With 90 percent removal of sewage solids, there still remains, in the treated sewage, about 87 tons per day of solids, which contain about 5 tons per day of nitrogen. An additional 40 tons per day of nitrogen is carried to the canal in the treated sewage effluent. This nitrogen promotes underwater growth which in time cause nuisance, and probably actual, obstructions.

Under present conditions, with diversion at Chicago limited to 1,500 cubic feet per second, a foul condition is created in the upper 50 miles of the Illinois Waterway, from Chicago to Dresden Island. The worst section is between Lockport and the Brandon Road pool in South Joliet. Here the dissolved oxygen (DO) in the water frequently drops to less than 1 part per million, in the summer months, with a biochemical oxygen demand (BOD) of 6 to 7 parts per million. Considerable sludge digestion takes place in the Brandon Road pool, and some in the Dresden Island pool. Below that point the stream is in fairly good shape.

WATERWAYS

Despite the fact that Government engineers had been making studies for an adequate waterway connection between Lake Michigan and the lower Illinois Rivers, since 1880 and earlier, the only physical change in this situation for 50 years, or up to 1930, had been the construction of the Drainage Canal, by 1900, and its extension to Joliet, by 1908. The Government had authorized a 9-foot navigation project in the lower Illinois River, 1927, requiring a diversion of about 5,000 cubic feet per second of water from Lake Michigan to maintain this depth.

The State of Illinois was constructing the Illinois Waterway, five locks and dams, for 9-foot draft, between Lockport and the Illinois River, under the State Act of 1919. So, when the Lake States case was tried, on re-reference, 1929, there was no authorized physical connection between the Federal navigation project in the Chicago River including the Drainage Canal, and the Federal project in the lower Illinois River. For the slim, but perhaps proper, legal reason that there was no authorized connection between these two Federal navigation projects, no testimony was permitted in this case as to the needs of the Illinois River, or the needs of the waterway as a whole. Testimony was limited to the needs of the Chicago River, "as part of the Port of Chicago."

Funds of the State of Illinois, for the construction of the waterway, became exhausted and, July 3, 1930, less than two and one-half months after the Supreme Court decree of April 21, 1930, limiting the diversion to 1,500 cubic feet per second, Congress passed an act, taking over the Illinois Waterway and appropriating funds for its completion. This act provided that the 1,500 cubic feet per second of water from Lake Michigan, authorized by the Supreme Court, should be used for the navigation of this waterway; and provided further that after the Illinois Waterway was completed the Secretary of War should cause a study of the amount of water required to meet the needs of a commercially useful waterway and report to the Congress on or before January 31, 1938.

The Illinois Waterway was completed March 1, 1933 and officially opened June 22, 1933. Colonel Sultan, U.S. District Engineer, at Chicago, made a report to Congress on the matter September 26, 1933, in which he concluded that the diversion of 1,500 cubic feet per second, annual average, from the Lake Michigan watershed, in addition to domestic pumpage, was sufficient to meet the direct (flotation) needs of the waterway; but that the indirect needs, in the matter of securing satisfactory sanitary conditions for those aboard vessels or employed at terminals could not be determined until after the waterway had been fully completed, the sewage treatment plants of the Sanitary District placed in full service, and the diversion limited to 1,500 cubic feet per second for a sufficient period of time (suggested as not more than 2 years) to observe the conditions as they might then exist.

Colonel Sultan stated: "Then, and then only, can it be determined whether any additional diversion is necessary in order to provide decent and healthful living conditions for boatcrews and river terminal operators."

This study has never been made.

NAVIGATION—ILLINOIS WATERWAY

Traffic on the Illinois Waterway has increased from 5,501,000 tons in 1939, to 12,895,000 tons in 1949, to 20,077,000 tons in 1953, and to about 22 million tons per year, or more, as of today.

Representatives of the Army Engineers testified at congressional hearings in 1952, 1954, 1955, and again in 1956, recommending an increase of 1,000 cubic feet per second in diversion for 3 years for study purposes to enable by tests to determine whether any increase in flow through the Illinois Waterway is necessary or desirable in the interest of navigation.

All agree that it would benefit the welfare of the users of this waterway, both on boats and on shore, to have at all times a clean stream.

CANADA'S INTEREST

Canada's interest in the matter of diversion is purely selfish and noncooperative. The record shows this clearly. A full discussion of Canada's interest in this diversion is in order because objection by Canada to bills for increased diversion of 1,000 cubic feet per second, passed by Congress 1954 and 1956, was cited by the President as one of the reasons for his veto of both bills. It appears to be the principal reason for objection to passage of the pending O'Brien bill, H.R. 2, 85th Congress, 1st session.

On June 3, 1902, Congress passed the act under which the International Waterways Commission was created to study and report on the matter of waterflow at Niagara Falls. Three engineers from the United States and three from Canada formed this Commission.

After due study, this Commission reported, each section to its own Government, April 1906, and then, the joint commission to both Governments, May 1906, that a treaty or legislation be had authorizing diversion of water from Niagara River, above the falls, in the amounts of 36,000 cubic feet per second on the Canadian side, and 28,500 cubic feet per second on the U.S. side, this latter figure to include 10,000 cubic feet per second for the Chicago drainage canal.

Congress, on June 29, 1906, passed the Niagara Falls Act, providing in section 1, as follows:

"That the diversion of water from Niagara River or its tributaries, in the State of New York, is hereby prohibited, except with the consent of the Secretary of War as hereinafter authorized in section 2 of this act: *Provided*, That this prohibition shall not be interpreted as forbidding the diversion of the waters of the Great Lakes or of Niagara River for sanitary or domestic purposes, or for navigation, the amount of which may be fixed from time to time by the Congress of the United States or by the Secretary of War of the United States under its direction."

Section 2 of this 1906 act authorized the Secretary of War to grant permits for power purposes, within certain limitations. By section 4, the President was requested to open negotiations with Great Britain for the purpose of effectually providing by suitable treaty, for such regulation and control of the waters of Niagara River and its tributaries as should preserve the scenic grandeur of Niagara Falls and of the rapids. In view of the last-mentioned provision, an amendment of the bill, proposed by Senator Hopkins of Illinois, had been adopted in the Senate, as follows:

"Provided, however, That nothing contained herein shall be construed to hold or concede that the waters of Lake Michigan shall be or are subject of international agreement."

The House of Representatives refused to concur in this amendment, as it might embarrass the President in conducting negotiations. The conference committee therefore receded from the amendment. Senator Lodge, on reporting to the Senate the action of the conference committee and replying to Senator Hopkins, said:

"Mr. President, I had supposed that the Senator from Illinois [Mr. Hopkins] realizes that the report of this bill in its present condition would not in any way endanger the rights of Chicago to have water from the lake. Certainly I should have adhered to the amendment if I had thought that the drainage canal of Chicago would have been in any way endangered by the Commission. The House did not accept this amendment.

"The first section of the bill protects the rights of Chicago. No treaty would be made by our commissioners which would impair or infringe those rights.

"Every right is safeguarded. The confereees were as anxious as the Senator from Illinois could possibly be to protect the drainage canal at Chicago, but they did not feel warranted in allowing the whole legislation for such an important object to fail."

On January 4, 1908, the International Waterways Commission made a special report upon the Chicago Drainage Canal. This gave a full description of the canal. It concluded with the following recommendation:

"A careful consideration of all the circumstances leads us to the conclusion that the diversion of 10,000 cubic feet per second through the Chicago River will, with proper treatment of the sewage from areas now sparsely occupied, provide for all the population which will ever be tributary to that river, and that the amount named will therefore suffice for the sanitary purposes of the city for all time. Incidentally, it will provide for the largest navigable waterway from Lake Michigan to the Mississippi River which has been considered by Congress.

"We, therefore, recommend that the Government of the United States prohibit the diversion of more than 10,000 cubic feet per second for the Chicago Drainage Canal."

The Boundary Waters Treaty was signed, 1909, and ratified May 1910.

The statement of the Secretary of State (Elihu Root) before Foreign Relations Committee of the Senate when this treaty was under consideration shows that it was not intended to cover Lake Michigan as a boundary water or to affect the diversion through the drainage canal at Chicago. Among other things, Secretary Root said to the committee:

"The treaty starts with defining the boundary waters as the waters from main shore to main shore of the lakes and rivers and connecting waterways, or the portions thereof along which the international boundary between the United States and the Dominion of Canada passes, including all bays, arms, and inlets thereof, but not including tributary waters which in their natural channels would flow into such lakes, rivers, and waterways or waters flowing from such lakes, rivers, and waterways.

"I have very carefully guarded the terms of this treaty in order not to include Lake Michigan and in order not to involve Senator Cullom's constituents in the drainage canal in the treaty in any way. * * *

"The great bulk of the water goes on the Canadian side, and the Waterways Commission that was appointed some time ago to deal with the question of the lake levels reports, I think, that 36,000 feet can be taken out of the Canadian side and 18,500 on the American side, without injury to the Falls. I thought it wise to follow the report of the Commission and I put in 1,500 feet in addition to get round numbers, so our limit is higher than we want but their limit could not be cut down below what it is because there are three companies on the Canadian side who have the right and works there. * * * Then, there is this further fact why we could not object to this 36,000 provision on the Canadian side. We are now taking 10,000 cubic feet a second out of Lake Michigan at Chicago, and I refused to permit them to say anything in the treaty about it. * * *

"The definition of boundary waters was carefully drawn in order to exclude Lake Michigan. * * *

"* * * In the third place" (referring to the reasons for allowing the United States to divert but 20,000 cubic feet per second, while Canada was allowed 36,000 cubic feet per second) "they consented to leave out of this treaty any reference to the drainage canal, and we are now taking 10,000 cubic feet per second for the drainage canal which really comes out of this lake system."

Despite this record, Canada objected to increasing the diversion from 4,167 cubic feet per second to 10,000 cubic feet per second, at the hearings before Secretary of War Stimson. Objections were expressed by Canada, or Canadian interests, on every possible occasion thereafter. It is not improbable that the great wave of publicity against the Chicago diversion, beginning about 1923, was financed largely by Canadian funds.

Issuance of the diversion permit of March 3, 1925, was the cause of diplomatic correspondence, initiated by Canada.

The first proposed St. Lawrence Seaway Treaty, signed 1932, by its article VIII, would have fixed the diversion from Lake Michigan, at Chicago, at 1,500 cubic feet per second, for all time, or subject to an international tribunal. This treaty failed of ratification in 1934, largely because this provision would have removed this question from the jurisdiction of Congress and the Supreme Court.

This proposed 1932 treaty would have given Canada the exclusive right to use, for power purposes, any water it might divert into the Great Lakes system. Later, as the result of a series of notes exchanged between Canada and the State Department of the United States about 1938–41, Canada was given permission to divert about 5,000 cubic feet per second of water from the Albany River watershed into Lake Superior.

The Niagara Falls Treaty of 1950, ratified by two-thirds of a very small group of Senators present, divided the water at Niagara Falls equally, for power purposes, but exempted the inflow from the Hudson Bay watershed, from this division.

Canada enjoyed the use of 16,000 cubic feet per second more water for power than the United States, for 40 years, from 1910 until 1950, when the Niagara Falls Treaty was passed and the water divided equally. This 1950 treaty did not legally change the status of water diversion at Chicago in any respect.

The 1950 treaty of Niagara amended the 1909 treaty in some respects, particularly in providing for equal division of waters available for power purposes, but expressly excluded the amount of water used and necessary for domestic and sanitary purposes and for the service of canals for the purposes of navigation.

Cordell Hull, Secretary of State, construed the 1909 treaty as having reserved 10,000 cubic feet per second of water for Chicago. In a letter, 1938, to the Canadian Minister, he stated that the Supreme Court decree, 1930, limiting the Chicago diversion to 1,500 cubic feet per second, had made 8,500 cubic feet per second of water available at Niagara Falls, which were not considered available in 1909.

RECENT ATTEMPTS AT LEGISLATION

The sanitary district has sought additional diversion of water from Lake Michigan to provide a clean stream and decent conditions for navigation in the upper reaches of the Illinois Waterway, in particular, from Chicago to the Brandon Road pool just below Joliet. If proper conditions can be maintained in this critical reach, the conditions further downstream will assuredly be good, since the quality of the water improves as it flows on, beyond Brandon Road.

The sanitary district, as such, has no particular obligation in this respect, as these channels in question have, since 1930, been taken over by the Federal Government and operated as a part of the Federal Waterway, from Lake Michigan to the Gulf of Mexico. The sanitary district has, since 1950, provided complete treatment for all of its sewage; and has thus done all that can be expected of any municipal organization. It has complied with all the requirements of the Supreme Court decree of April 21, 1930, in the Lake States case. Its major sewage treatment plant, the West-Southwest plant, was named, October 1955, by the American Society of Civil Engineers as one of the seven modern engineering wonders of the United States.

The legislation in question has been:

The Sheehan bill, 1952, approved by the House Public Works Committee, was killed by an early adjournment of Congress.

The Jonas bill, passed by Congress, 1954, but vetoed by President Eisenhower, who gave four reasons for this action:

1. Existing diversions were adequate for navigation on the Illinois Waterway and Mississippi River.

2. All methods of control of lake levels and protection of property on the Great Lakes should be considered before arbitrarily proceeding with the proposed increased diversion.

3. The diversions are authorized without reference to negotiations with Canada.

4. The legitimate interests of other States affected by the diversion may be adversely affected.

The O'Brien bill, passed by Congress, 1956 (H.R. 3210, 84th Cong.), but vetoed by President Eisenhower, who gave reasons 2, 3, and 4, above for this veto.

Pending is another O'Brien bill (H.R. 2, 85th Cong.), which has passed the House and is now before the Senate.

The O'Brien bill provides for a temporary increase of 1,000 cubic feet per second in the diversion, from 1,500 cubic feet per second to 2,500 cubic feet per second, for a 3-year period; and a study in that time by U.S. Army Engineers and the U.S. Public Health Service, of its effect on the Illinois Waterway and on the Great Lakes. Whether or not the increase in diversion would be permanent would depend upon future action by Congress, after a report on the results of this proposed study.

ARGUMENTS FOR AND AGAINST DIVERSION

More water is needed:

1. For sanitation, in the Chicago to Joliet area.

2. For industrial use in the same area.

3. To improve the quality of water, for navigation in the Illinois Waterway, particularly in the 50 miles of the stream from Chicago to Dresden Island.

4. To restore fish life to the entire waterway and thus assure clean conditions throughout the Illinois River.

5. To provide navigation depth in the Mississippi River, from Alton to St. Louis, in crises, when prolonged droughts have caused the water resources of the Missouri and upper Mississippi Rivers to be exhausted.

Objections to this added water at Chicago are based on claims that it would:

1. Infringe on certain legal rights of the Lake States.

2. Lower lake levels, about five eighths of 1 inch, and amount so small that it can not be measured, but can only be computed theoretically.

3. Cause loss to shipping on the Great Lakes.

4. Reduce the waterpower potential at Niagara Falls and in the St. Lawrence River. It is power potential, and not actual power, because the present plants lack the installed capacity to use the water now available, and will not have such capacity for years to come.

As to loss to shipping, and the reduction in waterpower potential, the International Lake Ontario Board in its report, 1955, concluded that:

The reduction of five-eighth of 1 inch in lake levels would have no significant effect on navigation.

The computed reductions in power are of such small magnitude that provision for any replacement capacity would not be justified.

In the report, January 1957, by General Berrigan, Division Engineer, the following comments are made:

As to power:

"For a 3-year increase in diversion, the temporary character of the effects on dependable capacities is such as not to warrant evaluation."

As to lake levels:

"However, it is not believed practicable to evaluate such effects because of the small

extent of the lowering and also because of the temporary nature of the lowering there would be no means of estimating the lake stages which would prevail at the time lowering of lake levels is effective."

The Chief of Engineers' comments on the report of General Berrigan, made at the direction of the administration, are as follows:

In regard to navigation:

"That the lowering of Lakes Michigan and Huron could be offset by construction of a deeply submerged sill in the St. Clair River, cost $1,530,000; for Lake Erie, by proper operation of control gates in the Niagara River, now under construction; and that there would be no significant change in Lake Ontario and St. Lawrence levels."

In regard to power:

"That the changes in theoretical dependable capacity are so small with respect to the total capacities of the power systems that assignment of value to the changes is not warranted, from a practical operational standpoint."

A good example of the selfish type of opposition to this legislation, and to the tests which might clear up some of the points which have been in dispute, over the years, can be cited:

As to the loss to shipping on the Great Lakes, counsel for the Lake Carriers in a sentence carefully worded, to be purposely misleading, stated (1956): "If all the vessels owned by the Lake Carriers had their draft reduced three-fourths inch, the annual loss in carrying capacity would be 1½ million tons of cargo.

The answer is that a slight lowering of the water surface would affect only the few larger boats, capacity 10,000 tons and over and these only on downbound trips, when they carry the heaviest cargo, iron ore. On the upbound trips, even fully loaded with coal, they could not possibly be affected. Perhaps 75 percent of the boats on the Great Lakes have drafts that do not require even present full project depths.

It is significant that the Army Engineers, interested in navigation and even now working on the Calumet-Sag Channel widening project to increase the capacity of the Illinois Waterway, have supported each of the four bills for increased diversion, from 1952 to 1957; while the State Department has opposed them. The State Department apparently pays more attention to an objection by Canada, whether it be a valid objection or not, than to the needs of the Middle West.

In 1956, the Supreme Court of the United States finally recognized, for the first time since its decree in 1930, that navigation can require increased diversion. Unprecedented drought conditions existing in the area of the Mississippi and Illinois Rivers threatened the water supplies of many communities upon the waterways and seriously impaired navigation. At one time, for example, 200 barges were tied up on the Mississippi River at the Alton Dam. Therefore, the Governor of Illinois on October 16, 1956, petitioned the Secretary of Defense for an increase of diversion, but the petition was rejected by the Secretary of the Army. Thereupon the State of Illinois petitioned the Supreme Court on November 13, 1956, to increase diversion to 10,000 cubic feet per second for a period of 100 days. On December 17, 1956, the Supreme Court entered the following order:

"In view of the emergency in navigation caused by low water in the Mississippi River, paragraph 3 of the decree in these causes issued on April 21, 1930, is temporarily modified to permit the diversion to and including the 31st day of January 1957, from the Great Lakes-St. Lawrence system into the Illinois Waterway and the Mississippi River of such amount of water not exceeding an average of 8,500 cubic feet a second, in addition to domestic pumpage, as the Corps of Engineers, U.S. Army, shall determine will be useful in alleviating the emergency with respect to navigation on the Illinois Waterway, at such times and in such amounts as the Corps of Engineers shall direct."

It is a matter for Congress, and Congress has acted, but has been overruled twice, by pocket vetoes, after Congress had adjourned.

The point is next made that the proposed additional diversion at Chicago may well serve as a precedent in the controversy between the United States and Canada over the waters of the Columbia River. There is fear expressed that a unilateral diversion at Chicago without Canada's consent—even though legally appropriate—may serve as an incentive for Canada to take unilateral action in diverting the waters of the Columbia River away from the United States. On this point let me cite the letter of the Counsel of the Department of State, dated July 31, 1958, on that point, to the effect that if there were no material damage resulting from the proposed additional diversion at Chicago, there would be no precedent established for consideration in the discussions of the diversion of the waters of the Columbia River. The studies of the Corps of Engineers indicate that the proposed diversion cannot possibly result in material damage either to the power or the shipping interests. It is extremely unlikely, therefore, that passage of this bill and any diversion made under it could serve as a precedent for the Columbia River water discussions. I shall attach that letter to my remarks.

The contention in opposition to the bill is being made, too, that increased expenditures by the sanitary district could improve its engineering facilities and its treatment processes to the point where the additional diversion would not be necessary. Even the most ardent opponents of this bill admit that the sanitary district is one of the most modern treatment plants in the world. In fact, some of its operations have been described by the American Society of Sanitary Engineers as one of the engineering marvels of the world. The work of improvement of its facilities is a constant one and in the next 2 or 3 years alone, the sanitary district will spend $46.9 million in maintenance and improvements to its plant. If this is not an indication of good faith, I do not know what is.

And so, Mr. Chairman, we who represent this great metropolis of the Middle West ask your help in allowing Chicago to fulfill its destiny. We would not jeopardize the St. Lawrence Seaway because we know that this waterway will eventually make Chicago the No. 1 port of the world. New commerce and new industry are moving into our city every day. New people are establishing homes and making contributions toward building our community and our country. This problem of sanitation and waste disposal is a straitjacket to our growth. That is why this bill is of such vital importance—of importance not only to us, but to every great city in the country.

The benefits which flow from this test and this study will accrue to all the people of our Nation. This bill should be approved.

JULY 31, 1958.

The Honorable SIDNEY R. YATES,
House of Representatives.

DEAR MR. YATES: In accordance with your telephone request of yesterday, I am submitting herewith a supplementary statement regarding certain of the conclusions set forth in my letter of July 29, 1958, to Senator RICHARD L. NEUBERGER. With the consent of the Senator I am sending you herewith a copy of that letter.

The Department has not attempted to make any determination with regard to the conflicting claims as to whether the proposed diversion at Chicago would in fact cause material injury to Canadian navigation or hydroelectric power interests. As far back as 1954 the Canadian Government, in objecting to a bill similar in its terms to H.R. 2, asserted: "If the proposed increase in the diversion at Chicago were to take place, the Government of Canada would, in the circumstances described above, consider that there would be material injury to the navigation interests on its side of the boundary." In 1956 they stated their view that "the enactment of the proposed legislation would be prejudicial to the navigation and power interests of both countries." In 1958 they referred to "the economic harm which may be done to navigation and hydroelectric generation in both countries by extended use of dilution methods." Extracts from the communications from the Canadian Government in which these expressions of view appear were set forth somewhat more fully in my letter of July 29, 1958, to Senator NEUBERGER.

It was in the light of this position of the Canadian Government that I stated, in that letter: "Canada's reasons for opposing the Chicago diversion bill are thus very similar to those of the United States with respect to the Columbia River diversion, and it would seem that H.R. 2, if enacted, could constitute a precedent to be used by the Canadian interests in support of their proposals on the Columbia."

If in fact the proposed diversion at Chicago did not result in material injury to navigation or power interests on the Canadian side of the boundary, this basis of objection by Canada would not exist, and in those circumstances there would, of course, be no precedent that might be cited in connection with the Columbia River situation.

Sincerely yours,

JOHN M. RAYMOND,
Acting Legal Adviser.

The CHAIRMAN. The time of the gentleman has expired.

All time has expired.

The Clerk will read.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in order to provide the basis for the study, authorized by section 2 of this Act, of the effect of increased diversion of water from Lake Michigan, in addition to the one thousand five hundred cubic feet of water per second presently provided by the 1930 decree of the Supreme Court of the United States (281 U.S. 181–202) and subsequently authorized by the Rivers and Harbors Act of 1930 (46 Stat. 918, 929), upon the Illinois Waterway and the degree of improvement in such waterway caused thereby, and the effect of such increased diversion upon commerce among the several States and navigation on the Great Lakes and the Illinois Waterway, authority is hereby granted to the State of Illinois and the Metropolitan Sanitary District of Greater Chicago, under the supervision and direction of the Secretary of the Army, to withdraw water from Lake Michigan for the one-year period specified in paragraph (3) of subsection (b) of section 2 of

this Act, in addition to all domestic pumpage, at a rate providing a total annual average of not more than two thousand five hundred cubic feet of water per second, to flow into the Illinois Waterway during such one-year period, subject to the following limitations:

(1) The Secretary of the Army shall at all times have direct control and supervision of the amounts of water directly diverted from Lake Michigan.

(2) The Secretary of the Army shall not allow any water to be directly diverted from Lake Michigan to flow into the Illinois Waterway during times of flood in the Illinois, Des Plaines, Chicago, or Calumet Rivers.

SEC. 2. (a) During the three-year period beginning on the date of enactment of this Act the Secretary of Health, Education, and Welfare, in cooperation with the Secretary of the Army (acting through the Chief of Engineers), shall cause a study to be made of the effect on Lake Michigan and on the Illinois Waterway of the increased annual diversion of one thousand cubic feet of water per second for the one-year period authorized by this Act, and the improvement in navigation conditions and other improvements along the Illinois Waterway which may result from such increased diversion.

(b) The study authorized to be made by subsection (a) of this section shall be divided into the following phases:

(1) The first period of six months shall begin on the date of enactment of this Act and shall be used to develop plans for the tests and range of studies of the Illinois Waterway, with no increase in the authorized diversion from Lake Michigan during such period.

(2) The twelve-month period immediately following the period specified in paragraph (1) shall be devoted to a stream survey of the Illinois Waterway under existing conditions, with no increase in the authorized diversion from Lake Michigan during such period.

(3) The twelve-month period immediately following the period specified in paragraph (2) shall be used to study the conditions in the Illinois Waterway with a total annual average diversion of two thousand five hundred cubic feet of water per second (comprising the authorized diversion of one thousand five hundred cubic feet of water per second and the additional one thousand cubic feet of water per second authorized by the first section of this Act) in addition to all domestic pumpage.

(4) The six-month period immediately following the period specified in paragraph (3) shall be used to prepare the final report required by subsection (c) of this section.

(c) Upon completion of the study authorized by subsection (a) of this section, the Secretary of Health, Education, and Welfare, and the Secretary of the Army shall correlate the results of such study. Thereafter the Secretary of the Army shall report such results to Congress on or before June 1, 1962. The report on such results shall contain recommendations with respect to continuing the authority to divert water from Lake Michigan into the Illinois Waterway in the amount authorized by the first section of this Act, or increasing or decreasing such amount.

Mr. BLATNIK (during the reading of the bill). Mr. Chairman, I ask unanimous consent that further reading of the bill be dispensed with, that it be printed in the RECORD and that it be open for amendment at any point.

The CHAIRMAN. Is there any objection to the request of the gentleman?

There was no objection.

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendment on page 3, line 11, strike out "of enactment of this Act" and insert in lieu "funds are first made available for the study".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment on page 4, lines 10 and 11, strike out the period after the word "study" and substitute a comma and strike out "Thereafter the Secretary of the Army" and substitute the word "and".

Mr. HOFFMAN of Michigan. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, some of us find ourselves in a difficult situation. The Illinois Members, and especially our colleague from Illinois [Mrs. CHURCH], and the Chicago Tribune, a great American paper, if there ever was one, and no doubt other Chicago publications, want this legislation. It is tough on some of us who oppose it, who would like to please them, to vote as we must, but the bill is no solution to the sanitation problem of the city of Chicago. I recall very distinctly standing on the State Street Bridge in Chicago and watching the river flow into Lake Michigan, carrying its sewage into Chicago's source of drinking water. That was 60 years ago. The gentleman from Chicago [Mr. O'HARA] remembers it very, very well. Chicago has not successfully solved the problem, which is an excess of sewage in their water supply. That is the real issue here.

Chicago wants to draw additional water out of Lake Michigan to lessen its burden of disposing of its sewage. So doing may or may not lower the water level of our harbors around the lakes, the harbors of Ohio, Wisconsin, Indiana, Michigan; it may or may not; but one thing is certain: Chicago intends to use that water to dump this sewage through the canal and down the river. True, Michigan is not without sin; we have dumped some of our sewage into the lake; but in my home town we bonded our city and taxed our people to build a sewage-disposal plant, and that is what Chicago will be forced to do before it ever gets its sanitation situation solved.

And answer this question of pollution and public health: Where do you get your drinking water? You take it out of the lake.

That question will confront us. We are already getting letters on it. These foreign ships come in and dump their sewage into the lake. As rivers flowing into Lake Michigan continue to dump sewage into Lake Michigan your water supply will continue to grow less drinkable. You get your drinking water from the lake. We do not want it polluted, nor should we lessen its volume. There is another problem you must meet. All you have to do to realize its magnitude is to fly over Chicago and look at those cesspools or sludge ponds all around that great canal. Sometime Chicago will be forced to either quit growing or take care of its own sewage, both raw and industrial, for throughout the country the water supply is becoming inadequate.

Mr. BOGGS. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I listened to my colleague from Michigan reduce this discussion to an argument about Chicago sewage. As far as I can see there is considerably more involved in the issue before the House today.

Others have made an argument about Canada. I happen to be chairman of the Subcommittee on Foreign Trade Policy of the Ways and Means Committee. My subcommittee visited Canada about a year ago and we met with everyone from Prime Minister Diefenbaker on down. We listened to the Canadian problems very sympathetically. As a matter of fact, I have taken this well on numerous occasions to present the Canadian point of view on many of these issues. I might say in passing that not once in our discussion was any mention made of this bill now being debated. This bill was before the Congress then, it was before the Congress prior to that time.

What does this bill seek to do? This bill does not seek to set up a permanent system of diversion. It simply says that under the direction of the Army Engineers—who are the best qualified in our country—there shall be diverted from Lake Michigan into the Chicago Canal 1,000 cubic feet of water additional per second for 1 year, and that a study of such diversion shall be made extending over a 3-year period. I cannot conceivably believe that the Government of our greatest friend and finest neighbor, Canada, could possibly object to a responsible agency of our Government making this type of study.

Second, when I was in Canada I had the privilege of going to Toronto and going out and looking at the model of the St. Lawrence Seaway. In this project there is diversion of many types: diversion from lake to lake; from lakes into the St. Lawrence River; from lakes into various channels of the St. Lawrence system, and that whole thing has been worked out between the United States and Canada. I cannot believe that there is not enough common sense existing between the United States and its Canadian neighbor to work out this problem.

Finally, let me say that there is more than Chicago involved, although I think that is quite a commanding consideration. I yield to no one in my profound affection for the gentleman from Illinois, TOM O'BRIEN, but I would be for this bill whether I held that affection for the gentleman from Illinois, TOM O'BRIEN, or not.

I would be for this bill because there is much national interest involved in it. We have built in our country, with great pride and great credit, a magnificent system of inland waterway navigation and transportation. This is part of it. Back in 1956, if I remember correctly, the oil barges moving up the inland waterway system from Houston, Tex., from the oil wells of Texas and Louisiana and the great Southwest, could not get past the

Alton locks, just above St. Louis, to the areas to the north, Chicago, and the other great centers, including the cities that have expressed some concern about this study being made. These areas were threatened with a shortage of fuel oil in a cold winter because of the fact these locks were not navigable.

So this study is important not only from the point of view of whether or not the city of Chicago has or has not used proper diligence in solving its sewage-disposal problem. This is important in the whole complex of the inland waterway system of the United States.

It would seem to me that the people who reside in the Great Lakes region would recognize the importance of connecting the St. Lawrence Seaway system with the vast inland waterway system stretching from Pittsburgh on the east to beyond Kansas City on the west and down the Mississippi River to New Orleans and points throughout the world.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

(By unanimous consent (at the request of Mr. Boggs) he was allowed to proceed for 2 additional minutes.)

Mr. SCHERER. Mr. Chairman, will the gentleman yield?

Mr. BOGGS. I yield to the gentleman from Ohio.

Mr. SCHERER. Would the gentleman explain to the House how the 1,000 cubic feet per second per year would help navigation in view of the Army Engineers' report that 1,500 cubic feet per second is adequate?

Mr. BOGGS. The question of a thousand feet would not have any perceptible effect on navigation. I do not think anyone who advocates this bill says it does. All I am saying is that this bill states: Let the qualified agency of the Government make a study and report back to Congress.

When you vote against that, you say, "We will not let them make that study." So I am pleading that in the interest of navigation, including navigation on the Ohio River, which is a great river—and there is more navigation on the Ohio River today than there was before the coming of the railroads—this study should be authorized.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. BOGGS. I yield to the gentleman from Michigan.

Mr. DINGELL. I would like to remark for the gentleman's benefit that this problem of oil barges being tied up at the Alton Locks was handled under Supreme Court procedure. Additional water was permitted under the decree to the city of Chicago, the sanitary district. The additional water that was needed was furnished to let these barges go up and down that river.

Mr. BOGGS. I am very happy that the gentleman made that point, because the amount of water made available at that time was considerably above the 1,000 cubic feet asked for in this study, and it had no effect whatsoever on the level of Lake Michigan.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. BOGGS. I yield to the gentleman from Illinois.

Mr. YATES. The amount made available was 8,500 cubic feet per second, and the amount which is suggested under this bill is only 1,000 cubic feet per second.

Mr. BOGGS. Yes. In conclusion, I would hope we would not deny the Army Engineers the information which we are all entitled to, not as a sectional thing but as a national proposition for the benefit of all of us.

Mr. MACK of Washington. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, my distinguished friend from Louisiana says that he cannot imagine the Canadian Government protesting to this legislation. Well, all he has to do is to read the report of the committee that is here on file. He will find that the Canadian Government already has protested to the State Department the enactment of this legislation. The position of Canada is perfectly clear. Canada does not want this legislation enacted, and for very good reasons.

Shipping interests on the Great Lakes testified before our committee that if Lake Michigan is reduced in level by one inch as this bill will reduce it the cost to the shipping interests on the Great Lakes will be $2 million. Of that $2 million loss to the shipping interests $600,000 will be lost by the shipping interests of Canada. Furthermore, we have evidence from the New York Power Commission and others that if this bill is enacted, the Canadians will lose several hundred thousand dollars annually of income due to the loss of power generation at its St. Lawrence Canadian plants.

Now, my distinguished friend from Louisiana says this bill provides for only a temporary diversion. No one here, I hope, is so naive as to believe that Chicago seeks to obtain diversion only for 12 months. The purpose of the survey sought to obtain a go ahead on full scale permanent diversion. There is no sense of spending $545,000 of the Federal taxpayers' money for a survey if the purpose is not to go ahead with a permanent diversion of the waters of Lake Michigan to the Illinois ship canal.

Now, there is only one issue here. The city of Chicago has a tremendous and dangerous pollution problem. Chicago can solve that problem itself, as the gentleman from Michigan well said, by merely building more or building larger sewage disposal plants. The reason that the pollution exists in the Illinois waterway is that Chicago is dumping solids from untreated sewage into the canal. A sewage disposal plant or plants built by Chicago at its own expense could correct this pollution problem. But, the people of Chicago, naturally, would rather have the Federal Government, the taxpayers of the Nation, pay for the eradication of this pollution than for Chicago to pay for it. You cannot blame them for that. They now introduce this legislation in the hope that Chicago can obtain additional water, flush out the waterway, and thereby correct the pollution, with the taxpayers of the United States paying the bill rather than the taxpayers of the city of Chicago.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. MACK of Washington. I yield to the gentleman from Illinois.

Mr. YATES. Does not the gentleman overlook the testimony of the Corps of Army Engineers? Did not the Corps of Army Engineers testify that the maximum lowering of the Great Lakes that would occur under the bill under consideration would be one-quarter of an inch?

Mr. MACK of Washington. I say that this bill is an attempt to get permanent diversion of 1,000 cubic feet of water per second. General Parsons testified before the committee. I said to the general, "What is the U.S. Army Engineers' official position as to the amount of lowering of the water level, if it continues over a period of 15 years?" And he said, "It will lower the level of Lake Michigan, not by a quarter of an inch, but by one inch."

Mr. YATES. You asked the general what would happen if it was permanent. That is not in this bill. This seeks diversion for 1 year, and we will have to come back to the Congress again.

Mr. MACK of Washington. It is my position that the purpose of the bill is eventually to get permanent diversion, since temporary diversion will be of no value.

I append to my statement, first, Canada's protest to the proposed diversion; second, the statement of the U.S. State Department in opposition to this legislation; and third, the statement of the Budget Bureau in opposition to this legislation.

The Canadian Government expressed its official position in its communication dated February 20, 1959, to our Department of State, which is as follows:

On a number of occasions in the past, the Canadian Government has expressed its objections to proposals envisaging increased diversions of water from Lake Michigan at Chicago. Once again, and at the invitation of the Government of the United States through the U.S. Embassy's aide memoire of February 9, 1959, the Government of Canada is anxious to make known its views on legislative proposals now before Congress, such as bill H.R. 1, which are intended to authorize an increased diversion of water from the Great Lakes Basin into the Illinois Waterway.

While recognizing that the use of Lake Michigan water is a matter within the jurisdiction of the United States of America, it is the considered opinion of the Canadian Government that any authorization for an additional diverison would be incompatible with the arrangements for the St. Lawrence Seaway and power development, and with the Niagara Treaty of 1950, and would be prejudicial to navigation and power development which these mutual arrangements were designed to improve and facilitate.

The point has been made repeatedly by Canada that every withdrawal of water from the basin means less depth available for shipping in harbors and in channels. Additional withdrawals would have adverse effects on the hydroelectric generation potential on both sides of the border at Niagara Falls and in the international section of the St. Lawrence River, as well as in the Province of Quebec, and would inflict hardship on communities and industries on both sides of the border.

The Government of Canada therefore protests against the implementation of proposals contained in H.R. 1.

The opposition of the Department of State to enactment of H.R. 1 was made known to the committee through the testimony of Woodbury W. Willoughby, Director, Office of British Commonwealth and Northern European Affairs, and includes reference to the Canadian Government's views. The statement to the committee was as follows:

H.R. 1 authorizes the withdrawal of water from the Great Lakes Basin at Chicago and thus must be considered in relation to the rights of Canada as a coriparian in the waters of that basin. The Department, in the interest of maintaining harmonious relations with that country, has traditionally sought its views on proposals of this type.

This committee has previously been furnished with the texts of the recent communications exchanged with the Canadian Government regarding its views on H.R. 1, and will have noted the protest registered by that Government against implementation of the proposals contained in the bill. I should be glad to submit a copy at this time for insertion in the record.

The most recent Canadian aide memoire, dated February 20, 1959, expresses the opinion that any authorization for an additional diversion from Lake Michigan at Chicago would be incompatible with the arrangements for the St. Lawrence Seaway and power development, and with the Niagara Treaty of 1950, and would be prejudicial to navigation and power development which these mutual arrangements were designed to improve and facilitate.

Neither the Niagara Treaty nor the International Joint Commission orders relating to the development of power by the United States and Canada in the International Rapids section of the St. Lawrence River place any specific limitation upon diversions of the type authorized by H.R. 1. Nevertheless, the Department is not in a position to question the Canadian position that an additional withdrawal of water from the Great Lakes Basin such as that under consideration would affect adversely Canadian navigation and power interests in the Great Lakes, their connecting channels, and the St. Lawrence River.

I understand that estimates have been furnished to the Congress by the U.S. Army Corps of Engineers as to the extent of the damage that would be suffered by downstream hydroelectric interests on both sides of the boundary in the event that the present proposal is enacted. It is noted that H.R. 1 provides no means by which injured parties may be compensated.

In view of the foregoing, the Department believes that enactment of H.R. 1 would adversely affect our relations with a friendly foreign government. Therefore, it is unable to support this legislation.

The Bureau of the Budget, on March 3, 1959, the day before the committee voted to favorably report H.R. 1, advised the committee of its opposition to the bill. The views of the Bureau of the Budget are as follows:

On February 18, 1959, we advised your committee by letter of the views of the Bureau of the Budget on H.R. 1, a bill to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation, and for other purposes. However, because it was necessary to submit that report before there was an opportunity to consult with other affected agencies, we indicated that we would advise you further of our views on H.R. 1 at a later date.

We noted in our letter particularly the fact that the Department of State had asked for the current views of the Government of Canada on this legislation. Since that time the Canadian Government has advised the Department of State that it protests the implementation of the proposals contained in H.R. 1.

In the face of this latest protest from Canada and in view of the pending application by certain Great Lakes States before the Supreme Court for a review of the decree of April 21, 1930, the Bureau of the Budget must recommend against the enactment of H.R. 1, even if amended as suggested in our letter of February 18, 1959.

However, we believe that two possible avenues of further exploration may prove fruitful. The first, and the one which we believe is clearly preferable, is to investigate the feasibility of a full technical study of the sewage treatment problems of the Metropolitan Sanitary District of Greater Chicago to be undertaken and financed jointly by the U.S. Public Health Service and the sanitary district without any actual increase in the present diversion of water from Lake Michigan. We visualize that such a study would attempt to measure very carefully existing sanitary conditions in the Illinois Waterway and extrapolate future conditions based on anticipated population growth. The study would also explore alternative means of correcting the problem, including a possible increased diversion of water into the Illinois Waterway, the effect of which should not be difficult to calculate, and attempt to evaluate the alternatives in terms of costs and effectiveness. If such a study is considered feasible by the Public Health Service and the sanitary district, we would strongly recommend that your committee consider legislation to authorize it.

However, if a study of the problem without an actual test diversion for an extended period is not feasible, we believe that before your committee acts on H.R. 1, the possibility of compensation by the sanitary district for damages to Canadian and United States interests, particularly hydroelectric power developments, should be explored. The Department of State could be asked to discuss with Canada what it would consider an equitable compensation and the Department of the Army could be asked to pursue the same question with hydroelectric power interests in the United States.

It is hoped that this presentation of our further views will be helpful to your committee.

The CHAIRMAN. The time of the gentleman from Washington has expired.

The question is on the amendment.

The amendment was agreed to.

Mr. BLATNIK. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BLATNIK: On page 2, line 22, strike out the words "the date of enactment of this Act" and insert "funds are first made available for the study."

Mr. BLATNIK. Mr. Chairman, this is merely a technical amendment to have this earlier section conform to the following section which we have already amended where we struck out the words "on the date of enactment" and inserted in lieu thereof "as of the date funds are first made available."

The CHAIRMAN. The question is on the amendment.

The amendment was agreed to.

Mr. BLATNIK. Mr. Chairman, I offer a clarifying amendment on the same subject, to make the entire bill conform.

The Clerk read as follows:

Amendment offered by Mr. BLATNIK: On page 4, lines 11 and 12, add a period after the word "Congress" and strike out the words "on or before June 1, 1962."

The CHAIRMAN. The question is on the amendment.

The amendment was agreed to.

Mr. WITHROW. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WITHROW: On page 3, lines 22 and 23, strike out the words "annual average" and on page 3, line 23, after the words "diversion of" insert the words "not to exceed at any time."

Mr. WITHROW. Mr. Chairman, under the present wording of the bill before us there is no determining how much water may be diverted over a year from Lake Michigan. I realize that it is an annual average. However, if, for instance, we have a lot of moisture in the northwest for a period of 3 months and very little water has to be drawn off the lake, then in order to bring the average up, if that is what they desire to do, no one can determine how much water will be drawn off Lake Michigan during the remaining 9 months of the year. But we know that a great deal more than 2,500 cubic feet per second will be drawn off. And it will be drawn off at a time when we need the water the most in Lake Michigan and the other Great Lakes.

I believe regardless whether one is for this piece of legislation or not, that each and every Member must feel that if this experiment is to be carried on, they should not be permitted to draw off more than 1,000 cubic feet per second. That is why I have offered this amendment. The amendment restricts them to that amount of water, and I believe the amendment should be supported by this body.

Mr. BLATNIK. Mr. Chairman, I rise in opposition to the amendment. I believe the amendment is rigid and restrictive. This is a technical matter. The amendment would arbitrarily restrict the engineering operations of the Corps of Engineers. There may be occasions when they may need a flow at a higher rate than 2,500 cubic feet per second, but the average shall not exceed 2,500 cubic feet per second.

So I rise in opposition to the amendment. It would arbitrarily restrict and hamper a technical study.

Mr. MACK of Washington. Mr. Chairman, I rise in support of the amendment. This bill carries a provision that in times of flood downstream below the city of Chicago, they may prohibit the diversion of any water. That means that the water will be taken away from Lake Michigan, as the gentleman has said, at a time when the lakes are at its lowest level.

The amendment, in my opinion, is a good amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin [Mr. WITHROW].

The amendment was rejected.

Mr. MEADER. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, this is a far-reaching and controversial piece of legislation. Similar legislation has been vetoed twice by the President. Yet there are no hearings available so that the Members of the House may know the evidence upon which they are going to have to make a decision. We have already found in the debate thus far controversies over what was actually testified before the Committee on Public Works. And yet we do not have the hearings here upon which any such disagreements as to the testimony could be resolved.

I had to resort to getting a copy of a prepared statement of the president of the Lake Carriers Association, Mr. Lyndon Spencer, who testified before the House Committee on Public Works on February 17, 1959, because I was interested in the cost of this program and in the question of less efficient navigation. On page 4 of his statement I find the following:

Under existing conditions the continued diversion of an additional 1,000 cubic feet per second with its subsequent lowering of lake levels will reduce the carrying capacity of the United States and Canada Great Lakes fleets by more than 1 million tons annually with a direct economic loss to the vessel industry of better than $2 million per year.

I have not heard actual figures on current lake levels discussed in detail in this debate. I have before me the report of the U.S. Army Engineers district in Detroit, Michigan, for the levels of the Great Lakes for December of 1958. Let me say that report, which I will insert in the RECORD in its entirety pursuant to permission obtained in the House earlier this afternoon, shows that this is the poorest time for water to be diverted from the Great Lakes because the Great Lakes are at their lowest level in recent years.

The only port Michigan has on Lake Erie is in my congressional district, the port of Monroe. Just last year the Committee on Appropriations appropriated $1 million to restore that port to its project depth. What sense does it make for us to be spending money on the connecting channels and the harbors in the St. Lawrence Seaway system, after spending over $100 million on the St. Lawrence Seaway itself, on the one hand, adding the cost of transportation on the second hand, and then diverting water and making these public works and the shipping they support less efficient and less economical?

Likewise, we are subsidizing shipbuilding, yet making shipping less economical and efficient at the same time. How inconsistent can we be, and how can we decide this question without any evidence before us on such a far-reaching matter?

Lake Erie is now below its average level by over 1 foot. It was 570.79 feet above sea level in December 1958. That was only 1.32 feet above the lowest December level in all history, which was in 1934. It is 2.75 feet below the December high in past history, which was in December 1885. It is 3.39 below the high level in March 1952. If Chicago is going to have a diversion for 1 year for a study, why should it not ask for the diversion and study when the lake levels are high rather than when they are low?

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. MEADER. I yield to the gentleman from Illinois.

Mr. YATES. May I suggest to the gentleman that in this bill the actual diversion will not take place until two conditions are first met; first, when funds are made available for the study; and, second, after such funds are made available the diversion will not begin for 18 months. In all probability the actual diversion will not take place for at least 2 or 3 years from this time, assuming the bill is passed soon and the funds made available shortly thereafter.

Mr. MEADER. The lake levels are still on the decline. Can the gentleman tell me whether he would be willing to wait until the lake levels go up before this diversion occurs?

Mr. YATES. I do not know what the lake levels will be at the time the actual diversion is made. Perhaps they will be higher than they are at the present time.

Mr. MEADER. Mr. Chairman, the Corps of Engineers' Bulletin, from which I quoted, is as follows:

MONTHLY BULLETIN OF LAKE LEVELS FOR DECEMBER 1958, U.S. ARMY ENGINEER DISTRICT, LAKE SURVEY, CORPS OF ENGINEERS

The following table presents the monthly average levels of the Great Lakes during December 1958, determined by the U.S. Lake Survey from daily readings of staff gages. These provisional elevations are generally within 0.05 foot from the more precise monthly averages to be derived from the continuous records of the automatic gages. The table also lists for comparison prior monthly average December levels during the period of record since 1898 on Lake St. Clair and since 1860 on the other lakes.

Lake	December 1958 level	December 1957 level	Average December level, entire record	Extreme low and high December levels during entire record prior to 1958				Difference, December 1958 level from L.W.D.[1]
				Low	Year	High	Year	
Superior	602.07	601.91	602.21	600.70	1925	603.17	1876	+0.47
Michigan-Huron	577.94	578.98	580.24	577.53	1933	582.70	1861	−.56
St. Clair	573.88	574.70	574.64	572.87	1925	576.65	1951	+.38
Erie	570.79	571.78	571.85	569.47	1934	573.54	1885	+.25
Ontario	244.20	244.74	245.40	242.71	1934	247.58	1861	+.20

[1] L.W.D. is the plane to which Lake Survey chart and Federal navigation improvement depths are referred.

NOTE.—Elevations are in feet above mean tide at New York, 1935 datum.

The table below shows recorded changes between successive months in the monthly average levels of the Great Lakes which will provide the basis for comparison of the current behavior with that of the past and also shows the Lake Survey estimate of the probable January level:

Lake	Change in level from November to December		Change in level from December to January			Probable January level
	In 1958	Average during entire record	Average during entire record	Maximums during entire record		
				Fall	Rise	
Superior	−0.21	−0.25	−0.26	−0.52	−0.01	601.8
Michigan-Huron	−.19	−.19	−.12	−.39	+.27	577.7
St. Clair	+.14	−.01	−.43	−1.85	+.57	573.4
Erie	−.27	−.08	−.03	−.67	+.83	570.7
Ontario	−.17	−.08	+.02	−.58	+.63	243.9

NOTE.—Lakes Superior and Michigan-Huron continued their seasonal decline at about average rate from November to December. Lakes Erie and Ontario declined at greater than average rate.

Mr. VANIK. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. VANIK: Page 2, line 3, after "Lakes" insert the following: "and their connecting waterways."

Page 2, line 25, strike out "Lake Michigan" and insert in lieu thereof the following: "the Great Lakes and their connecting waterways."

Page 3, line 12, after "Waterway," insert the following: "and the Great Lakes and their connecting waterways."

Page 3, line 17, after "Waterway" insert a comma and the following: "and the Great Lakes and their connecting waterways."

Page 3, line 22, after "Waterway" insert a comma and the following: "and the Great Lakes and their connecting waterways."

Mr. VANIK. Mr. Chairman, I ask unanimous consent that the amendments be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The CHAIRMAN. The question is on the amendments.

The amendments were agreed to.

Mr. DINGELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: On page 3, line 6, after the period insert the following: "Such study shall include, but not be limited to, an analysis of municipal and industrial waste disposal treatment practices and storm overflows within the metropolitan district of Chicago in order to determine whether everything possible is being done to reduce to a minimum the strength and volume of waste discharged into the Illinois Waterway."

Mr. DINGELL. Mr. Chairman, the chairman of the subcommittee [Mr. BLATNIK] will recall a colloquy which we had on the floor yesterday about this, wherein I stated to Mr. BLATNIK—and which is reported in the CONGRESSIONAL RECORD—as follows:

Mr. DINGELL. May I ask the gentleman this question? He was telling us at this time that a part of this bill or rather a part of the study that will be made pursuant to this bill will be a study of pollution in the Illinois waterways; is that correct?

Mr. BLATNIK. Yes.

Mr. DINGELL. Then, I assume the gentleman would have no objection nor would any other sponsors or proponents of this particular measure have any objection to having concrete language in the form of an amendment to H.R. 1, which would specifically set forth that it shall include a study of pollution in this particular waterway; is that correct?

Mr. BLATNIK. I have no objection.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman.

Mr. YATES. May I suggest to the gentleman that the Metropolitan Sanitary District of Greater Chicago has just retained perhaps the outstanding sanitary engineering firm in the world for the purpose of conducting the exact study that is the subject of the gentleman's amendment at a cost to the district of $125,000. Therefore, it would be repetitive and redundant for the study to be made a part of this bill.

Mr. DINGELL. Mr. Chairman, I decline to yield further.

Mr. Chairman, I want to tell the gentleman I think the worth of the study that is going to be made by the Chicago Sanitary District will have as much merit as have some of the other things that have been said by the Chicago Sanitary District. They have played all sides of the field on this particular issue.

The record of the Chicago Sanitary District in the treatment of its pollution and its waste is so bad that I do not think that a study made by them can be objective. We already have heard the Corps of Engineers, in the person of General Itschner, and other representatives tell us time after time that there is no need for a study of navigation on this particular waterway, and yet the bill is full of provisions for study of navigation. If the one needs further study so does the other.

Existing diversion is more than adequate to sustain any foreseeable navigation on the waterway even if the waterway was going to be double tracked so that they would have an upbound lane and a downbound channel.

What we are asking is a fair and impartial study of the matter. If you are going to have a study of navigation, which the Corps of Engineers has already said is not necessary because the existing water flow is more than sufficient. Let us at least have the benefit of everything that the Department of Health, Education, and Welfare and the Corps of Engineers can find on this subject.

So I think we are entitled to have at least a fair and objective study by the Department of Health, Education, and Welfare and the Corps of Engineers of the treatment practices and the waste disposal methods of the Chicago Sanitary District. If the people from Chicago come to us and say, "We must have this to treat or dilute our sewage." We say, "Let us have the study be complete." And "Let us have it be objective. Let us have it go into treatment methods and the question of whether or not Chicago's treatment methods are adequate. We want adequate study of this matter which will give us a good understanding and a fair interpretation and sufficient factual data on which we can act." I assume, the gentlemen from Chicago will be here wanting us to legislate sometime in the future on this, to give Chicago right to more Great Lakes water.

Mr. GRIFFIN. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield.

Mr. GRIFFIN. I would just like to call to the attention of the membership the fact that several references have been made to the Canadian position in the last Congress and reference was made to the aide memoire which was supposed to indicate that the Canadian Government was not in opposition at that time to the water diversion proposal.

Mr. GRIFFIN. I am going to quote certain provisions from the memorandum:

The Canadian Government understands that, if such legislation is enacted, these sanitation studies will not be limited to evaluation of the effects of dilution, but will also include consideration of all possible measures for dealing with waste-disposal facilities at Chicago. Such measures would include: (a) complete separation of storm sewers from the domestic sewerage system, or expansion of the existing treatment facilities to serve a total combined flow; (b) treatment of organic wastes in industrial plants before discharging these effluents into the sewerage systems; (c) chlorination of effluent before discharge into the Illinois Waterway; and (d) artificial aeration of the waterway.

Mr. DINGELL. I thank the gentleman very much.

With regard to my statement I am going to ask the distinguished chairman of the subcommittee, the gentleman from Wisconsin [Mr. BLATNIK]: Is what I am asking here fair and proper? Or is it improper?

I yield to the gentleman to answer me.

Mr. BLATNIK. I am only speaking for myself, but I say for myself that what the gentleman requests in my opinion is a fair and sound request. It does extend the survey to a much larger scope. This matter was brought up before the committee and it was explained by the proponents of the bill that a private survey is now under way.

Mr. DINGELL. There is no reason why this private study could not be used to help with the other study proposed by the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan.

The question was taken, and on a division (demanded by Mr. DINGELL) there were—ayes 51, noes 125.

So the amendment was rejected.

Mr. MICHEL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MICHEL: Page 2, immediately following line 20, insert the following:

"(3) With respect to the regulation of flows along the Illinois River, particularly at Pekin, Ill., the diversion authorized by this act in accordance with this section will be regulated with the objective of maintaining a uniform flow at Pekin of 8,000 cubic feet per second when such uniformity of flow is feasible, as determined by the Chief of Engineers and the Secretary of the Army, and when maintenance of this uniformity will not conflict with or interfere with the preceding provisions of this section."

Mr. MICHEL. Mr. Chairman, this amendment which I offer today is the same one which I offered the last time this legislation was being considered in the 85th Congress. It was unanimously accepted by the committee and incorporated in the final bill approved by the House.

All I am simply attempting to do here is to write into the law specifically what the committee expressed in its House Report No. 369, 85th Congress, 1st session, page 8, which reads as follows:

The committee anticipates that the diversion authorized by H.R. 2 in accordance with section 1 will be regulated with the objective of maintaining a uniform flow at Pekin of 8,000 cubic feet per second when such uniformity of flow is feasible, as determined by the Chief of Engineers and the Secretary of the Army, and when maintenance of this uniformity will not conflict with or interfere with the provisions of section 1.

You see here the language is practically verbatim of that embodied in my amendment.

In order that the House may again act favorably on this amendment, I should like to quickly review the reasons why this amendment should be reapproved. Inasmuch as the Illinois River runs diagonally through my congressional district for a little better than a hundred miles, we have a definite interest in any proposed increase in diversion. Except for the last few years, downstate Members of Congress from Illinois have generally been opposed to any increase.

I have taken the position that an increase of 1,000 cubic feet per second would serve a number of good purposes, provided that the controlling of the daily rate of diversion is regulated to a degree by the Corps of Engineers downstream at Pekin, Ill.

As a matter of fact, I have introduced legislation which differs from H.R. 1 in only one respect, and that is the text of the amendment which I offer here today. Two years ago, when I presented my views to the House Public Works Committee and last year before the Senate Public Works Committee, I sought to regulate the diversion as a means of giving those of us downstate a more uniform flow in the river throughout the year.

There seems to be little question that the main cause of the death of thousands of fish in the river 2 years ago was the rapid lowering of the water level. Any quick change of the water level for any reason, aside from an outright emergency, is inexcusable.

Such changes are not only destructive to fish and wildlife, but are highly inconsiderate of the people whose land lies adjacent to the river. Sudden shifts of the water level cause the destruction of those recreational pursuits which we have come to enjoy downstream.

I have been told that the increased diversion would increase the oxygen content of the river and would be of major benefit to fish and wildlife. Better control of low-water flow assists materially in the spawning activities of wildlife. It is also my belief that a better quality of water would tend to develop a better grade and type of fish. Higher low-water stages would provide better duck-hunting facilities. Reduction of diversion during the fall months in past years has tended to dry up many small pools of water that could have been used for duck-hunting purposes.

I point out these advantages to the sportsmen and conservationists as the objections to increased diversion in Illinois in years past have come principally from these quarters.

There are other benefits to be derived downstream with a properly controlled increase in diversion.

First, ground-water levels all over the State are declining, and in the Illinois River Valley, the underground water level definitely fluctuates with the river level. Any raising of the low-water level, therefore, has a corresponding beneficial effect on the level of the underground water supply.

As a matter of fact, the situation is so critical that three major industrial interests in Peoria, the Peoria Water Works, Bemis Bag Co., and the water resources and flood control committee of the Peoria Association of Commerce, have already constructed four river water infiltration pits into which some 7 million to 8 million gallons of river water is put into our underground water supply. Plans are under way to construct a water purification plant. Other Illinois cities, including Jacksonville, Winchester, and Galesburg, have already found it necessary to do likewise in the future.

Second. During the low-flow period of the Illinois River, there is a possibility of an inadequate supply of sufficient water to provide proper cooling for major industrial and powerplants. Continued industrial development will require more and bigger powerplants with a corresponding increase in demand for more cooling water during low stages in the river. Increased flow of cooler Lake Michigan water would increase the efficiency of industrial and powerplant cooling systems.

Third. Higher low water levels would eliminate the costly operation of reducing river barge payloads due to low river water levels. With the rapid increase of river shipping this is becoming more and more important.

A comparison of figures for tonnage carried on the Illinois Waterway indicates a growing traffic on the river. At Peoria, for instance, total tonnage for 1956 was over 18 million tons, an increase of 2 million tons over the previous year. The Corps of Engineers has just informed me that the tonnage at Peoria for 1958 was over 24 million tons. With the opening of the St. Lawrence Seaway early this summer, this figure should be increased greatly.

Fourth. In past years, icebreaking during the winter months has been a costly operation, both from the standpoint of icebreakers and tow charges. This led to an order by the U.S. Supreme Court to grant a temporary increase in diversion to cope with recent serious ice jams occurring on the Illinois River.

In conclusion, it seems to me that for as many years as this matter has been kicked around, we ought to take the logical and sensible approach and approve the bill under consideration, along with my amendment.

Mr. BLATNIK. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield.

Mr. BLATNIK. I ask the gentleman whether this is not similar or identical to an amendment submitted when the bill was under consideration 2 years ago.

Mr. MICHEL. The proposal 2 years ago was in this exact identical language, and the committee unanimously accepted it.

Mr. BLATNIK. That is our recollection.

Mr. Chairman, we have no objection to this amendment.

Mr. MACK of Washington. Mr. Chairman, there is no objection on this side.

The CHAIRMAN. Without objection, the amendment is agreed to.

There was no objection.

Mr. O'HARA of Illinois. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, it had not been my intention to participate in this debate, my colleagues from Illinois having so well presented the issue, but when the gentleman from Florida sought to speak for the Committee on Foreign Affairs, I felt that I should say something.

I am in thorough agreement with the gentlewoman from Illinois [Mrs. CHURCH]. She and I serve on that committee. We know something of its problems. With all due respect for the distinguished gentleman from Florida I join with Mrs. CHURCH in suggesting that perhaps we are in better position to speak for the committee on which we serve.

We know, and I think we both regret, that because of the setup of the State Department the Dominion of Canada is not regarded as belonging to the American hemisphere but belonging instead to Europe. So the determinations are made not on what is good for America but on what is good for Europe.

Certainly all on the Committee on Foreign Affairs look forward to the day when between the United States and the Dominion of Canada there will be a working together in complete accord and understanding and for a common hemispheric purpose. We believe that if Europe will take care of its own affairs and not meddle in the affairs of the American hemisphere by exerting pressures on the Canadian Government that objective will be reached.

The trouble is that in the concept of the State Department the Dominion of Canada is not regarded as belonging to the American hemisphere but as belonging to Europe. This concept, however unrealistic, is reflected necessarily in the setup of our own subcommittees on the Committee on Foreign Affairs. The Dominion of Canada, despite the fact that it is our hemispheric neighbor to the north and we have so much in common that it is separated from the interest of Europe, is not under the jurisdiction of our subcommittee on Inter-American affairs. Instead the Dominion of Canada is under the jurisdiction of the subcommittee on Europe.

If the Dominion of Canada were left to itself, freed entirely from European influences, it is inconceivable that it would take a position in opposition to the test proposed in H.R. 1 on which the health of the people of Chicago and the people of Illinois so vitally depends. The gentlewoman from Illinois has eloquently and convincingly brought home to us the grave risk of a frightful plague of disease unless something is done and done quickly along the lines proposed in H.R. 1. If the Dominion of Canada were faced with such a threat does anyone doubt that there would be any hesitancy to cooperate on the part of the people of Illinois? I am very sure that the people of Canada have the same neighborly feeling toward the people of Chicago and of Illinois, and if left to themselves would go all out in friendly cooperation. Indeed, only a few months ago the State Department informed the author of H.R. 1, the Honorable THOMAS J. O'BRIEN, beloved dean of the Illinois delegation, and Congressman YATES, that Canada had no objection to H.R. 1. That, Mr. Chairman, was at a time when Canada was making her own determinations and on the basis of what was best for her and best for the American hemisphere of which she is a part.

I with Mrs. CHURCH and other members of the Committee on Foreign Affairs deeply regret that any decisions that affect the American hemisphere should be influenced by matters that concern Europe and have no relation to this hemisphere. Unfortunately, determinations too often are made not on what is good for America but on what is good for Europe.

Let me call the attention of my colleagues to the situation that obtained shortly after the Suez incident and the United Kingdom was badly in need of money. Our State Department was consulted, and there followed a loan commitment to the United Kingdom of $500 million, a loan from the Export-Import Bank, which never before had made a loan for political purposes. The function of the Export-Import Bank is to make loans to backward countries for the development of their economies.

About this time the United Kingdom wished to postpone its payments on its war debt to the United States. My colleagues who were in the Congress at that time will remember the very spirited debate. The measure carried on a very close vote and largely because the then Secretary of the Treasury, a distinguished son of Ohio, put his full weight behind it and also the weight of the State Department and of the administration.

I need not remind my colleagues that Ohio has always led the fight against legislation along the lines of H.R. 1. The reason is that the lake carriers have a stranglehold on the press and the politics of that State. No one wants to hurt the lake carriers. Certainly in Chicago we have no such desire, and Mayor Daley of Chicago has publicly stated that if the test proposed in H.R. 1 should prove in any reasonable measure to work to the harm of the lake carriers he would be the first to ask that the test be called off.

I would not suggest that there was a connection between the loan commitment by the Export-Import Bank of $500 million to the United Kingdom for a political purpose, and the extension of the payments on the debt of the United Kingdom to the United States, with anything that has happened in connection with the consideration of a proposal for Lake Michigan water diversion to prevent a frightful plague of disease from striking the city of Chicago and the State of Illinois. But it is a fair presumption, human nature being what it is, that in return for being bailed out the United Kingdom might have had open ears to the suggestion that a little whispering to Canada would be a gracious reciprocal gesture.

Mr. Chairman, I am convinced that this time when the Lake Michigan water diversion bill has passed this body and the other body and has reached the White House, the President of the United States will agree with the majority in both branches of the Congress that what is in the common hemispheric interest of both the United States and the Dominion of Canada should not be lost through European meddling.

Mr. BENTLEY. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I was interested in hearing the remarks of my two good colleagues, members of the Committee on Foreign Affairs, the gentleman who has just spoken and the gentlewoman from Illinois who earlier spoke. I think I have as much right as any other Member to speak for the committee. I believe that many of us on the committee are concerned about the possible effect the enactment of this legislation will have on our relations with Canada.

There seems to have been some misapprehension on the part of a good many people that the Dominion of Canada in protesting the enactment of H.R. 1 has no legal basis and is merely protesting for the record.

I call the attention of the Committee to the treaty of 1909, the International Boundary Treaty. The final paragraph of article II of that treaty states:

> It is understood, however, that neither of the high contracting parties intends by the foregoing provision to surrender any right which it may have to object to any interference with or diversions of waters on the other side of the boundary the effect of which would be productive of material injury to the navigation interests on its own side of the boundary.

A lot of people appear to regard it as somewhat sinister that last month, or perhaps in January, the Department of State requested the views of the Canadian Government with respect to H.R. 1. I do not think there is anything particularly sinister about the fact that the Canadian Government, having previously expressed opposition to diversion from Lake Michigan, would again be consulted as to its views.

I want to call my colleagues' attention to the fact that opposition on the part of the Canadian Government is not recent, and if they will turn to page 4044 of the RECORD of March 12 they will find an objection by the Canadian Government going back to April 25, 1906.

So, I say that the position of the Canadian Government is quite historic in this respect, and it was perfectly proper and natural for the State Department to solicit their views and present them to the Committee on Public Works. I am not going to get into an argument about the technical questions regarding lake levels; I leave that to the committee. But, I do say that the Canadian Government has made its position clear and unmistakable that it reserves its right under the International Boundary Treaty to take whatever action is proper if diversion legislation is enacted. Furthermore, I say that the passage of this legislation endangers our relations with the Dominion of Canada—which is still in the Western Hemisphere, no matter what the State Department may say—it will endanger our relations with the Dominion of Canada whose cooperation and mutual assistance we need so desperately in the defense of our own best interests and our own vital security.

Mr. CRAMER. Mr. Chairman, will the gentleman yield?

Mr. BENTLEY. I yielded to the gentleman from Florida.

Mr. CRAMER. Since my name has been mentioned, does the gentleman not believe that the members of the Committee on Foreign Affairs, being jealous of their own jurisdiction, should be concerned about the fact that we are here today considering a bill that involves the Committee on Foreign Affairs; a bill that the Foreign Affairs Committee has never had an opportunity to consider and which is opposed by the State Department. I am delighted to see that the members of the Committee on Foreign Affairs are asserting thmselves in the course of this debate.

Mr. BENTLEY. I will say to the gentleman, as one member of that committee, that I am very much concerned with our relationships with Canada, and the effect the passage of this legislation will have on them.

Mr. GRIFFIN. Mr. Chairman, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Michigan.

Mr. GRIFFIN. Mr. Chairman, question has been raised concerning the extent of the objection actually raised by Canada. It has even been suggested that the official objection registered with our State Department reflects the views of diplomats in England rather than our Canadian neighbors.

To indicate that such is not the case, I offer for consideration of the House a recent editorial which appeared in the Grand Rapids (Mich.) Press:

ONTARIO OBJECTS, TOO

For the last several weeks supporters of Chicago's petition to be permitted to divert additional water from Lake Michigan have been saying that Canada no longer has any objection to this scheme. But the Province of Ontario has some very strong objections, and intends to voice them at any hearing conducted on the matter.

Ontario's municipal affairs minister, William K. Warrender, has attacked the proposed water grab on two fronts. He has declared, first, that diverting water from Lake Michigan into the Illinois Waterway would be "bound to have an adverse effect on harbor installations in a great many ports in Ontario." Further, he has stressed that Chicago is asking permission to divert more water to relieve its sewage disposal problem, but that Ontario, at the request of the President of the United States "some years ago" is spending millions of dollars to halt pollution of international waterways.

The Province has a right to be incensed. Why should Chicago be permitted to use part of Ontario's water to avoid having to spend large sums for sewage disposal when Ontario is being compelled to spend millions for the same purpose to help keep Canadian-American waterways clean? Why should Chicago escape having to do what all the other cities on Lake Michigan are doing to prevent pollution and protect lake levels?

It should be kept in mind that our international policies are judged by others in the world not entirely by what the executive branch does or says but also by what this Congress does and says.

If we expect other nations of the world to conduct themselves within the norm of accepted principles of international law, surely it behooves all of us, both officially and unofficially, to adhere to the same principles which we call upon others to respect.

On February 12, 1958, the Committee on Interior and Insular Affairs of the other body sent a letter to our Secretary of State requesting that the committee be provided with a memorandum on the international law applicable to the proposed diversion by Canada from the Kootenay River into the Columbia and from the Columbia into the Fraser. The committee asked the State Department, in its study, to analyze the law under any applicable treaties and also under general international law.

In August 1958 the State Department transmitted to the Senate Committee on Interior and Insular Affairs the study entitled "Legal Aspects of the Use of Systems of International Waters," which has been printed as Senate Document No. 118. This is an exhaustive study of the principles of international law which are applicable to the use of international water systems.

Now what were the principles of international law set forth in this study which we call upon other nations to respect in dealing with the use of systems of international waters?

The principles are outlined on pages 89–91 of the document, as follows:

> It is believed that any examination, such as the foregoing, of the sources of international law demonstrates that there are principles of international law governing systems of international waters in the sense that if issues with regard thereto were to be posed

before an international tribunal it would pronounce judgment in accordance with such principles.

Bearing in mind that as used in this study system of international waters refers to an inland watercourse of lake, with its tributaries and distributaries any part of which lies within the jurisdiction of two or more States, and riparian and co-riparian refer to States having jurisdiction over parts of the same system of international waters—it is believed that an international tribunal would deduce the applicable principles of international law to be along the following lines:

1. A riparian has the sovereign right to make maximum use of the part of a system of international waters within its jurisdiction, consistent with the corresponding right of each co-riparian.

2. (a) Riparians are entitled to share in the use and benefits of a system of international waters on a just and reasonable basis.

(b) In determining what is just and reasonable account is to be taken of rights arising out of (1) agreements; (2) judgments and awards; and (3) established lawful and beneficial uses; and of other considerations such as (4) the development of the system that has already taken place and the possible future development, in the light of what is a reasonable use of the water by each riparian; (5) the extent of the dependence of each riparian upon the waters in question; and (6) comparison of the economic and social gains accruing, from the various possible uses of the waters in question, to each riparian and to the entire area dependent upon the waters in question.

3. (a) A riparian which proposes to make, or allow, a change in the existing regime of a system of international waters which could interfere with the realization by a co-riparian of its right to share on a just and reasonable basis in the use and benefits of the system, is under a duty to give the co-riparian an opportunity to object.

(b) If the co-riparian, in good faith, objects and demonstrates its willingness to reach a prompt and just solution by the pacific means envisaged in article 33(1) of the Charter of the United Nations, a riparian is under a duty to refrain from making, or allowing, such change, pending agreement or other solution.

These are not new principles of international law. They apply equally to us as well as to Canada. They apply to the diversion of water at Chicago just as they apply to the proposed diversion by Canada of waters of the Columbia and other rivers, which might cause us injury.

I should like to emphasize the principle stated that whenever a co-riparian nation objects or files a protest against a proposed change in the existing regime of international waters, the nation desiring to make the change should refrain from putting it into effect until opportunity has been afforded to negotiate and satisfactorily compose the difference, and if such negotiations fail to achieve a mutually satisfactory solution, then the matter should be referred to arbitration or the International Court of Justice.

Here we are, with full knowledge that the Canadian Government has lodged a vigorous protest with our State Department against the diversion at Chicago proposed in this bill. If we expect Canada to abide by these principles of international law, how can any Member of this Congress vote for the present bill?

Mr. GROSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GROSS: On page 4, after line 16, add the following new paragraph:

"(d) No Federal funds shall be made available for the studies contemplated in this act."

Mr. GROSS. Mr. Chairman, this is a nice, simple amendment that anyone can understand. It is contemplated that half a million dollars will be provided by all the taxpayers of the country to provide for the study proposed in this act. I have no objection to the city of Chicago studying this proposition from now until doomsday. Just help yourselves and spend all the money you want to spend, but get off the backs of the taxpayers of Iowa and the rest of the country.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa [Mr. GROSS].

The question was taken, and on a division (demanded by Mr. GROSS) there were—ayes 67, noes 134.

So the amendment was rejected.

Mr. DINGELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: On page 4, strike out line 10, and all that follows down through and including line 16 and insert in lieu thereof the following: "correlate the results of such study. Thereafter the Secretary of Health, Education, and Welfare and the Secretary of the Army shall submit their proposed report to the Governor of each of the following States: Minnesota, Wisconsin, Illinois, Indiana, Michigan, Ohio, Pennsylvania, and New York, and to the Secretary of State who is requested to transmit such proposed report to the appropriate officials of the Government of Canada. After the expiration of 45 days from the date the proposed report is submitted to the Governors and the Secretary of State, the Secretary of Health, Education, and Welfare, and the Secretary of the Army shall make their final report to Congress which shall contain (1) all comments and recommendations with respect to the proposed report made by any Governor and by any official to whom such proposed report was submitted, and (2) shall contain recommendations with respect to continuing the authority to divert water from Lake Michigan into the Illinois Waterway in the amount authorized by the first section of this Act or increasing or decreasing such amount, and such other recommendations as may be necessary. Such final report shall be made to the Congress on or before June 1, 1962."

Mr. DINGELL. Mr. Chairman, having been run over by the Illinois steam roller one time already this afternoon and having watched numerous and sundry others of my colleagues suffer the same experience, I must confess that I offer this amendment with some apprehension.

Briefly, for the benefit of proponent and opponent alike, the only thing this amendment seeks to do is to have the text of the report when complete submitted to the Governors of the other Great Lakes States and through the Secretary of State to the officials of the Government of Canada 45 days before submittal to Congress. It makes no other change in the bill. You will note that it imposes no delays, no time extension over and above what is already provided in the legislation before us. It only requires that the report be submitted to the Governors of the various Great Lakes States and the Government of the Dominion of Canada through the Department of State. This is the appropriate and proper method of seeing to it that our neighbor to the north, Canada, is notified of the text of this particular study report. Beyond this it does nothing else.

It does not compel the Corps of Engineers to pay any heed to the wishes of the Governors of the various States or to pay any heed to the views and wishes of the Dominion of Canada. Indeed, it compels no more attention to the wishes of these States, their citizens and their officials, and the views of the Dominion of Canada than we see paid by the House of Representatives today. That is very little.

So, Mr. Chairman, what we seek and what we hope here today is that some notice be given those concerned.

We know this legislation is going to be passed, but I will make a prediction, that it will be vetoed in the ordinary course of events by the President of the United States for the same reason that he vetoed the other bills on this subject. After all, citizens of our Great Lakes States outnumber the citizens of Illinois. These Great Lakes States are contributing a great deal more water to the Great Lakes than the State of Illinois which only gives 500 cubic feet per second to the Great Lakes.

We ask that you at least give our officials, the Governors of our States, and the Government of the Dominion of Canada, an opportunity to look at the report before it is filed with Congress. That is the only thing we ask. We hope we are entitled to some fairness, to some small consideration in this matter, and that you will listen to our pleas for a fair and objective study, as you have not so far. We hope the House will at least give us the courtesy of having our Governors know a little bit in advance what is proposed on the basis of the study which will be made. That is all we ask today of the Congress of the United States. Give us a little bit of basic fairness, give us a little bit of notice. I hope you will do so.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan [Mr. DINGELL].

The amendment was rejected.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. SISK, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 1) to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation, and for other purposes, pursuant to House Resolution 202, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

Mr. WITHROW. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. WITHROW. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. WITHROW moves to recommit the bill H.R. 1 to the House Committee on Public Works.

The SPEAKER. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

Mr. MACK of Washington. On that, Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 238, nays 142, answered "present" 2, not voting 52, as follows:

Dixon	Macdonald	Teller
Evins	Magnuson	Thompson, Tex
Fisher	Martin	Wainwright
Frelinghuysen	Monagan	Weaver
Glenn	Morrison	

So the bill was passed.

The Clerk announced the following pairs:

On this vote:

Mr. Baker for, with Mr. Laird against.

Mr. Curtis of Missouri for, with Mr. Bray against.

Mr. Martin for, with Mr. Weaver against.

Mr. Celler for, with Mr. Frelinghuysen against.

Mrs. Kelly for, with Mr. Henderson against.

Mr. Chelf for, with Mrs. St. George against.

Mr. Monagan for, with Mr. Dixon against.

Mr. Green of Pennsylvania for, with Mr. Judd against.

Mr. Hébert for, with Mr. Coffin against.

Mr. Riley for, with Mr. Scott against.

Mr. Rhodes of Arizona for, with Mr. Wainwright against.

Mr. Roberts for, with Mr. Glenn against.

Mr. McGinley for, with Mrs. Bolton against.

Mr. Lane for, with Mr. Lafore against.

Mr. Thompson of Texas for, with Mr. Riehlman against.

Mr. Sheppard for, with Mr. Taylor against.

Mr. Morrison for, with Mr. Polk against.

Mr. Roosevelt for, with Mr. Quie against.

Until further notice:

Mr. Herlong with Mr. Andersen of Minnesota.

Mr. Evins with Mr. Cahill.

Mr. BAKER. Mr. Speaker, I have a live pair with the gentleman from Wisconsin [Mr. LAIRD]. If he were present, he would have voted "nay." I voted "yea." Therefore, I withdraw my vote of "yea" and vote "present."

Mr. RHODES of Arizona. Mr. Speaker, I have a live pair with the gentleman from New York [Mr. WAINWRIGHT]. If he were present, he would have voted "nay." I voted "yea." Therefore, I withdraw my vote of "yea" and vote "present."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. BLATNIK. Mr. Speaker, I ask unanimous consent that all Members have 5 legislative days in which to revise and extend their remarks on the bill just passed.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

PROGRAM FOR THE BALANCE OF THIS WEEK AND FOR NEXT WEEK

Mr. HALLECK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. HALLECK. Mr. Speaker, I have asked for this time for the purpose of inquiring concerning the program for the balance of the day and the program for next week.

Mr. McCORMACK. Mr. Speaker, for the balance of today we have the bill relating to the coloring of oranges. That is about to come up. Then there are two bills out of the Committee on Armed Services.

There are three rules to be adopted, if they do not take too long.

I know of no opposition to the bills, I am hopeful they will be disposed of them today. Those in charge of the bills, if they find there is opposition, I am sure will proceed expeditiously.

Mr. HALLECK. If there are rollcalls, however, they would be had this evening?

Mr. McCORMACK. Yes. I know of no rollcall that will be asked, but one can never tell.

If either of the bills from the Committee on Armed Services is not disposed of, they will go over until next Tuesday. I am hopeful they will be disposed to today. Assuming the three bills to which I have referred are disposed of today, I come now to next week's program.

On Monday we have the Consent Calendar.

Then there are three suspensions:

H.R. 5640, the extension of the temporary unemployment compensation law.

H.R. 10, the self-employed individual retirement act of 1959.

H.R. 519, revision of laws relating to depositary libraries.

Then the District of Columbia appropriation bill for 1960 will be brought up.

If the District of Columbia bill is not completed on Monday it will go over until Tuesday. As I say, if any of the bills programed for today are not completed today they will come up Tuesday.

By agreement of the leadership on both sides, any rollcalls on Monday and Tuesday will go over until Wednesday, on account of Tuesday's being, of course, one of the greatest days in the history of the world, St. Patrick's Day.

The Committee on Rules meets on Tuesday. If a rule is reported out on Tuesday on the bill H.R. 5132, or the Airport bill, which is H.R. 1011, either one of those bills might be brought up. I prefer not to state now which one will be brought up or brought up first. Of course, if both can get through the same day, that would be fine. I would want to bring up both of them, but if rules are reported out on both, as to which one would be brought up first I should like to have a little flexibility. The probability is that the Armed Forces retention of officers bill would be the one, but I would not want to commit myself on that now.

On Thursday the Treasury-Post Office appropriations bill for 1960 will be considered.

The Easter recess will begin at the close of business on March 26 and will run until Tuesday, April 7.

I make the usual reservation that conference reports may be brought up at any time and that any further program will be announced later.

Mr. HALLECK. If I may in my time, I should like to make an observation with respect to the suspensions that are scheduled for Monday. The first one has to do with the extension of temporary unemployment compensation. The majority leader and the Speaker very kindly spoke to me about it, and I agreed that it should be called up. We all realize that action must be had on that measure before March 31, which puts it in the nature of an emergency.

The suspension having to do with the revision of laws relating to depository libraries is rather a matter of routine and is not of any great consequence.

I would want the record to show that with respect to H.R. 10 I did not agree, so far as I was concerned, to the suspension on Monday next. As a matter of fact, I did what I could to avoid its being called under suspension. Of course I recognize that this is a matter completely within the prerogative of the Speaker, as to recognizing any Member to move to suspend the rules and pass a bill. Certainly anything I could say I would not want to be interpreted as any criticism of the Speaker in that regard.

However, no rule has been asked for on the bill. If it comes on under suspension, the minority does not have any right even to make a motion to recommit. Under the circumstances, I thought it might have been better to call the bill under a rule, which rule certainly I would have joined in trying to obtain. However, the promise has been made to put it on under suspension on Monday. So, having made that statement, that is the most I can do.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. HALLECK. I yield to the gentleman from Iowa.

Mr. GROSS. Is Monday a holiday or something? Why should we not have a rollcall vote on Monday?

Mr. McCORMACK. I think the gentleman from Iowa is one of the fairest-minded men that I have met.

Mr. GROSS. Well, now——

Mr. McCORMACK. Wait a minute, now. I am expressing my views, and the gentleman has no control over my thoughts. If they are nice and favorable to my friend, they are my thoughts just the same.

Since Tuesday is St. Patrick's Day, I am sure my friend would not want to have Members who have commitments for that day to go away over the weekend and come back here on Monday and then go back on Tuesday to carry out the comitments which they might have. That is, as I said, a very important day and I am sure that is an observation which will appeal to the fairmindedness of our colleague, the gentleman from Iowa.

Mr. HALLECK. Mr. Speaker, I join with the gentleman from Massachusetts in his statement that it is really a great day, but I will not say it is the greatest day.

If I may add one thing further in connection with what I said about the bill, H.R. 10, I would not want my remarks to be construed by anyone here as anything but an expression of opinion as to procedure—certainly not on my side, because I know a great many Members on both sides of the aisle are very much in favor of the enactment of H.R. 10. What I had to say had to do only with the matter of keeping the record straight with respect to the procedure involved.

ADJOURNMENT UNTIL MONDAY NEXT

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

ORANGE COLORING

Mr. TRIMBLE. Mr. Speaker, by direction of the Committee on Rules, I call up the resolution (H. Res. 200) to amend the Federal Food, Drug, and Cosmetic Act to permit the temporary listing and certification of citrus red No. 2 for coloring mature oranges under tolerances found safe by the Secretary of Health, Education, and Welfare, so as to permit continuance of established coloring practice in the orange industry pending congressional consideration of general legislation for the listing and certification of food color additives under safe tolerances, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union, for the consideration of the bill (S. 79) to amend the Federal Food, Drug, and Cosmetic Act to permit the temporary listing and certification of Citrus Red No. 2 for coloring mature oranges under tolerances found safe by the Secretary of Health, Education, and Welfare, so as to permit continuance of established coloring practice in the orange industry pending congressional consideration of general legislation for the listing and certification of food color additives under safe tolerances. After general debate, which shall be confined to the bill, and shall continue not to exceed one hour to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. TRIMBLE. Mr. Speaker, House Resolution 200 makes in order the consideration of S. 79, which amends the Federal Food, Drug, and Cosmetic Act to permit the temporary listing and certification of citrus red No. 2 for coloring mature oranges.

The practice of using artificial color to color the skins of fully mature, sound oranges has prevailed in Florida and Texas for many years. Such coloring is necessary because fully mature fruit from those areas in many instances may be greenish and nonuniform in color.

Formerly the coloring material employed was coal tar color FDC red No. 32. In 1955 the Food and Drug Administration developed evidence that this coloring material was not harmless since, under some circumstances and in some quantities, it is capable of causing harm when fed to laboratory animals under properly conducted tests. Because of these findings the Administration caused this color to be removed from the list of colors certifiable for use in foods, which prohibited its use in coloring oranges.

In the 84th Congress legislation was passed, Public Law 672, which provided for the temporary continuation of certification and use of the color previously known as FDC red No. 32 solely for the purpose of coloring skins of oranges, it having been determined that this would involve no known danger to public health. This legislation expressly provided an expiration date of February 28, 1959, or sooner if a harmless substitute were developed. The studies undertaken during that period led to the development of the color known as citrus red No. 2, and we have been assured that the toxicity level of citrus red No. 2 is significantly lower than that of FDC red No. 32, and that in the quantities necessary to color the skin of oranges it is without hazard to man.

It is specifically provided that the provisions of this bill will become inoperative on August 31, 1961, or before that time if general legislation affecting coloring materials for food is enacted by the Congress. The reason for the time limit is that this is emergency legislation which will meet the immediate needs of the citrus industry without permanently engrafting on the basic Food, Drug, and Cosmetic Act a new principle of tolerances for coal tar colors which is not applicable to foods generally. The expiration date has been so fixed as to allow the Congress ample time to consider the application of this principle to all foods. It is the intention of the Committee on Interstate and Foreign Commerce, to which this bill was referred for consideration, to study amendments to the Federal Food, Drug, and Cosmetic Act dealing with color additives generally since the need for such legislation has been amply demonstrated to this committee.

Mr. Speaker, I yield 30 minutes to the gentleman from Ohio [Mr. BROWN].

Mr. BROWN of Ohio. Mr. Speaker, this resolution was unanimously reported by the Committee on Rules. It makes in order the consideration of the bill, S. 79. I support both the rule and the bill. I have no requests for time and yield back the balance of my time.

Mr. TRIMBLE. Mr. Speaker, I move the previous question.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

AUTHORIZING CONSTRUCTION OF MODERN NAVAL VESSELS

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up the resolution (H. Res. 203) providing for the consideration of H.R. 3293, a bill to authorize the construction of modern naval vessels, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3293) to authorize the construction of modern naval vessels. After general debate, which shall be confined to the bill, and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio [Mr. BROWN]; and pending that, I yield myself such time as I may consume.

Mr. Speaker, this rule was reported unanimously and the bill that will be considered under the rule was also unanimously reported. I know of no opposition to the rule.

Mr. BROWN of Ohio. Mr. Speaker, the minority members of the Committee on Rules supported this rule. I know of no opposition to either the rule or to the legislation.

Mr. Speaker, I yield back the balance of my time.

Mr. BOLLING. Mr. Speaker, I move the previous question.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

EXTENSION OF SPECIAL ENLISTMENT PROGRAM

Mr. DELANEY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 204 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3368) to extend the special enlistment programs provided by section 262 of the Armed Forces Reserve Act of 1952, as amended. After general debate, which shall be confined to the bill, and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. DELANEY. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio [Mr. BROWN] and yield myself such time as I may consume.

The SPEAKER. The gentleman from New York is recognized.

Mr. DELANEY. Mr. Speaker, House Resolution 204 makes in order the consideration of H.R. 3368, to extend the special enlistment programs provided by section 262 of the Armed Forces Reserve Act of 1952, as amended. This resolution provides for an open rule and 2 hours of general debate.

The purpose of this bill is to extend until August 1, 1963, the special Reserve component enlistment program provided by section 262, Armed Forces Reserve Act of 1952, as added by section 2(1), Reserve Forces Act of 1955. It is this authority upon which the Department of Defense has established its 6 months' trainee program for individuals between the ages of 17 to 18½. Under present law the authority for this program will expire on August 1, 1959. The Department of Defense has indicated that extension of this authority is considered essential to the maintenance of the strengths and mobilization readiness of the Reserve components.

This amendment to the Armed Forces Reserve Act of 1952 was part of the Reserve Forces Act of 1955, which act had as its primary purpose the development of an efficient and well-trained Ready Reserve Force. Therefore, the authority provided in section 262 of the Armed Forces Reserve Act was not an independently conceived program but an integral part of the effort made by Congress in 1955 to overhaul the Reserve structure with a view toward providing the machinery by which our Reserve Forces could be so organized and trained that in the event of war they would be mobilized quickly and be capable of efficiently augmenting the Active Forces in defending our country.

Since the implementation of section 262 in 1955 nearly 100,000 physically fit and qualified young men have taken advantage of the opportunity offered by this program to satisfy their military obligation to this country.

Extension of this authority will parallel extension of the Universal Military Training and Service Act and assures a continued flow of well-trained young men into the Ready Reserve components of our Armed Forces.

I urge the adoption of this resolution.

Mr. BROWN of Ohio. Mr. Speaker, the minority members of the Rules Committee supported this rule. I know of no opposition on this side to either the rule or the bill.

I yield back the balance of my time.

Mr. DELANEY. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

USE OF CITRUS RED NO. 2 FOR COLORING ORANGES

Mr. HARRIS. Mr. Speaker, I call up the bill (S. 79) to amend the Federal Food, Drug, and Cosmetic Act to permit the temporary listing and certification of citrus red No. 2 for coloring mature oranges under tolerances found safe by the Secretary of Health, Education, and Welfare, so as to permit continuance of established coloring practice in the orange industry pending congressional consideration of general legislation for the listing and certification of food color additives under safe tolerances, and ask unanimous consent that it may be considered in the House as in the Committee of the Whole.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the second proviso of section 402(c) of the Federal Food, Drug, and Cosmetic Act is amended by striking out "March 1, 1959," and inserting in lieu thereof "May 1, 1959,".

(b) The third proviso of section 402(c) of such Act is amended to read as follows: "*And provided further,* That, without regard to the requirements of sections 406(b) and 701(e), the Secretary shall promptly establish, and may from time to time amend, regulations (1) prescribing the conditions (including quantitative tolerance limitations) under which the coal-tar color known as Citrus Red No. 2 (more particularly to be defined in such regulations) may be safely used in coloring the skins of oranges which are not intended or used for processing (or, if so used, are oranges designated in the trade as 'packinghouse elimination'), and which meet minimum maturity standards established by or under the laws of the States in which the oranges are grown, (2) providing for separately listing such color solely for such use on such oranges, and (3) providing for the certification of batches of such color, with or without harmless diluents, for each restricted use; and such oranges, if colored prior to September 1, 1961, and to the enactment by the Congress (subsequent to the date of enactment of this proviso) of general legislation for the listing and certification of food color additives under safe tolerances, in conformity with this proviso and such regulations, with Citrus Red No. 2 from a batch certified in accordance with such regulations, shall not be deemed to be adulterated within the meaning of this paragraph."

Mr. HARRIS (interrupting the reading). Mr. Speaker, I ask unanimous consent that the bill be considered as read and printed in the RECORD at this point.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Speaker, the purpose of the bill which was passed unanimously by the Senate and reported favorably and unanimously without amendment by the Committee on Interstate and Foreign Commerce is to amend the Federal Food, Drug, and Cosmetic Act to permit the artificial coloring of the skins of oranges with a color known as citrus red No. 2.

Mr. HALEY, our esteemed colleague from Florida, introduced a bill identical with S. 79. Mr. HALEY testified before our committee on this legislation and he made his presentation with the clarity and persuasiveness which is so characteristic of the gentleman.

The practice of using artificial color to color the skins of fully mature, sound oranges has prevailed in Florida and Texas for many years. Such coloring is necessary because fully mature fruit from these areas, in many instances, may be greenish and nonuniform in color.

Formerly, the coloring material employed was FDC red No. 32. In 1955, the Food and Drug Administration developed evidence that red No. 32 was not harmless, and because of these findings the Food and Drug Administration caused the color to be removed from the list of colors certifiable for the use in foods. This removal had the effect of prohibiting its use for the coloring of oranges.

In the 85th Congress legislation was passed—Public Law 672—which provided for the temporary continuation of certification of red No. 32 solely for the purpose of coloring skins of oranges. The Food and Drug Administration found that this practice would involve no known damage to the public health.

The legislation expressly provided for an expiration date of February 28, 1959, or sooner, if a harmless substitute was developed. Citrus red No. 2, which was the substitute developed, has a toxicity level significantly lower than FDC red No. 32.

The bill, S. 79, provides authorization for the listing and certification, under safe tolerances, of citrus red No. 2 solely for the use in coloring mature oranges. The bill provides that each batch of such color employed in the coloring of oranges shall be certified by the Department of Health, Education, and Welfare. Since it will require a period of approximately 60 days for the color citrus red No. 2 to be manufactured, certified, and available to orange packers, the bill further provides that the effective date for the termination of Public Law 672—which authorizes the use of FDC red No. 32—shall be April 30, 1959, instead of February 28, 1959.

Testimony was received by the committee from the Food and Drug Administration that the use of these colors will in nowise be detrimental to the public health.

The legislation is temporary legislation and will become inoperative on August 31, 1961, or before that time if general legislation affecting coloring materials for food is enacted by the Congress. The Food and Drug Administration expects to submit a general bill to the Congress in the near future. It is then the intention of the committee to give consideration to these general amendments to the Federal Food, Drug and Cosmetic Act since the need for such legislation is apparent to the committee.

Mr. Speaker, I ask unanimous consent to insert in the RECORD as part of my remarks a letter from John L. Harvey, deputy commissioner, dated February 26, 1959, and one from Mr. Harvey dated March 3, 1959, together with a summary of toxicity studies on citrus red No. 2.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

(The matter referred to follows:)

FEBRUARY 26, 1959.

Hon. JAMES J. DELANEY,
House of Representatives,
Washington, D.C.

DEAR MR. DELANEY: In accordance with your request by telephone I may say the Department has indicated no objection to the passage of S. 79 as passed by the Senate and I so testified before the full Senate committee and the Committee on Interstate and Foreign Commerce in the House.

This bill would continue a provision making available a coal tar color for application to the skin of oranges but would require a limitation or tolerance for the color to be imposed and restrict the color to this use only. Each orange would be marked "Color Added" as has been heretofore required where oranges are artifically colored. Also, in accordance with the restrictions of long standing, color is applied only to fully mature oranges which fail to color naturally.

This temporary legislation is in effect a substitution of the color citrus red No. 2 for FDC red No. 32 with the added safeguard of a tolerance limitation. The citrus red No. 2 represents significant advantage over red 32, both because it is inherently much less toxic by level of feeding and because it requires only about one-fifth as much of the citrus red No. 2 to effectively color oranges. The bill is not inconsistent with the provisions of the Food, Drug, and Cosmetic Act generally, and as you have noted it is actually designed to be merged in a general color bill which we hope will be passed in the Congress this session.

The expiration date of existing legislation on the red 32 color is February 28—hence the urgent desire on the part of proponents to pass this bill on a consent calendar. If there is further information we can supply, please call me.

Sincerely yours,

JOHN L. HARVEY,
Deputy Commissioner.

MARCH 3, 1959.

Hon. JAMES J. DELANEY,
House of Representatives,
Washington, D.C.

DEAR MR. DELANEY: Further reference is made to S. 79, as amended and passed by the Senate and as favorably reported by the House Committee on Interstate and Foreign Commerce. We are satisfied that the provisions of the bill are such as to fully safeguard the public health. The requirements for certification of each batch of the color and the application of a tolerance are practicable and workable provisions.

The Department will shortly submit a bill generally applicable to the use of colors in foods, drugs, and cosmetics, which will embody the same principles of insuring safety contained in S. 79. These principles have been adopted after very thorough study in an effort to devise the most satisfactory means of dealing with the use of colors so as to insure that they are safe under the conditions of use and to always provide a wide margin of safety.

Considering the present emergency situation which prohibits the coloring of oranges after February 28, 1959, and the expectation that general legislation on colors will provide for the coloring of oranges, we believe that S. 79 should be passed.

Sincerely yours,

JOHN L. HARVEY,
Deputy Commissioner.

SUMMARY OF TOXICITY STUDIES ON CITRUS RED NO. 2; 2 (1-[2, 5-DIMETHOXYPHENYLAZO]-2-NAPHTHOL

I. Chronic toxicity studies on rats, using pharmacologically accepted procedures, showed that the feeding of 500 parts per million of the dye in the diet for 2 years produced no effect. One thousand parts per million produced only suggestive (questionable) effect. Higher levels produced effect.

II. Chronic toxicity studies on dogs, using pharmacologically accepted procedures, showed that the feeding of about 2,000 parts per million of the dye in the diet for 76 weeks produced no effect. About 8,000 parts per million in the diet for 2 years produced effect.

III. Subcutaneous injection studies and metabolism studies gave no basis for ques-

tioning the safety of lifetime ingestion of small amounts of citrus red No. 2.

IV. There was no indication in any of the experiments that the dye causes cancer.

V. Conclusions:

The dye did not produce any adverse effect when fed to dogs at 2,000 parts per million for 76 weeks, or when fed to rats at 500 parts per million for their lifetime. There was no indication that the dye is carcinogenic.

The level proposed for use of the dye on oranges—1 to 1.5 parts per million—would give the following safety factors: (a) 300- to 500-fold based on rat experiments; (b) 1,300- to 2,000-fold based on dog experiments.

(A 100-fold safety factor would be regarded by competent pharmacologists as adequate where results such as those obtained here are obtained.)

This shows that citrus red No. 2 can be used on oranges at a level of 1 to 1.5 parts per million without hazard to man. Juice or peel from treated oranges, or the whole oranges, would be safe.

Mr. TEAGUE of California. Mr. Speaker, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from California.

Mr. TEAGUE of California. Mr. Speaker, I have no objection to this bill and I do not know of anyone from California who does, but I would like to point out for the benefit of my friends here in the House that my colleagues from Arizona and California would like to make the point that we in California and Arizona do not find it necessary to use coloring on the oranges grown in those States.

Mr. HOLIFIELD. Mr. Speaker, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from California.

Mr. HOLIFIELD. Mr. Speaker, unfortunately the gentleman from California has expressed in different words my own thoughts. My question was going to be: Would those oranges from Florida and Texas have that natural result that the good sunshine in California gives them and therefore makes California oranges attractive to the American people?

Mr. HARRIS. I would not want to undertake to make a comparison of oranges from Florida or Texas that are colored with the oranges from the gentleman's State.

Mr. HOLIFIELD. I may say all of my colleagues from California are sympathetic with the plight of the orange growers in Texas and Florida, and we have no desire to stand in the way of helping them in any manner we can.

Mr. HARRIS. The point that the gentleman has so well made was made to our committee by another colleague of ours from California.

Mr. RHODES of Arizona. Mr. Speaker, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Arizona.

Mr. RHODES of Arizona. I want to add my voice to those who have already spoken and say that we do not begrudge this gift to the gentlemen from Florida and Texas. We know full well that the outside of the fruit might look the same as ours, but inside will not compare with ours in any way and there is nothing they can do about it, so we are for this bill.

Mr. HARRIS. May I make this other point seriously, Mr. Speaker, for the information of the House. It is necessary that this temporary legislation be passed because they are now in the harvesting season in Florida. Already some of these plants are being closed down, and within a very few days some 6,000 people will be out of jobs and the American people will be deprived of the kind of oranges they have been accustomed to receiving.

Mr. WIER. Mr. Speaker, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Minnesota.

Mr. WIER. Your very report would leave the impression, at least with me, that this stopgap legislation is not yet safe. We are preparing a safe one, it is said. Anyway, I want to say that I am opposed to it. I am opposed to the artificial coloring of foodstuffs that the American people eat.

Mr. HARRIS. The gentleman has a right to express his views. I did not mean to leave the impression that this was in any way unsafe.

Mr. WIER. The gentleman said this is stopgap legislation and until they perfect the formula it might be unsafe.

Mr. HARRIS. No; not this formula. I referred to the overall, broad subject.

Mr. WIER. Are we going to have this on all fruit?

Mr. HARRIS. This only affects oranges.

Mr. WIER. Well, I am still against it.

The SPEAKER. The time of the gentleman from Arkansas has expired.

Mr. DELANEY. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, I cannot in good conscience support S. 79.

Although tests show that citrus red No. 2 is much less toxic than FDC red 32, which it is designed to replace, it is, nevertheless, toxic. If it were not toxic, the citrus industry would not feel impelled to ask for this legislation.

As you know, the Food, Drug, and Cosmetic Act bars the use of any coal tar dye in food unless it is harmless. Unfortunately, the burden of proof is on the Government and the Food and Drug Administration does not have the facilities to test all of the coal tar dyes now in use. In fact, it has been stated that it would take them 20 years to complete the job, and, meanwhile, the public continues to consume them in food.

However, a number of the dyes that FDA has been able to test have been found toxic, and these have been delisted. Only last month, final action was taken to delist four of them—FDC yellow 1, 2, 3, and 4. Just this week I have learned that tests have revealed that yellow 3 and 4, AB and OB, contain an element which is known to induce cancer in humans. I understand that these dyes have been used in margarine and certain baked goods. Previous to last month's action, FDA had delisted other dyes—among them FDC red 32.

The pasasge of S. 79 would be only a first step to weaken our protection against harmful coal tar dyes. I say that the public needs more protection—not less.

Coal tar dyes are in a special category, and scientists have been suspicious of them for many years. That is why the Congress enacted special provisions relative to them in the Food, Drug, and Cosmetic Act.

When a new coal tar dye is proposed for use, I believe it is time to stop, look, and listen. That is why I stopped, looked, and listened when citrus red No. 2 came along.

Is this dye harmless at the level of use suggested? Well, I have been able to discover that it belongs to a chemical family, two members of which have been found to induce cancer when implanted in the bladders of mice. The first of these compounds induced cancer in 25 percent of the mice tested—the second, in 37.5 percent of the mice. These tests were reported in the British Journal of Cancer, June 1958, volume 12, No. 2, in a paper by D. B. Clayson, J. W. Jull, and G. M. Bonser. I understand that citrus red No. 2 is related, chemically, to the 2 compounds reviewed in this paper.

I do not claim that citrus red No. 2 can cause cancer. A summary of the toxicity studies on the color, which was submitted to me by FDA, states that there was no indication in any of the experiments that the dye causes cancer. However, the tests were feeding tests. Cautious cancer researchers do not accept feeding tests alone as conclusive.

In any event, this bill means taking a calculated risk with the public health. In the case of coal tar dyes, I hold that we are not justified in taking a calculated risk.

Coal tar dyes serve no useful purpose. They do not add any nutritive value to oranges. They do not make oranges any more delicious. Their only use is to add to eye appeal.

If the citrus industry would spend as much money educating consumers to accept undyed oranges as it spends in dyeing them, the public would not be subjected to any risk and, in the long run, the industry would save money and trouble.

Mr. Speaker, I see no good reason for passing this bill, and I see many reasons for defeating it.

Mr. HARRIS. Mr. Speaker, will the gentleman yield?

Mr. DELANEY. I yield.

Mr. HARRIS. The gentleman did have a letter from the Food and Drug Administration on the subject, did he not?

Mr. DELANEY. Yes; I did.

Mr. HARRIS. That letter did advise the gentleman that this was a safe coloring?

Mr. DELANEY. May I say that I had to write to the Food and Drug Administration and consult with them on three different occasions. Finally, we got a letter that said that the tests showed 100 degrees of safety. They found it was safe, in their opinion; that is, the opinion of the Food and Drug Administration. While they did not sponsor the bill, they did not object to it.

LONG-RANGE SIGNIFICANCE OF THIS LEGISLATION

Mrs. SULLIVAN. Mr. Speaker, I rise in opposition to the pro forma amendment.

I have had, and still have, many reservations about the desirability of this legislation. I wish it were not necessary for us to consider it. I will be sorry to see it become law. Yet I have to acknowledge that every question I have raised to responsible authorities about the possible dangers inherent in the bill has been answered straightforwardly and persuasively.

On the basis of existing scientific knowledge it appears clear that there would be no danger to the consumer in eating oranges colored by citrus red No. 2, even to children sucking an orange through a hole in the skin.

On the other hand, I do not want to let this bill go through the House without raising some points about the long-range significance of this bill's enactment, with the hope that some better method can be devised by our food industry for promoting sales of its varied products than continuously using more and more camouflage to fool the consumer, particularly if the camouflage consists of chemical materials definitely known to be harmful under certain circumstances.

SEARCH FOR "HARMLESS" COLOR WAS FRUITLESS

Mr. Speaker, this is not the first bill brought before us under so-called emergency circumstances to legislate the citrus industry of Florida and Texas out of a difficult situation involving the coloring of their oranges. Several years ago, when it first became known that the coal tar color then being used on oranges—and which will still be used for a little while under this bill—when it became known that this coal tar color designated food, drug, and cosmetic red 32 was not in fact harmless, Congress passed temporary legislation to permit the industry to continue using the color until February 28, 1959.

Congress agreed to that in the expectation that—in the assurance that—a harmless substitute color could be developed in the interval.

The interval has expired, but no suitable and practical harmless color has been discovered to take the place of the old food, drug, and cosmetic red 32 in coloring oranges. The effort was certainly made. But it is clear that coal tar derivatives are no longer providing a reservoir of new artificial colors which can qualify under the Food, Drug, and Cosmetic Act as being harmless.

CITRUS RED NO. 2 NOT HARMLESS, BUT IS LESS TOXIC

Instead, Mr. Speaker, the chemical industry has developed a synthetic color known as citrus red No. 2 as a substitute for the old food, drug, and cosmetic red 32 in coloring oranges. Citrus red No. 2 is not harmless under the terms of the Food, Drug, and Cosmetic Act. But it is said to be substantially less toxic than the old FDC red 32. The Food and Drug Administration is convinced that in the manner in which this color would be used for coloring oranges, and in the quantities which FDA would permit to be used in coloring oranges under the authority of this legislation, citrus red No. 2 would be perfectly safe from the consumer standpoint.

Of course, Mr. Speaker, I can hardly claim to know more, or anywhere near as much, about this as the FDA, so I am certainly not going to challenge their scientific determination as to the relative safety of using this material on oranges, subject to close supervision and control.

But it is worth noting that what we are authorizing is not the use of a harmless material, but of one which is less harmful, less toxic, than the chemical which has long been used for this purpose.

S. 79 TEMPORARY PENDING PASSAGE OF OVERALL COLOR LEGISLATION

As I said, Mr. Speaker, I would much prefer not to see legislation of this kind enacted. I would prefer to see some way found to eliminate the alleged economic necessity for the artificial coloring of foodstuffs with chemicals about whose safety there is even remote doubt and suspicion.

The food additives bill which we enacted last year after many years of effort was a big step toward the solution of a very serious problem involving the use in foodstuffs of hundreds of other chemicals of doubtful safety but the food additives bill did not apply to this specialized field of coal tar derivatives because the coal tar derivatives have been treated for years under our laws with deep suspicion.

This bill is the first step in a process to change that basic attitude toward the coal tar colors. It is a temporary piece of stopgap legislation intended to remain in effect only until Congress enacts overall legislation in the field of artificial coloring of foods, or for no more than 2 years at the outside.

The necessity for such overall legislation, or at least the pressure for it, arises out of the fact that the Food and Drug Administration is being caught in a squeeze between food industry demands, on the one hand, for more and more certified colors to use in or on foods, and the scientific truth, on the other hand, that fewer colors, old or new, are able to pass the test of harmlessness required under the Food, Drug, and Cosmetic Act of 1938.

CONSUMER BLAMED FOR INCREASE IN USE OF ARTIFICIAL COLORS

Presumably it is the public which demands this coloring material in food. If that is so I would say that the food industry makes little effort to talk the consumer out of this so-called fetish for fancy camouflage of the foods we buy. Rather, I would say the food industry deliberately promotes, provokes, and fools the consuming public into buying more and more foods unnecessarily colored with artificial and potentially dangerous chemical substances. I use the word "unnecessary" about this coloring from the standpoint of nutritional value. The coloring is put in only to make the product more attractive.

For instance, we have official word from the Department of Health, Education, and Welfare that synthetic colors, including some of now very doubtful safety are now being used in or on such a wide variety of commodities as butter, margarine, sausage casings, cakes, cookies, pies, bread, processed cheese, spreads, canned and frozen vegetables, confectionery, ice cream, gelatin desserts, puddings, and many, many other items.

The significant thing about this increasing use of coloring matter on or in food is that the old colors long in use and always thought to be completely safe are now being found to be less than completely safe, definitely harmful under certain circumstances, and thus no longer subject to certification and approval under the Food and Drug Act.

So once we enact this law to permit oranges to be colored by a material which is not harmless under that act, we are going to be faced with the necessity of allowing other doubtful colors to be used under similar safeguards.

SAFE TOLERANCES DON'T ALWAYS STAY SAFE

But who is to say that we have enough scientific knowledge to guarantee that the safe tolerances which are now to be set will still be found to be safe as our testing techniques improve? That is not an academic question. We know now that the old Food, Drug, and Cosmetic red No. 32 used for so many years on oranges is more toxic than we thought. It can no longer be used in or on food—it has been redesignated as external red 32 for use only on drugs or cosmetics used externally, although for the next few months it will still be used on oranges, under this bill.

I am reminded, Mr. Speaker, of the announcement made a day or two ago by a committee of experts reporting to the Public Health Service on so-called safe limits of radiation. Just a few years ago, safe tolerances were set for atomic workers at 100 units a year. Later study has proved this was completely unrealistic—the so-called safe limit for atomic workers is now only 5 units a year.

The committee of experts now wonders if this is much too high. The safe level for the general public is set at one-half unit per year. And this may prove to be too high a constant.

The same is true with these coal tar colors. We know they are dangerous—potential killers. We know that in using them in food we are taking a chance. We are assured the level permitted under this bill for use on oranges will be a safe one, but how do we know further research may prove there is no such thing as a safe level of citrus red No. 2?

IS THIS BILL AN ECONOMIC NECESSITY?

Mr. Speaker, I for one am not at all convinced that passage of this legislation now before us is an economic necessity for the survival of the Florida and Texas citrus industries. If that is the case, then the firms involved in that industry—the industry as a whole—have only themselves to blame. They tell us people will not buy their oranges in competition with the naturally colored oranges of California unless the Florida and Texas oranges can be tinted to what is regarded as a natural orange color.

Everyone knows that Florida and Texas oranges are juicier. Why cannot the industry spend some of the money

it devotes to coloring oranges in order to explain to the public that the uncolored, natural orange is not only just as good in taste and flavor and everything else but contains on its skin no doubtful chemicals?

It seems to me the consumer would prefer the natural orange to an orange treated with even minute quantities of a chemical which can, in sufficient quantities, cause serious harm. Yet as far as I know the citrus growers of Florida and Texas have made no effort at all to popularize the uncolored oranges. Instead, they take the adamant position that they must color oranges with coal tar derivatives because the public insists on it.

What the public does not know may, in this instance, be hurting it.

QUESTIONS RAISED ON CITRUS RED NO. 2

I asked the Secretary of Health, Education, and Welfare for a full report on some questions which had occurred to me about this legislation and I have received an excellent and, I will admit, reassuring reply from the Food and Drug Administration. I am placing that exchange of correspondence in the RECORD at the conclusion of my remarks. But I call attention now to these unpleasant facts, which I do not think appear in the hearings of the committee or in the report on this bill. I quote Mr. John L. Harvey, Deputy Commissioner of the Food and Drug Administration, in reply to my question asking at what point these coloring materials become toxic:

The acute effect in toxic doses of red 32—

Mr. Harvey wrote—

is vomiting and diarrhea. Among the chronic effects are growth retardation and anemia. In the rats studied there was liver damage at autopsy. In the case of citrus red No. 2 excessive dosages produce damage to the circulatory system and cause blood seepage with swelling or edema. There was also harm to the liver in the test animals. The safe level for the citrus red No. 2 in the test animals is 500 parts per million and the amount that would be needed in coloring oranges is from 1 to 1½ parts per million. The toxic level of citrus red No. 2 begins at about 1,000 parts per million. Signs become more marked as the quantity fed is increased significantly above this. In the studies on red 32 which led to its delisting, some effects were noted at levels of 100 parts per million in the test animals. The amount of red 32 used in the coloring of oranges was found to be 3 to 5 parts per million.

In other words, Mr. Speaker, the amounts to be used in coloring oranges are infinitesimal compared to the quantities necessary to cause harm. That is the only basis under which we could possibly permit the use of any of these coal-tar derivatives to be used on the skins of oranges which children like to put in their mouth. But I hate to see even such a tiny amount of a poisonous or harmful substance used in or on food, when it is not necessary.

CONSUMER WANTS FACTS

What is the answer, then, to the problem? The citrus industry affected says it absolutely must have the ability to disguise the natural color of its product. Otherwise, it says, people would not buy it.

On behalf of the housewives of our country, I deny any such broad statement as that. Our housewives are not morons—they must be pretty intelligent individuals to buy and shop and budget and maintain a home and keep a family today under present cruelly high prices. They are as a group intensively interested in everything about their homes—and anxious to know more about nutrition and diet and comparative values. Anyone who thinks differently just has not been in the stores watching women shop. I would not say men are less careful shoppers, but I might point out that the supermarkets love to see the husbands come in to do the shopping—and for the benefit of the husbands, incidentally, the stores have a wide variety of impulse-buying luxury items displayed just at eye height on the shelves where the men find it almost impossible to resist buying.

I do not say this in any battle of the sexes over which group constitutes the best shoppers. But I do want to emphasize that women read up on the food values, watch the prices, and look for nutritional items. They are intelligent shoppers.

WHY NOT EDUCATE CONSUMERS?

Certainly our great food industry—the biggest users of advertising in the whole world—could market uncolored oranges very successfully if they would take the time and effort to help educate the public to the advantages of uncolored oranges.

When the citrus growers were before the Supreme Court last year on this question of coloring oranges with coal tar colors no longer considered harmless, I understand Justice Douglas asked why they did not spend some effort to try to market the uncolored oranges so that it would no longer be economically necessary to tint the oranges. He was told the industry had made such an attempt but it did not work. His comment was a good one. He said something to this effect: that the industry was much more willing to spend time and money to litigate, rather than to educate on this issue. The industry lost the litigation, and now it is in here with a plea for us to legislate it out of a difficult situation. Still, as I see it, there is virtually no inclination on the part of the growers to educate the public—the housewife.

DEPARTMENT OF AGRICULTURE SHOULD HELP

I wonder, Mr. Speaker, why our Department of Agriculture, which spends many millions both in research and in educational work to promote purchase by consumers of good foods in ample supply, cannot devote some of its time and effort to promoting the purchase of uncolored oranges. I for one would support whatever appropriation was necessary to enable the Department to explain to housewives that the coloring material in Florda and Texas oranges is unnecessary and, in fact, may someday turn out to have been more harmful than we thought.

It is worth the effort, I think, to guide the consumer to buy the natural foods in preference to those which contain unnecessary colors or other ingredients which add absolutely nothing to their nutritional value or taste or anything else—but which just make them appear to be perhaps more attractive in the store. If the ingredients used are potentially dangerous, even if not harmful in the amount used, I still think we are better off not using these additives.

Once the consumers learn of the dangers involved, I am sure this problem will solve itself. In the meantime, we should tread slowly in the use of potentially dangerous ingredients.

FACTS ON POSSIBLE DANGERS TO CONSUMERS

Mr. Speaker, I mentioned my exchange of correspondence with the Department of Health, Education, and Welfare on this bill, and some of the facts which were brought out in that exchange.

Of great significance to this discussion, too, is the report made by the same Department nearly a year ago on legislation which was introduced in the 85th Congress to set up the kind of safe-tolerance color standards for all foodstuffs which this bill would permit in the case of oranges. As I said, this bill is the temporary expedient until long-range color legislation can be passed. I think many of the things in the Department's report of last year on the long-range color legislation are important to our discussion here today, and so I am including that report also as part of my remarks.

I submit, therefore, in the following order, as part of my remarks, my letter to Secretary Flemming, the reply from the Department of Health, Education, and Welfare containing the memorandum from Mr. Harvey, of the Food and Drug Administration, and then, third, the report of June 27, 1958, from Assistant Secretary Elliott L. Richardson on the whole question of color legislation. I have quoted in my talk today from portions of that report.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., February 12, 1959.

Dr. ARTHUR S. FLEMMING,
Secretary, Department of Health, Education, and Welfare, Washington, D.C.

DEAR MR. SECRETARY: I have just read the Senate debate of Monday on S. 79, the emergency bill to let the Florida and Texas citrus industry use the coal-tar color formerly known as Food, Drug, and Cosmetic red 32 for another 2 months, until May 1, and then to use thereafter the newly developed citrus red 2 until September 1961 for coloring oranges, despite the fact that neither color is harmless under the Food, Drug, and Cosmetic Act.

The fact that the Senate action, both in committee and on the floor, was unanimous, and the further fact that you indicated your Department's approval of the bill as amended along lines you suggested, indicate it will probably be coming before us in the House very shortly, accompanied by a demand for speedy action. I would therefore appreciate your comments on some thoughts which occur to me about this measure.

I read your report on the bill with mixed feelings. The changes you suggested in the legislation were certainly improvements, but I wonder if the emergency is really so serious to the industry as your report seems to indicate. Several stores, I notice, have anticipated the deadline of February 28 for the use of the old red 32 on oranges by putting up signs saying they will handle only uncolored oranges until a safe color is developed. Has anyone made any study to

show whether consumers actually refuse to buy uncolored oranges if they are aware of the facts about the coloring material used? Is the industry or the Department of Agriculture making any effort to promote the sale of uncolored oranges in view of the toxicity of any coloring which would be used to camouflage the true color?

While I know that you did not write the Senate committees' report on the bill, undoubtedly the facts therein were based to a large extent on your report and the testimony of your experts. Therefore, I wonder if you could explain the contradiction between the statement in your report, on the one hand, that the Florida and Texas citrus growers face an emergency because of consumer resistance to uncolored oranges, making artificial coloring an economic necessity, and the statement in the committee report on the other hand that the coloring of oranges will not raise their price "inasmuch as the competition between colored and uncolored oranges would have the effect of precluding passing on the cost of coloring to the consumer"?

More important than these questions involving the degree of economic necessity behind this legislation are several others which keep occurring to me: if the old red 32 and the new red 2 are not toxic in the manner in which they are used in coloring oranges, why would the coloring matter not be permitted on oranges which are intended for processing? What percentages of these colors would be toxic, and what percentages are now in use or to be permitted under this legislation? What are the reactions to toxic quantities of either color? Will a child sucking an orange through a hole in the skin—and nearly every child loves to do that—be in danger of ingesting any harmful quantity of this coloring matter?

I would very much appreciate the considered judgment of your experts on these questions. If there is absolutely no danger whatsoever to anyone as a result of the use of these coal-tar colors on oranges, that is one thing; but if there is even a remote but possible danger of harm, then I don't think we should rush into bad legislation under the spur of an imagined economic crisis.

With best wishes, I am,

Sincerely yours,

LEONOR K. (MRS. JOHN B.) SULLIVAN,
Member of Congress, Third District of Missouri.

THE SECRETARY OF HEALTH,
EDUCATION, AND WELFARE,
Washington, February 23, 1959.

Hon. LEONOR K. SULLIVAN,
House of Representatives,
Washington, D.C.

DEAR MRS. SULLIVAN: Replying to your letter of February 12 regarding the newly developed color citrus red No. 2, enclosed herewith is a memorandum which was furnished me by the Food and Drug Administration.

I hope that this covers the questions which you have; and if we can be of further service, please let us know.

Sincerely yours,

ARTHUR S. FLEMMING,
Secretary.

FOOD AND DRUG ADMINISTRATION,
February 21, 1959.

Hon. ARTHUR S. FLEMMING,
Secretary, Department of Health, Education, and Welfare.

JOHN L. HARVEY,
Deputy Commissioner,
Food and Drug Administration.

USE OF CITRUS RED 2 FOR COLORING ORANGES

Very complete toxicity studies were conducted by a manufacturer of citrus red 2 and reported to us for study some months ago. These studies show that while the color can produce harm when fed to test animals in sufficient dosage, the feeding level at which harm is produced is so much greater than the level of use required for coloring oranges that the dye can be employed commercially without any hazard to the consumer. Thus, we are assured that the coloring with citrus red 2, which we would sanction if the proposed legislation were enacted, would not even harm the child who sucks an orange through a hole in the skin.

It has been our policy in administering the pesticide chemicals amendment and will be our policy in administering the food additives amendment to the Food, Drug, and Cosmetic Act not to allow more chemical in food than is reasonably required to accomplish the intended purpose, even though a higher concentration would appear to be safe, based on animal toxicity studies. We believe the same policy should apply with respect to the color for use on oranges. Oranges intended for processing do not need to be colored.

The statement in the Senate committee report that the coloring of oranges will not raise their price, "inasmuch as competition between colored and uncolored oranges would have the effect of precluding passing on the cost of coloring to the consumer," was not based on our testimony. However, we understand that it is based on the fact that California oranges and at least some of the oranges grown in other parts of the country do not acquire a greenish tint after ripening and are not artificially colored. The oranges that may acquire a green tint after ripening and are artificially colored would have to meet the competition from the uncolored oranges.

We do not know of studies conducted to show whether consumers refuse to buy uncolored oranges if they have a choice of uncolored and colored variety. We have been assured, however, by people who are well acquainted with conditions in the citrus-growing regions that consumers do not care to have oranges with green streaks or a slightly green cast at one end if they are able to buy fruit which is uniformly orange in color.

The acute effect in toxic doses of red 32 is vomiting and diarrhea. Among the chronic effects are growth retardation and anemia. In the rats studied there was liver damage at autopsy. In the case of citrus red No. 2, excessive dosages produce damage to the circulatory system and cause blood seepage with swelling or edema. There was also harm to the liver in the test animals. The safe level for the citrus red No. 2 in the test animals is 500 parts per million, and the amount that would be needed in coloring oranges is from 1 to 1½ parts per million. The toxic level of citrus red No. 2 begins at about 1,000 parts per million. Signs become more marked as the quantity fed is increased significantly above this. In the studies on red 32 which lead to its delisting, some effects were noted at levels of 100 parts per million in the test animals. The amount of red 32 used in the coloring of oranges was found to be 3 to 5 parts per million.

DEPARTMENT OF HEALTH,
Education, and Welfare.
Washington, D.C., June 27, 1958.

Hon. OREN HARRIS,
Chairman, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This letter is in response to your request for a report on H.R. 8945, a bill to protect the public health by amending the Federal Food, Drug, and Cosmetic Act to prohibit the use in food, drugs, and cosmetics of color additives which have not been determined suitable and harmless for such use.

The bill would, through substantial changes in the Federal Food, Drug, and Cosmetic Act, broaden and make flexible the Secretary's authority relating to the regulation and certification of colors for safe use in or on foods, drugs, and cosmetics.

I. COMPANION OF EXISTING LAW AND THE BILL

1. Scope of coverage: The provisions of existing law relating to the listing and certification of colors are limited to so-called coal-tar colors. The term "coal-tar color," however, has been interpreted to apply, generally, not only to dyes which are coal-tar derivatives, but also to synthetic dyes so related in their chemical structure to a coal-tar constituent as to be capable of derivation therefrom even when not actually so derived. The present bill would embrace all color additives, whether or not synthesized and whether or not capable of derivation from a coal-tar constituent.

2. Restrictions as to use of toxic colors—exemptions from certification requirement: The present law, more fully explained below, simply requires the Secretary to promulgate regulations providing for "the listing" of coal-tar colors harmless and suitable for use in food, or in drugs or cosmetics, and providing for the certification of batches of such colors, with or without harmless diluents (secs. 406(b), 504, 604). A food, drug, or cosmetic (other than a hair dye) is deemed to be adulterated if it bears or contains a coal-tar color other than one from such a certified batch (secs. 402(c), 501(4), 601(e)).

The bill (1) would require separate listing of color additives which are suitable for use in food, drugs, and cosmetics, and which are harmless under the conditions of use specified in such listing; (2) would expressly authorize the Secretary to establish maximum tolerance for the use of any listed color additive in or on different foods, drugs, or cosmetics; and (3) would require not only that the regulations provide for the certification of listed color additives, with or without diluents [but also] for the exemption from certification of color additives the certification of which is not necessary to protect the public health. The above-mentioned provisions of the present act relating to adulteration would be changed to correspond with these changes.

As we interpret the bill, the Secretary would, among other things, not only be authorized to establish tolerances for toxic color additives and to limit the manner of their use—e.g., to external use—in or on different foods (or drugs or cosmetics), but could permit the use of a color for one food, drug, or cosmetic and exclude it altogether from others. Thus, on the basis of the data before him, the Secretary might decide to list a color additive as harmless for use on the skin of mature oranges—subject to a tolerance if he thinks it necessary—and bar it for any other use.

The bill would not affect the temporary proviso to section 402(c), enacted by Public Law 672, 84th Congress, with respect to the coloring of oranges. It also would leave intact the present provisions of the act which establish the procedures (including hearing and judicial review) for the issuance, amendment, or repeal of regulations on colors, and would, as at present, provide for fees to maintain the listing and certification service (secs. 701(e)–(g); 706).

Under present law, as we read it, we do not have the kind of latitude afforded by this bill. We can, in our view, list a color as harmless for use in food, in drugs, or in cosmetics only where there is no possibility of adverse physiological effect on the consumer from its use, regardless of the concentration or manner, or the number of commodities, or (except as noted below) the kinds of commodities, in which the food, drug, or cosmetic manufacturer might choose to employ the color. Thus, if laboratory tests show a color to have any toxic effect

when ingested, we cannot list it as harmless for any use in which there is a possibility that some amount of the color, however minute, might be ingested by the consumer or come into contact with mucous membrane, though we can and do list such a color for a use (particularly in drugs or cosmetics intended only for external application to the body) which involves no possibility of its ingestion and where the color, regardless of amount or concentration used, is harmless for such noninternal use.

Our interpretation, recently challenged in the courts, is now in litigation. In one case, our action in "delisting" three coal-tar colors was sustained by the Court of Appeals for the Second Circuit on the basis of a record which demonstrated the toxicity of these colors. The court—without deciding whether we had basic authority to fix safe tolerances for toxic coal-tar colors—held that we could not be required to do so because (a) on the record, there was no showing of what (if any) level of use of the delisted colors would be harmless, (b) the Secretary should in no event be required by a court to permit the use of toxic colors "without the clearest and most uncompromising evidence that usage at certain levels was absolutely safe" in the light of the consumer's total diet, and (c) the court could see no possibility of limiting the consumer's actual intake of such colors (if permitted) to the consumption level estimated in setting a tolerance (*Certified Color Industry Committee* v. *Secretary of Health, Education, and Welfare*, 256 F. 2d 866 (1956)).

In another case, however—which involved the same "delisting" action and hearing record, though the petitioners were concerned only with the use of one of the delisted dyes in coloring oranges—the Court of Appeals for the Fifth Circuit decided that we had authority, in the listing and certification of colors, to differentiate between one food and another and one food use and another, and that in the case of food we were required to determine and establish safe tolerances for a particular food use—in this case, coloring of the skins of oranges—where the marketability of the food would otherwise be seriously prejudiced and an important segment of the industry depended upon the marketing of the colored commodity. The holding as to our tolerance authority and duty was bottomed on the view that in such a case the addition of color was "required in the production" of the food within the meaning of section 406(a) of the act, which provides that a poisonous or deleterious food additive shall be deemed to be unsafe unless "required in the production" of the food or unavoidable by good manufacturing practice and that, if it is so required or unavoidable, the Secretary shall establish safe tolerances therefor (*Florida Citrus Exchange* v. *Folsom*, 246 F. 2d 850 (1957)). This case is now pending for review in the Supreme Court.

3. Effective date and grandfather clause: The bill would become effective 6 months after the date of enactment. However, any color additive in use immediately prior to the date of enactment "in accordance with a sanction or approval previously granted" would be deemed to have been listed as suitable for use at the levels of use prevailing when the bill was enacted unless and until such presumed listing is "modified" by the Secretary.

II. COMMENT

We believe that, while the bill should be modified in certain substantive and technical respects, the concepts of the permanent provisions of the bill (as distinguished from the grandfather clause) are basically sound in view of (a) the inflexibility of the present law; (b) the resulting threat to the continued availability of color additives suitable for use in (or on) foods, drugs, and cosmetics in which they have long been used; (c) the fact that scientific procedures are available for determining whether such color additives may be safely used and, if so, in which commodities and under what conditions (including tolerance limitations); and (d) the anomaly of the present law in establishing different ground rules as between so-called coal-tar colors and other additives. It seems desirable to set forth the reasons for these conclusions.

1. The problem: The use of synthetic or other substances in food, drugs, and cosmetics for the purpose of imparting an attractive or distinguishing color to the commodity or, in the case of certain cosmetics, for the purpose of enhancing the appearance of the human body through added color, has long been established and is growing. It is widely accepted, and in many cases consciously demanded, by the consuming public. In the case of food, for example, synthetic color subject to listing and certification under the act is used in (or on) a wide range of commodities, including butter, margarine, oranges, sausage casings, cakes, cookies, pies, bread, processed cheese, spreads, canned and frozen vegetables, confectionery, ice cream, gelatin desserts, puddings, soft drinks, condiments, soups, pickles, prepared dishes, etc. Many housewives also purchase certified color directly and use it in their kitchen in making cakes, icings, desserts, and milk drinks, canning fruit, etc. And before the special tax on colored margarine was repealed, housewives often purchased the color separately and went to the trouble of mixing it with uncolored margarine. The Food and Drug Administration, in the fiscal year 1957, certified 1,581,000 pounds of primary colors listed as suitable and harmless for use in food, a quantity sufficient to color over 1 billion pounds of food. Color has come to be an economic necessity in the marketing of a variety of foods and other commodities covered by the act.

This development has, for more than half a century—i.e., since the enactment of the Pure Food and Drugs Act of 1906—taken place in the shelter of a national policy of allowing the use of synthetic colors, subject only to safeguards considered necessary to protect the public health and prevent deception of consumers. The provisions of the present act (enacted in 1938), prohibiting the use of so-called coal-tar colors other than harmless certified colors, were designed to give legislative sanction to, and to extend to drugs and cosmetics, a longstanding administrative practice in certifying "harmless" colors for food. While the congressional committees recognized that most so-called coal-tar colors were toxic—which was the reason for singling them out for special control—it was thought—and this is the central premise of these provisions—that an adequate supply of harmless ones, i.e., those demonstrated to be without adverse physiological action, had been developed under this administrative practice and, presumably, would continue to be developed as needed; hence, the stringency of the law as we read it (S. Rept. No. 361, 74th Cong. See also H. Rept. No. 2139, 75th Cong.). However, present-day scientific methods are providing this premise to have been largely illusory.

Within the past few years, new scientific testing methods have shown that some of the coal-tar colors which were permitted in food because earlier testing showed that they were harmless, are capable of causing harm when ingested. Three of these, as above mentioned, have therefore been removed from the list of permitted food colors and have been transferred to the list restricted to use in externally applied drugs and cosmetics, and proceedings have been commenced to remove four more, including a yellow color commonly used in margarine. These tests, conducted with a view to determining whether the colors are themselves harmless, were not aimed at determining, and hence were not adequate to show, whether we could establish for such colors safe levels of use in or on particular foods, drugs, or cosmetics, and, if so, whether their actual use exceeded those levels. As these modern tests are applied to other colors, it is not unlikely that more and more of them will be found to be toxic and thus will have to be removed from the list.

The process could eventually pose a serious threat to established coloring practices in the food, drug, and cosmetic fields. The threat is already present in the case of food colors. There were only 19 primary coal-tar colors listed for food use when the delisting process began. These have now been reduced to 16 (subject to the use on oranges permitted under court order and under temporary legislation) and would be reduced to 12 if the present proceedings on 4 other colors should end in delisting. While acceptable substitute mixtures of still listed primary colors have been developed for most (not all) food uses in which the three delisted colors were employed, substitution will obviously become more and more difficult as additional primary colors are taken off the list. Nor has it been found technically feasible, in most of these cases, to develop satisfactory non-coal-tar color substitutes.

In this situation, a legislative reexamination of the entire subject of color additives for use in the food, drug, and cosmetic supply of the country is indicated, and we should, in our view, be given new and clear statutory directives as to national policy in this field and as to our duty in carrying out that policy.

The process of judicial interpretation, even if it were finally to establish that we can or must fix tolerances for toxic colors, is not likely to lend itself in this instance to the establishment of the kind of rational scheme—with appropriate controls and with criteria for allocating the aggregate tolerance for a color among different commodities where necessary—which, we believe, would be necessary if coal-tar colors or other color additives were to be admitted to the food, drug, and cosmetic supply under tolerances established by this Department. In this connection, it should also be noted that the decision of the Court of Appeals for the Fifth Circuit in the orange color case is based on a provision of the act relating to food additives (sec. 406(a)) which has no counterpart in the drug and cosmetic provisions of the act. Moreover, legislation can also relieve, through suitable transitional provisions, the special consumer protection problem caused by the fact at the present rate of testing in the Food and Drug Administration's laboratories it would take many years to complete the task of reexamining the toxicity of all coal-tar colors now on the list. (See the discussion, below, of the grandfather clause of the bill.)

2. Basic approach of bill: The question, then, as we see it, is not so much whether the law should be changed, but, rather, what changes should be made so as, on the one hand, to avoid upsetting needlessly the established coloring practices and, on the other hand, to protect fully the public health and the consumer's interest in honesty and fair dealing.

(a) Scope of coverage: We do not believe that the present distinction between coal tar colors, so-called, and other color additives, whether synthetic or extracted from natural sources, is sound. The assumption that a color additive is necessarily safe when extracted from a plant, or when synthesized with a chemical structure which will not bring it under the term "coal-tar color," whereas a so-called coal tar color is safe only when subjected to special restrictions, is not scientifically tenable. We, therefore, believe that the same ground rules should apply to non-coal-tar color additives for food,

drugs, and cosmetics as are applied to coal-tar colors. In this respect the bill is therefore soundly conceived. (Pending enactment of color-additive legislation, food additives which are non-coal-tar colors should, of course, continue to be included in the proposed food additive legislation. See H.R. 6747.)

(b) Tolerances and other specifications of conditions of use of colors: There are few substances which are wholly inert and without any physiological effect, beneficial or harmful, when ingested by man or animal even in normal quantity. To the toxicologist, moreover, harmlessness in the abstract is an unrealistic concept, for it is one of the cardinal principles of toxicology that every substance has a toxic dose, though that dose may in actual practice never be reached. This, of course, does not mean that public health protection requires a tolerance limitation for every substance added to food. And it may well be true that certain color additives have such properties, or are suitable and intended for use in such limited circumstances, that it would be entirely safe to list them for use without quantitative restraint, at least for given uses, without establishment of a tolerance. In such cases we should be authorized to admit such colors for use without being required to establish a tolerance, though we would wish to be able to prescribe other conditions of use.

We are satisfied, however, that many color additives, though useful and presumably capable of safe use at given levels, are sufficiently toxic to give no assurance of safety in actual use in the absence of a governing tolerances limitation, since in the case of such colors individual food processors might otherwise, out of ignorance or carelessness, exceed the safe limit. This is true of all the colors we have delisted, or have so far proposed to delist, for food use. And the more toxic the color, the more this is true. As already indicated, we are likewise satisfied that, unless such colors are admitted under safe tolerances, the adequacy of the supply for continuation of established coloring practices will be in jeopardy. In this setting, a committee of recognized scientists, appointed by the National Academy of Sciences to review the coal tar color research program of the Food and Drug Administration, said in 1956: "This committee feels compelled to indicate that certification of a compound as 'harmless and suitable for use' in food, drug, and cosmetics, as required under present law, is unrealistic, unless the level of use is specified." It is not unreasonable to suppose that if Congress, when enacting the present act, had been aware that it was acting on a false premise in assuming that the color sections of the act were sufficient to assure an adequate supply of safe color, it would have permitted the establishment of tolerances under proper safeguards.

We are, therefore, in accord with the proposal that we be permitted to admit colors for use under appropriate tolerance and other prescribed conditions of use in specified foods, drugs, and cosmetics. In this connection, it will be recalled that, in our proposal on protesting of food additives (H.R. 6747), we conceded the desirability of permitting per se toxic additives in the food supply under safe tolerances if they have functional value, instead of limiting such additives to situations where they are required in production or are unavoidable by good manufacturing practice. In using the term "functional value," we did not intend to exclude nondeceptive additives designed for eye appeal, any more than additives intended for gustatory appeal.

(c) Certification of colors—Exemptions: While providing for certification of batches of color, as in the case of existing law, the bill would permit us to grant exemptions where certification is not necessary to protect the public health. The present requirement of certification for coal-tar colors is intended to assure food processors and housewives that the color is free from toxic impurities and otherwise complies with regulations defining the color's identity. We believe that power to exempt colors from the certification requirement is desirable, especially if the coverage of the law is broadened to include all types of color additives.

III. PRINCIPAL RECOMMENDATIONS FOR IMPROVEMENT OF BILL

While, as above shown, we agree in principle with the concepts embodied in the permanent provisions of the bill, we believe that the bill is in need of material revision in a number of respects.

1. Grandfather clause: (a) Listed colors: This provision of the bill (sec. 11(b)), while not altogether clear, would apparently have the effect of exempting from the bill preexisting uses and levels of use of coal-tar colors which are on the approved list at the time of enactment of the bill, until the Department has been able to do the necessary scientific work to establish tolerances and properly list them. The Food and Drug Administration estimates that completion of its present retesting work on all listed coal-tar colors at the current rate of testing in its laboratories would take about 25 years, even though these tests are not conducted with a view to the establishment of tolerances. Evaluation of the listed food colors alone, on which considerable work has already been done and which are relatively few in number, is expected to take at least 7 to 8 years at the current rate. Tests adequate for determining the precise toxicity of all these colors with a view to the establishment of tolerances would, of course, take as long or longer.

We, therefore, believe that in its present form this provision is not compatible with adequate protection of the public health. Industry, we believe, should at least share the task of retesting, thereby greatly accelerating its completion. We would therefore recommend that the bill be modified so as to require all the colors now on the permitted list to be reexamined and, unless existing data establish their toxicity in a reliable way, retested within a reasonable period of time by industry to establish satisfactory proof of the precise toxic potential of each color, so that the levels at which the colors may safely be used in food, drugs, or cosmetics can be set. Our food additives bill (H.R. 6747) could furnish a guide for what is a reasonable period.

Moreover, in view of the many uses for which listed colors are now employed, the probable toxicity of many of them, and the long time required for adequate retesting by the Food and Drug Administration at its present rate, enactment of the grandfather clause in its present form would, for many years to come, so devitalize the health protective aspects of the permanent provisions of the bill as to cast serious doubt on the acceptability of the bill as a whole, even if the bill were otherwise modified in accordance with our recommendations. Our suggestion for modification of the grandfather clause should, therefore, be considered as integrally and inseparably related to our position on the bill as a whole.

(b) Other color additives already in use: With respect to color additives which are not coal-tar colors, and which were in commercial use prior to January 1, 1958, we likewise suggest that a reasonable period be allowed for compliance with the bill. Such period, we believe, should follow the one contained in the grandfather clause of H.R. 6747, less any part of the period already elapsed under H.R. 6747 in the event of its prior enactment.

2. Related substances: The bill should be clarified by granting the Department specific authority in listing and setting a tolerance for a color to consider the additive effect of chemically or pharmacologically related substances in the diet.

3. Antideception provision: Added color, especially in the case of food, often lends itself to deception. The bill should expressly forbid the listing of a color for a use which will promote deception of the consumer or violate any provision of the basic act. In the case of new uses, the burden should be on the applicant for listing to satisfy the Secretary that it will not promote deception.

4. Barring violative colors from commerce—Verification of distribution: In order to facilitate enforcement, we believe that the bill should be amended so as to make contraband any color additive which is marketed in interstate commerce for use in food or drugs, or for use in or as a cosmetic, if such color additive is not listed or certified (when required) for such use, or if, in the case of a listed color additive, such additive or its packaging or labeling is not in conformity with requirements of the applicable regulation. It seems desirable to authorize the Secretary expressly to establish such packaging and labeling requirements instead of leaving this to implication. Also, we believe that the requirement, now contained in regulations, that color manufacturers maintain and afford access to records of disposal of listed colors should be expressly provided for by the bill.

5. Allocation of aggregate tolerance to one or more commodities: The bill, as we interpret it, authorizes the Secretary to decide which foods, drugs, or cosmetics may bear a color and in what amounts. A situation may arise whereby the entire safe tolerance of a particular color is used in one type of food. This would exclude its use on all other types of food until the former use has been delisted. Conceivably this could cause considerable difficulty. In the case of drugs and cosmetics, the bill lays down no criteria to guide the Secretary on how to allocate the supply of a color as between one commodity and others for which it is suitable and desired. Even in the case of food, the bill is not clear. It states that the Secretary may provide for different tolerances for the same color additive in or on different foods, "depending upon the relative importance of each color additive to the several foods in which it is used and the relative significance of those several foods in the human diet." We hope that the hearings will elucidate the intent of this phrase and, perhaps, develop specifications which will be less difficult to apply. Moreover, we hope that, at least in general, the allocation of a limited tolerance as between two or more color uses originating after enactment of the bill, or as between a use antedating the bill and a subsequently proposed use, can be based on a first-come, first-served basis.

6. Other improvements: In order to expedite this report, we are not commenting at this time upon a number of other revisions, of a subordinate or purely technical character, which we believe to be desirable. Such comment will be submitted at a later stage if desired.

IV. COST

Enactment of the bill would require a material expansion of enforcement and educational activity on colors to afford consumer protection equivalent to that available today. While the cost of the listing and certification service would be defrayed out of fees (sec. 10 of the bill) as at present, the cost of enforcement and education activities would necessarily have to come from appropriations out of general revenues. This additional cost is estimated, for the first year, to be about $825,000.

Under the present certification system, the food and drug inspector need only determine that the colors being used in a food plant are certified, in order to assure himself that the law is being complied with. If

known poisonous colors are used with tolerance limitations, he will have to determine not only whether the color is certified, but also the level at which it is employed, a determination which will have to be checked by periodic laboratory examination of samples of foods, drugs, and cosmetics. According to our best estimates, a minimum control at the Federal level under the tolerance-setting procedure would require approximately 75 additional employees (50 inspectors and 25 analysts).

V. CONCLUSION

To summarize: While we cannot support the bill, and especially the grandfather clause, in its present form, we favor the basic principles of the bill and would favor its enactment if modified along the above-suggested lines. We should be glad to submit such technical and other assistance to that end as the committee may desire.

The Bureau of the Budget, while perceiving no objection to the submission of this report, advises that, in the event of enactment of the bill, the level of appropriations to be requested in the President's budget would be determined in the light of broad budgetary and program considerations then prevailing.

Sincerely yours,

ELLIOTT L. RICHARDSON,
Assistant Secretary.

Mr. KING of Utah. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, I raise my voice at this time in unalterable and violent objection to the passage of this bill. I feel that it is one more example of the authorization of corruptive additives to our food, which has become the fad, today, but which I believe is dangerous in the extreme. I believe that if the members of the American public who will be buying these oranges were informed of the fact that these oranges have been artificially colored with coal tar products they would unite en masse here to object to the passage of this bill.

I realize, Mr. Speaker, that this bill calls only for the coating of the outer peel of the orange, and I suppose it will be argued that these materials do not reach the inner orange, and that they are not consumed. That, however, is not true. There are many people today who feel, and I think with reason, and I believe supported by scientific evidence, that the peel of the orange is also a source of great nourishment, and particularly of vitamins. I know of several nutrition textbooks myself which advocate the use of orange peels, grated and simmered over a fire, the liquor or the juice to be poured off and consumed as an aid in the cure of many diseases.

There are many people who consume the orange peels in that manner. Children, of course, suck on oranges. Millions of people make or consume marmalade made with orange peels. So coal tar products are taken into the system. Notwithstanding the fact that it has been reported that there is no evidence that this particular coal tar formula is damaging to the system, the fact still remains that no one on this earth can state absolutely and authoritatively that coal tar products will not cause damage to the human system. We are traveling here in the realm of the unknown. This is a dangerous thing. Now, at a day when we are witnessing 35,000 deaths every year from lung cancer alone, and alarming death rates from cancer in other parts of the body, it would seem to me the better part of wisdom that we eliminate all artificial and synthetic additives until more evidence is available. For that reason, I earnestly urge the Members of this House to reject this bill.

Mr. HALEY. Mr. Speaker, will the gentleman yield?

Mr. KING of Utah. I yield to the gentleman from Florida.

Mr. HALEY. The gentleman said just a moment ago that if people knew these oranges were colored they would not buy them. Every orange is plainly stamped "color added."

Mr. WOLF. Mr. Speaker, will the gentleman yield?

Mr. KING of Utah. I yield to the gentleman from Iowa.

Mr. WOLF. I should like to associate myself with the gentleman's remarks and thank him, and congratulate him on his statement.

Mr. HARRIS. Mr. Speaker, I move to strike out the last word, in order that the RECORD may be perfectly clear that the Food and Drug Administration has thoroughly tested this formula and that it is thoroughly safe.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. HARRIS. I yield.

Mr. PUCINSKI. I understood earlier from the remarks of the Pure Food and Drug Administration that they had approved an earlier dye only to reverse itself a couple of years later; is that correct?

Mr. HARRIS. No; that is not my understanding that they had approved it. They had investigated it over a period of time and while they did not hold that that particular formula was unsafe, they held that it was harmless when used to color the outside of oranges. They held that the new color is safer and, therefore, recommend it.

Mr. PUCINSKI. But is there any assurance then that they may not reverse themselves on this again?

Mr. HARRIS. They are coming up with general legislation on color additives which they say in this letter they are going to recommend to the Congress.

Mr. DELANEY. Mr. Speaker, will the gentleman yield in order to clarify one point?

Mr. HARRIS. I yield.

Mr. DELANEY. Under the 1938 Food and Drug Act, no minimum tolerance was created for coal tar dyes. There was an absolute prohibition and zero tolerance is in order. However, the Food and Drug Administration did establish a tolerance which was appealed to the United States Supreme Court and the decision came down last December sustaining the contention that no minimum tolerance would be permitted.

Mr. HARRIS. I appreciate the gentleman's statement clarifying that point.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. HARRIS. I yield.

Mr. VANIK. Mr. Speaker, I want to take this opportunity to express my opposition to this legislation to permit the temporary certification of citrus red No. 2 for coloring oranges. The purpose of this legislation is to make the fruit more attractive and salable by the use of artificial coloring.

Although the proposed coloring is alleged to be less harmful than a previously authorized coloring, it obviously does not meet the requirements of the Food and Drug Act. This legislation very cleverly shifts to the Congress of the United States any responsibility for error in judgment. It also has the effect of relieving the industry from any legal responsibilities if the coloring substance should subsequently prove to be harmful. The acceptance of this legislation will delay the development of coloring substances which can meet the requirements of the Food and Drug Act.

I believe the American people are capable of learning the use of uncolored oranges—particularly if they are made available at an attractive price. The industry can pass on to the consumer the savings in color and the high cost of color application. The vitamin-starved population should have an opportunity to purchase uncolored, lower-priced fruit.

An orange by any other color would be just as sweet—just as nourishing, and just as marketable.

At the present time and under existing official and unofficial controls, the citrus industry is doing very well. The price of citrus concentrates has continued at high levels invoked by artificial controls in marketing and processing. This artificial manipulation of concentrate pricing is every bit as wrong and as harmful as artificial coloring.

I hope this legislation is defeated.

Mr. WIER. Mr. Speaker, I will refrain, of course, from pursuing a policy of asking for a rollcall. I know that many have left and I do not want to leave anybody minus their right. I do hope at least, since I am going to oppose this bill, I want the RECORD to show my opposition to it and I do hope that a sufficient number here at least will answer and vote "Yes" or "No."

Mr. ROGERS of Florida. Mr. Speaker, I am in favor of this legislation which has been sponsored by my colleague, Hon. JAMES HALEY, of Florida.

F.D. & C. red No. 32, which is being continued under this bill for a period of 60 days until a new color can be certified, has been in use since before the passage of the Food and Drug Act in 1938. After complete hearings it was certified as harmless and suitable for use in foods in 1939 and more than 300 million boxes of color-added fruit have been shipped from Florida and large numbers from Texas without any complaint or claim of harm. A high percentage of the oranges shipped from both of these States is colored with this color. In one or more years in Texas 100 percent of fruit was so colored.

The new color leaves less residue and has a high level of use and is estimated to have 50 times the safety factor of the other color. This bill is intended to be only temporary legislation pending the adoption of the general color legislation

and the Department of Health, Education, and Welfare approved substantially the same feature in the general legislation in its approval of the Curtis bill. The Department favors this bill. As a matter of fact, this bill was carefully worked out by the Department and the industry so as not to disrupt the industry and at the same time protect the public safety.

No one claims that the present color is harmful as used in the coloring of oranges. The claim is that at high levels it would be harmful in other foods.

On February 28, 1955, the Commissioner of Food and Drugs wrote letters to Senator HOLLAND, Senator SMATHERS, and Representative HALEY in which he stated:

> There is, however, no evidence that, in the amounts used, and in the manner of use, in the coloring of citrus fruit, the product so colored is not safe for human consumption.

These letters were under the seal of the Department. I enclose for your information a copy of the letter to Congressman HALEY.

The Secretary of Health, Education, and Welfare in his report on H.R. 7732, 84th Congress, 1st session, stated that "the evidence so far available does not establish a likelihood of injury to man," and so forth.

Dr. Larrick, the Commissioner of the Food and Drug Administration, testified to substantially the same thing. No one actually claims that it is harmful as used in the coloring of oranges. The circuit court of appeals and even the Supreme Court of the United States so pointed out. The Supreme Court in the case of Flemming against Florida Citrus Exchange, and others, handed down on December 15, 1958, pointed out that the record does not show that it is harmful as used in the coloring of oranges and "it is conceded by the Secretary that there is no evidence that the level of ingestion of red No. 32 involved in human consumption of color-added oranges is harmful."

Nearly a quarter of a million dollars has been spent in developing a new color as contemplated by the special act of 1956 and this bill would allow the Secretary to certify such color with proper tolerances.

The color is on the outside and is an oil soluble color which does not even penetrate the white or rag of the orange. The tests show that with red No. 32 a person would have to drink 5,000 gallons of juice per day or eat at least 250 oranges, peeling and all, per day to show harm. Of course, the ordinary food products at such levels would be harmful. I have furnished Congressman HALEY with a detailed analysis made by Dr. Gerwe if this should be needed.

WHY THE NEED FOR COLOR?

The orange is one of the very few fruits which has blossoms, small fruit and fully mature fruit on the tree at the same time. In the fall until the cool days come a fully ripe and mature fruit may be green on the outside; when cool weather comes the late variety of orange may have a rich color on the outside and not be fully mature inside. Later in the spring when the chlorophyll—green color—rises in the tree it goes into the leaves and new fruit and likewise goes into the mature and ripe fruit "regreening it," causing it to be green on the outside although it is fully mature and by reason of this it is impossible to sell unless it is colored.

The Department of Agriculture, even when the Food and Drug Administration was within its department, recognized and encouraged the coloring and the Congress has recognized that it is an economic necessity and the Court of Appeals of the Fifth Circuit likewise recognized it. For your convenience I attach excerpts of certain departmental publications.

The necessity is borne out by the fact that for the seasons of 1945–46 through 1956–57, 68.2 percent of all oranges shipped out of the State of Florida used this color and the color-added range varied from season to season and ran from a low of 60 percent to a high of 76.3 percent and in Texas in some years 100 percent.

THE USE OF THIS COLOR DOES NOT RESULT IN DECEIT

Under the laws of Florida fruit cannot be colored for the purpose of concealing defects. This is also true of the Federal statutes. The fruit to be colored must have a higher standard than is required for fruit generally. No immature fruit can be colored. The amount of color added is limited. The law prohibits the use of color beyond the natural varietal color of the fruit.

The words "color added" are stamped upon each and every orange so colored.

Right now is the beginning of the regreening season and Valencia oranges, the late variety, which were a beautiful color a few days ago are beginning to regreen. The passage of this legislation is urgent. Failure to pass it will result in reducing employment and creating a chaotic market condition. The passage will allow the Congress to consider permanent legislation and allow the use of the color, which has been in use for more than 30 years and which is harmless as used, for 60 more days during the transition period and then allow the use of a new color with 50 times the "no effect" level of the old color for the period set forth herein.

Not all Florida oranges are colored. Those colored are so marked.

Mr. HALEY. Mr. Speaker, S. 79 would permit the listing and certification of a new color, citrus red No. 2, for the coloring of mature oranges under tolerances found safe by the Secretary of Health, Education, and Welfare. Thus, the bill would permit the continuation of an established coloring practice which began in the mid-thirties with the use of citrus red No. 32.

On November 10, 1955, the Secretary of Health, Education, and Welfare ordered citrus red No. 32 removed from the certified list, based on tests in 1951 to 1953 which cast doubt on the harmlessness of the color. The tests indicated that when red No. 32 was fed to test animals in substantial amounts, there was evidence of toxicity. The Secretary, therefore, held he had no authority, under present law, to list and certify red No. 32 because it was not found to be completely harmless. The Department construed the term "harmless" to mean without toxicity, and took the position that so long as there was any evidence of toxicity, regardless of the minute amount of the color used, the Secretary had no authority to certify that color for use. The Secretary's order was upheld by the U.S. Supreme Court on December 15, 1958.

The delisting of red No. 32 created an emergency for the citrus industry in Florida and Texas. Consequently, in 1956, the 84th Congress enacted Public Law 672 to permit the industry to continue for a maximum of 3 years—until March 1, 1959—the use of red No. 32 for coloring oranges. The enactment of this law, Public Law 672, was considered appropriate and necessary since the coloring of oranges was determined to be an economic necessity, and since there was no likelihood of injury to man from the use of red No. 32 on the exterior of oranges at the levels of use involved. Further, there was no evidence that injury to consumers had resulted from the consumption of oranges colored with red No. 32. I might add that citrus red No. 32 has been used for more than 20 years. More than 300 million boxes of color-added fruit have been shipped from Florida and a large amount from Texas without any complaint or claim of harm.

At the time of enactment of Public Law 672, it was understood the industry would conduct necessary scientific study toward the development of a harmless substitute for red No. 32. Pursuant to that understanding, the industry has developed citrus red No. 2 at a cost of approximately $200,000. The level of toxicity of the new color is one-fifth that of red No. 32, by the most conservative reports. In addition, the new color has greater tinctorial power than red No. 32. As a matter of fact, only one-fifth as much red No. 2 is required to color oranges as is necessary with red No. 32. Thus, it is easily seen that the new color has at least 25 times the safety factor of the other color. Even so, under present law, the Secretary of Health, Education, and Welfare is not authorized to list and certify red No. 2. Hence, the need for this legislation.

With respect to the new color, I am pleased to point out that in his report on this bill, the Secretary reported that, if authorized, the Department would be able to establish a safe tolerance for the use of citrus red No. 2. The Food and Drug Administration has reported that the provisions of this bill are such as to fully safeguard the public health, and that the requirements for certification of each batch of the color and the application of a tolerance are practicable and workable provisions.

Mr. Speaker, it should be pointed out that Florida and Texas color a large percentage of the fresh oranges shipped. For the seasons of 1945 to 1946 through 1956 to 1957, 68.2 percent of all oranges shipped out of the State of Florida used red No. 32. The color-added oranges varied from season to season, running

from a low of 60 percent to a high of 76.3 percent. I understand that coloring of Texas oranges has run as high as 100 percent of the fresh oranges shipped in a season. The fact that such a high percentage of the fresh oranges shipped are colored indicates that for some reason, people do not buy oranges whose color is green, but rather select the orange with the orange color. It is because of this that the coloring of oranges is an economic necessity.

It is a well-known fact that the economy of Florida is largely dependent on its sunshine, its warm climate, its tropical beauty, and its citrus industry. It is because of its wonderful climate that the Florida oranges must be colored artificially in order to have the eye appeal necessary to maintain a high volume of sales. This is due to the fact that in the fall of the year, or until cooler weather, the fully ripe and mature orange may be green on the outside. Cool weather, on the other hand, may cause the late varieties of orange to have a rich orange color on the outside even though it is not fully mature on the inside. Later in the spring, or with warmer weather, green color rises in the tree and into the leaves and oranges, thereby regreening the mature and ripe fruit.

I want to point out that under the laws of Florida, the fruit to be colored must have a higher standard than is required of other fruit. Coloring may not be used for the purpose of concealing defects. No immature fruit may be colored under Florida law. Further, under the Federal Food and Drug Act and the regulations promulgated by the Food and Drug Administration, the amount of color that may be used is limited and the words "color added" is required to be stamped on each and every orange so colored. Therefore, there is absolutely no danger of injury to the public.

Mr. Speaker, Public Law 672, 84th Congress, expired February 28, 1959, and at the present time the citrus industry is not permitted to use any coloring on oranges. We are now at the beginning of the regreening season and the late varieties of oranges, which had a beautiful orange color a few days ago, are beginning to regreen. Therefore, this legislation is urgent. Failure to enact this bill will result in reduced employment in Florida and will create a chaotic market condition. I respectfully request approval of this bill.

Mr. METCALF. Mr. Speaker, here is an ideal situation for application of Dr. Flemming's famous formula. You will recall that Dr. Flemming, Secretary of Health, Education, and Welfare, has said that if the States would and could do the job of building schools they would and could build 75,000 classrooms. Of course, the States would have to change their constitutions and revise their basic tax structure, but under Dr. Flemming's formula that is an unimportant matter.

Not only could we have brilliant orange oranges growing in both California and Florida, but we could have red oranges, blue oranges and, for next Tuesday, we could have ripe green oranges. To accomplish this might require a change in the molecular structure of the orange tree and cooperation of the orange itself, but under the Flemming formula those are minor obstacles.

Mr. CRAMER. Mr. Speaker, I strongly urge the Members of the House of Representatives to vote favorably on S. 79, which would permit the temporary listing and certification of citrus red No. 2 for coloring mature oranges under tolerances found safe by the Secretary of Health, Education, and Welfare.

In 1956 Congress passed a bill to permit the industry to continue for a maximum of 3 years the use of red No. 32 for coloring oranges to allow time for necessary scientific study in the development of a harmless color. The industry then developed red No. 2, a much less toxic dye.

This legislation is needed because the Supreme Court has held that the Secretary has no right to certify for a limited purpose or to grant tolerances. There was no claim anywhere in the record by the Food and Drug Administration or anyone else that the old color was harmful as used in the coloring of oranges, but the Supreme Court case hinged on the use of the word "harmless," and they held that it could not be certified if harmful at high levels and in other uses in food.

This legislation will allow the use of a new color with a very much higher safety factor than FDC red No. 32, although as stated before it was not claimed that this was harmful as used in the coloring of oranges.

The coloring of oranges is not done to deceive as the colored oranges are marked "color added" and only mature oranges meeting a higher degree of maturity than other oranges can be colored.

The need for coloring was brought out in the hearings, because the early orange does not color until the cold nights come and may be fully mature and yet be green on the outside. The later orange may be immature when it has a rich orange color and then as the chlorophyll comes into the leaves in the spring it regreens and the green gets in the orange, so a green-looking orange may be of greater maturity than a rich, ripe-looking one.

In answer to my distinguished colleague from California [Mr. TEAGUE], who commented on coloring of California oranges, I wish to suggest that we in Florida do not have the California smog through which to filter our sunshine, and the gentleman from Arizona [Mr. RHODES], with regard to the oranges from his State, I suggest that while he has the hot sunshine to color the oranges it also has the effect of drying them out to some extent. I also might remind my distinguished colleagues that it is not the hot sunshine that colors the oranges, but rather it is the cooler weather that adds the color. Florida offers the perfect climate for growing juicy, sweet oranges.

The SPEAKER. The question is on the third reading of the bill.

The bill was ordered to be read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and on a division (demanded by Mr. FULTON) there were—ayes 61, noes 21.

Mr. FULTON. Mr. Speaker, I object to the vote on the ground that a quorum is not present, and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 213, nays 94, not voting 127, as follows:

So the bill was passed.

The Clerk announced the following pairs:

Mr. Smith of Virginia with Mr. Martin.
Mr. Monagan with Mr. Arends.
Mr. Hébert with Mr. Auchincloss.
Mr. Morrison with Mr. Allen.
Mr. Pilcher with Mr. Simpson of Pennsylvania.
Mr. Lane with Mr. Taber.
Mr. Burleson with Mr. Merrow.
Mr. Chelf with Mr. Baker.
Mr. Evins with Mr. Halleck.
Mr. Fallon with Mr. Curtis of Missouri.
Mr. Garmatz with Mr. Dixon.
Mr. Friedel with Mr. Fino.
Mr. Nix with Mr. Ayres.
Mr. Green of Pennsylvania with Mrs. Bolton.
Mr. Teller with Mr. Broyhill.
Mr. Quigley with Mr. Canfield.
Mr. Thompson of Texas with Mrs. St. George.
Mr. Staggers with Mr. Bass of New Hampshire.
Mr. Scott with Mr. Osmers.
Mr. Riley with Mr. Mason.
Mr. Roberts with Mr. Laird.
Mr. Hull with Mr. Judd.
Mr. Kirwan with Mr. Glenn.
Mr. Sheppard with Mr. Frelinghuysen.
Mr. Loser with Mr. Derounian.
Mr. McGinley with Mr. Dorn of New York.
Mrs. Kelly with Mr. Gubser.
Mr. Zelenko with Mr. Andersen of Minnesota.
Mr. Donohue with Mr. Bray.
Mr. Philbin with Mr. Byrnes of Wisconsin.
Mr. Fogarty with Mr. Weaver.
Mr. Fountain with Mr. Taylor.
Mr. Herlong with Mr. Riehlman.
Mr. Hemphill with Mr. Chiperfield.
Mr. Roosevelt with Mr. Wainwright.
Mr. Shelley with Mr. Wharton.
Mr. Boykin with Mr. Cahill.
Mr. Santangelo with Mr. Collier.
Mr. Keogh with Mr. Lafore.
Mr. Anfuso with Mr. Horan.
Mr. Allen with Mr. Jackson.
Mr. Buckley with Mr. Hoffman of Michigan.
Mr. Multer with Mr. Henderson.
Mr. Holtzman with Mr. Hoeven.

Mr. REUSS changed his vote from "nay" to "yea."

Mr. RODINO, Mr. BARRY, and Mr. KEARNS changed their votes from "yea" to "nay."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. HARRIS. Mr. Speaker, I ask unanimous consent that all Members may have permission to extend their own remarks in the RECORD on the bill just passed immediately prior to the vote.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

EXTENDING SPECIAL ENLISTMENT PROGRAMS

Mr. RIVERS of South Carolina. Mr. Speaker, I call up the bill (H.R. 3368) to extend the special enlistment programs provided by section 262 of the Armed Forces Reserve Act of 1952, as amended, and ask unanimous consent that it be considered in the House as in the Committee of the Whole.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina [Mr. RIVERS]?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 262 of the Armed Forces Reserve Act of 1952, as amended (50 U.S.C. 1013), is further amended by deleting the date "August 1, 1959" in the first sentence of section 262(a) and inserting in lieu thereof the date "August 1, 1963".

Mr. RIVERS of South Carolina. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, the bill before the House today extends the special enlistment programs provided by section 262 of the Armed Forces Reserve Act of 1952, as amended, for a period of 4 years, until August 1, 1963. It is this authority upon which the Department of Defense has established its 6 months' training program for individuals between the ages of 17 to 18½. Under present law, the authority for this program, among other things, will expire on August 1, 1959. The Department of Defense has indicated that extension of this authority is considered essential to the maintenance of the strengths and mobilization readiness of the Reserve components.

As you will recall, the Congress during the past month has voted an extension of the induction provisions of the Universal Military Training and Service Act until July 1, 1963. The provisions of this proposal would similarly extend those provisions of the Armed Forces Reserve Act which permit the deferment and exemption from draft liability of individuals who agree to perform 6 months of active duty for training with the Armed Forces and thereafter continue to perform satisfactorily in the Reserve Forces.

Now let me refresh your memory on the history of the Armed Forces Reserve Act, as amended.

In 1955 the Congress, in response to a Presidential request, amended the Armed Forces Reserve Act of 1952 to provide the President with the authority to establish Reserve component enlistment programs for young men between the ages of 17 and 18½ and for persons who have critical skills and are engaged in civilian occupations in any critical defense-supporting activity or in any research activity affecting national defense.

This amendment to the Armed Forces Reserve Act of 1952 was part of the Reserve Forces Act of 1955 (69 Stat. 598) which had, as its primary purpose, the development of an efficient and well-trained Ready Reserve force. The authority provided in section 262 of the Armed Forces Reserve Act was not an independently conceived program but an integral part of the effort made by Congress in 1955 to overhaul the Reserve structure to provide the machinery by which our Reserve Forces could be well organized and efficiently trained. In the event of war they could be mobilized quickly and would be capable of effectively augmenting the Active Forces in defense of our country.

Under the authority contained in section 262, the Armed Forces, under such quotas as may be determined by the President—not to exceed 250,000 annually—are authorized until August 1, 1959, to establish special enlistment programs in units of the Ready Reserve for persons who, first, are mentally and physically qualified for service; second, have not been ordered to report for induction; and third, are under 18½ years of age.

This section further prescribes that the enlistment period for this special program must be for 8 years including an initial period of not less than 3 months or more than 6 months of active duty for training, with satisfactory service in the Reserve thereafter. In the case of individuals in attendance at high schools, the requirement of the 3- to 6-month period of active duty for training is deferred until the individual completes high school or reaches 20 years of age. Except for war or national emergency, individuals enlisted under this program and who serve satisfactorily are exempt from induction under the Universal Military Training and Service Act.

Included in section 262 is authority to establish an enlistment program for individuals possessing critical skills who are engaged in civilian occupations in any critical defense-supporting industry or in any research activity affecting national defense. In the case of such individuals the law provides that the program will also require an 8-year enlistment period with an initial period of active duty for training of not less than 3 nor more than 6 months. However, the law prescribes that such individuals may be enlisted without regard to age and even though ordered to report for induction.

On the basis of the statutory authority contained in section 262 of the Armed Forces Reserve Act of 1952, as amended, the President, by Executive order in the summer of 1955, authorized the acceptance of enlistments under this program in units of the Ready Reserve. Subsequently, by Executive order in early January of 1956, the President established the authority for the administration of the special enlistment program designed for individuals possessing critical skills. Both programs, authorized by the statute, were put into operation soon after Congress had acted to permit this development.

The Honorable Hugh M. Milton II, Under Secretary of the Army, in testimony before the Armed Services Committee on February 17, 1959, on the extension of section 262 of the Armed Forces Reserve Act, made the following comment which reflects the importance of the enlistment and training programs authorized by this law:

When we requested legislative authority for the direct enlistment and training of qualified young men for service in the Reserve components nearly 4 years ago we emphasized the then unsatisfactory state of our Reserve Forces. You were told that too large a percentage of reservists had not undergone basic training; that in the Ready Reserve of the Army Reserve only 1 out of 10 trained enlisted men was actively participating in unit training and that the Reserve could not be built to a minimum state of combat readiness in an acceptable period of time. We sought the opportunity to show what we could do to correct these deficiencies and promised you that we were determined to do a good, sensible job. The section 262 enlistment programs providing for the direct Reserve component enlistment of young men in the 17–18½-year age group and critically skilled specialists employed in national defense activities represents your response, interest and determination to develop a strong Reserve.

We have had the law and the special enlistment programs for nearly 4 years now and there is no doubt in my mind that the Reserve components of the Army have attained the highest degree of mobilization readiness, deployment availability, and combat potential in history.

Continuation of the section 262 programs will assure the Reserve Forces a steady supply of men basically trained and qualified to participate as members of a Reserve unit. The 6 months' training period provides the sound basis for their integration into the unit team and the future development of their ability and skill through more advanced training and application.

I am sure that you are aware of the favorable reaction given the 6 months' enlistment and training programs by parents, educators, civic and religious leaders, and the young men of our country.

As you are also no doubt aware, the Reserve Forces Act of 1955 required the National Security Training Commission to report annually to the Congress with respect to the welfare of certain members of the Ready Reserve undergoing 6 months' active duty for training. In June 1957 the commission reported to Congress that—

The services are doing an excellent job in looking after the welfare of trainees. The manner in which they have conducted the 6 months' Reserve training program has been a credit to themselves and to the Nation. * * * Now that the Reserve program is well under way, the commission feels that its mission has been accomplished. * * * The commission believes that the Defense Department and the various Armed Forces can adequately look after the welfare of the trainees without the aid of a civilian body. Therefore, the commission recommended, and President Eisenhower agreed, that it should terminate its activities on June 30, 1957.

The military services are unanimous in their endorsement of this enlistment and training program and each utilize or will utilize its provisions to the degree most compatible to the requirements of their Reserve component.

In view of the foregoing it is easy to understand why the Department of Defense looks upon section 262 of the Armed Forces Reserve Act of 1952 as the cornerstone upon which its 6-month training program is based.

Mr. Speaker, I am convinced that the Congress in its enactment of the Armed Forces Reserve Act of 1952 provided our Armed Forces with an instrument of inestimable value in terms of national security and preparedness. Our Reserve Forces in their utilization of this statute have attained a posture with regard to mobilization readiness and combat potential unparalleled in history.

The Committee on Armed Services strongly recommends enactment of the proposed legislation which will extend until August 1, 1963, the authority upon which the Armed Forces presently base their 6 months' training programs. Extension of this authority will parallel extension of the Universal Military Training and Service Act and will assure a continued flow of well-trained young men into the Ready Reserve components of our Armed Forces.

Mr. VAN ZANDT. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, there is little more that I can add to the detailed explanation that has just been presented by my colleague, the gentleman from South Carolina [Mr. RIVERS].

He has given you a thorough explanation of the need for this legislation and has fully justified the 4-year extension of the special enlistment programs provided by section 262 of the Armed Forces Reserve Act of 1952, as amended.

There are, however, a few aspects of this measure that I consider worthy of mention in some little detail.

We have heard of the benefits of this legislation insofar as our country and its security is concerned. There is another important aspect of this matter which should be mentioned. I refer to the relative security this legislation offers the young men of our Nation in terms of their future. I would like to quote from section 262 of the Armed Forces Reserve Act of 1952 wherein it is stated:

Performance of such initial period of active duty for training by any person enlisted under this section while satisfactorily pursuing a course of instruction in a high school shall be deferred until such person ceases to pursue such course satisfactorily, graduates from such course, or attains the age of 20 years, whichever first occurs.

Thus, through the enactment of this provision of law young men have been provided with an opportunity to volunteer their services in such a manner as to permit minimum interference with educational plans while satisfying the requirements of a military service obligation. This, to my way of thinking, is extremely important when we consider the urgent need for brainpower in so many of our national and international activities. This legislation positively reflects the interest of Congress in the educational well-being of our country as well as its national security. While contributing to the storehouse of national assets in terms of better educated young people properly prepared to take their places in the world of tomorrow, we strengthen the military security of the Nation.

The Honorable Hugh M. Milton II, Under Secretary of the Army, in testimony before the Armed Services Committee on February 17, 1959, on the extension of section 262 of the Armed Forces Reserve Act, made reference to this aspect of the matter when he stated:

I think this is a wonderful provision of law.

He continued by saying:

If you will recall, 4 years ago, one of the problems which we were worried with was trying to adjust our Reserve component training so that youngsters who wanted to go to college, who wanted to get into some sort of arts and training, would not have their programs interrupted. And I am very much in favor of this 17–18½ provision, because it just works splendidly with these youngsters.

Later in his testimony before the committee, Secretary Milton made reference to the effect that these young men had on the Reserve components of our Armed Forces when he stated that:

Qualitatively the influx of these basically trained young men has contributed significantly to the present high status of readiness, training, stability, and efficiency of the Reserve components. It is considered noteworthy that for the first time in the history of the Army's Organized Reserves, selected units have begun basic unit training. This will serve to reduce the post training mobilization training requirements of these units by up to 17 weeks. Noteworthy too is the high mental caliber of the young men attracted to the program. During fiscal year 1958 more than 17 percent of those enlisted were in the highest mental grouping. This compares most favorably with the 9.6 percent of Regular Army enlistees in this category and the 7.8 percent of those inducted.

Mr. Speaker, the young men of this Nation recognize and understand their

military service obligation and the necessity for maintaining our military strengths. They have recognized the opportunities provided by this legislation to discharge such responsibilities in a voluntary manner as evidenced by the overwhelming success experienced by the military services in its administration. It is widely known that enlistment and training programs provided by this legislation are congressionally sponsored and that they provide statutory draft deferment and eventual exemption.

I think it is important at this point to tell you that not one single voice was raised in opposition to extension of section 262 of the Armed Forces Reserve Act of 1952, as amended, during the course of the Armed Services Committee hearings on February 17, 1959. On the contrary its extension was highly recommended by the National Guard Association, the Reserve Officers Association, the American Legion, the Veterans of Foreign Wars of the United States, the Jewish War Veterans of the United States, as well as representatives of the military services.

When Congress enacted the Armed Forces Reserve Act of 1952, as amended, it initiated a new era in the history of the Reserve components of our Armed Forces and for that reason the Congress should continue to identify itself with this program through its endorsement of the bill now before the House.

In addition and finally I am convinced that extension of these special enlistment and training programs as provided for in H.R. 3368 is essential to the maintenance of the strength and mobilization readiness of the Reserve components of our Armed Forces.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AUTHORIZING CONSTRUCTION OF NAVAL VESSELS

Mr. DURHAM. Mr. Speaker, I call up the bill (H.R. 3293) to authorize the construction of modern naval vessels and ask unanimous consent that it be considered in the House as in Committee of the Whole.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina [Mr. DURHAM]?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized to undertake the construction of not to exceed twenty thousand tons of amphibious warfare vessels and landing craft and not to exceed four thousand tons of patrol vessels.

SEC. 2. There is hereby authorized to be appropriated such sums as may be necessary for the construction of the foregoing vessels.

Mr. DURHAM. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, this bill is identical in all respects to a number of bills which the Congress has passed over the last several years.

This year's bill would authorize the construction of five ships as follows: One amphibious transport, dock; one amphibious assault ship; two escort vessels; and one submarine chaser.

The ships are described in detail on pages 3 and 4 of the report. The dimensions, tonnage, and function are all clearly set out in that portion of the report.

Briefly stated, the amphibious assault ship and the amphibious transport form the nucleus of the assault landing force. They were developed by the Navy and Marine Corps especially for use in assault by vertical envelopment. Both of them carry helicopters and one of them, the amphibious transport, carries landing craft underneath the flight deck.

The two escort vessels are actually a type of destroyer escort. They will be highly mobile, very fast, and will be equipped with the most modern antisubmarine weapons.

The submarine chaser is a hydrofoil. Previously, a prototype of this vessel was authorized and has proved highly successful. As you know, a hydrofoil provides that the body of the ship be placed on what I will call skis. As the ship increases in speed, its body is lifted out of the water and the only contact with the water from that point on is that made by the skis.

The ship is very fast and can operate even in rough water up to a distance of 200 miles from shore. It, too, will be equipped with submarine detection devices and will be a most effective antisubmarine weapon.

This bill represents only a small fraction of the total shipbuilding program of the Navy for fiscal year 1960. All of the remainder of the ships will be built from tonnages currently available to the Navy from previous laws. This bill, however, is necessary because these five ships are in categories for which there is no available tonnage.

The Armed Services Committee had a very detailed hearing on this measure and reported the bill unanimously.

I know of no objection to the bill.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. DURHAM. I yield.

Mr. GROSS. Does the gentleman intend to propose an amendment to provide that this $110 million shall come out of the foreign giveaway counterpart funds?

Mr. DURHAM. No; I do not expect to offer such an amendment.

Mr. GROSS. Would the gentleman be opposed to an amendment of that kind if offered to the bill?

Mr. DURHAM. I think I would have to oppose an amendment such as that.

Mr. NORBLAD. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. NORBLAD. Mr. Speaker, the gentleman from North Carolina [Mr. DURHAM], who is the chairman of the subcommittee which handled this bill, has given a clear and concise description of what this bill will do.

There is little that I can add to his fine explanation of the bill itself, but I do think it would be a matter of interest to the Members of the House—and to the public at large—to have some knowledge of the current status of our nuclear-propelled ships.

Five nuclear-powered submarines have been completed: U.S.S. *Nautilus,* U.S.S. *Seawolf,* U.S.S. *Skate,* U.S.S. *Swordfish,* and U.S.S. *Sargo.* There are 19 other nuclear-powered submarines now under construction, including 6 fleet ballistic missile submarines, 1 nuclear-powered guided missile submarine, and 1 nuclear-powered radar picket submarine. Nine other nuclear-powered submarines have not been awarded.

At present, there are three nuclear-powered surface ships under construction: The *Long Beach,* the *Enterprise,* and the destroyer leader guided missile–25—unnamed. The *Long Beach* is scheduled for delivery in October 1960, the *Enterprise* in September 1961, and the destroyer leader guided missile in October 1961. Physical construction is under way on both the *Long Beach* and *Enterprise.* With regard to the destroyer leader guided missile–25, orders have been placed for long leadtime items including key reactor components and steel; development of working plans is on schedule and prekeel fabrication began in February of this year. This ship, which is part of the fiscal 1959 program, was awarded in September of 1958. The *Long Beach,* with delivery scheduled for October 1960, will be the Navy's first nuclear-powered surface ship to become operational.

In addition, I would like to point out that at present three fleet ballistic missile submarines—SSBN—for which funds were provided in a supplemental fiscal 1958 appropriation, are under construction, the *George Washington* and the *Patrick Henry* at the Electric Boat Division of General Dynamics Corp., and the *Theodore Roosevelt* at the Mare Island Naval Shipyard.

Two other SSBN submarines, the *Robert E. Lee* and the *Abraham Lincoln,* both of which are part of the Navy's fiscal 1959 program, are also under construction, the former at the Newport News Shipbuilding and Drydock Co., the latter at the Portsmouth Naval Shipyard.

Of the four remaining SSBN submarines in the 1959 program, funds for which were added by Congress, only one, the SSBN–608, has been awarded. Electric Boat has received a contract to prepare working plans for this lead ship of a new class of SSBN submarines and to construct the prototype ship itself. Procurement of long leadtime components for all four ships has been in progress for some time.

Mr. Speaker, I trust that this brief explanation has given a reasonable picture of our progress in the field of nuclear propulsion and I urge that the House give favorable consideration to H.R. 3293 as an important forward step in our total defense picture.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed, and a motion to reconsider was laid on the table.

REPEAL OF EXCISE TAXES ON TELEPHONE AND TELEGRAPH SERVICES

Mrs. GREEN of Oregon. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD, to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentlewoman from Oregon?

There was no objection.

Mrs. GREEN of Oregon. Mr. Speaker, I have again the honor to lay before this House a memorial enacted by the 50th Legislative Assembly of the State of Oregon. This memorial prays the repeal of the Federal excise taxes on telephone and telegraph services.

In the text of the memorial are set forth several good and ample reasons why these taxes, relics of the wartime period, should be removed from the statute books. But chief among these reasons, from the point of view of the State which I have the honor and privilege to represent in the Congress, and from the point of view of her sister States of the West and, in particular, the two newest members of the Union, is that set forth in the seventh paragraph of that memorial, to wit:

> The continued imposition of this tax is discriminatory upon businesses in the western United States who market their products competitively in the East, with communication service to such eastern markets essential to such competition.

I might add to this the discriminatory effect which the excise taxes on these services has upon the people, as well as the business firms, of our Western States. These taxes, Mr. Speaker, are unfair in their incidence, bereft of the wartime justification for their enactment, and long overdue for repeal.

SENATE JOINT MEMORIAL 2

To the Honorable Senate and House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the 50th Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas the Federal Government levies an excise tax on telephone and telegraph services; and

Whereas such tax was levied during World War II as a wartime emergency tax to help defray war costs and to discourage unnecessary use of such services; and

Whereas the wartime emergency has expired and there is no longer a justification for imposing such tax for the purpose for which it was initially levied; and

Whereas the tax on telephone and telegraph bills imposes an undue hardship upon millions of individuals and businesses in this country, and is discriminatory; and

Whereas telephone and telegraph services are essential to the orderly transmission of information required in transaction of business and personal affairs and should not be taxed in the same manner as luxury items such as furs, jewelry, and other nonessentials; and

Whereas the continued imposition of this tax is discriminatory upon businesses in the Western United States who market their products competitively in the East, with communication service to such eastern markets essential to such competition; and

Whereas the maintenance of an adequate communication system is essential to the economic prosperity and welfare of the people of this country: Now, therefore, be it

Resolved by the Senate of the State of Oregon (the House of Representatives jointly concurring therein), That the Legislative Assembly of the State of Oregon respectfully memorializes the Congress of the United States to repeal the excise tax levied upon telephone and telegraph services; and be it further

Resolved, That copies of this memorial be sent to the President and Vice President of the United States, the Speaker of the House of Representatives, the chairman of the Ways and Means Committee of the House of Representatives and to all Members of the Oregon congressional delegation.

DIRE ECONOMIC AND FOREIGN POLICY CONSEQUENCES WILL RESULT FROM PRECEDENT-SETTING MANDATORY QUOTAS ON OIL IMPORTS

Mr. IRWIN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. IRWIN. Mr. Speaker, President Eisenhower's precedent-setting imposition of mandatory quotas on oil imports can have only dire and damaging effects upon the Nation's economy and upon our relations with foreign powers.

It is my opinion—one, I believe, shared by many others in this Nation—that the President's action will increase the cost of oil and its products, thereby contributing to the inflationary pressures which the administration has been accusing the Democrats in Congress of fostering.

And in imposing compulsory quotas on oil imports, Mr. Eisenhower has established a precedent in recognizing the protectionist interests of one group at the expense of all others and particularly of the public welfare.

I question, Mr. Speaker, the President's contention that oil imports are on such a scale as to threaten to impair our national security.

Import restrictions, such as those imposed by the administration, should not be established unless deemed a necessity to our national security by appropriate, unbiased, and knowledgeable nongovernmental advisory groups.

It is my belief, Mr. Speaker, that this hemisphere can only be adequately defended if petroleum can flow freely between countries.

I contend that our experiences in World War II and during the Suez crisis should have taught us that healthy Canadian, Latin, and South American crude oil production is vitally important to this Nation.

The administration to the contrary, we are still quite dependent upon our neighbors for fuels to supplement our own resources in peacetime and provide for full mobilization in wartime.

It seems obvious to me, Mr. Speaker, that the administration's action constitutes a surrender to certain special interests motivated by desire for greater profits rather than any national, economic or industrial security measure.

I am wholeheartedly in agreement with an editorial in the New York Times of March 12 which declares that the imposition of compulsory quotas on oil imports will result in a further major intrusion of Government control in our economic life, with consequent weakening of the free-enterprise system.

Certainly, we appear to have committed a calculated act of economic warfare by, in the words of the Times editorial, "again repudiating our frequent protestations of desire for the freest possible flow of international trade."

I would like, Mr. Speaker, to introduce into the RECORD, the following highly informative editorial from the New York Times on this precedent-setting action by Mr. Eisenhower:

OIL IMPORT QUOTAS

President Eisenhower's decision to set up a system of compulsory import quotas covering crude petroleum and its products is an unhappy victory for a group of special interests whose gain will be at the expense of the general welfare and perhaps, ultimately, even at the expense of those who sought this move. If the immediate aims of these interests are served, the new restrictions on imports will tend to raise the cost of oil and its products, and perhaps also of coal, thus further intensifying the inflationary pressure which, in other respects, the Government is seeking to combat. And if, as is hinted in the President's statement, the Government seeks to police the price of oil and its products by changing the levels of permitted imports in response to price changes in this country, the result will be a further major intrusion of Government control in our economic life, with consequent weakening of the free-enterprise system.

The national security argument for these controls is not convincing. This is shown most obviously by the inclusion of Canada in the list of countries whose oil exports to us are curbed, though there is no threat of interruption of seaborne transport in the case of Canadian oil. Beyond that, if serious attention need be paid to assuring sufficient petroleum for future emergency needs there is much to be said for keeping as much of our oil as possible in storage under the ground and increasing, not reducing our use of imported oil.

Nor can we look with equanimity upon the probable foreign repercussions of this move. The Canadian Trade Minister has already protested it, and similar resentment is undoubtedly felt also in Venezuela and other sources of imported oil. To many abroad this will look like still another calculated act of economic warfare by the United States against its friends, an act they will interpret as again repudiating our frequent protestations of desire for the freest possible flow of international trade. It is an unhappy precedent which has been set.

DISCONTINUANCE OF EXCISE TAX ON TELEPHONE SERVICE

Mr. DADDARIO. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. DADDARIO. Mr. Speaker, I am calling to the attention of the House a petition from the Public Utilities Commission of Connecticut relative to the excise tax on telephone service. I request unanimous consent that the text of the petition be placed in the body of the RECORD with my remarks.

I have had a good deal of correspondence from people in my district opposing the continuance of this tax. The telephone is certainly an essential part of our communications, and it is hard to recognize why a tax on its use should continue so long after the war has ended.

Knowing the many difficult problems that face the Ways and Means Committee, I would expect that this has been brought to their attention. But I would stress that Connecticut and Hartford County feels that the purpose of the tax has long since been outmoded and that there is a substantial claim for reconsideration. In reviewing the tax laws, the Ways and Means Committee should recommend the end of this particular excise.

The petition follows:

PETITION AND RESOLUTION OF THE PUBLIC UTILITIES COMMISSION OF THE STATE OF CONNECTICUT PERTAINING TO FEDERAL EXCISE TAXES ON TELEPHONE SERVICE

It appearing, that Federal excise taxes on telephone service were levied initially or greatly increased during World War II to assist in defraying the expenses of conducting the war, and to discourage the unnecessary civilian use of telephone service; and

It appearing further, that the Congress has recognized that wartime excise taxes should be eliminated and many such eliminations have been made; and

It appearing further, that telephone service is not in the class of luxuries but is an essential public utility service; and

It appearing further, that at this time, almost 14 years after the end of World War II hostilities, the excise tax on telephone service is still in effect and is continuing to discourage public use of this essential service—the only household utility service which is the subject of Federal excise taxes:

Now, therefore, we, the undersigned, comprising the Public Utilities Commission of the State of Connecticut, petition and memorialize Connecticut Representatives and Senators in Congress that the Federal excise taxes on telephone services are not consistent with the maintenance of a reasonably priced and nondiscriminatory public telephone service and, therefore that such Federal excise taxes should be repealed.

We hereby direct the secretary of this commission to forward a copy of this petition and resolution to each Connecticut Representative and Senator in Congress.

EUGENE S. LOUGHLIN,
HENRY B. STRONG,
BASIL P. FITZPATRICK,
Public Utilities Commission.

Dated at Hartford, Conn., this 11th day of February 1959.

AREAS OF SUBSTANTIAL LABOR SURPLUS

The SPEAKER. Under the previous order of the House, the gentleman from Pennsylvania [Mr. FLOOD] is recognized for 20 minutes.

Mr. FLOOD. Mr. Speaker, it is with regret that once again I am compelled to point out that joblessness in this country is on the increase and that at this moment upward of 5 million Americans are out of work.

This is not only a distressing situation but a stern challenge to our Government. This Nation, confronted as it is with a grave military threat, particularly in Berlin, and an intensified Soviet economic war, cannot afford to treat this problem casually.

Action is demanded to deal with unployment—action on a broad front—action that will mobilize the economic resources of the Nation. We need a program, and need it quickly, that will put to work the potential of millions of hours of productive effort that are now being wasted. We need job-creating policies and programs to bring these idle workers into the battle against inflation, and to strengthen America's hand in the deteriorating cold war.

It becomes my unpleasant duty to inscribe on the record the latest unemployment compilation of distress areas, which constitute a record-breaking peak of joblessness in recent years.

This bad news confirms the necessity of legislation like the Douglas-Flood bill to provide for the redevelopment of chronically distressed communities. Earlier this week I testified before the House Banking and Currency Committee on my area redevelopment bill, H.R. 3466, which is designed to meet the problems of these jobless-plagued regions, and I strongly urge that this badly-needed legislation be brought to early enactment by the Congress so that its constructive, beneficial provisions can begin to minister to the national economy and welfare at the earliest possible date.

The growth and widespread nature of chronic unemployment throughout the United States is grimly borne out by the following tables, ably assembled and prepared by the Area Employment Expansion Committee, 99 University Place, New York City, under the direction of Mr. Sol Barkin, executive secretary.

I would like to point out, Mr. Speaker, the fact that of the 149 major labor market areas, 72 will become eligible for assistance by January 1960, under my bill, H.R. 3466 and S. 722, but only 19 areas will become eligible for assistance by that date under the administration's bill H.R. 4264 and S. 1064.

The aforementioned compilation and tables follow:

AREA REDEVELOPMENT FACT SHEET NO. 34—COMPARATIVE IMPACT OF H.R. 3466 AND H.R. 4264 (THE ADMINISTRATION BILL) ON MAJOR LABOR MARKET AREAS IN THE UNITED STATES

Twenty-eight major labor market areas are currently eligible for assistance (grants and loans) under H.R. 3466. Of these only 12 are currently eligible for assistance under H.R. 4264.

Of the remaining 44 major labor markets with substantial labor surpluses in January 1959, all but one would be eligible under H.R. 3466 for assistance (grants and loans) in 1959, if substantial unemployment continues.

Under H.R. 4264, only 7, in addition to the 12 enumerated above as immediately eligible, would become eligible in 1960. The remaining 53 would, at best, become eligible in 1961 or much later.

Similar information is being developed for smaller and very small labor markets by individual States since the Bureau of Employment Security has not made available data for them.

I. Major labor markets currently eligible for assistance under both H.R. 3466 and H.R. 4264:

Indiana: Evansville, Terre Haute.
Massachusetts: Lawrence, Lowell, New Bedford.
New Jersey: Atlantic City.
Pennsylvania: Altoona, Johnstown, Scranton, Wilkes-Barre-Hazleton.
Rhode Island: Providence.
West Virginia: Charleston.

II. Additional major labor markets currently eligible for assistance under H.R. 3466:

Massachusetts:Fall River.
Michigan: Detroit, Flint, Grand Rapids, Lansing, Muskegon.
New York: Utica-Rome.
North Carolina: Asheville, Durham.
Oregon: Portland.
Pennsylvania: Erie.
Tennessee: Chattanooga, Knoxville.
Washington: Spokane, Tacoma.
West Virginia: Huntington-Ashland.

III. Dates of eligibility of major labor markets with substantial labor surplus on January 1959 for assistance under H.R. 3466 if substantial labor surpluses continue:

MARCH 1959

Connecticut: Bridgeport.
Pennsylvania: Pittsburgh.

APRIL 1959

Connecticut: New Britain, Waterbury.[1]
Ohio: Lorain-Elyria.
West Virginia: Wheeling-Steubenville.[1]

MAY 1959

Kentucky: Louisville.
Michigan: Battle Creek.

JUNE 1959

New Jersey: Newark-Jersey City, Paterson-Clifton-Passaic, Perth Amboy-New Brunswick, Trenton.
New York: Buffalo.

JULY 1959

Alabama: Birmingham.
Connecticut: New Haven.
Illinois: Joliet.
Indiana: Fort Wayne, South Bend.
Maine: Portland.

SEPTEMBER 1959

Alabama: Mobile.
Illinois: Chicago.
Michigan: Saginaw.
Missouri: Kansas City.
Virginia: Roanoke.

JANUARY 1960

New York: Binghamton.

IV. Dates of eligibility of major labor markets with substantial labor surplus on January 1959 for assistance under H.R. 4264 if substantial labor surpluses continue:

A. Seven major labor markets will become eligible for assistance under H.R. 4264 in 1960 if substantial labor surpluses continue in 1959:

Indiana: South Bend.
Massachusetts: Fall River.

[1] All but these three will become eligible after 18 months of substantial surplus. These three labor markets are likely to be eligible after 15 months, since their rate is 9 percent or more.

Michigan: Detroit, Flint, Muskegon.
North Carolina: Asheville.
Tennessee: Knoxville.

B. The dates for the other labor markets becoming eligible are 1961 or later so that estimates are not at all feasible.

TABLE I.—*Annual averages of unemployment as a percent of labor force, major areas of substantial labor surplus, 1955–58*

Labor market areas	1955	1956	1957	1958
Alabama:				
Birmingham	4.5	3.7	3.9	7.2
Mobile	5.2	4.0	3.9	6.7
Connecticut:				
Bridgeport	3.2	2.2	3.9	10.8
New Britain	3.1	2.4	3.9	11.3

SAFEGUARD OUR NATIONAL SECURITY

Mr. SMITH of California. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. ALGER] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. ALGER. Mr. Speaker, with every day's papers recounting the grave concern of congressional leaders over the adequacy of the President's defense proposals, one's confidence grows that these same men will spare no effort in seeing to it that we are fully prepared in every way to fight if need be, and to win.

Surely, men who regard as niggardly the administration's $41 billion military budget, and who call for even greater taxpayers' sacrifice in the interest of preparedness, surely such men will leave no stone unturned, no deal overlooked, in insuring that American boys will not have to fight for their lives with their hands tied behind their backs. Consequently, I am perfectly confident that Congress will act promptly on bills already introduced by Senator BUTLER, by the gentleman from Ohio [Mr. SCHERER], and today by myself, aimed simply at enabling us to protect ourselves and the forces in the field from crippling expionage.

The gentleman from Ohio did the Congress and the Nation a service when, on January 29 on this floor, he outlined in graphic detail our dangerous and potentially tragic impotency to deal with espionage. To any who may not have heard his remarks or seen them in the RECORD, on pages 1446–1448, I strongly urge that you read Mr. SCHERER's statement thoughtfully and soberly.

Equipped with ample and clear testimony, that the very communications tielines and the leased lines out of the Pentagon itself are exposed at this very moment to the surveillance of a Communist controlled unit, equipped with the knowledge that restricted messages from the Pentagon have already been intercepted by persons under discipline of this Communist controlled organization and there is presently nothing the Army can do about it, forewarned that the Pentagon knows of some 2,000 identified potential saboteurs employed in plants vital to our Nation's defense, but is powerless to remove them, surely Congress will act to meet the challenge.

In the face of the Pentagon's plea that "unless this legislation is enacted, we are not in a position to assure the Congress and the American people that all reasonable measures are undertaken to safeguard our national security," can a Congress, if seriously concerned over our defense preparedness, fail to act?

RETIREMENT FOR SELF-EMPLOYED

Mr. BURDICK. Mr. Speaker, I ask unanimous consent that the gentleman from Oklahoma [Mr. STEED] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from North Dakota?

There was no objection.

Mr. STEED. Mr. Speaker, on January 27 I introduced H.R. 3507, a bill to permit the self-employed person to defer income tax each year on a portion of his own income set aside to provide for his retirement. This could be done on up to 10 percent of total income or $2,500, whichever is the lesser amount.

This bill is identical to H.R. 9 and 10, which were introduced by my distinguished colleague, the gentleman from New York, Congressman KEOGH, and the gentleman from Pennsylvania [Mr. SIMPSON]. It is a bipartisan measure, with bipartisan support, which passed the House in the closing days of the 85th Congress.

High taxes and inflated living costs have made it difficult for self-employed people to set aside money for their own retirement. On the other hand, tax deferments are already applicable in the case of corporate employees covered by private pension plans. This constitutes an inequity in treatment which badly needs correction. More and more qualified young men are going on a corporate payroll, rather than striking out for themselves. The factor of retirement planning often plays a significant role in their decision.

H.R. 10 would do much to correct this disparity. It has been favorably reported by the Committee on Ways and Means, and it is my understanding that it will come before the House for consideration on Monday. I believe this measure is a long-delayed step of tax justice.

The Keogh bill would affect a wide variety of self-employed people, totaling about 7,500,000 in number. This figure would include an estimated 13,000 persons in my own Fourth Congressional District of Oklahoma alone.

By far the majority of these are small retailers, farmers, and other independent proprietors. These are people who have the personal initiative to go out on their own, and who help promote the productivity that provides the basic strength of the American economy. Typical of those who have written me concerning this legislation are druggists, realtors, furniture-store owners, plumbers, savings and loan men, and certified public accountants.

I feel that my colleagues may be interested in a few of these expressions, especially because they indicate the wide range of persons who would be affected by the passage of the bill. For this reason, I now ask permission to extend my remarks in the RECORD to include a few of the communications I have received on this measure:

STILLWATER, OKLA.,
February 25, 1959.

Hon. TOM STEED,
Congress of the United States,
Washington, D.C.

DEAR MR. STEED: I am definitely in favor of the immediate passage of H.R. 10. In my opinion this is long overdue. Generally men in my profession have long seen the need for tax equality as being enjoyed by a few. My thoughts on this has been if one were

allowed to invest perhaps up to this amount in a deferred annuity contract or even an insured annuity contract. The actual cost of the insurance being taxable but the saving portion exempt. Insurance companies, no doubt, could furnish you a breakdown on this as to savings or retirements income, that is, the portion charged to insurance.

If in my limited way I can be of any service to you in this respect, please advise.

Sincerely yours.

PAUL M. KERR, *Realtor.*

SHAWNEE, OKLA.,
March 2, 1959.

The Honorable TOM STEED,
Congress of the United States,
House of Representatives,
Washington, D.C.

MY DEAR MR. STEED: Thank you for your letter of February 24 relating to H.R. 10. I am somewhat familiar with this bill and I also was aware of the fact that you were one of the sponsors. I appreciate your interest and support in this bill, and feel as though it is a change which is long overdue.

In addition to offering you my support, I am also advising clients of my office about this bill and urging them to write you also. These clients are, for the most part, businessmen within the Shawnee area.

Yours very truly,

DREW FINLEY, Jr.
FINLEY & COOK,
Certified Public Accountants.

NATIONAL ASSOCIATION OF
PLUMBING CONTRACTORS,
Washington, D.C., March 12, 1959.

Hon. TOM STEED,
House of Representatives,
Washington, D.C.

DEAR MR. STEED: The average plumbing contractor in the United States employs between 8 and 11 persons.

The plumbing contractor operates a family business. In most cases he does some plumbing work himself, and frequently his wife and family handle the books and the office end of things.

There are about 80,000 plumbing contractors in the country. More equitable tax treatment for these self-employed men would reflect a great return to the Nation's economy. An inequity in the tax laws now works against the small self-employed businessman. For example, a man who works for someone else may be provided with certain fringe benefits at no cost to himself. These include in many cases sickness, accident, health, and welfare pensions, and similar benefits. The cost of providing these is deductible by the employee on his tax returns but need not be included in the employee's declaration of income.

A self-employed individual is not treated equally in this respect. He must pay the cost of such protection for himself and his family out of earnings remaining after income taxes have been paid. In many cases, the small businessman operates on a narrow and often fluctuating margin and is simply unable after payment of all expenses and income taxes on net earnings to provide the necessary retirement funds.

The National Asssociation of Plumbing Contractors feels there is great merit in the Keogh-Simpson proposal in H.R. 10 allowing a limited tax deduction for funds to provide for retirement. We appreciate support of this legislation on behalf of the nearly 10,000 members of our association, most of whom are self-employed small businessmen.

Sincerely yours,

LEONARD F. KILEY,
Chairman, Public Relations Committee.

NATIONAL FEDERATION OF
INDEPENDENT BUSINESS,
Washington, D.C., March 12, 1959.

Hon. TOM STEED,
House of Representatives,
Washington, D.C.

MY DEAR CONGRESSMAN STEED: I know that you will be interested as to a recent poll of our nationwide membership of independent business and professional men, all voting members (not groups) that we recently presented to them for the fifth time, arguments for and against on the Keogh-Simpson bill. The argument we presented to our members is as follows:

ARGUMENTS FOR

Fair play for business and professional people, that's what this bill seeks. These people generate much of our prosperity and provide essential services. They should have the same chance to provide for retirement as have corporation officials and employees—which this bill would grant them. By exempting from tax the first 10 percent of income pay into these plans, it would help them finance programs for retirement. Congress went almost 75 percent of the way toward making this into law in 1958 * * * in all fairness, it should go all the way this year. This is nothing but simple justice.

ARGUMENTS AGAINST

There are a lot of injustices in our tax laws. Perhaps these bills would correct one of them. But in doing so, they would create others. Treasury officials have testified that the bills would throw a harpoon into budget balance work and promote further depreciation of the dollar. Others have argued that the bills would confer special privileges on higher, middle, and upper income groups at a time when all need a tax reduction. Congressional authorities say we should start with a general reduction in all tax rates, and eliminate all special exceptions. Let's start with a general tax cut.

Congressman STEED, this poll was recently completed and the vote was 76 percent for the proposition, 20 percent against, and 4 percent no vote.

We believe this information should prove of considerable interest to your colleagues.

Sincerely yours,

GEORGE J. BURGER,
Vice President.

SHAWNEE, OKLA.

Hon. TOM STEED,
House of Representatives,
Washington, D.C.

DEAR TOM: I appreciate very much your letter of February 16, regarding H.R. 10, of which you are a joint sponsor.

This is the first time that I have given any serious thought to the bill and was quite interested in reading the comments in your letter as well as the leaflet enclosed, which more fully explained the purpose of the proposed legislation. It does seem to me that this would provide a solution for an inequity which now exists, and that those who are self-employed should not be penalized for attempting to provide for their retirement years.

I have no suggestions to offer but wanted you to know that my reaction to this bill is favorable.

Your very truly,

JOHN A. MERRILL,
Vice President, First Federal Savings & Loan Association of Shawnee.

WETUMKA, OKLA., *February 28, 1959.*

TOM STEED,
Member of Congress,
Washington, D.C.

DEAR TOM: I am very interested in private pensions for self-employed persons. H.R. 10 is legislation that is fair and just, and I hope that it is approved and passed on soon.

I understand the legislation, so won't comment further.

Your friend,

W. M. LOVE.

ADA, OKLA., *February 28, 1959.*

DEAR MR. STEED: Thank you for your letter concerning H.R. 10.

I am in favor of this bill. It seems to me that too much emphasis is being placed upon employees benefits with little or no relief for the employer.

Thank you.

HOMER H. HENSLER, Jr.

CHANDLER, OKLA., *February 28, 1959.*

Congressman TOM STEED,
House of Representatives,
Washington, D. C.

DEAR TOM: I am happy that you called your House bills (H.R. 10 and H.R. 9) to my attention, for I'm very much in favor of this voluntary pension plan, I happened to read about this plan in the newspaper some 2 or 3 weeks ago and thought about writing you at the time.

Again I want to thank you for being so thoughtful as to ask what or how I feel about the bill.

Sincerely,

FRIEND BURNHAM.

SHAWNEE, OKLA., *February 27, 1959.*

Hon. TOM STEED,
House of Representatives,
Washington, D. C.

DEAR TOM: We are vitally interested in bills H.R. 10 and H.R. 9. It is something the self-employed person has needed a long while, we think.

Surely do appreciate your efforts on behalf of the bill.

Sincerely,

COY and LETA WINSETT.

BARTLESVILLE, OKLA., *February 27, 1959.*

Hon. TOM STEED,
House Office Building,
Washington, D. C.

DEAR SIR: Our observation in the preparation of income tax returns for all classes of taxpayers has proved to us that the executive of a corporation approaches the retirement time in his life in a much more secure position than the average business or professional man.

The corporation employee has had the advantage of joining a company retirement plan and retires with payments from the plan with an income sufficient to care for him in his declining days. The self-employed has been unable for various reasons to provide for his declining days.

For these reasons we are highly in favor of the Keogh-Simpson bill (H. R. 10) and hope you will use your best efforts to assure its passage.

We could give many more reasons why we feel that this is commendable legislation but trust that this is sufficient to secure your support.

Yours very truly,

SEIDLE, WILSON, JONES, & SEIDLE,
GENE E. WILSON, *Partner.*

GEOPOLITICS AND NATIONAL POWER

Mr. FLOOD. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD, and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. FLOOD. Mr. Speaker, during the past several years I have devoted much time and study to interoceanic canal policies and other matters related to our national power. In examining such questions, the evidence is cumulative of the imperative necessity for deriving our policies to present a reasoned line of thought in relation to actual conditions with a view to improving them.

Thus, it was most gratifying to read in the March–April 1959 issue of the Military Engineer, the journal of the Society of Military Engineers, published bimonthly in the Nation's Capital, a thoughtful article on "Geopolitics and National Power," by Capt. William T. Greenhalgh, U.S. Navy. Also in this issue is the following brief biographical sketch of the author:

Capt. W. T. Greenhalgh has served for the past 3 years as Assistant Chief of Naval Material and Director, Supply Programs Division in the Office of Naval Material. His interest in foreign affairs began as a student at the Industrial College of the Armed Forces where he served as an instructor in "Military and Economic Potential of World Areas." Following this, he served as chief of foreign production on the Munitions Board, and participated in the establishment of NATO requirements for the first military aid program. In 1951 he was ordered to the staff of SHAPE, where he served as logistics officer under Generals Eisenhower and Gruenther. Captain Greenhalgh received his education at the University of Pennsylvania. In the field of foreign affairs, he studied under former Ambassador to the U.S.S.R. George Kennan, and Father Edmund Walsh, of Georgetown University.

To give Captain Greenhalgh's article wider circulation as well as to record it in the permanent annals of the Congress, under leave accorded to extend my remarks, I quote the indicated article:

GEOPOLITICS AND NATIONAL POWER

(By William T. Greenhalgh, captain, U.S. Navy)

In these days of international confusion which call for swift and drastic national actions, it is important to be fully aware of the basic philosophies upon which American foreign policy is based and to manifest an interest in how these policies are affected by current events. If they are not understood, it is possible to arrive at erroneous interpretations of the events or actions.

Many of the factors and recommendations included here have been expressed before, but the passage of time sometimes puts old problems in new settings; and it may be the essence of great wisdom to make time the creative ally of diplomacy. Even though history is moving with long and rapid strides, previously proposed courses of action cannot be discarded without careful consideration, for they may involve new and dynamic courses which are vitally necessary. The world today is begging for words of guidance to cheer its toilsome march across the chasm of these perilous years.

Geopolitics, as a science, affects philosophies and policies both foreign and domestic. It is far broader than the two aspects expressed in its title—geography and politics. It also involves national and racial attributes, national traditions, social mores and customs, environment of the people, and to a very large extent, military philosophies such as those expressed by Clausewitz and Mahan and to some extent by national leaders and statesmen.

Geopolitics can be for the thinker a kind of extension in space and time of his experience, a deepening and a widening of his private world. Even though it may seldom move one emotionally, it can give the inquisitive and imaginative mind a magnificent ranging ground.

The present overall strategic policies of the United States and the U.S.S.R. have their basis in the geopolitical theories set forth some 50 or 60 years ago. While time and the accelerated progress in technology have challenged the validity of these theories, it is essential to understand them and the effect that they have had in the last half century. Today it may be vital to examine even visionary philosophies in an effort to find either a catalyst or a dynamic counterphilosophy to communism.

For example, the tallest buildings are nothing more than an extension of the earth's surface—manmade caves constructed from materials taken out of the earth and transformed and fashioned into shapes suitable to current desires. Such structures would never be built without knowing the strengths, the tensions, and the wearing qualities of the materials used or all facts concerning the foundation. The same is true in the building of geopolitical philosophies and the formulation of foreign policies. While others may be charged with the responsibilities of creating such philosophies and policies, it is, nevertheless, vital for everyone affected by them to be fully aware of the basic concepts underlying their adoption.

BASIC EARLY PHILOSOPHIES

Seapower: In 1890 Adm. A. T. Mahan developed his theory of insular dominance. He pointed out[1] that nations may rise or fall but no nation may stand still. He believed that expansion was essential to national greatness. His theory was that to expand, a nation must be wealthy; to be wealthy, it must have a large and prosperous foreign trade; to have a large and prosperous trade, it must have a large navy. Insularity, according to Mahan, was an invaluable asset in the struggle to control the sea. No state with insecure land frontiers could compete for maritime primacy with a comparably strong state that was completely insular; hence, the state which controlled the oceans and narrow seas could be the leader in world politics through its grip on the seaborne movement of commerce and military forces.

Mahan believed that a physically secure base, such as an insular base, would be free of the economic burden of having to defend insecure land frontiers. This is exemplified by Great Britain and the NATO forces in Europe.

Fifty years ago Mahan predicted that America's possession of an economically strong and secure insular base of continental proportion might well be the means of her succeeding Great Britain as the dominant maritime power of the globe.

Landpower: The theory that landpower was more essential than the development of maritime supremacy was first advanced by Sir Halford K. Mackinder, when he challenged the maritime supremacy theories of Admiral Mahan in 1904.[2]

Mackinder's concepts were formulated around the greatest land mass—Europe, Asia, and Africa—which he aptly named the world island. He considered the world island to be composed of two very different regions, with the rest of the world lying in a third region. Of the two regions comprising the world island, the first included the interior of the Eurasian land mass, dependent upon overland communications and relatively inaccessible to the influence or domination of seafaring peoples. This he named the heartland of Eurasia. The second region was exterior, comprising those outer areas of the world island which are generally accessible to the sea and dependent upon sea communications for a large element of their economic strength. The maritime outer region he named the coastland or inner crescent of the world island.

Mackinder warned that if some central European power were to unite the advantages of the heartland with the advantages which would accrue through access to the sea, there might arise a combination of land and sea power that could easily dominate the world. He feared that possible leadership for just such a superpower could be found in the Germanic peoples of central Europe.

It was not until 1919, however, that the strategic concept of Mackinder's theories was made known to the world. In that year he published his "Democratic Ideals and Reality," a book addressed to the Allied statesmen then sitting at the peace table following World War I. In it he pointed out the ever present threat to the peace of Europe through German-Russian rapprochement or through German domination of Russia. He cautioned his readers that: who rules Europe commands the heartland; who rules the heartland commands the world island; and who rules the world island commands the world. He feared that Germany would get control of Russia and in time accomplish the conquest of the world.

APPLICATIONS OF THE HEARTLAND THEORY

The world ignored Mackinder's warning but one man studied it carefully. Gen. Karl Haushofer, a German soldier and scholar, combined the theories of earlier geopolitical scholars with the thoughts expressed by Mackinder. He saw in these theories a logical plan for German conquest.

The story is told that Rudolf Hess, a disciple of Haushofer's took him to see Hitler in the Landsberg jail. From this and subsequent visits came chapter XIV of "Mein Kampf"—Mackinder's heartland theory twisted to Germany's ends. And to this theory Hitler added action.

Haushofer's aim was to bring about a tripartite alliance between Japan, Russia, and Germany. But, as is well known, this was not to be. Nazism and communism included an identical objective—world revolution and eventual domination. They jointly expressed the two most dynamic principles in the European balance of power and were historically and politically destined for eventual collision. Both secretly understood the nature of the breathing spell afforded them by the Russo-German nonaggression pact of 1939. They knew it to be merely a breathing spell to prepare for the inevitable struggle between the two titans, between the two philosophies of political and economic life most concerned with the domination of the heartland. It must be recognized that the U.S.S.R. was thrown not so much into the camp of the Allies as back into her original domestic defense position respecting Nazi Germany. She was fighting with the Allies against a common enemy, but neither guaranteeing nor underwriting the common objectives of the United Nations. This fact was not understood, or else it was ignored, by many of America's leading statesmen.

On the other hand, Japan was convinced that an alliance with Germany and Russia would assist in securing Asia for the Asiatics with Japan calling the plays. Fortunately for the world, Tojo and Hitler failed to heed fully Haushofer's warnings. With Russia lost to the alliance, he counseled Japan to strike first against the British Pacific Empire and the other European

[1] In his book, "The Influence of Seapower Upon History."

[2] In a paper presented before the Royal Geographic Society that year.

colonies in the Pacific. His advice to Hitler was to direct the Nazi conquest primarily toward the Middle East with the idea of meeting the invasion forces of Japan somewhere in India. Thus both the heartland and the interior of the Chinese mainland would be cut off and isolated.

Instead of turning south, however, Japan started her drive on the continent of Asia. At the other end of the Berlin-Tokyo axis the clash with Russia became inevitable.

With the defeat of Germany and Japan, the heartland extended its tentacles in all directions. While seizing Eastern Europe and buffer areas in Asia, the Kremlin also attempted to gain control of areas in north Africa and the Middle East (Tripolitania and the Kars-Erzurum area of Turkey). Failing in the latter attempts, the U.S.S.R. has consistently tried to foster the creation of a Kurdistan Republic—to be carved out of Turkey, Iraq, and Iran—which would seal off all entrances to Soviet territory through the Middle East. All of these moves follow the heartland theory and its ultimate aim of controlling the world island.

CONTAINMENT AND THE RIMLAND THEORY

But how do the geopolitical ideas tie in with American attempts to halt this growing Red tide? Shortly after Mackinder advanced his heartland theory, the late Prof. N. J. Spykman, of Yale, pointed out what he believed to be fallacies in the Mackinder theory. Among others, he felt that the inner crescent, composed of the Mediterranean Basin, the European Peninsula, and the Asiatic coastlands, with its seapower and its own natural barriers, was of greater strength and power than the heartland. He paraphrased Mackinder by saying that who controls the Rimland, or inner crescent, rules Eurasia; who rules Eurasia controls the destinies of the world. Apparently the United States and other allied nations, either by choice or necessity, favor the rimland theory. This, of course, accounts for the accent on Western Europe and the determination to hold Japan, Formosa, and southeast Asia, and foster the American position in the Middle East. This, in essence, is the containment policy.

Containment means, first of all, the prevention of the extension of Communist control into the rimland—a policy which was inaugurated officially back in 1947 with American aid to Greece and Turkey. The philosophical basis for the pursuit of such a policy has often been cited as set forth in an article entitled, "The Sources of Soviet Conduct," by George F. Kennan, career Foreign Service officer.

Kennan's thesis rests on the premise that there are two basic facts: First, that the Russians live in a vast, defenseless plain, where they have always been surrounded by hostile forces; and, second, that their society and culture have ever been weak, disorganized, and primitive, according to Western standards. As a result, Kennan contends, the Russians have traditionally suffered from a sense of insecurity and their rulers from feelings of inferiority. They have always been consumed by fear—fear of foreign penetration; fear of what would happen if the Russian people learned the truth about the world outside, or if foreigners learned the awful truth about the world inside; fear of direct contact between the Western World and their own. Thus, Russia's rulers have learned to seek security only in waging a patient but deadly struggle for the total destruction of rival power—never in compacts and compromises with it.

The advent of Marxism in Russia, Kennan holds, and its doctrine of the irrepressible conflict between Marxism and capitalism, is just a convenient vehicle, serving to enhance the concept of Old Mother Russia encircled on all sides by hostile forces. It has served merely to provide Russia's rulers with a plausible apology and justification for the exercise of autocratic power, and with an intense faith in the ultimate triumph of Russia's cause, without the urgency of adhering to any fixed timetable to insure ultimate success.

To Kennan the most effective policy for the West is a long-range containment effort, pursued as steadily, patiently, and resourcefully as the policy pursued by the Russians. This involves the diligent application of Western power at a series of constantly shifting geographical and political points, corresponding to the shifts and maneuvers of Soviet policy. The West must confront the Communists with unalterable counterforce at every such point. The United States must demonstrate to the world that she is capable of dealing successfully with her own internal problems, that she is a country that knows what she wants, and that she possesses a spiritual vitality capable of holding her own among the major ideological currents of the time.

In summary, Kennan believed that such a program of continuous pressure applied from the outside, if vigorously pursued for a period of 10 to 15 years, would so frustrate and disillusion Russia's leaders as to result in either a genuine mellowing of Soviet power or its complete collapse.

Considerable encouragement has been found by Mr. Kennan in the trend of events in Eastern Europe during the last year such as Zhukov's dismissal, and the outbreaks in Hungary and Poland. Soviet communism today remains what it proclaimed itself to be 40 years ago—a threat to the non-Communist world. But the nature of the threat has changed. There was a real possibility that the bitterness and frustration generated by World War I (and to some extent World War II) would turn men's minds to communism and touch off revolutions in other countries besides Russia. In those days Russia was militarily helpless to the point of impotence; propaganda and examples were the weapons of the Communist government.

Now, except possibly in some of the more backward areas of Asia, Communist Party propaganda has lost much of its power of appeal. Soviet living conditions are not calculated to induce workers or anyone else to embrace its theories in the hopes of reproducing these conditions in other countries.

But, rapid Soviet mastery of deadly weapons and a willingness to brandish these weapons for purposes of blackmail pose new and worse threats.

Today the sea and air power of the Western allies depend upon the fringing rimlands of Eurasia and the bordering islands and continents, such as Africa, for forward bases. This insular concept of strategy was entirely valid in the days before the airplane and the atomic bomb and it still has some validity today. But island bases, fringing continental land masses such as Great Britain, Japan, and Formosa, are less secure in the age of airpower and hydrogen weapons than in the decades when surface ships were supreme.

Around the Eurasian periphery—on the continental rimland and the fringing islands—the United States and its allies have the advantage of hundreds of air and naval bases, which virtually encircle the Communist heartland. The Communists, on the other hand, would have no such bases in the Western Hemisphere; attacks on the United States would have to cross great distances of sea and air. This condition has made the development of the intercontinental ballistic missile (ICBM) a Soviet necessity, while shorter range missiles and bombers are still suitable for the West.

THE WAY TO PEACE AND FREEDOM

The American defense problem in the age of nuclear plenty is twofold. She must maintain her strategic power, enough of it so that any prospective enemy must believe that he cannot survive a war against it. Such strength will serve as a deterrent to prevent general war. Equally, America must be prepared to exert her force successfully in limited conflicts. The two requirements are parallel. Neither has priority; both are necessary. America faces destruction if she becomes incapable of an annihilating stroke, but she can just as surely be destroyed piece-by-piece if she cannot manage the so-called little threats. It might take longer to destroy her that way, but probably not much. She cannot sit idle while her foundations are chiseled away. And, of course, it is also true that little threats can bring on general war if they are not adequately dealt with at the start.

Advances in transportation and communication have made a smaller world, into which the tremendous destructiveness of nuclear weapons must be crowded. Someone has suggested that the United States and the U.S.S.R. are like two deadly enemies locked in a small room, each armed with a hand grenade. For this problem, the analogy may be refined by assuming that Russia also has a knife. If America does not provide herself with a weapon to parry Russia's knife, she can be cut to ribbons, with no defense that is not also suicide. If America should also have a knife she is then in a position to put up a suitable defense, and possibly find a way out of the room.

The Soviet cold war tactics will succeed only if America and her allies fail to move together. It is imperative to recognize that the Soviet Union and her satellites are employing a combination of military, political, and economic techniques all over the world to achieve Communist ends. The West requires no less an integration of its own strategy, and must realize that wise use of economic and political power is just as necessary as increased military power.

In the postwar years the non-Communist countries, even though they differed among themselves in opinions, desires, and needs, have been pushed together by the pressure of a common opponent and a common danger.

There may have been a time, long before written history was set forth when primitive people, huddled over their fires with the cold and darkness pressing in on them, realized with some suddenness that they must be brothers if they were to withstand the perils of the wilderness. Something like that has happened today. The fire America and her allies cherish and strive to keep alive is the bright flame of civilization and freedom. The cold and darkness are the possibilities of Communist despotism menacing the human spirit. Much that was good came from the conquest of the old and simpler danger. Perhaps the new danger also carries some reward, for when freedom is menaced it is valued the more; when civilization is attacked it is realized how bleak the world would be if the attack were to succeed. Americans must not merely oppose the Communist terrorism but hold up to the world a glowing and warmhearted alternative. Let America offer her friends her confidence and cooperation as equal to equal.

America has lived for some time in a kind of winter of the modern world chilled by the cold war. There have been short periods when there seemed to be a coming of spring—a possible end to the cold war, but each time her hopes have been in vain. It might be said of Americans in particular that no people in all history ever wanted more to be let alone. If the thought of American military forces being stationed in Europe, in Asia, or anywhere else overseas is accepted, it is because it is believed that this action, so many miles away, may make it a little more certain that the Americans at home may go more peaceably about their business.

America wants peace and knows that mankind cannot survive without it. Perhaps the peoples of the Communist countries would understand the principles of peace and freedom and meet the West halfway if they could be reached. For this reason America cannot afford to reject completely Communist avowals of goodwill just because she is not convinced of their sincerity. Issues such as unification of Germany and Western mutual influence in the Middle East, where Communist and Western national interests clash, must be made susceptible to negotiation. Naturally, it must be a genuine negotiation in which both sides are no longer looking for the ultimate destruction of an enemy but for the accommodation of a rival in the sincere belief that the survival of both is of more advantage to each than the destruction of either. It would indeed be difficult to make peace with Russian communism; however, peace is not made with the doctrine of communism, but with the national interests of Russia. Unfortunately, it is believed that this is the only way in which the nuclear fires may be escaped, the true creative energies of free society released, and freedom served.

The contest between the Communist and the free world must, therefore, be fought out on the diplomatic battlefields, where the battle will be won or lost by the possession or the lack of certain basic elements which decide international contests on any field. These elements include the imponderable but indispensable support of the moral forces of the world, which must recognize the justice of the Western cause, and which in the long run have toppled even the strongest tyrannies. Equally important are both military and economic strength to permit America to negotiate from a position of strength with a world power which has only contempt for weakness. In both these categories the United States must still aid the free world where necessary, and any reduction in either respect, due to either a false sense of security or a false economy, can spell disaster.

This is the way of diplomacy and power; it can spare America neither trial nor tension, but in the interminable struggle will demand realism and risktaking. It is the only way left to the free people between the distant alternative of full agreement and the near alternative of continued conflict.

TECHNOLOGY, DIPLOMACY, AND POWER

Every great achievement of modern technology may be used to bring to humanity hope and promise if mankind will work together for the common good, or may lead to despair and disaster if used for the purposes of aggression, death, and destruction. So it is with the space satellite. The rocket motors which sent it into the upper atmosphere may be harnessed for a great cooperative scientific assault on the barriers of distance in space, or they may be used to propel destruction upon defenseless millions. The fantastic speed of modern scientific and technical advance permits no procrastination in deciding on the course to take.

Wise, forward-looking diplomacy, supported with effective power, offers free men a rational hope for survival. It will tax them not only in resolution but also in resources. To prevail with diplomacy and power against the Communist world, America must undo its lies with truth and must challenge its threats of aggression with superior power. No more formidable task has ever confronted the American people. No more fearful judgment has ever awaited them should they fail.

OPENING THE BANKERS' EYES TO CREDIT UNIONS

Mr. BURDICK. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. PATMAN] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from North Dakota?

There was no objection.

Mr. PATMAN. Mr. Speaker, last week the American Bankers Association held its 56th Annual Savings and Mortgage Conference in New York.

The American Banker has reported that the bankers attending this conference "got an eye-opening report on one of their liveliest competitors, the credit unions." The eye-opening report in question was delivered by Dr. Rudolf Modley who told the bankers that credit unions now have assets amounting to $4.3 billion and they have share holdings amounting to nearly $4 billion.

These figures bring up some important comparisons, and they raise some important questions for the future of the commercial banking system of the country.

PAID-IN CAPITAL ABOUT EQUAL

First, consider this: The share holdings, of credit unions or what we would call "paid-in capital" in commercial banking, is now about the same as the paid-in capital of all member banks of the Federal Reserve System. On June 23 of last year the paid-in capital of all these banks amounted to only $4.5 billion, or roughly one-half billion dollars more than the paid-in capital of the credit unions.

On that date the paid-in capital, plus notes and debentures of all insured commercial banks in the country, came to only $5.3 billion. In the case of all insured commercial banks, I do not have a separation of the figures as between capital stock on the one hand and the notes and debentures on the other. But that is unimportant.

The contrasts in the ways which the credit unions and the commercial banks use their paid-in capital make the interesting points.

SEVENTY-SEVEN BILLION DOLLARS OF GOVERNMENT OBLIGATIONS ON CREATED MONEY

As has beeen noted, the total assets of the credit unions are only $4.3 billion—only slightly more than their paid-in capital. Unlike the commercial banks, the credit unions do not create money. Credit unions have a certain amount of money invested, by their members, and they can lend and invest no more than the members have put in. They can make loans to their members. They can invest in certain amounts of U.S. Government securities and in insured building and loan and savings and loans institutions.

The commercial banks, on the other hand, create money. As of June 23, 1958, the insured commercial banks, on their $5.3 billion of paid-in capital, had acquired and were holding $63.5 billion of interest-bearing obligations of the U.S. Government. These holdings of U.S. Government obligations alone amounted to about 12 times the amount of their paid-in capital.

In addition, these banks held at least $13.7 billion of tax-exempt obligations of the States and subdivisions. This was the amount of such obligations which they held at the end of 1957, and such holdings have long been on the increase. It is probable that by midyear 1958 their holdings of these obligations were substantially larger.

All of the assets of the insured commercial banks on June 23 came to $225.9 billion. These assets included, in addition to the securities I have mentioned, $95 billion in loans outstanding to business, consumers, security dealers, and so on, and included about $43 billion in cash.

On the liability side of the account, insured commercial banks had, of course, some earnings on their paid-in capital which had not been distributed to the stockholders. In other words, there are earnings from previous years on the created money which by one method of comparison should be counted as invested capital. These banks had on June 23, $3.7 billion of undivided profits; $8.4 billion of surplus, and about $0.5 billion in reserves which, when added to capital, makes a total capital account of $17.9 billion. If we compare their total capital account to their holdings of U.S. Government obligations, we find that their holdings of these obligations amount to 3½ times their total capital account.

PRIVILEGES TO BANKS INTENDED FOR SERVICES TO LOCAL COMMUNITIES

I have some serious reservations about allowing the commercial banks to create money—which is done on a delegation of the power of the U.S. Government—to acquire U.S. Government securities and tax-exempt securities of the State and local governments. If it is wise to allow the commercial banks to do this, should the law be amended to permit the credit unions to operate on a fractional-reserve system and create money to buy and hold these kinds of securities?

The original idea which justified all the privileges extended commercial banking—the privilege of chartering, with limited monopoly protection, the privilege of creating money on the credit of the United States, and so on—was that the commercial banks would use these in service to the local communities. It seems to me the commercial bankers are getting too far away from their proper function—serving the credit needs of their local communities when they become simply holders of securities of the United States and tax-exempt securities of the State and local communities.

THE CORNEY DRAINAGE SYSTEM

Mr. BURDICK. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. DINGELL] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from North Dakota?

There was no objection.

Mr. DINGELL. Mr. Speaker, the State of Louisiana is proud of its fishing and hunting areas, made possible by a plentiful supply of surface waters. Many of these are parallel streams which flow from southern Arkansas into Louisiana, thence to the Ouachita River. One such system of streams and bayous is called the Corney drainage system, consisting

of Corney Lake, Corney Creek and other tributaries.

Once the Corney Drainage System was an abundant source of fish and small game, an established recreation area, supporting commercial fishing, trapping, and providing water for livestock.

In southern Arkansas, however, oil was discovered. Large fields of oil wells sprang up along the borders of streams which formed the Corney system. Although the operation of these wells brought in valuable oils, also supplied in even greater quantity was an utterly valueless byproduct a brine of high salt and acid content.

Getting rid of the large volumes of brine was most cheaply accomplished by discharging them to the surrounding land from which they made their way into the waters of the Corney drainage system. Later, holding pits of earthern walls were hastily constructed by bulldozer operation. These were far from waterproof and the brines continued to seep into the nearby surface streams. Residents of the sportsmen's paradise in Louisiana soon found that the blessings of oil enjoyed by Arkansas signified a curse to themselves.

Pollution of these waters became so severe and complaints mounted so high, that the Public Health Service, under its enforcement powers, was called in to conduct a hearing, to look into the matter. Witness after witness took the stand to testify about the ways in which the pollution from Arkansas was damaging the stream, their uses of it, and their properties. They told of large-scale fish kills, corroded metal boat parts, disintegrated fishing lines, and the disappearance of the formerly abundant fish and wildlife. Farmers who depended upon the stream as a source of water for livestock were compelled to sell their cattle and, in one case, abandon land which, once flooded by the acid-laden waters, could no longer produce crops.

One farmer, relating his experiences, indicated the nature and effects of the water in the following colloquy:

Question. When you noticed the bad effects of this water, did you taste it?

Answer. Man, it stunk so bad you couldn't afford to taste it. Too much slime in it, and stuff like that * * * I had a nice peach orchard, selling peaches every year, and I had this land all plowed up and broke up there, and this overflow backed in on it there, and in 6 weeks' time every tree was dead.

Another farmer, in matter-of-fact language that masked what must have been a personal economic catastrophe, described how the polluted water affected him.

Question. Will you explain what you were doing on those 90 acres of land and what occurred to you?

Answer. Well, we used it mostly as a dairy farm. We had a lot of other land rented that we also used, and in 1952 pollution hit us; we felt a little results of it. In 1953 it almost got us; and in 1954 it completely got us.

Question. When you say it completely got you, what happened?

Answer. We quit.

Question. How many head of cattle did you have?

Answer. We had a total of about a hundred and thirty or forty head.

Question. What did you do with them?

Answer. We lost 96 head of them, they died.

Question. What happened to the timber along the creek where the creek overflowed?

Answer. It began to die, and also, the land it backed out on, approximately 60 or 70 acres, it ruined it totally as a pasture and as farm land.

A trapper told of how his business of trapping along Corney Creek was damaged:

Everything has been killed in the creek, and the furbearing animals has done quit traveling it. They don't feed there any more; there's nothing there for them; not even a frog.

And another citizen of the area who spent several thousand dollars building a private camp along the waters of the creek was forced to give up the use of it because of the pollution:

Of course the loss to me has been the loss of the use of my camp which has been rendered entirely useless, but the principal loss to me is the loss in my family recreation with my two boys whom I used to be able to take out of school at three o'clock in the afternoon and take them up there for a nice fishing trip.

As a consequence of this testimony, the Public Health Service compelled the oil-well operators to install equipment for pumping brines back into the wells themselves in order to avoid further contamination of the streams. Despite these installations, because the soil in the area has been so thoroughly impregnated with brines which still wash into the stream each time it rains, it will be years before the waters of the Corney drainage system are restored to their former quality.

NATIONAL MILK SANITATION BILL

Mr. JOHNSON of Wisconsin. Mr. Speaker, on Monday, March 9, a number of my colleagues from Wisconsin, Minnesota, and Iowa and I called to the attention of the House the national milk sanitation bill we are sponsoring. My bill is H.R. 3840. On the afternoon of that day, Al Stedman, an outstanding editorial and feature writer, farm editor, and recognized authority on Federal milk sanitation standards and milk orders, wrote an editorial in the St. Paul (Minn.) Pioneer Press, entitled "Uncle Sam's Milk." This is one of the leading newspapers in the Midwest. In this editorial, he calls attention to what is going on under our eyes in the way of a new Federal milk order in the Washington area. This order is so far-reaching that—and I quote Mr. Stedman's editorial—"it applies itself to sales of milk to all Government agencies, whether Federal, State, or local. This includes all defense agencies and military posts, docks, wharves, piers, and ships in the Nation's key defense area. And it applies specifically to fresh or frozen concentrated milk that can be and often has been sold to Government defense agencies at economical costs to them." Mr. Stedman also states: "Finally, an order omission opens the way for Washington area milk prices and Government milk costs to rise as high as the artificial restriction of supply helps push them. The order regulates supplies but not prices."

Mr. Speaker, I include with my remarks the article by Mr. Stedman along with the proposed Federal milk order. I think it would be well if the proper committee would look into this new Federal milk order, as it will affect our Armed Forces in the Washington, D. C., area.

Mr. Stedman's article follows:

In formidable and bipartisan strength, Midwest House Members in Washington this afternoon will raise for later decision a key issue. This is the question of abolishing Federal, State, and municipal barriers against freedom of interstate commerce in milk of established wholesomeness and quality. Their abolition would be achieved by enactment of the Lester Johnson bill.

Special target will be the new Federal milk order now being proposed for the Washington area by the U.S. Department of Agriculture. This amazing 15,000-word Government edict would regulate milk supplies for the District of Columbia and nine surrounding counties in Virginia and Maryland. The order is in itself a summation of types of milk barriers being used to wall out milk that can compete with local dairy monopolies.

The order starts by complaining against "increasing competition" from such outside milk. It proceeds to impose the usual Federal restrictions plus some more. Then it gives special Federal sanction to milk regulations of surrounding municipalities. Thus it authorizes them to bar any outside milk they choose by simple refusals to inspect, as Washington already does.

From that point, the proposed order applies itself to sales of milk to all Government agencies whether Federal, State, or local. This includes all defense agencies and military posts, docks, wharves, piers, and ships in the Nation's key defense area. And it applies specifically to fresh or frozen concentrated milk that can be and often has been sold to Government defense agencies at economical costs to them.

Finally, an order omission opens the way for Washington area milk prices and Government milk costs to rise as high as the artificial restriction of supply helps push them. The order regulates supplies but not prices. Its stipulated prices are merely minimums. Right now actual Washington area milk prices are much above the order's show-window figures.

Of course, the 2,000 or so dairy farmers supplying that market have a natural advantage due to location and hauling costs that cannot be taken from them. But why deliberately erect artificial barriers on top of the natural one? Our Government claims to be founded on principles of freedom of competition and enterprise. These principles can be applied in ways that treat Government suppliers fairly. Or, in the face of severe budget problems, they can be flouted to discriminate between citizens and inflate Government costs.

Midwest dairying asks that these principles be reaffirmed by enactment of the Johnson bill. Our farmers, cooperatives, and milk handlers are Americans, too. They pay taxes to the Government. Their sons help man its defenses. They ask Congress by enacting the Johnson bill to get rid of such harmful and costly discriminations as the proposed Washington order exemplifies.

[From the Department of Agriculture, Agricultural Marketing Service, 7 CFR pt. 902, Docket No. AO–293]

HANDLING OF MILK IN WASHINGTON, D.C., MARKETING AREA—NOTICE OF REVISED RECOMMENDED DECISION AND OPPORTUNITY TO FILE WRITTEN EXCEPTIONS THERETO WITH RESPECT TO PROPOSED MARKETING AGREEMENT AND ORDER

Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure, governing the formulation of marketing agreements and marketing orders (7 CFR pt. 900), notice is hereby given of the filing with the hearing clerk of this revised recommended decision of the Deputy Administrator, Agricultural Marketing Service, U.S. Department of Agriculture, with respect to a proposed marketing agreement and order regulating the handling of milk in the Washington, D.C., marketing area. Interested parties may file written exceptions to this recommended decision with the hearing clerk, room 112, Administration Building, U.S. Department of Agriculture, Washington 25, D.C., not later than the close of business the 10th day after publication of this decision in the Federal Register. The exceptions should be filed in quadruplicate.

Preliminary statement: A public hearing on a proposed marketing agreement and order was called by the Agricultural Marketing Service, U.S. Department of Agriculture, following receipt of a petition filed by the Maryland and Virginia Milk Producers Association. The hearing was held in Washington, D.C., on April 8–19, 1957, pursuant to a notice duly published in the Federal Register on February 27, 1957 (22 F.R. 1116). The period until June 14, 1957, was allowed interested parties for the filing of briefs on the record.

Upon the basis of the evidence introduced at the hearing and the record thereof, the Deputy Administrator, Agricultural Marketing Service, on May 26, 1958 (23 F.R. 3719), filed with the hearing clerk, U.S. Department of Agriculture, his recommended decision on all issues except the issue of class I price. It was stated in the decision that the hearing would be reopened to receive further evidence on this issue. The period until July 2, 1958 was provided for the filing of written exceptions to the recommended decision.

The reopened hearing was held on September 22–25, 1958, pursuant to a notice duly published in the Federal Register (23 F.R. 6909). The notice set forth a revised class I price proposal made by the proponent cooperative association and stated that interested parties might submit additional evidence on all issues included in the original hearing notice. The period until November 3, 1958, was allowed interested parties for the filing of briefs on the record.

In arriving at the conclusions and recommendations set forth in this revised decision consideration has been given to the record evidence of the reopened hearing and to the exceptions filed to the initial recommended decision.

The material issues of record related to:

1. Whether the handling of milk in the market is in the current of interstate commerce or directly burdens, obstructs or affects interstate commerce in milk or its products;

2. Whether marketing conditions justify the issuance of a marketing agreement or order; and

3. If an order is issued what its provisions should be with respect to:

(a) Scope of regulation;

(b) The classification of milk;

(c) The level and method of determining class prices;

(d) The method to be used in distributing proceeds among producers; and

(e) Administrative provisions.

Findings and conclusions: Upon the evidence adduced at the hearing and the record thereof, it is hereby found and concluded that:

Character of commerce: The handling of milk in the Washington, D.C., marketing area is in the current of interstate commerce and directly burdens, obstructs, or affects the handling of milk and its products.

The Washington fluid milk market is an interstate market encompassing not only the District of Columbia but the immediately adjacent counties of both Maryland and Virginia. Within this market there is a substantial and continuing interstate commerce, both in the procurement of milk and in the sale of fluid milk and its products.

The District of Columbia which is but a part of the area comprising the whole market, is entirely urbanized and must rely completely on movements of milk in interstate commerce for its supply. Milk for the market is regularly supplied by dairy farmers in the four-State area of Maryland, Pennsylvania, Virginia, and West Virginia. Statistics presented by the Maryland and Virginia Milk Producers Association, whose members produce approximately 90 percent of the total market supply, indicate that for the month of March 1956, 49 percent of their milk originated from farms located in the State of Virginia, 46 percent from farms in the State of Maryland, 2 percent from farms in the State of Pennsylvania and 2 percent from farms in the State of West Virginia. In addition, at least two substantial handlers in the market procure their milk supply from other sources. One of these dealers procures his supply through the Capitol Milk Producers Association from farms located in the States of Virginia and Maryland. The other dealer, whose bottling and distributing plant is located outside the District of Columbia in the State of Maryland, procures his supply primarily from two cooperative associations, one of whose plants is located in the State of Pennsylvania and the other in the State of Virginia. Milk from the Virginia plant is supplied by dairy farmers located in Virginia and in West Virginia. The milk from the Pennsylvania plant is supplied by dairy farmers in Pennsylvania, Maryland, and in West Virginia.

Distributors whose plants are located in the District of Columbia have regular and substantial route sales, both wholesale and retail, extending into the adjacent counties of both Virginia and Maryland. One such distributor also makes regular sales into the State of Delaware as well as on the Eastern Shore of Maryland and Virginia. Distributors whose plants are located in nearby Maryland and distributors whose plants are located in nearby Virginia regularly compete with distributors whose plants are located in the District of Columbia for contract sales to Federal and/or State installations in the District of Columbia and in Maryland and Virginia. One substantial handler processes and packages frozen concentrated milk at his Washington, D.C., plant which milk is later transported to naval installations in the State of Florida. In addition, the Maryland and Virginia Milk Producers Association makes substantial spot sales of bulk milk to outlets in the States of New Jersey, North Carolina, and Florida.

Milk produced for the local fluid market, but which may be in excess of current fluid needs, is processed into manufactured milk products in nearby manufacturing plants which products are sold on the national market in competition with similar products from all parts of the country. In addition manufactured dairy products such as cottage cheese, sour cream, and ice cream are distributed in the local market from sources outside of the District of Columbia or the States of Maryland and Virginia.

From the foregoing it is evident that the vast majority of the milk in the Washington market does move in the current of interstate commerce and directly burdens, obstructs or affects interstate commerce of milk and its products.

Need for an order: Marketing conditions in the Washington, D.C., marketing area justifying the issuance of a marketing agreement and order.

For a period of about 14 years from February 1940 to August 1954, marketing conditions in the Washington market were, in general, orderly and stabilized. During the period from February 1940 until April 1947 the market was regulated under Federal Order 45. That order was terminated effective April 1, 1947, at the request of the Maryland and Virginia Milk Producers Association, a cooperative association representing the majority of the producers supplying the market. Throughout the period in which the order was in effect the market was generally in short supply and supplemental outside milk was regularly imported to meet the fluid needs of the market. After the termination of the order the market continued to be in short supply until early in 1951. Throughout the period in which the market was in short supply the blended prices returned to all producers on the market were very near the class I price.

Subsequent to the termination of the Federal order the Maryland and Virginia Milk Producers Association continued to market the milk of its producer-members on a classified use basis and to return a blended price to its members. The Capitol Milk Producers Association, which markets the milk of its producer-members through one substantial handler in the market, on the other hand, has sold the milk of its members on a flat price basis which price has approximated the blended price which the Maryland and Virginia Milk Producers Association has returned to its members. The handler who purchases this milk has maintained a very high Class I utilization, currently about 95 percent. The utilization of the Maryland and Virginia Milk Producers Association, while varying, has in some months of 1956 been as low as 65 percent in class I.

A substantial handler who prior to October 1, 1954, purchased his milk from the Maryland and Virginia association on a classified use basis now purchases his milk from two cooperatives, one in Virginia and one in Pennsylvania, on a negotiated flat price basis. The handler's current utilization approximates 95 percent of class I. The loss of this class I outlet has increased the volume of milk from members of the Maryland and Virginia Milk Producers Association utilized in manufacturing uses, thus lowering the blended prices returned to the members of this association, and indirectly, the returns to members of the Capitol Milk Producers Association whose milk is purchased on a price related to the Maryland and Virginia blended price. At the same time the advantage which the handler buying milk through the Capitol Milk Producers Association has maintained over other handlers in the market in the cost of class I milk has been further enhanced. The record evidence does not reveal the prices paid by the one handler to the two cooperatives who supply his needs. However, it does show that the prices paid to the two cooperatives are not necessarily the same and do vary from month to month.

The trend of increasing milk supplies in the Washington market is typical of the

dairy industry generally throughout the country. With the increase in milk supplies locally and in adjacent markets, Washington handlers who purchase their milk on a classified use basis have encountered increasing competition in their regular route distribution as well as on contract sales to Federal Government installations. Government contract purchases in the Washington area represent a substantial part of the total class I sales in the market. In recent years Washington area handlers have encountered increased competition from outside dealers using milk surplus to their normal market with the result that bid prices to supply class I milk to Government installations currently reflect values only slightly in excess of milk disposed of in manufacturing use.

In an effort to preserve their established class I outlets the Maryland and Virginia Milk Producers Association has priced milk to its buyers at prices calculated to meet the competition from the flat price buyers in their regular trade and the outside dealers on contract business for Government installations. One substantial handler testified that his company paid as many as six different class I prices for the same quality milk. This must be presumed to be typical of all other handlers in the market since the association witnesses pointed out that all of the regular buyers purchasing milk for any particular outlet were charged the same prices. Notwithstanding the efforts of the local producers to hold their class I outlets, local handlers have not been entirely successful in holding the contract business.

The Maryland and Virginia Milk Producers Association currently supplies nearly 90 percent of all the class I milk for the market and an even greater proportion of the reserve supply. In earlier years arrangements with one of the larger handlers in the market who maintains a receiving and manufacturing plant at Frederick, Md., provided a basis whereby the cooperative association could direct milk to the several handlers in the quantities and at the time needed. Milk not needed for fluid uses was held at the Frederick plant for manufacturing uses. In order to better service the market and to return the highest possible prices to its producer-members the association in 1955 acquired its own manufacturing plant. This acquisition has provided substantially greater flexibility in marketing on the part of the association. Notwithstanding, the loss of class I outlets, and the extensive price cutting which has prevailed over an extended period, have resulted in increasing market instability, which if continued, may lead to a complete breakdown of the marketing system. This situation constitutes a continuing and serious threat to a dependable supply of pure and wholesome milk for the Washington area.

It is concluded that the issuance of a marketing agreement and order for the Washington market will contribute substantially to the stabilization of the fluid milk market and will tend to effectuate the declared policy of the act. The adoption of a classified price plan based on audited utilization of handlers will provide a uniform system of pricing of milk to all handlers and will assure a fair division of returns to all producers. The public hearing procedure required by the Agricultural Marketing Agreement Act will provide opportunity for representation of producers, handlers, and to the public to present information on marketing conditions and participate in the determination of prices for milk in the area.

The marketing area: The Washington, D.C., marketing area should include all of the territory in the District of Columbia; the city of Alexandria and the counties of Arlington, Fairfax, Prince William, all in the State of Virginia, and the counties of Prince Georges (exclusive of the corporate limits of the town of Laurel), Montgomery, Charles, and St. Marys; the southern portion of Calvert County, and the southern portion of Frederick (including the city of Frederick), all in the State of Maryland, together with all piers, docks, and wharves connected therewith and including all territory within such boundaries which is occupied by Government (municipal, State, or Federal) installations, institutions, or other establishments.

The maximum area of regulation as set forth in the several proposals contained in the hearing notice included, in addition to the area herein proposed, the counties of Accomack and Northampton in Virginia and the counties of Talbot, Dorchester, Wicomico, Worcester, Somerset, the remaining portion of Calvert County and portions of the counties of Washington, Howard, and Anne Arundel, and the town of Laurel in Prince Georges County, all in the State of Maryland.

The population of the area as herein proposed, according to the 1950 census, is in excess of 1,500,000 persons, of which approximately 800,000 are in the District of Columbia. Unofficial population estimates introduced in the record of the hearing indicate an overall population growth in this area from 1950 through 1956 of more than 33 percent, the greater part of which has taken place in the nearby Maryland and Virginia counties. The principal populated areas outside of the District of Columbia include: Alexandria, Arlington, Falls Church, Fairfax and Manassas, Va.; Bethesda, Chevy Chase, Rockville, Silver Spring, Hyattsville, Riverdale, Mount Rainier, College Park, La Plata, Leonardtown, Prince Frederick, and Frederick, Md. The major Federal installations in the area include Andrews Air Base, Bolling Field, Bethesda Naval Hospital, Cameron Station, Fort Belvoir, Fort Myer, Fort McNair, Mount Alto Veterans' Hospital, National Institutes of Health, Naval Air Station, Naval Gun Factory, Naval Receiving Station, Patuxent Air Station, Quantico Marine Base, St. Elizabeths, and Walter Reed Hospital.

Milk for the marketing area as herein proposed is produced under the applicable health regulations of the District of Columbia, or the States of Maryland and Virginia and in some instances local jurisdictions. Milk produced under District of Columbia inspection is sold throughout the area since it is acceptable under all of the applicable ordinances. Milk produced under State or local health inspections, while generally of similar quality, cannot be distributed in the District of Columbia and it is not clear from the record to what extent the respective State or local health authorities accept reciprocal inspection. Distributors from the District of Columbia compete with one another throughout most of the area herein proposed. The greater part of their business is done in the highly urbanized area comprised of the District of Columbia, Montgomery and Prince Georges Counties in Maryland, and the city of Alexandria and the counties of Arlington and Fairfax in Virginia. Throughout this area District of Columbia handlers are the primary handlers. However, they meet substantial local competition in both Virginia and Maryland.

District of Columbia handlers also do the preponderance of the overall fluid milk business in Charles and St. Marys Counties, Md., and are substantial handlers in the southern portion of Calvert County and the Frederick County, Md., area and in Prince William County, Va. These areas, though substantially more rural in character than the other parts of the proposed area, represent substantial sales areas in which District of Columbia handlers operate.

The Frederick County area herein proposed for inclusion was specifically requested by local handlers who are the primary distributors there but who would be brought under full regulation by virtue of the sales which they make into Montgomery County. A local Frederick handler appeared at the reopened hearing to support the inclusion of additional territory in Frederick County, contending that he had substantial business beyond the proposed limits of the marketing area and would be disadvantaged in the sale of milk outside the marketing area in competition with unregulated milk.

The area in question was not noticed in either the original or the reopening notice of hearing and no point in this regard was raised in exceptions filed to the recommended decision. Inclusion of territory not previously noticed in accordance with the applicable rules of practice and procedure cannot be considered on the basis of this record. However, if after an order is promulgated it appears desirable to consider inclusion of additional territory in Frederick County in the marketing area this may be accomplished through an amendment hearing.

It was concluded in the initial recommended decision that all of Calvert County, Md., should be included in the marketing area. On the basis of exceptions filed to the recommended decision and evidence adduced at the reopened hearing, it is now concluded that Baltimore handlers do the preponderance of business in the northern portion of this county and accordingly, that only the area of Calvert County which lies south of Maryland State Highways 507 and 263 appropriately should be included in the marketing area.

Prince William County has experienced a very considerable suburban development in recent years, particularly in the Manassas area. With the exception of the southernmost tip, the county is served exclusively by District of Columbia handlers and by local Virginia handlers who would be regulated by virtue of their business in other parts of the proposed area.

Proponents for inclusion of the Quantico Marine Base contend that under present circumstances the contract milk distributed through the base commissary is a serious disruptive factor over a wide area of Prince William County. The Quantico Marine Base has been a substantial outlet for handlers who will be brought under regulation by the order. While such handlers have not exclusively held this contract they have been the primary suppliers. In order to remove this source of disruption to orderly marketing within the regulated area Quantico Marine Base must be included.

The record indicates that the boundaries of the Quantico Marine Base extend beyond Prince William County into Stafford County. However, that portion of the base in Stafford County is exclusively used as a maneuver and firing range. The inclusion in the marketing area of that portion of the base within Prince William County will encompass all of the administrative barracks, quarters, and sales area of the base and will tend to implement the intent of regulation.

A dealer who operates a plant at Fredericksburg, Va., proposed that the portion of the Fredericksburg area of the Virginia State Milk Central Commission which lies in Prince William County, with the exception of the Quantico Marine Base, be excluded from the marketing area. This particular dealer was the principal proponent for the inclusion of the Quantico Marine Base in the area. It would be impractical to exclude this area if the Quantico Marine Base is included. The extent of business done by this dealer in the immediately surrounding area is such that with little adjustment in his business he may become fully regulated or remain outside the scope of regulation as he deems best. In any event, the provisions of the order are so drafted that he has substantial latitude of choice in the matter of impact

of regulation upon his operations. In the interest of orderly marketing, it is necessary that the entire area of Prince William County be included in the marketing area.

It is intended that the sales of fluid milk from piers, docks, and wharves and to crafts moored thereat be included in the marketing area. It is also intended that the area include all the territory occupied by Government reservations, institutions, or other such establishments whether municipal, State, or Federal if they fall within the limits of the area as defined. The record indicates that in general the quality requirements for milk for such installations are patterned after the U.S. Public Health Standards and are similar to those for milk sold in other parts of the marketing area. These, by location and past performance represent logical areas of distribution for Washington, Virginia, and Maryland dealers who are in substantial competition with one another in the marketing area. Unless they are included, regulated handlers will be placed at a serious competitive disadvantage in competing with unregulated dealers for such sales. The inclusion of these areas will tend to assure uniform and equal costs as between handlers.

The marketing area as herein defined comprises a contiguous, generally heavily populated territory served by the same handlers. Such area is in reality a single milk market, all part of which are regulated by health ordinances generally similar in scope and enforcement, which constitutes a practical unit for the proposed regulation.

The town of Laurel, in Prince Georges County, Md., historically has been served almost exclusively by Baltimore distributors. While Washington area handlers who would be brought under regulation by this order, have some sales there, such sales are a minor portion of their total sales and the inclusion of the town might bring under regulation Baltimore distributors who do the major portion of their business beyond the limits of distribution of Washington handlers.

Although the extreme southern portion of Anne Arundel County and a portion of Howard County were proposed for inclusion in the marketing area, the record provides no basis for determining the extent of business done in this area by Washington dealers and it is not possible to ascertain whether in fact Washington, Baltimore, or local dealers are the primary distributors. It is apparent that distribution here by Washington handlers is not extensive and inclusion of these areas under regulation is unnecessary at this time.

While one substantial Washington handler distributes milk through an independent vendor in the Eastern Shore counties of Dorchester, Somerset, Talbot, Wicomico, Worcester, Accomack, and Northampton, this area is basically rural in character and its inclusion in the area would bring under regulation a number of distributors doing a large portion of their business in other parts of Maryland and the State of Delaware where Washington area handlers have little or no distribution. This distribution by the Washington handler constitutes a minor portion of his overall fluid business. It is neither administratively feasible nor necessary to include within the marketing area all of the territories in which Washington handlers do any business. Ideally, the established marketing area boundaries should encompass that area in which handlers who would be regulated do the preponderance of their business and should leave a minimum of competition with unregulated handlers outside the area. The inclusion of any part of the eastern shore area would not tend to implement this position, but would place local handlers serving the area in a disadvantageous position relative to their competition in their normal area of distribution outside of the marketing area.

Although a portion of Washington County, Md., was proposed for inclusion in the marketing area the record fails to substantiate the fact that any handler who would be regulated is presently serving this area and its inclusion at this time is unnecessary.

Milk to be priced: The plants which distribute milk in the Washington, D.C., marketing area disposed of the major portion of their milk receipts for fluid consumption. Milk intended for fluid consumption in the Washington area is required to be produced in compliance with inspection requirements of the duly constituted health authorities having jurisdiction in the area. The minimum class prices of the order should apply to such milk which is regularly received from dairy farmers at plants primarily engaged in the fluid milk business and which pasteurize and bottle milk for fluid distribution on retail or wholesale routes (including routes of vendors) or through plant stores in the marketing area or which is received at plants which are regular and substantial suppliers of milk to such pasteurizing, bottling or distributing plants. This milk may be identified by providing appropriate definitions of the terms: "Approved plant," "pool plant," "handler," "dairy farmer," "dairy farmer for other markets," "producer," "producer-handler," "producer milk," and "other source milk."

These definitions are designed to identify the supplies of milk on which the market regularly and normally depends. However, under the terms of the order herein proposed milk may be disposed of for fluid consumption in the marketing area by and from plants not meeting such criteria. It is necessary, therefore, to establish definitive standards of performance which may be used in determining which plants and what milk constitute the regular sources of supply and therefore become fully subject to regulation. Such standards are set forth in the order and apply uniformly to all plants wherever located. Any plant, regardless of location, may bring itself under regulation by performing in the manner required. Any plant may relieve itself from regulation by no longer operating in a way that brings it within the scope of the order. Under the circumstances, the decision as to whether a plant will be regulated or unregulated is determined by the decision of the plant operator.

The class I price under a Federal order is fixed at a level which exceeds the value of milk for manufacturing uses. This value or differential over milk used for manufactured dairy products is essential as an incentive to producers to supply the market with an adequate supply of pure and wholesome milk for fluid consumption. The extra cost incurred by producers who supply milk which meets the requirements for class I milk must be borne by that portion of the milk which is marketed as class I milk. Milk in excess of class I uses, although an essential part of the fluid milk business, cannot be expected to return producers more than a manufacturing value. The only outlet for reserve milk not needed for fluid uses is in the form of manufactured milk products and such products must be marketed on a national market in competition with similar products which can be, and are, made throughout the country from ungraded milk.

In establishing an appropriate class I price it is intended that the level shall be such as will attract only that volume of milk which is needed to meet the fluid needs of the local market plus the necessary reserve to assure an adequate supply throughout the year.

Because of the distances that eastern fluid markets are from areas of alternative supply in the Midwest, the price for milk for fluid uses in eastern markets is higher in relation to manufacturing milk values than is the case in the Midwest. Under such circumstances there might be an incentive for dealers in unregulated adjacent markets to seek a class I outlet in the Washington market for temporary or seasonal surpluses in excess of their local market needs. Because of the substantial number of Government installations in the area which procure their milk supplies on a competitive bid basis for relatively short periods there is a considerable opportunity, unless appropriate safeguards are provided, for such unregulated dealers to market milk excess to their local needs at prices below the value of milk for fluid uses. They may do this by bidding off available contracts at such Government installations. This situation, would be a serious disruptive factor to orderly marketing in the Washington marketing area. It is essential, therefore, that the order be constructed in a manner which will safeguard the market from serving as a surplus disposal area for surrounding markets.

As indicated elsewhere in this decision, marketwide pooling of producer returns is considered essential to the stable and orderly functioning of the market. One of the primary problems in setting up a marketwide pool is to establish appropriate standards which accommodate the sharing of class I sales among those dairy farms who constitute the regular source of supply for the marketing area. Performance standards, therefore, should be such that any milk plant which has as its major function the supplying of milk for fluid use in the marketing area would participate in the marketwide equalization pool. On the other hand, such standards should be sufficiently flexible to permit intermittent shipment of milk from supply plants not regularly identified with the local market and direct distribution from plants which have only a minor part of their overall fluid business in the area without subjecting such plants to full regulation.

Full regulation of such plants is unnecessary to accomplish the purposes of the order and might result in placing such plants at a competitive disadvantage in supplying the unregulated but primary markets with which they are normally associated.

Any plant which disposes of milk in the marketing area as Class I milk or which supplies milk to a plant which disposes of class I milk in the area is intended to be an "approved plant." An approved plant other than that of a producer-handler, from which class I milk equal to not less than 50 percent of its receipts of milk from dairy farmers is disposed of in the form of class I milk during the month on routes (including routes operated by vendors) or through plant stores to wholesale or retail outlets and which disposes of not less than 10 percent of such receipts on such routes in the marketing area should be a fully regulated pool plant. The pool plant definition should also include an approved plant which has no direct distribution in the marketing area but which disposes of 50 percent of its receipts from dairy farmers during any month(s) of October through February or 40 percent of such receipts during any month(s) of March through September to another plant(s) which disposes of class I milk equal to 50 percent or more of its receipts from dairy farmers and receipts from other approved plants and which disposes of at least 10 percent of such receipts as class I milk on routes in the marketing area.

Any plant distributing fluid milk in the marketing area and which disposes of less than 50 percent of its total receipts from dairy farmers as class I milk cannot be considered as primarily in the fluid milk business and any distributing plant which does

less than 10 percent of its total fluid business in the marketing area cannot be considered as substantially associated with the local market.

In like manner, any supply plant which during the shortest production months does not ship at least 50 percent of its total receipts from dairy farmers to fully regulated distributing plants cannot be considered as primarily associated with the market. Any such plant which is a pool plant in each of the months of October through February should be a qualified pool plant in each of the months of March through September regardless of the quantity then shipped unless the operator thereof elects to withdraw the plant from regulation. This provision will accommodate the pooling of all milk primarily associated with the market under changing supply-demand relationships which occur from season to season.

A plant which was a nonpool plant during any of the months of October through February should not be permitted pool plant status in any of the immediately following months of March through September in which it is operated by the same handler, an affiliate of the handler or any person who controls or is controlled by the handler. It would be inappropriate to permit a handler pooling status during the flush months of production if his milk were used to supply outside class I markets during the short production months when such milk would be most needed by the local market. This provision, however, will permit a handler, who during certain short production months ships the required percentages, to pool his plant(s) in those months in which the standards are met. If the milk is utilized for other markets during part of the short season, it will not permit the pooling of such supplies during the months of flush production.

It is recognized that the demand for milk from supply plants may vary seasonally and will be greatest during the season of low production. During the months of flush production supplies of milk received at plants located in or near the marketing area may be sufficient to supply the class I outlets, in which case it would be more economical to leave the most distant milk in the country for manufacturing and utilize the nearby milk for class I use. Performance standards under the order should not force milk to be transported to distributing plants during the flush months merely for the purpose of maintaining eligibility for pooling.

To avoid uneconomic movements of milk provision should be made whereby a plant may maintain pool status throughout the year if it supplies a substantial portion of its producer milk to the market during the normal low production months. The order, however, should not force such a supply plant to pool during the flush if it does not meet the current supply requirements and the operator thereof elects to withdraw his plant from the pool. The order provisions are drafted to require qualification of a supply plant on the basis of the current month's performance except that a plant which has previously qualified in each of the months of October through February may retain pool status during the March through September period unless application is made to the market administrator to be a nonpool plant during those months.

Provision should be made whereby pool plant status is accorded any manufacturing plant operated by a cooperative association if the production of at least 70 percent of its members is regularly received at other pool plants. The Maryland and Virginia Milk Producers Association, whose members supply nearly 90 percent of the milk for the market, operates a manufacturing plant to provide for orderly disposition of the excess or reserve milk in the market. This association, acting as the marketing agent for all of its producer members, daily moves milk (by assigning producers) directly from the farm or through receiving stations to its buyers in the amounts required for class I and related uses. Milk not so needed in the market and for which no class I outlet is available is moved to the association plant for processing. The volume of receipts at this plant varies from day to day and month to month depending on the needs of the several handlers and the variation in production. Although the operation of this plant is very beneficial to the orderly marketing of milk for this market, the nature of the operation carried on would not result in pool status under the standards for distributing or supply plants.

The qualification for pool plant status is a means of establishing identity of plants with the fluid market. In this regard, however, it must be recognized that the arrangement of the Maryland and Virginia Milk Producers Association is unique and does not lend itself to performance requirements of the usual nature. The milk of its producer members which is received at its manufacturing plant is a part of the regular supply for the local fluid market and is available to the several handlers in the market whenever needed. While the manufacturing plant does not carry District of Columbia health approval, this in no way affects its status as a surplus disposal plant or its functions of carrying the reserve supply of milk for the market.

The performance standards herein provided for a manufacturing plant operated by a cooperative association describe a particular basis of operation in this market and will accommodate the pooling of milk regularly associated with this market.

It was proposed at the hearing that provision be made whereby a system of distributing and supply plants could qualify as a unit if the overall system met the distributing plant pooling requirements. It was concluded in the recommended decision that the system pooling requested was not needed and that the pooling requirements, as recommended, were reasonable and necessary to define those plants which were sufficiently associated with the fluid market to be included in the pooling arrangement. The proponent for a system pooling arrangement excepted to this conclusion stating that it was essential that the company's two manufacturing plants be accorded pooling status and that the provisions as recommended were inappropriate in that they would not accomplish this end. Exceptor further stated that if the pooling provisions were not revised some other procedure must necessarily be devised to permit their manufacturing operations access to pool milk.

It is not clear why exceptors hold that the pool should furnish a milk supply for their manufacturing operations. It is apparent that the market now operates almost exclusively under bulk tank handling and that the plants in question now have little function as supply plants. While they at one time may have been intimately associated with the market as receiving plants and/or as balancing plants, much in the same way as the cooperative association's plant now operates, they no longer are essential to the market as a whole in this role.

The order is intended to assure an adequate, but not excessive, supply of quality milk to meet the fluid needs of the market only. The pooling requirements herein recommended are minimum standards and under the existing market structure it is expected that virtually all distributing plants will have a substantially higher class I utilization than the 50 percent requirement established. To permit system pooling of supply plants and distributing plants as requested would tend to implement the inclusion in the pool of plants with little or no direct association with the market and primarily engaged in manufacturing operations.

Plants primarily engaged in manufacturing operations and not meeting the pool plant qualifications herein recommended should not be granted pool status, nor should the order be so drafted that handlers are encouraged to develop a milk supply solely for manufacturing uses. It is recognized that processing facilities must be available to the market to permit orderly disposition of the necessary market reserve and seasonal surplus resulting from day-to-day and month-to-month variations in supply and demand. To the extent that such surpluses exist, handlers with nonpool manufacturing operations need not be encumbered in their ability to process such surpluses through their own facilities. This can be accomplished through appropriate diversion provisions which will permit direct delivery from the farm to such nonpool plants without loss of pool status for the milk involved. However, to promote the integrity of regulation such diversion should be accommodated only to the extent necessary to assure orderly handling of the necessary market surplus. The diversion provisions hereinafter set forth will accomplish this end.

It was concluded in the recommended decision that when milk moves to market in tank trucks owned or operated by, or under contract of a cooperative association the cooperative should be held as the responsible handler. A number of exceptions were filed to this conclusion. Exceptors state that milk now moves to market via independent haulers and that holding the cooperative as the responsible handler would adversely affect present handler-producer relationships and quality programs which are currently being carried on. Certain proprietary handler exceptors also contend that if the cooperative were made the responsible handler the order must necessarily make clear that such cooperative would absorb any shrinkage between the farm and plant of first receipt. Cooperative exceptors on the other hand state that they would be placed in a disadvantageous position if required to absorb such shrinkage.

The record is not clear as to precisely what extent the cooperative actually controls the independent hauler. In view of the fact that proprietary handlers have expressed a desire to be held as the responsible handlers and the proponent cooperative is reluctant to accept the shrinkage resulting from farm to plant movements it is concluded that the operator of the pool plant at which producer milk is first received should be held the responsible handler. However, in the case of milk which is first received at the plant of a cooperative association and which is subsequently disposed of to a proprietary handler the order should require that such handler pay the cooperative association not less than the minimum order prices applicable at the location of the transferee plant. The act clearly establishes the intent that no cooperative association may sell milk to any handler at less than the prescribed order class prices.

Some milk distributed in the marketing area may be from plants which are fully subject to the classification and pricing provisions of other Federal milk marketing orders. To extend the application of this order to cover such plants which dispose of the major portion of their receipts in another area would result in unnecessary application of regulation. Accordingly, the order proposed herein provides that a distributing plant which would otherwise be subject to the classification and pricing provisions of another order and which disposes of a greater volume of class I milk in such other area than in the Washington area shall not be regulated by this order. Also, any supply plant which disposes of a greater volume of milk under another order and which would be subject to the classification and

pricing provisions of the other order would be exempted from regulation under this order. This condition would not be applicable during the months of March through September, however, if such plant had been a supply plant under this order in each of the preceding months of October through February. While some milk may be distributed in the marketing area from plants regulated under another order and will not be subject to regulation under this order, such plants should be required to report their receipts and utilization to the market administrator so their exact status under the order can be determined.

A "handler" should be defined as (1) any person in his capacity as the operator of one or more approved plants or any other plant which is a pool plant, and (2) any cooperative association with respect to the milk of any producer which it causes to be diverted to a nonpool plant for the account of such association.

Inclusion in the handler definition of the operator of any approved plant which does not qualify as a pool plant, including a producer-handler, is necessary in order that the market administrator may require reports as he deems necessary to determine the continuing status of such individual. In the case of an approved plant which is a distributing plant but does not acquire pool status because of insufficient direct sales in the marketing area, such reports are necessary to determine the amount payable by the operator of such plant on the milk distributed in the marketing area.

The handler definition should be sufficiently broad so as to include a cooperative association with respect to producer milk diverted by it from a pool plant to a nonpool plant for the account of such association. This arrangement will permit the cooperative association to divert milk for class I use which might otherwise be used or disposed of by the proprietary handler in class II and thus will promote efficient utilization of producer milk in the highest available use class. The handler definition should also include a cooperative association with respect to its operations of a manufacturing plant which meets the requirements of a pool plant hereinbefore described.

The term "dairy farmer" means any person who produces milk which is delivered in bulk to a plant. The term "dairy farmer for other markets" as herein proposed is intended to designate those dairy farmers whose milk production is primarily associated with other markets and which should not be accorded pooling status along with regular producers for the market.

Under usual circumstances the Washington market is adequately supplied with milk. Any needed supplemental supplies would most likely be required during the short production months. This is also the period when milk would be in greatest demand in other surrounding fluid markets which represent alternative outlets for milk produced by local dairy farmers. Under the marketwide type of pooling herein provided any dairy farmer or group of farmers with an alternative outlet during the short season might find it advantageous to leave the Washington market during those months when milk is in greatest demand and seek to return during the flush production months when the outside market was no longer available. While it is not intended that Federal regulation should preserve a market for any particular qualified producers to the exclusion of other qualified dairy farmers, the regulation should not provide a means whereby through manipulation certain dairy farmers may preserve their class I outlets for themselves and dispose of their surplus in the pool. Under the terms of the order as hereafter set forth a dairy farmer delivering milk to a pool plant during the flush production months of March through September, who during the preceding short production months of October through February delivered his milk to a nonpool plant operated by the same handler, or an affiliate thereof, would be considered a dairy farmer for other markets during the flush months of March through September.

The "dairy farmer for other markets" definition should also include those dairy farmers whose milk is received at the manufacturing plant of a cooperative association, which plant is a pool plant, for the account of another cooperative association which has no membership among producers delivering to other pool plants. The manufacturing plant of the Maryland and Virginia Milk Producers Association, herein proposed to be a pool plant, from time to time processes milk purchased from a cooperative association in the neighboring Baltimore market which milk is in excess of the fluid needs of the Baltimore market. Such milk is not available for fluid distribution in the local market. It is handled in the manufacturing plant of the local cooperative as a service to the Baltimore cooperative and hence cannot be construed to be a part of the normal milk supply for the Washington market. A continuation of this relationship will in no way adversely affect the application of regulation and will facilitate orderly marketing of milk both in the Washington and Baltimore area.

The term "producer" should be defined to mean any person other than a producer-handler or a dairy farmer for other markets, who produces milk which is approved by the appropriate health authority having jurisdiction in the marketing area for consumption as fluid milk in the area and which milk is received at a pool plant.

The definition should be sufficiently broad to include a dairy farmer whose milk is ordinarily so received but is diverted by a handler to a nonpool plant for his account on not more than 8 days (4 days in the case of every-other-day delivery) during any month of October through February and at any time during the months of March through September. In order that milk which is so diverted continues to be included in the regular pool computations, it should be treated as if received at the pool plant from which it was diverted.

As previously indicated, it is intended that the order shall assure an adequate, but not excessive, supply of milk for the fluid market. The order provisions should not be so drawn as to encourage an excess volume of milk to associate with the pool. During the months of October through February it is not necessary to accommodate diversions to nonpool plants except insofar as may be necessary to assure orderly handling of the weekend surpluses which accrue because plant bottling operations may be suspended during weekends.

The months of March through September are the months of greatest production during which unlimited diversion privileges are desirable in order to expedite the orderly disposition of the necessary surplus.

Milk disposed of to Government installations under contract sales is required to meet specified standards patterned after the U.S. Public Health standards which are similar to those in effect in other parts of the area. It is intended that dairy farmers whose milk is received at a plant used to fill contracts for Government installations in the marketing area shall be considered as qualified producers in such month(s) when their milk is so disposed of if the plant at which their milk is first received is a fully regulated pool plant during such month(s).

In the case of milk regularly received at a manufacturing plant operated by a cooperative association which is pooled on the basis of its function as a reserve plant, further identification standards are needed to properly define those dairy farmers whose milk is approved for fluid consumption in the marketing area. Without such identification milk may be received and included in the pool which does not meet the sanitation requirements for fluid consumption in the marketing area.

Under usual circumstances dairy farmers producing milk for fluid distribution in the marketing area hold individual farm inspection permits issued by the appropriate health authority having jurisdiction in the marketing area. However, under certain circumstances, milk may be received at distributing or supply plants serving the area from dairy farmers which do not hold such permits. It must be presumed in such cases that the milk is acceptable to the appropriate health authority having jurisdiction and therefore any dairy farmer whose milk is so received should be considered to be a producer.

The manufacturing plant of the local cooperative association as hereinbefore explained, does not have health approval to move milk to other pool plants for fluid consumption. Hence, it is possible that some of the milk received at this plant is not qualified for fluid distribution in the market. It would be impractical to require the market administrator to make individual determination as to whether each dairy farmer's milk so received is of acceptable quality for fluid use. It is therefore appropriate in the case of dairy farmers who deliver their milk to a manufacturing plant owned by a cooperative association, which is pooled on the basis of its function as a reserve plant for the market, to require that such farmers in order to acquire producers status hold valid farm permits issued by the appropriate health authority having jurisdiction in the marketing area.

The definition of producer as herein provided will identify those persons who deliver milk to pool plants which is acceptable to the appropriate health authorities for fluid consumption in the marketing area. It also identifies those persons to whom the minimum prices are to be paid and who share in the marketwide pool under the terms of the proposed order.

The term "producer milk" is intended to include all skim milk and butterfat contained in milk produced by producers and received at pool plants directly from such producers. As previously stated certain diversions are permitted and such diverted milk is considered as a receipt at the plant from which it is diverted.

A "producer-handler" is defined as any person who operates a dairy farm and an approved plant from which class I milk is disposed of in the marketing area and who received no other source milk or milk from other dairy farmers. Since a producer-handler receives only milk of his own production or pool milk from other handlers it is unnecessary to subject such an operation to the pooling and payment provisions of the order. However, as previously indicated it is necessary that the plant operator in his status as a handler be required to make reports to the market administrator in order that his continuing status as a producer-handler can be ascertained and to facilitate accounting with respect to transfers from other handlers.

The classification provisions of the proposed order should provide that any milk in the form of class I products transferred by a pool handler to a producer-handler will be class I milk. Any supplemental supplies of milk which may be obtained from other handlers, by virtue of the type of operation involved, may be presumed to be needed by the producer-handler for fluid use and should be classified in the supplying handler's pool plant as class I milk. A producer-handler may receive pool milk from other handlers and still maintain his status as a producer-handler.

Any milk which a handler receives from a producer-handler should be "other source milk" and would, therefore, be allocated to the lowest class utilization at the pool plant after the allocation of shrinkage on producer milk. Milk disposed of to another handler by a producer-handler must be presumed to be surplus to the operation of the producer-handler and since other producers do not share in the class I utilization of the producer-handler it would be unfair to ask such producers to share their class I utilization with the excess milk of a producer-handler. This method of allocating producer-handler milk will preserve producers' priority on the class I sales in the market.

Exceptors to the above conclusion suggested that some further limitation should be placed on producer-handlers, by restricting their ability to use milk other than own farm production, by limiting the number of farms which such individuals might operate or by limiting their volume of distribution. The record indicates that there are few producer-handlers operating in the market and there is no showing that they have been a disturbing factor in the market. Accordingly, it is concluded that further limitations of the proposed nature are not necessary at this time.

The term "other source milk" should be defined as all skim milk and butterfat utilized by a handler in his operation except milk and milk products in the form of class I milk received from pool plants, inventory in the form of class I milk and current receipts of producer milk. The term should include all skim milk and butterfat in products other than class I products from any source, including those produced at the handler's plant during the same or an earlier month, which are reprocessed or converted to other products during the month. Other source milk is intended to represent all skim milk and butterfat from sources not subject to the classification and pricing provisions of the attached order. If other source milk is disposed of in class I products, partial pricing and regulation is provided under compensatory payment provisions. Defining other source milk in this manner will insure uniformity of treatment to all handlers under the allocation and pricing provisions of the order.

Classification of milk: All milk and milk products received by pool handlers should be classified on the basis of skim milk and butterfat according to the form in which, or the purpose for which, such skim milk and butterfat was used or disposed of as either class I milk of class II milk.

Under an order, only producer milk is priced. Milk is received, however, at pool plants directly from producers, from other handlers and from other sources. Milk from all of these sources is intermingled in the handlers plant(s). It is necessary, therefore, to classify all receipts of milk to properly establish classification of producer milk.

The conditions in this market make it appropriate to provide for a two class classification scheme. Class I milk should include those products which are required by the local health authorities in the various segments of the marketing area to be made from milk from approved sources. Class II milk should include those products which compete on a national market with similar products. Such products are not required by the local health authorities to come from approved sources under their jurisdiction. Products which are permitted by the local health authorities to be sold in the area from milk from unapproved sources include ice cream, cottage cheese, sour cream, eggnog, evaporated milk, aerated whips, and milk in hermetically sealed containers. Although local health authorities require local handlers to use approved milk in their fluid milk plants in the manufacture of such manufactured products they permit similar and competing products to be sold in the marketing area from unapproved sources. Under such circumstances it would not be feasible economically to classify and price such products in class I. To do so would place local handlers at a competitive disadvantage in the disposition of such products and would virtually deny a market for the reserve milk supplies of the market. Moreover, the classification and pricing of such products in class I would extend regulation beyond the limits necessary for orderly and stable marketing.

The extra cost of getting quality milk produced and delivered to the market in the condition and quantities required makes it necessary to provide a price for milk used in class I products somewhat above manufacturing milk prices. This higher price should be at such level that it will yield a blend price to producers that will encourage production of sufficient quantities of milk to meet the market needs for these class I products and the necessary market reserve.

Milk not needed seasonally or at other times for class I use must be disposed of for use in manufactured products. These products must be sold in competition with products made from unapproved milk. Milk so used should be classified as class II and priced in accordance with its value in such outlets.

Under the proposed classification scheme, class I milk would comprise all skim milk (including that used to produce concentrated milk and reconstituted or fortified skim milk) and butterfat: (1) Disposed of (other than in hermetically sealed container) in fluid form or as frozen concentrated milk for human consumption as milk, flavored milk, skim milk, flavored skim milk, cultured skim milk, buttermilk, cream, (except sour cream) including any mixture of cream and milk or skim milk containing less butterfat than the regular standard for cream; and (2) not specifically accounted for as class II milk.

Class I products such as skim milk drinks and buttermilk to which extra solids have been added, or concentrated whole milk disposed of for fluid use, should be included under the class I definition. The quality requirements for the milk used to produce such milk solids or concentrated milk are the same as for the milk used to produce the skim milk to which such solids are added and other products included in class I. The classification scheme herein established provides for a full accounting of all skim milk and butterfat and in the event products classified as class II are later disposed of in a different form any reclassification should apply to the respective volumes of skim milk and butterfat originally used to produce such products.

All skim milk and butterfat used to produce products other than those classified in class I should be class II milk. This classification would include all of those products which are generally considered as manufactured milk products not required by the health authorities to be made from approved milk.

Handlers have inventories of milk and milk products at the beginning and end of each month which enter into the accounting for the receipts and utilization. The accounting procedure will be facilitated by providing that end-of-the-month inventories of all class I products be classified as class II milk, regardless of whether such products are held in bulk or in packaged form. Inventories of such products on hand will then be subtracted under the proposed allocation procedure from any available class II disposition in the following month. The higher use values of any class I product in inventory assigned to current producer receipts during the month and which may be allocated to class I milk in the following month should be reflected in returns to producers. The mechanics of the attached order provide for the reclassification of inventories on that basis.

Inventories of class I products on hand at a pool plant at the beginning of any month during which such plant first becomes a pool plant should likewise be allocated to any other available class II utilization at the plant during the month. This will preserve the priority of assignment of current producer receipts to current class I use.

Under usual circumstances in the operation of a fluid-milk plant, small unavoidable losses of both skim milk and butterfat are experienced. Such losses are normally referred to in the trade as "shrinkage." Since it is intended that a handler be required to make a full accounting for all plant receipts on a classified use basis, it is necessary that provision be made for the classification of such plant shrinkage.

The operations carried on by local handlers are such that plant-shrinkage experience in this market is somewhat lower than the average market. The record clearly establishes that an allowable shrinkage on producer milk of not more than 1½ percent will cover normal plant operations. Accordingly, it is concluded that shrinkage of producer milk not in excess of 1½ percent of total producer receipts should be classified as class II and any shrinkage in excess of that quantity should be classified as class I.

In the determination of shrinkage of producer milk, total shrinkage should first be prorated between receipts of producer milk and receipts of other source milk. None of the shrinkage should be assigned to milk received from other pool plants since shrinkage on such milk is allowed to the transferring handler. All shrinkage of other source milk should be classified as class II. The classification procedure herein recommended gives adequate protection in the classification of shrinkage on producer milk and it is unnecessary to limit the classification of shrinkage on other source milk in class II.

Skim milk and butterfat are not used in most products in the same proportions as contained in the milk received from producers, and therefore should be classified separately according to their separate uses. The skim milk and butterfat content of milk products, received and disposed of by a handler, can be determined through certain recognized testing procedures. Some of these products such as ice cream and condensed products, present a more difficult problem of accounting in that some of the water contained in the milk has been removed. It is proposed, in the case of such products, that the respective volumes of skim milk and butterfat be ascertained by the use of adequate plant records made available to the market administrator or by use of standard conversion factors of skim milk and butterfat used to produce such products. The accounting procedure to be used in the case of any concentrated products such as condensed milk and nonfat solids should be based on the pounds of milk or skim milk required to produce such products.

Each handler must be held responsible for a full accounting of all of his receipts of skim milk or butterfat in any form. The handler who first receives milk from producers should be responsible for establishing the classification thereof, and for making payment to producers. This principle is followed consistently in federally regulated markets and is necessary to assure effective administration of the order.

Except for that shrinkage which may be classified in class II under conditions previously described in this decision, all skim milk and butterfat which is received and for which the handler cannot establish utilization should be classified as class I milk. This provision is necessary to remove any advantage to handlers who fail to keep complete and accurate records and to assure

that producers receive full value of their milk on the basis of its use.

Because of spoilage or as a result of the handler's inability to salvage route returns butterfat and skim milk in the form of class I products may be disposed of from time to time, for livestock feeding. It is provided that such a disposition shall be classified as class II if verifiable evidence of such disposition is available to the market administrator.

From time to time handlers may find it necessary to dump skim milk. Under such circumstances, the market administrator must be provided opportunity to witness the actual dumping, if he deems it necessary, and to otherwise have verifiable evidence to substantiate such reported disposition. Such class II utilization may be allowed only when the handler during normal business hours has given the market administrator at least 3 hours advance notice of intention to dump and information regarding the quantity of skim milk involved.

No allowance is made for butterfat dumped even though the skim milk dumped, and for which a class II classification is provided, is a component of a fluid milk product from which the butterfat has not been removed. Under normal circumstances, the butterfat component of any fluid milk product is salvagable and it is not desirable to permit dumping of butterfat under other than a class I classification.

Producer proponents at the hearing proposed a three-class classification scheme similar to the plan which they now employ in marketing their milk with handlers in the market. As previously indicated, under the order as herein proposed, skim milk and butterfat are classified separately in accordance with their actual dispositions and are priced in the class in which they are utilized. Under such circumstances it is unnecessary to provide for more than two classes of utilization. All of those products which are designated as class I are required by the local health authorities to be made from approved milk. Those products designated as class II are not subject to this requirement and local produced milk so disposed of must compete on a national market with similar products made from unregulated milk. To establish a separate classification and a higher pricing for milk disposed of in any of these products could seriously restrict such outlets as a disposition for the necessary reserve of the local market.

One handler proposed that milk which was disposed of as frozen concentrated milk to military installations for use outside the continental United States be classified in a class I–A and be priced below the price of milk disposed of in other class I products. Official notice is taken that the quality specifications established by the Defense Department for such milk are the same as those for fresh fluid milk. Under such circumstances it would be improper to classify and price milk so utilized as other than class I.

As previously indicated classification of skim milk and butterfat used for the production of class II products should be considered to have been established when the product is made. Classification of skim milk and butterfat used to produce class I products should be established when such products are actually disposed of. Classification of such class I products disposed of by transfer to another plant, under certain circumstances, should be determined on the basis of their utilization in the transferee plant.

Skim milk and butterfat in the form of any class I product transferred to the pool plant of another handler, should be classified as class I unless both handlers indicate in their reports to the market administrator that such classification should be class II. However, sufficient class II utilization must be available in the transferee plant to cover any claimed class II classification after the prior allocation of shrinkage, other source milk, and inventory of class I products. Skim milk and butterfat disposed of in bulk in the form of any class I product to an approved plant other than a pool plant or the plant of a producer-handler should be classified as class I milk up to the extent of such plant's disposition of skim milk and butterfat, respectively, as class I milk in the marketing area. Any remaining amount of such transfer or diversion should be assigned to the highest remaining utilization in the transferee plant after the prior assignment of receipts at such plant from dairy farmers who the market administrator determines constitute its regular source of approved supply for the outside area. This procedure will complement the application of the compensatory payment provision and will provide the nonpool handler with class I sales in the marketing area with the opportunity to choose whether he shall offset such class I sales with pool purchases or make compensatory payments to the pool. In either event the pool handlers have assurance that nonpool handlers will not have a price advantage on milk disposed of in the marketing area. It is not intended that pool milk should displace a nonpool handler's regular receipts from dairy farmers which meet the quality requirements of the health authority having jurisdiction in the area in which his outside sales are made. However, because of the known high quality of pool milk, transfers of pool milk to a nonpool distributing plant should take priority assignment in the highest available use class ahead of other receipts of milk at such plant except regular receipts from dairy farmers meeting local health approval.

Skim milk and butterfat disposed of in bulk in the form of milk, skim milk, or cream to a nonpool plant other than an approved plant either by transfer or diversion should be class I unless specified conditions are met. If the transferee plant is located not more than 300 miles distance from the zero milestone in Washington, D.C., by shortest highway distance the transferring handler should be permitted to claim classification as other than class I. In such instance the transferee handler must maintain adequate books and records of utilization of all skim milk and butterfat in his plant which are made available to the market administrator, if requested, for verification purposes and must have utilized at least an equivalent amount of skim milk and butterfat, respectively, in the reported use. Provision for verification by the market administrator is reasonable and necessary to assure that producer milk will be paid for in accordance with its utilization. The record shows that there are ample manufacturing facilities within a 300-mile distance of Washington to handle any prospective surplus of the market. Unless some limitation is provided on the distance beyond which shipments of milk, skim milk, and cream are permitted in class II classification, it would be necessary for the market administrator to follow any such shipments of milk, skim milk, and cream to their destination to determine utilization and classification. Such procedure would of necessity increase the costs of administering the order. Under usual circumstance in this market, milk, skim milk, and cream which is moved in excess of 300 miles distance from the zero milestone in Washington, D.C., is for fluid uses. It is appropriate therefore both for administrative convenience and for the conservation of market administrative funds to provide automatic classification in class I for milk, skim milk, and cream which is moved more than 300 miles distance from the zero milestone in Washington, D.C.

The class prices established by the order apply only to producer milk. Accordingly, since a plant may receive skim milk or butterfat from sources other than producer milk a procedure must be established whereby it may be determined what quantities of milk in each plant should be assigned to producer milk. The milk from producers who are regular suppliers of milk for the Washington market should be given priority of the assignment of class I utilization at pool plants. When milk is received from other sources it should be assigned to class II milk first. Unless this procedure is followed there can be no assurance that such other source milk would not be used to displace producer milk in class I when it is advantageous to the purchasing handler. If the order permitted handlers to obtain other source milk for class I uses whenever it was advantageous to do so while producer milk in the plant was utilized in class II the order would not be effective in carrying out the purposes of the act and the market would be deprived of a dependable supply of milk.

In the assignment of other source milk, any such milk received from sources not regulated by an order issued pursuant to the act should be first assigned to class II milk. The plant(s) supplying such milk may not have purchased it from dairy farmers on a classified use basis and it is not feasible to determine this or other conditions of sale. Following the assignment of such unregulated other source milk, other source receipts in the form of class I products received from plants regulated by other orders issued under the act should be assigned to the lowest remaining available use classification. Under this procedure a handler has assurance that if his producer receipts are inadequate to meet his class I needs and he purchases regulated milk from another Federal order market such milk will be assigned to class I. Since it is not intended that there be any compensatory payment on other source milk which is fully regulated under another order and which is disposed of for class I use in this market, this sequence of assignment will tend to minimize the application of the compensatory payment provision.

One proprietary handler proposed that following the assignment of unregulated other source milk an amount equal to 10 percent of the receipts from regular producers be allocated to class II prior to the allocation of other source milk from a regulated plant under another Federal order. Proponent contended that such procedure would protect the handler in months when his overall receipts from producers equaled or exceeded his fluid needs but were inadequate during certain days of the month.

The record evidence shows no need for such allocation during recent years. In fact, since 1951 there has been no milk purchased by Washington handlers from outside sources to supplement local producer deliveries for utilization in fluid products. Production by local producers has been running in excess of class I requirements during all months of the year. Further, the Maryland and Virginia Milk Producers Association has readily moved milk from surplus plants to its buying handlers for fluid uses. During recent years the Maryland and Virginia Association had supplied an adequate amount of local producer milk to meet all their fluid needs during every month of the year. With adequate supplies of milk available from local producers and with marketwide movements of such milk to the local handlers when needed, it would be inappropriate to permit such other source milk to displace producer milk in class I in this market.

If after making the various assignments of skim milk and butterfat pursuant to the allocation provisions of the order, the total of all class I and class II milk assigned to producer milk exceeds the amount of producer milk reported to have been received by the handler for whose pool plants the computation is being made, such overage should be assigned first to the available class II utilization and any remainder to class I.

Such overage should be paid for by the handler at the applicable class prices. In the allocation procedure recognition is taken of all receipts of other source milk reported by the handler. When utilization records indicate a disposition greater than receipts it must be presumed that the handler underreported his receipts of producer milk.

The accounting procedure as herein proposed would establish a calendar month as the accounting period. One handler proposed at the hearing that some flexibility be provided in the accounting period so that a handler might in as many as 3 months during any one year choose to break a calendar month into two accounting periods. It was contended that such a provision would provide reasonable assurance to a handler that in any month in which the relationship between his supply of producer milk and his class I utilization fluctuated to the point that during a part of such month he had a more than adequate supply, and during the remainder of such month an inadequate supply, his producer milk would not displace his necessary purchases of other source milk in class I. The Washington market is presently adequately supplied with milk from local producers and carries a sufficient reserve supply to meet all handlers' needs in all months of the year. This reserve supply, which when not needed for fluid uses, is processed at the manufacturing plant of the principal cooperative association in the market is available to all handlers in the market and may be readily shifted from plant to plant as needed. Under such circumstances no need was shown for this proposed provision in this market.

The level and method of determining class prices: In order to restore and maintain orderly marketing conditions in the Washington, D.C., marketing area, it is essential that minimum prices for class I and class II milk be established at such levels as will maintain an adequate but not excessive supply of quality milk for the fluid market and assure the orderly disposition of the necessary market surplus.

The production area for the Washington market is largely coextensive with that for the Baltimore market and in certain areas overlaps the production areas for the Philadelphia and New York markets as well as a number of local markets. It is essential in order to restore and maintain orderly marketing of milk in the area that producer returns maintain a close alinement with competitive prices paid to dairy farmers supplying these neighboring markets.

Class I price: A basic class I price of $5.10 per hundredweight for the months of March through June and $5.55 per hundredweight for the months of July through February should be established for the Washington market to be effective for the first 18 months in which the order is in operation. An adjustment mechanism should be provided which will move such price either upward or downward, as the case may be, to reflect the average movement in the class I price levels in the Philadelphia, New York, and Chicago markets.

Propcnents at the original hearing proposed that a basic class I price level of $5.86 be established and that movements in the U.S. Wholesale Commodity Price Index, as published by the Bureau of Labor Statistics, U.S. Department of Labor, be used as a temporary mechanism for adjusting the basic price to meet current economic conditions. They pointed out that a committee of nationally recognized economists and specialists were then engaged in a detailed study of the local market with the purposes of developing a specific proposal for a pricing mechanism to reflect the peculiarities of the local market and of recommending an appropriate level for the class I price.

It was concluded in the initial recommended decision that the record did not support a price level of $5.86 and that the use of the U.S. Wholesale Price Index did not provide an adequate basis for maintaining the local price in alinement with milk values in the national market. It was further concluded that the hearing should be reopened on the issue of class I price after the committee had completed its investigations and a specific proposal had been received setting forth its recommendation for a class I pricing formula.

Members of the committee appeared at the reopened hearing and presented their recommendations and the reasons therefor. They proposed a basic annual price level of $5.55 with a price of $5.10 to be applicable during the months of April, May, and June and a price of $5.70 to be applicable in other months of the year. They further proposed that changes (from levels prevailing in the same months of 1957) in the Federal order class I prices for the Chicago, Philadelphia, and New York markets be used as a basis for automatic adjustment of the Washington class I price to assure continuing alinement of the local price with those of other markets and with changing conditions of supply and demand both regionally and nationally. And finally, they proposed that such pricing mechanism be made effective for a period of from 12 to 18 months and that after a year's operation of the order the provisions thereof be reviewed, and if necessary modified in light of experience under the order.

The committee, in recommending an annual class I price level of $5.55, concluded that such price, in conjunction with the class II price set forth in the original recommended decision, would return to dairy farmers a blended price approximating that which they had actually received in 1957. While they recognized that there had been a steadily increasing supply of milk over an extended period of time and that current supplies were somewhat in excess of the fluid needs of the market, they took the position that such excess was not unreasonably large and that there were positive indications of a leveling off of supplies. They therefore concluded that the blended prices actually returned to producers in the previous year could be considered as an appropriate level of prices for the first 12 to 18 months under an order.

While the committee was inclined to view the general leveling off of supply which occurred in late 1957 and through the spring of 1958 as an indication that prices were not sufficiently high to attract greater volumes of milk, such factors as the pool quality of feed resulting from the 1957 summer drought and the wet, cold spring of 1958 undoubtedly had an influence on production during this period. It is apparent that there is, and has been, a somewhat larger than necessary milk supply and that there are no physical barriers to further increased production. Moreover, even though proponents suggested that bulk tank handling will tend to deter such increase, the record indicates that only about half of the bulk tank milk is presently delivered daily and that farm tanks generally are not being used to capacity.

In any event, the class I price in the local market cannot be established at a level which would exceed the cost of securing dependable alternative supplies. The Chicago milkshed represents an appropriate area for determining such alternative cost, because of its existing dependable reserve supply and its past experience as a supply of milk to fluid markets throughout the country.

The 55–70 mile zone class I price under the Chicago Federal order during 1957 averaged $4.03 and in 1958 will approximate $3.92, both exclusive of supply-demand adjustments which reduced the price approximately 18 and 19 cents, respectively, in such years. Since the supply-demand adjuster in the Chicago order is intended to reflect the supply-demand situation in the local market it need not be a consideration in establishing the basic price level in a market as far distant as the Washington market.

Milk would not likely move to outside markets from near-in Chicago plants and it is appropriate therefore that price comparisons be related to the order prices in that market's surplus supply area. The committee suggested Shawano, Wis., as an appropriate point from which milk might move to the Washington market. Shawano is in the 12th zone under the Chicago order and a 22-cent location adjustment is applicable at that point. According to Rand McNally Road Atlas, Shawano is 914 highway miles from Washington, D.C. The schedule of transport rates for fluid milk issued by Dairyland Transport Company, a nationally recognized transport company doing considerable business in hauling between the Midwest and eastern markets, which was presented in evidence at the hearing, indicates a charge of $1.52 per hundredweight for moving milk 920 miles. The Chicago average 12th-zone price for 1958 adjusted for transportation to Washington, D.C., would suggest $5.22 as the appropriate level of class I price for Washington.

Proponents, however, contend that any price based on comparative costs from Chicago should recognize the markup which the seller of spot milk customarily includes in his selling price. They suggest that such charges may vary from 0 to 75 cents depending upon the market involved, the season and alternative outlets for milk.

In establishing an appropriate price level for the Washington market, the available alternative supply sources must be considered as a potential regular supply source in which case the charges, of the nature suggested, would not be applicable. Under the Federal order program it is a generally accepted principle that producers should bear the cost of moving milk from the farm to the central market. This is accomplished by pricing milk at the location of the plant of first receipt and by providing appropriate location differentials to reflect transportation costs to the market. When milk is received directly at the city the handler bears the costs associated with physical receipt of the milk.

In some instances handlers operate country receiving plants where milk is received, assembled and cooled for shipment to the city. In such cases, the country plant performs many of the necessary functions otherwise performed at the city plant. Whether milk is received at country plants, or directly at the city is largely the choice of the individual handler whose decision is undoubtedly related to his physical plant setup and can be presumed to result in the most economical overall cost to him. Hence, it is not appropriate that producers be asked to bear the cost of operating country receiving plants.

Nevertheless, it seems apparent, in the case of milk movements from the Chicago area to Washington, that the selling handler in recognition of his alternative outlets and use of such milk would pass on to the purchaser the cost of services performed in receiving, assembling and cooling. Under normal circumstances such costs should approximate the costs Washington handlers incur in direct receipt at city plants. Hence, costs of loading milk at the Chicago plant, and unloading at the Washington plant which costs are directly related to and for this purpose may be considered a part of the transportation cost, are additional necessary costs which may appropriately be considered in determining the cost of alternative supplies.

Official notice is taken of the decision of the Assistant Secretary on proposed amendments to the Philadelphia order issued on November 25, 1957 (22 F.R. 9600) in which it was found that the fixed costs associated with loading a tanker approximated 10 cents per

hundredweight and that the cost of receiving tanker milk at the city approximated 5.5 cents per hundredweight. It seems likely that such cost would not vary substantially between markets. Hence, it is appropriate for this analysis that a figure of 15.5 cents be added to transportation costs between Chicago and Washington to secure an appropriate alternative cost figure for establishing a Washington market price.

The addition of 15.5 cents to the Shawano, Wis., Chicago order price plus transportation would provide a price level of $5.375 per hundredweight which for administrative convenience is rounded to $5.40. This is concluded to provide an appropriate annual price level for the Washington market for the initial 18 months.

Milk prices in fluid milk markets throughout the country normally vary seasonally, being highest in the short production months and lowest in the months of flush production. Notwithstanding the fact that producers in the Washington market have not sold milk to dealers at seasonally varying prices (for reasons later explained) it is desirable that some seasonality be provided to insure that the cost of alternative supplies during the flush production months will not be sufficiently below the Washington price to encourage handlers to drop local milk during this period in favor of cheaper supply sources. The months of normal flush production in the several markets vary somewhat due primarily to variations in weather and pasture conditions. The months of March through July, however, are generally considered to constitute the period of flush production. Washington is a notable exception in that July is the month of lowest production. Under these circumstances, it is concluded that an appropriate intermarket pricing relationship can be maintained throughout the year if a price of $5.10 and $5.55 respectively is provided for the periods of March through June and July through February.

Notwithstanding the fact that the pricing herein recommended is limited to a period of 18 months, it is essential that some mechanism be provided to assure that the price during such period will reflect the current supply-demand situation in the market and maintain an appropriate relationship with prices in surrounding markets. Lack of marketwide information at this time deters the formulation of a supply-demand adjuster based on local market conditions. The committee recommended an adjustment mechanism based on the average movements in the Philadelphia, New York, and Chicago Federal order class I prices. They pointed out that the Washington market production area overlaps that of Philadelphia and to a degree that of New York and hence bulk milk supplies regulated by these orders are, in many instances, within easy trucking distance of Washington. They concluded, therefore, that notwithstanding the need for general price alinement with Chicago, for reasons previously stated, it is essential that a close alinement also be maintained between class I prices in the Washington, Philadelphia, and New York markets.

Since the adjustment mechanisms of the New York and Philadelphia orders are based on broad economic indications and the Chicago order uses a mechanism that relates the class I price to values of manufacturing milk, the relating of Washington price movements to the average price movements in these three markets will have the effect of bringing each of these to bear on the Washington price.

It is concluded that this mechanism will produce appropriate changes in the Washington class I price which reflect changes on the national market for milk and cost factors affecting the supply and demand for milk and will maintain a reasonable alinement of price between markets during the interim period of operation of the order. Since the interim class I price herein recommended is based on 1958 data it is appropriate that the three-market average movements be related to the same month in 1958 rather than 1957 as recommended by the committee.

The Washington market has not been accustomed to frequent price changes. Frequent price changes of a few cents would serve no useful purpose in this market. The committee recommended that the interim class I price be effective without adjustment within a range of plus or minus 15 cents from the three-market average for each month when compared to the corresponding month of the base year (1958) and that movements in the three-market average in excess of 15 cents but not exceeding 35 cents in total provide an adjustment of 20 cents in the Washington price. Subsequent adjustment to the Washington price would be made in 20-cent multiples following each 20-cent change in the three-market average price. The committee recommendations in this regard are concluded to represent an appropriate procedure for maintaining the desired intermarket price alinement.

Proponents for a larger marketing area than that herein recommended requested that, if their marketing area proposal was not acceptable, a separate classification and pricing mechanism be provided for fluid milk products sold outside the marketing area which would assure a price competitive with that of unregulated handlers in such area. It is concluded that such a provision would not be appropriate.

The essentials of the classified pricing plan as herein proposed and generally applicable to all Federal orders issued by the Secretary are to establish one level of price for milk which is sold as fluid milk or fluid milk products for fluid consumption and another lower price or prices for the necessary surplus of the market which is disposed of in lower-valued manufactured products. It is intended that the class I price herein proposed will bring forth a sufficient supply to meet the demands of milk for the marketing area, but not necessarily to fulfill the requirements of outside markets. Producer milk sold for fluid uses outside the marketing area has the same characteristics of bulk and perishability, is produced under identical conditions and cost and is subject to the same transportation costs in moving from the farm to the handlers' pool plant, as is milk disposed of in the marketing area. Different health and sanitation requirements in markets outside the marketing area might result in different costs of producing milk for those markets only, but would have no effect on the production costs of producer milk sold to Washington handlers.

Neither is it intended, moreover, that adjacent outside markets be used as dumping grounds for milk in excess of a regulated market's needs. The fixing of a lower price for milk sold in other markets could have a depressing effect on the price paid farmers by competing unregulated distributors in such markets. Such action would also tend to lower blended returns to producers in the Washington market with the result that the level of price for milk to be sold within the regulated market might have to be raised to provide incentive for the production of a sufficient supply to fulfill the market needs.

Class II price: Some milk in excess of class I requirements is necessary in order to maintain an adequate supply of fluid milk for the market on an annual basis. This excess milk must be disposed of in manufactured products which under the proposed classification system would be class II. The class II price should be maintained at the highest level consistent with facilitating the movement of class II milk to manufacturing outlets when it is not needed in the market for class I purposes. Such price should not be established at a level so low as to encourage handlers to procure milk supplies solely for the purpose of converting them into class II products.

The available manufacturing facilities associated with the market are sufficient to handle any prospective market surplus. The Maryland and Virginia Milk Producers Association, which handles the bulk of the market surplus, proposed that milk disposed of for other than class I purposes be priced on the basis of butterfat values as reflected in the Philadelphia market cream price quotations and skim values as reflected in the Chicago market dry milk price quotations. Substantially the same formula which proponents proposed, and which was generally supported by handlers in the market, has been used in the market as a basis for pricing milk surplus to fluid needs over an extended period of years dating back to and including the time during which order No. 45 was in effect.

The formula as herein proposed would base the butterfat value on the Philadelphia market weekly quotations per 40-quart can of 40 percent sweet cream approved for Pennsylvania and New Jersey for each week ending within the month as reported by the U.S. Department of Agriculture, and would provide a make allowance of $2 per can of cream. In order that butterfat values may not be unduly depressed by local market conditions in the Philadelphia area as reflected in such cream price it is provided that the butterfat value shall not be less than the average grade A (92-score) butter price at New York as reported by the U.S. Department of Agriculture for the month less 17 cents. This arrangement will provide assurance to local producers that the class II price will continuously reflect competitive eastern butterfat values.

The skim milk value under the formula as herein proposed would be based on the average of the Chicago daily market quotations for roller and spray nonfat dry milk as reported by the Department of Agriculture for the period from the 26th day of the preceding month through the 25th day of the month for which the class II price is being determined and reflects a make allowance of approximately 5½ cents per pound of powder.

It is concluded that values determined from the proposed formula will provide a proper basis of pricing class II milk in the Washington market. The formula as herein proposed would have yielded an average class II price of $3.23 for the year 1957. While such price is 17 cents higher than the New York class III price, it is only 2 cents over the Philadelphia class II price and appropriately reflects the value of milk going into manufactured products in this market. This level of class II pricing should provide for the orderly disposition of milk in excess of fluid needs and at the same time will return to producers a competitive use value for such milk. A higher price for class II milk than that herein proposed might result in a loss of outlets for local producer milk for manufacturing uses and hence, would not be in the interest of orderly marketing.

The classification system hereinbefore set forth provides for a full accounting of all skim milk and butterfat. While milk is priced to handlers at a basic test it is intended that the butterfat values be as precisely related to open market cream or butter values as is practical. Hence, the price to handlers for differential butterfat is rounded to the nearest one-tenth cent. For reasons later explained the butterfat differential to producers is rounded to the nearest full cent. Since a different butterfat differential is charged to handlers than is paid to producers it is necessary that the payments for differential butterfat be cleared through the producer-settlement fund.

The health regulations applicable in the marketing area permit the standardization of milk for consumer use. Open market cream can be sold in a substantial part of the marketing area. Excess cream must be disposed of in the open market or utilized in manufactured products. Producer milk delivered to Washington handlers is intended primarily for fluid milk requirements of the market and the butterfat differential should be designed to encourage the production of milk with a butterfat content about the same, or at least as high, as the butterfat content of fluid milk products sold by handlers. To set the butterfat differential above competitive values would encourage handlers to utilize alternative sources of butterfat. Setting the producer butterfat differential at a higher level than competitive prices would encourage producers to produce milk with a higher butterfat content than needed for fluid uses.

The basic test at which milk has been sold to handlers and uniform prices paid to producers historically has been 3.5 percent in this market. Both producers and handlers proposed that the 3.5 percent basic test be maintained. Producers and handlers generally supported a proposal that the butterfat differential be determined on the basis of open market cream values.

It is concluded that the class I butterfat differential value should directly reflect the open market value of sweet cream for fluid uses as determined from current price quotations on the Philadelphia cream market. Such value may be derived by dividing by 334.8 the average of all weekly quotations for 40-quart cans of 40 percent sweet cream approved for Pennsylvania and New Jersey in the Philadelphia market as reported each week ending within the month by the U.S. Department of Agriculture.

Should the class II butterfat differential exceed the value determined through this calculation, however, the class II butterfat differential should be used as the class I butterfat differential value.

The class II butterfat differential should be directly related to the butterfat values in the class II pricing formula. Such values reflect the competitive value of butterfat for manufacturing uses and will implement the orderly disposition of butterfat in excess of fluid needs.

Location differentials: Location differentials should be established for milk received at plants located a substantial distance from the marketing area. Such differentials recognize the principle that milk similarly used and located should be similarly priced. Milk which originates nearest the market should command a higher price than milk more distantly located in order to reflect the difference in cost of transporting it to the marketing area. No advantage can be accorded any particular group of producers if the location differentials established realistically reflect only differences in transportation cost.

Since virtually all of the milk produced for the Washington market moves from the farm in tank trucks, it would be inappropriate to establish differentials within the radius from which milk would normally move directly from farms to bottling and distributing plants in the area. Accordingly, it is concluded that no differential should be established on class I milk received at plants located within a 75-mile radius of the zero milestone in Washington, D. C. In the case of plants located more than 75 miles from the zero milestone in Washington, D. C., it is concluded that a differential on class I milk of 12 cents per hundredweight plus 1.5 cents for each additional 10 miles distance, or fraction thereof which such plants are located from Washington by the shortest hard-surfaced highway distance as determined by the market administrator should be appropriate. Such location differentials provide adequate allowances for transporting milk in bulk tankers between plants in the Washington area.

Milk may be received at a fluid milk bottling plant directly from producers as well as from one or more receiving plants. Under such circumstances it is necessary to designate an assignment sequence which will protect producers from unnecessary transportation costs involving transfers for other than class I uses. It is provided, therefore, that for purposes of computing allowable class I location differentials for each handler, the class I disposition from a fluid milk pateurizing or bottling plant shall first be assigned to direct producer receipts at such plant and any remaining class I use shall be assigned to receipts from other pool plants in order of their nearness to Washington.

The value of milk used in manufactured dairy products is affected, little, if any, by the location of the plant receiving and processing such milk in contrast to the situation with respect to class I milk. The milk received at country plants need not be transported to the city for utilization in class II. Accordingly, a location differential should apply only to milk received at country plants and utilized in class I or disposed of to plants which dispose of milk on routes in the marketing area.

The pricing provisions herein proposed utilize a number of reported prices and indexes from various specified sources. From time to time it is possible that such individual price(s) or index may not be reported or published. Under such circumstances it is necessary to provide that the market administrator shall use a price or index determined by the Secretary to be equivalent to or comparable with the unreported or unpublished factor or price.

Payments on other source milk: As pointed out previously, the minimum class prices established under the order apply only on producer milk received at plants subject to full regulation under the order. However, milk may be disposed of for class I utilization by and from plants not subject to full regulation of the order. Such unregulated plants may sell milk in bulk form to pool plants that in turn use it in supplying their class I outlets, or they may sell class I milk directly on routes as defined herein, including sale to Government installations.

The role of the compulsory classification system and the minimum prices as set forth in a Federal milk order is to insure that the price competition from reserve and excess milk will not break the market price for class I milk, thereby destroying the incentive necessary to encourage adequate production. Because the classified program of the order is applicable only to fully regulated plants, it is necessary, in order to provide continued stability of the market, to remove any advantage unregulated plants may attain with respect to sales in the regulated market. Such plants have a real financial incentive to find a means to sell excess milk at prices somewhat less than current class I levels so long as the price is higher than its value when used in manufactured dairy products. If unregulated plant operators were allowed to disposed of their surplus milk for class I purposes in the regulated marketing area without some compensating or neutralizing provision of the order, it is clear that the disposition of such milk, because of its price advantage relative to fully regulated milk, would displace the fully regulated milk in class I uses in the marketing area. The plan of Congress as contemplated under the Agricultural Marketing Agreement Act of 1937, as amended, of returning minimum prices to the producers for the regulated marketing area, would be defeated.

In the absence of any competitive or regulatory force which compels all handlers to pay producers for milk used in fluid outlets at a rate commensurate with its value for such use, the position of any handler who pays the class I price is insecure, if not untenable, whenever cheaper milk is available to the market. A classified pricing program under regulation cannot hope to be successful in the long run in insuring returns to producers at rates contemplated by the act if it is possible for some handlers to purchase outside milk for class I use at less than the class I price. Any handler who finds himself in a situation where his competitors pay less for fluid milk than he pays will be compelled to resort to the same methods, if possible. A price advantage in using unregulated milk is a compelling force in promoting its greater use and as a result it is probable that regular sources of regulated milk will eventually be abandoned by handlers, thus creating insecurity for themselves, producers, and consumers alike.

It is concluded, therefore, that the inclusion of compensation payment provisions in the order is necessary to insure against the displacement of producer milk for the purpose of cost advantage. This is essential to preserve the integrity of the classified pricing program of the order. Since minimum class prices may not be set under the order for handlers who do not participate in the marketwide equalization, the only alternative is to levy a charge against unpriced milk, for the removal of any advantage that there may be in using unregulated milk in class I instead of regular producer milk.

While there are few handlers who now have regular direct distribution in the marketing area and who would maintain unregulated status under the terms of the order as herein proposed; nevertheless, there are a very large number of substantial handlers in the immediately adjacent markets, many of whom could readily extend their distribution routes into the marketing area and by preserving their unregulated status could operate with a substantial price advantage over regulated handlers unless provision is made to assure that all competing handlers pay the minimum class prices. The interrelationship of the supply areas of these adjacent markets with the Washington market emphasizes the need for application of the compensatory payment provision on such distribution. As was earlier pointed out the utilization in the Washington market was as low as 65 percent class I in some months. Hence, unless provision is made to protect the integrity of regulation there exists a substantial opportunity for unregulated handlers to exploit the local fluid market to the detriment of both regular producers and regulated handlers.

The compensatory payments applicable to other source milk disposed of in the marketing area from approved plants which are not pool plants should be the same as those applicable to other source milk distributed from pool plants. It would not be possible to stabilize this market under the classified pricing program in the market if nonpool plants were allowed to distribute unpriced milk in the marketing area without compensatory payments. Handlers distributing such unpriced milk in the marketing area have the same opportunity to buy milk at the opportunity cost level as do the operators of the pool plants who purchase other source milk. In addition, however, the operator of a nonpool plant in all probability has surplus milk in his own plant which he would willingly dispose of on any basis that would yield a higher return than the surplus value. It would be particularly easy to dispose of such milk for class I use in the marketing area by bidding for large contracts such as hospitals, defense establishments, or other types of institutions. With surplus outlets as the alternative, and no compensatory payments to make, the nonpool handlers would have considerable incentive or margin to underbid the seller of priced milk for such

sales. Providing for some method of compensating for, or neutralizing the effect of, the advantage created for unregulated milk, therefore, is an essential and necessary provision of this order.

It is concluded that the compensatory payment on other source milk utilized in class I should be the difference between the class II price and the class I price under the Washington order. The class II price established by the order is a fair and economic measure of the value of milk in surplus uses in the Washington area and hence, represents the actual value of other source milk.

By choosing a rate of compensatory payment which reflects the cost of the cheapest other source milk which may be expected to be available to regulated handlers, any advantage to one handler relative to others, in obtaining such cheap milk and substituting it for producer milk in class I, is removed insofar as administratively possible and no handler is given the clear opportunity to gain an unfair advantage which would otherwise exist. Although the unfair advantage of obtaining other source milk is removed by the particular rate of payment herein provided, nevertheless, if other source milk is to be purchased, the incentive for purchasing the cheapest of such milk remains, because the lower the price which a handler pays for other source milk, the lower will be his total cost of purchasing such milk.

All funds collected from compensatory payments should be added to the producer-settlement fund. The handler regulated by the order should be obligated to make compensatory payments to the producer-settlement fund. There will be no difference in actual price paid for milk whether the payment is made by the regulated handler or by the operator of the unregulated plant from which the other source milk was obtained. Because the regulated handler makes the actual distribution of the milk in the marketing area and because he reports its utilization to the market administrator he is, from the administrative viewpoint, the logical one to make the payment.

For the reasons set forth in this decision, class I milk under the order is priced at the plant where the milk is first received from producers, hence, the compensatory payment on other source milk should be computed at the same stage of the marketing process to be directly comparable. No allowances are made in the order for cost and profits of handlers in moving producer milk to subsequent stages of marketing; neither should they be made for other source milk.

(d) Distribution of proceeds to producers: The order should provide for the distribution of returns to producers through a marketwide type of equalization pool. Under this type of pooling all producers receive a uniform price which varies only to reflect differences in butterfat content and location of plants of receipt.

As has been previously indicated the principal cooperative association in the market carries the bulk of the necessary surplus of the market which is processed through its manufacturing plant. It is imperative, therefore, that a procedure for pooling be established which will provide for an equitable sharing by all producers of the lower returns realized from the handling of this necessary reserve supply of milk.

A marketwide pool will facilitate the activities of the cooperative in moving milk supplies among handlers to meet their individual needs and will encourage processing of the necessary surplus of the market at the plants which can make the most efficient use of such milk.

This method of paying producers will require a producer-settlement fund for making adjustments in payments, as among handlers, to the end that the total sums paid by each handler shall equal the value of milk received by him at the prices fixed in the proposed marketing agreement and order.

Under this pooling arrangement handlers who are required to pay more for their milk on the basis of their utilization than they are required to pay to producers or cooperative associations will pay the difference to the producer-settlement fund; all handlers who are required to pay more to producers or cooperative associations than they are required to pay for their milk on the basis of utilizations will receive the difference from the producer-settlement fund. The market administrator in making payment to any handler from the producer-settlement fund should offset such payments by the amount of payments due from such handler. This is sound business practice. Without this provision the market administrator might be required to make payments to a handler who may have obtained money from the producer-settlement fund by filing incorrect reports or who owes money to the producer-settlement fund but who is financially unable to make full payment of all of his debts.

If at any time, the balance in the producer-settlement fund is insufficient to cover payments due to all handlers from the producer-settlement fund, payments to such handlers should be reduced uniformly per hundredweight of milk. The handlers may then reduce payment to producers by an equivalent amount per hundredweight. Amounts remaining due such handlers from the producer-settlement fund should be paid as soon as the balance in the fund is sufficient, and handlers should then complete payments to producers. In order to reduce the likelihood of this occurring, milk received by any handler who has not made the required payments into the producer-settlement fund for the preceding month should not be considered in the computation of the uniform price in current month.

The order should provide that in the case of a cooperative association which is authorized to collect payments otherwise due its producer members, and which requests such payments in writing, the handler shall make payment to the cooperative of the amount otherwise due its producer members. Under the provisions of the order as hereinafter proposed a cooperative association by definition has "full authority in the sale of milk of its members" and is engaged in "making collective sales of or marketing milk or its products for its members." As the duly authorized agent of its producer members there can be no question of its authority to receive the payments otherwise due such producers. This privilege is specifically provided for in the act and the practice is being followed by all of the cooperatives operating in the market.

In order that the cooperative may have the proper records on which to pay the individual producer members, the handler should, on or before the 8th day after the close of the month, be required to furnish the cooperative association with a statement showing the name, address, and code number, if any, of each producer for whom payment is to be made to the cooperative association, the volume and average butterfat content of milk delivered by each such producer, and the amount of and reason for any deduction which the handler is withholding from the amount payable to each producer. This information is necessary in order that the cooperative association can make proper distribution of moneys to its producer members for whom it makes collections.

In making payments to producers for milk received at plants located at least 75 miles distance from Washington the price should be reduced 12 cents plus 1.5 cents for each additional 10 miles distance or fraction thereof which such plant is located from Washington. Such a location differential will reflect cost of hauling milk to market by an efficient means and should tend to distribute returns to producers fairly.

Provision should also be made for the handler, if authorized in writing by the producer, to make proper deductions for goods or services furnished to or for payments made on behalf of the producer.

Proponents of the order proposed that the order provide for a "take-out and payback" plan to encourage a level production program. They pointed out that their association had operated such a plan for several years with satisfactory results to their membership.

Another cooperative in the market has successfully operated a base rating plan which has provided a seasonality of production which meet the fluid needs of its buyers.

The two plans, each intended to promote an even production over the year, have operated independently of each other without apparent adverse effects upon the market as a whole. A seasonality of pricing is provided in the class I pricing formula hereinbefore set forth. If further seasonality is desirable, there is good reason to allow the seasonal returns plans of the several cooperative associations to be continued outside the structure of the order.

The order should provide that each handler pay each producer, for milk received from such producer, and for which payment is not made to a cooperative association, on or before the 15th day after the end of each month. This is the date on which producers have been accustomed to receiving payment and provides a reasonable time for reporting, computation and announcement of the blended price and the drawing of individual checks. All reporting, announcement, and payment dates herein provided are synchronized to permit payment on this date.

When payment is to be made to a cooperative association, such payment should be made on or before the 13th day after the end of each month. This will permit the cooperative association to prepare and mail individual checks to its producer members by the 15th, the same date on which nonmember producers receive payment.

In the event a handler has received milk from producers which has an average butterfat content of more or less than 3.5 percent, the returns to such producers should be adjusted by a differential which reflects the weighted average values of the butterfat and skim milk in producer milk utilized in the respective classes. This follows the same principle as the payment of a uniform price to all producers. Since each producer shares equally in the total value of the handlers' class I and class II utilization at the basic test of 3.5 percent butterfat, it is equally appropriate that each should receive the average utilization value of the butterfat and skim milk components for milk testing above or below 3.5 percent. The producer butterfat differential should be rounded to the nearest full cent. Such adjustment will tend to minimize audit adjustment and will recognize that producers have long been paid on a fixed differential basis and are not accustomed to constantly changing values.

Administrative provisions: The marketing agreement and order should provide for other general administrative provisions which are common to all orders and which are necessary for proper and efficient administration of the order.

In addition to the definitions discussed earlier in this decision which define the scope of regulation, definition of certain other terms is necessary for brevity and to assure that each usage of such terms denotes the same meaning. These include the terms "act," "Secretary," "Department of Agriculture," "person," and "cooperative association."

Provision should be made for the appointment by the Secretary of a market administrator, and the order should define his

powers and duties, prescribe the information to be reported by handlers each month, set forth the rules to be followed by the market administrator in making computations required by the order, and provide for the liquidation of the order in the event of its suspension or termination.

The powers of the market administrator as set forth in the order are specifically provided in section 8c(7)(C) of the Agricultural Marketing Agreement Act of 1937, as amended, and the proposed language is essentially that of the statute.

The duties of the market administrator as set forth are essentially those which are found in all Federal milk marketing orders and are necessary to define specifically the responsibilities of the market administrator. Handlers should be required to maintain adequate records of their operations and to make the reports necessary to establish classification of producer milk and payments due for such milk. Time limits must be prescribed for filing such reports and for making payments to producers. It should be provided that the market administrator report to each cooperative association, which so requests, the amount and class utilization of milk received by each handler from producers who are members of such cooperative association. For the purpose of this report, the utilization of members' milk in each handler's plant will be prorated to each class in the proportion that total receipts of producer milk were used in each class by such handler.

Handlers should maintain and make available to the market administrator all records and accounts of their operations and such facilities as are necessary to determine the accuracy of the information reported to the market administrator as he may deem necessary or any other information upon which the classification of producer milk or payments to producers depends. The market administrator must likewise be permitted to check the accuracy of weights and tests of milk and milk products received and handled to verify all payments required under the order.

It is necessary that handlers maintain records to prove the utilization of the milk received from producers and that proper payments were made therefor. Since the books of all handlers associated with the market cannot be audited immediately after the milk has been delivered to a plant, it is necessary that such records be kept for a reasonable period of time.

The order should provide for specific limitations of the time that handlers should be required to retain their books and records and of the period of time in which obligations under the orders should terminate. Provision made in this regard is identical in principle with the general amendment made to all milk orders in operation on July 30, 1947, following the Secretary's decision of January 26, 1949 (14 F.R. 444). That decision covering the retention of records and limitations of claims is equally applicable in this situation and is adopted as a part of this decision.

Each handler should be required to pay the market administrator as his pro rata share of the cost of administering the order not more than 4 cents per hundredweight or such lesser amounts as the Secretary may, from time to time prescribe on (a) producer milk (including such handler's own production), (b) other source milk in pool plants which is allocated to class I milk, and (c) class I milk disposed of in the marketing area (except to a pool plant) from a nonpool plant.

The market administrator must have sufficient funds to enable him to administer properly the terms of the order. The act provides that such cost of administration shall be financed through an assessment on handlers. One of the duties of the market administrator is to verify the receipts and disposition of milk from all sources. Equity in sharing the cost of administration of the order among handlers will be achieved, therefore, by applying the administrative assessment to all producers' milk (including handler's own production) and other source milk allocated to class I milk.

Plants not subject to the classification and pricing provisions of the order may distribute limited quantities of class I milk in the marketing area. These plants must be checked to verify their status under the order. Assessment of administrative expense on such milk sold in the marketing area will help defray the cost of such checking.

In view of the anticipated volumes of milk and the cost of administering orders in markets of comparable circumstances, it is concluded that an initial rate of 4 cents per hundredweight is necessary to meet the expenses of administration. Provision should be made to enable the Secretary to reduce the rate of assessment below the 4 cents per hundredweight maximum without necessitating an amendment to the order. This should be done at any time experience in the market reveals that a lesser rate will produce sufficient revenue to administer the order properly.

A provision should be included in the order for furnishing market services to producers, such as verifying the tests and weights of producer milk and furnishing market information. These should be provided by the market administrator and the cost should be borne by the producers receiving the service. If a cooperative association is performing such services for any member producers and is approved for such activities by the Secretary, the market administrator may accept this in lieu of his own service.

There is need for a marketing service program in connection with the administration of the order in this area. Orderly marketing will be promoted by assuring individual producers that payments received for their milk are in accordance with the pricing provisions of the order and reflect accurate weights and tests of such milk. To accomplish this fully, it is necessary that the butterfat test and weights of individual producer deliveries of milk as reported by the handler be verified for accuracy.

An additional phase of the marketing service program is to furnish producers with correct market information. Efficiency in the production, utilization and marketing of milk will be promoted by the dissemination of current information on a market-wide basis to all producers.

To enable the market administrator to furnish these marketing services, provision should be made for a maximum deduction of 5 cents per hundredweight with respect to receipts of milk from producers for whom he renders marketing services. If later experience indicates that marketing services can be performed at a lesser rate, provision is necessary for the Secretary to adjust the rate downward without the necessity of a hearing.

Rulings on proposed findings and conclusions: Briefs and proposed findings and conclusions were filed on behalf of several interested parties in the market. These briefs, proposed findings and conclusions, and the evidence in the record were considered in making the findings and conclusions set forth above. To the extent that the suggested findings and conclusions set forth in the briefs are inconsistent with the findings and conclusions herein, the requests to make such findings or to reach such conclusions are denied for the reasons previously stated in this decision.

General findings: (a) The proposed marketing agreement and order and all of the terms and conditions thereof, will tend to effectuate the declared policy of the act;

(b) The parity prices of milk as determined pursuant to section 2 of the act are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the marketing area, and the minimum prices specified in the proposed marketing agreement and the order are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest; and

(c) The proposed marketing agreement and order will regulate the handling of milk in the same manner as, and will be applicable to persons in the respective classes of industrial and commercial activity specified in, a marketing agreement upon which a hearing has been held.

Revised recommended marketing agreement and order: The following order regulating the handling of milk in the Washington, D.C., marketing area is recommended as the detailed and appropriate means by which the foregoing conclusions may be carried out. The recommended marketing agreement is not included in this decision because the regulatory provisions thereof would be the same as those contained in the proposed order.

DEFINITIONS

Section 902.1. Act:

"Act" means Public Act No. 10, 73d Congress, as amendment and as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.).

Section 902.2. Secretary:

"Secretary" means the Secretary of Agriculture or any officer or employee of the United States authorized to exercise the powers and to perform the duties of the Secretary of Agriculture.

Section 902.3. Department of Agriculture:

"Department of Agriculture" means the U.S. Department of Agriculture or any other Federal agency as may be authorized by act of Congress, or by Executive order, to perform the price reporting functions specified in this part.

Section 902.4. Person:

"Person" means any individual, partnership, corporation, association, or other business unit.

Section 902.5. Cooperative association:

"Cooperative association" means any cooperative marketing association of producers which the Secretary determines, after application by the association:

(a) To be qualified under the provisions of the act of Congress of February 18, 1922, as amended, known as the "Capper-Volstead Act"; and

(b) To have full authority in the sale of milk of its members and to be engaged in making collective sales of or marketing milk or its products for its members.

Section 902.6. Washington, D.C., marketing area:

"Washington, D.C., marketing area" hereinafter called "the marketing area" means all of the territory situated within the District of Columbia; the counties of Arlington, Fairfax, and Prince William, and the city of Alexandria, all in the State of Virginia; the counties of Prince Georges (excluding the corporate limits of the town of Laurel), Montgomery, Charles, and St. Marys; that portion of Calvert County lying south of a line beginning at the western terminus of Maryland State Highway 507, continuing easterly along said highway to its intersection with Maryland State Highway 2, continuing northerly along said Highway 2, to its intersection with Maryland State Highway 263 and then easterly along said Highway 263 to its terminus at the Chesapeake Bay, and that part of Frederick lying south of a line be-

ginning at the intersection of the Washington-Frederick County line with Alternate U.S. Route 40, following Alternate U.S. Route 40 easterly to the western boundary of the corporate limits of the city of Frederick, thence along the western, northern, and eastern boundary of the city to its eastern junction with Alternate U.S. Route 40 and then southeasterly along Alternate U.S. Route 40 to the Frederick-Carroll County line, all in the State of Maryland; together with all piers, docks, and wharves connected therewith and including all territory within such boundaries which is occupied by Government (municipal, State, or Federal) installations, institutions, or other establishments.

Section 902.7. Plant:

"Plant" means the land, buildings, surroundings, facilities, and equipment, whether owned and operated by one or more persons, constituting a single operating unit or establishment for the receiving and processing or packaging of milk or milk products.

Section 902.8. Approved plant:

"Approved plant" means:

(a) Any plant which is approved by the applicable health authority having jurisdiction in the marketing area for the handling of milk for disposition as class I milk and from which class I milk is disposed of on routes to retail or wholesale outlets in the marketing area; and

(b) Any plant which is approved by the applicable health authority having jurisdiction in the marketing area to supply milk to a plant specified in paragraph (a) of this section and from which milk is moved during the month to such plant.

Section 902.9. Pool plant:

"Pool plant" means:

(a) An approved plant other than the plant of a producer-handler: (1) During any month within which a volume of milk equal to not less than 10 percent of its receipts of milk from dairy farmers, approved by the applicable health authority for fluid disposition in the marketing area, is disposed of as class I milk on routes in the marketing area: *Provided,* That the total quantity of class I milk disposed of from such plant, both inside and outside the marketing area, is equal to not less than 50 percent of such plant's total receipts from such dairy farmers; or (2) during any month of October through February in which at least 50 percent, and during any month of March through September in which at least 40 percent, of its receipts of milk from dairy farmers, approved by the applicable health authority for fluid disposition in the marketing area, is shipped in the form of milk, skim milk, or cream to a plant which disposes of not less than 10 percent of its receipts of approved milk from dairy farmers and from other approved plants as class I milk on routes in the marketing area and not less than 50 percent of such receipts are disposed of as class I milk, both inside and outside the marketing area: *Provided,* That any such plant which was a pool plant in each of the preceding months of October through February shall be a pool plant for the months of March through September, unless the handler gives written notice to the market administrator on or before the first day of such month that the plant is a nonpool plant: *And provided further,* That any such plant which was a nonpool plant during any of the months of October through February shall not be a pool plant in any of the immediately following months of March through September in which it was owned by the same handler or affiliate of the handler or by any person who controls, or is controlled by, the handler.

(b) Any manufacturing plant which is operated by a cooperative association 70 percent or more of whose membership are qualified producers whose milk is regularly received during the month at other pool plants.

Section 902.10. Handler:

"Handler" means:

(a) Any person in his capacity as the operator of an approved plant (whether or not such approved plant is a pool plant) or any plant qualified as a pool plant pursuant to section 902.9(b); and

(b) Any cooperative association with respect to the milk of any producer which it causes to be diverted in accordance with the proviso of section 902.15 from a pool plant to a nonpool plant for the account of such cooperative association.

Section 902.11. Pool handler:

"Pool handler" means any person in his capacity as the operator of a pool plant or a cooperative association qualified as a handler pursuant to section 902.10(b).

Section 902.12. Producer-handler:

"Producer-handler" means any person who operates a dairy farm and an approved plant from which class I milk is disposed of on route(s) in the marketing area and who during the month received no milk from any source other than his own farm production and from pool plants.

Section 902.13. Dairy farmer:

"Dairy farmer" means any person who produces milk which is delivered in bulk to a plant.

Section 902.14. Dairy farmer for other markets:

"Dairy farmer for other markets" means:

(a) Any dairy farmer whose milk is received by a handler at a pool plant during the months of March through September from a farm from which the handler, an affiliate of the handler, or any person who controls or is controlled by the handler, received milk other than as producer milk during any of the preceding months or October through February; and

(b) Any dairy farmer whose milk is received at a pool plant qualified pursuant to section 902.9(b) for the account of a cooperative association which has no membership among producers delivering milk to other pool plants.

Section 902.15. Producer:

"Producer" means any dairy farmer, except a producer-handler or dairy farmer for other markets, who produces milk which is approved by the applicable health authority having jurisdiction in the marketing area for fluid disposition within the marketing area and which is received at a pool plant or is diverted to a nonpool plant during any month(s) of March through September or on not more than 8 days (4 days in the case of every-other-day delivery) during any month(s) of October through February: *Provided,* That the milk so diverted shall be deemed to have been received by the diverting handler at a pool plant at the location from which it was diverted: *And provided further,* That the criterion for determination of qualification under this definition for a dairy farmer delivering milk to a pool plant qualified under section 902.9(b) shall be the holding of a valid farm inspection permit issued by the applicable health authority having jurisdiction in the marketing area. This definition shall not include any dairy farmer whose milk is diverted during the month or more than the number of days specified in this section.

Section 902.16. Producer milk:

"Producer milk" means any skim milk or butterfat contained in milk received directly at a pool plant from producers, or diverted in accordance with the proviso of section 902.15.

Section 902.17. Other source milk:

"Other source milk" means all receipts of skim milk and butterfat other than that contained in (a) producer milk, (b) receipts from pool plants, or (c) class II products disposed of in the form in which received without further processing by the handler.

Section 902.18. Route:

"Route" means any delivery (including any delivery by a vendor or disposition at a plant store or from vending machines) of any class I product to a wholesale or retail stop, including a Federal, State, or municipal institution or installation, but excluding any delivery to a plant.

MARKET ADMINISTRATOR

Section 902.20. Designation:

The agency for the administration of this part shall be a "market administrator" selected by the Secretary. He shall be entitled to such compensation as may be determined by, and shall be subject to removal at the discretion of, the Secretary.

Section 902.21. Powers:

The market administrator shall have the following powers with respect to this part:

(a) To administer its terms and provisions;

(b) To make rules and regulations to effectuate its terms and provisions;

(c) To receive, investigate, and report to the Secretary complaints of violations; and

(d) To recommend amendments to the Secretary.

Section 902.22. Duties:

The market administrator shall perform all duties necessary to administer the terms and provisions of this part, including, but not limited to the following:

(a) Within 45 days following the date on which he enters upon his duties, or such lesser period as may be prescribed by the Secretary, execute and deliver to the Secretary a bond, effective as of the date on which he enters upon his duties and conditioned upon the faithful performance of such duties, in an amount and with surety thereon satisfactory to the Secretary;

(b) Employ and fix the compensation of such persons as may be necessary to enable him to administer its terms and provisions;

(c) Obtain a bond in a reasonable amount, and with reasonable surety thereon, covering each employee who handles funds entrusted to the market administrator:

(d) Pay out of the funds received pursuant to section 902.88:

(1) The cost of his bond and the bonds of his employees,

(2) His own compensation, and

(3) All other expenses except those incurred under section 902.87, necessarily incurred by him in the maintenance and functioning of his office and in the performance of his duties;

(e) Keep such books and records as will clearly reflect the transactions provided for in this part, and, upon request by the Secretary, surrender the same to such other person as the Secretary may designate;

(f) Publicly announce at his discretion, unless otherwise directed by the Secretary, by posting in a conspicuous place in his office and by such other means as he deems appropriate, the name of any person who, within 5 days after the date upon which he is required to perform such acts, has not made reports pursuant to section 902.30 or payments pursuant to sections 902.80 to 902.88.

(g) Submit his books and records to examination by the Secretary, and furnish such information and reports as the Secretary may request.

(h) Verify all reports and payments of each handler, by audit if necessary, of such handler's records and of the records of any other handler or person upon whose utilization the classification of skim milk and butterfat for such handler depends;

(i) Prepare and make available for the benefit of producers, consumers, and handlers, such general statistics and information concerning the operation of this part as do not reveal confidential information;

(j) On or before the date specified, publicly announce by posting in a conspicuous

place in his office and by such other means as he deems appropriate, the following:

(1) The 5th day of each month, the class I price computed pursuant to section 902.50(a) for the current month, and the class II price computed pursuant to section 902.50(b) and the handler butterfat differentials computed pursuant to section 902.51, both for the preceding month; and

(2) The 10th day of each month, the uniform price computed pursuant to section 902.71 and the producer butterfat differential computed pursuant to section 902.81 both for the preceding month; and

(k) On or before the 10th day after the end of each month, report to each cooperative association which so requests, the class utilization of milk purchased from such association or delivered to the pool plant(s) of each handler by producers who are members of such cooperative association. For the purpose of this report, the milk so purchased or received shall be allocated to each class in the same ratio as all producer milk received by such handler during such month.

REPORTS, RECORDS, AND FACILITIES

Section 902.30. Reports of receipts and utilization:

(a) On or before the 8th day after the end of each month each pool handler shall report to the market administrator in the detail and on forms prescribed by the market administrator as follows:

(1) The quantities of skim milk and butterfat contained in (i) receipts of producer milk (including such handler's own production), (ii) receipts from other pool plants in the form of products designated as class I milk pursuant to section 902.41(a)(1), and (iii) receipts of other source milk.

(2) Inventories of products designated as class I milk pursuant to section 902.41(a)(1) on hand at the beginning and end of the month; and

(3) The utilization of all skim milk and butterfat required to be reported pursuant to this paragraph.

(b) Each nonpool handler shall make reports to the market administrator at such time and in such manner as the market administrator may prescribe.

Section 902.31. Other reports:

(a) Each pool handler shall report to the market administrator in the detail and on forms prescribed by the market administrator as follows:

(1) On or before the 20th day after the end of the month, for each of his pool plants, his producer payroll for such month, which shall show for each producer; (i) his name and address, (ii) the total pounds of milk received from such producer, (iii) the average butterfat content of such milk, and (iv) the net amount of the handler's payment, together with the price paid and the amount and nature of any deduction;

(2) On or before the first day other source milk is received in the form of milk, fluid skim milk or cream at his pool plant(s) his intention to receive such product, and on or before the last day such product is received, his intention to discontinue receipt of such product; and

(3) Such other information with respect to receipts and utilization of butterfat and skim milk as the market administrator shall prescribe.

(b) Promptly after a producer moves from one farm to another, or starts or resumes deliveries to any of a handler's pool plants, the handler shall file with the market administrator a report stating the producer's name and post office address, the health department permit number, the date on which the change took place, and the farm and plant location involved.

(c) Each pool handler who receives milk during the month from producers for which payment is to be made to a cooperative association pursuant to section 902.80(b) shall on or before the 10th day after the end of each month report to such cooperative association concerning each producer-member of such cooperative association from whom he received milk during the month as follows:

(1) The name, address, and code number, if any;

(2) The total deliveries and the number of days on which delivery was made;

(3) The average butterfat test of the milk delivered; and

(4) The nature and amount of any deductions to be made in payments due such producer.

(d) Each handler dumping skim milk pursuant to section 902.41(b)(3) shall give the market administrator during normal duty hours, not less than 3 hours' advance notice of intention to make such disposition and of the quantities of skim milk involved.

Section 902.32. Records and facilities:

Each handler shall maintain and make available to the market administrator during the usual hours of business such accounts and records of his operations together with such facilities as are necessary for the market administrator to verify or establish the correct data for each month, with respect to:

(a) The receipt and utilization of all skim milk and butterfat handled in any form;

(b) The weights and tests for butterfat and other content of all milk and milk products handled;

(c) The pounds of skim milk and butterfat contained in or represented by all items in inventory at the beginning and end of each month required to be reported pursuant to section 902.30(a)(2); and

(d) Payments to producers and cooperative associations, including any deductions and the disbursement of money so deducted.

Section 902.33. Retention of records:

All books and records required under this part to be made available to the market administrator shall be retained by the handler for a period of 3 years to begin at the end of the month to which such books and records pertain: *Provided,* That if, within such 3-year period, the market administrator notifies the handler in writing that the retention of such books and records, or of specified books and records, is necessary in connection with a proceeding under section 8c(15)(A) of the act or a court action specified in such notice, the handler shall retain such books and records, or specified books and records, until further notification from the market administrator. In either case, the market administrator shall give further written notification to the handler promptly upon the termination of the litigation or when the records are no longer necessary in connection therewith.

CLASSIFICATION OF MILK

Section 902.40. Skim milk and butterfat to be classified:

All skim milk and butterfat received within the month at pool plants and which is required to be reported pursuant to section 902.30 shall be classified by the market administrator.

Section 902.41. Classes of utilization:

Subject to the conditions set forth in sections 902.42 to 902.46 the classes of utilization shall be as follows:

(a) Class I milk: Class I milk shall be all skim milk (including that used to produce concentrated milk and reconstituted or fortified skim milk) and butterfat: (1) Disposed of (other than in hermetically sealed containers) in fluid form or as frozen concentrated milk for human consumption as milk, flavored milk, skim milk, flavored skim milk, cultured skim milk, buttermilk, cream (except sour cream) including any mixture of cream and milk or skim milk containing less butterfat than the regular standard for cream; and (2) not specifically accounted for as class II milk.

(b) Class II milk: Class II milk shall be all skim milk and butterfat (1) used to produce any product other than those designated as class I milk pursuant to paragraph (a)(1) of this section; (2) disposed of for livestock feed; (3) contained in skim milk dumped if the conditions of section 902.31(d) are met by the handler; (4) contained in inventory of products designated in paragraph (a)(1) of this section on hand at the end of the month; (5) in actual plant shrinkage not to exceed 1½ percent of skim milk and butterfat, respectively, in producer milk; and (6) in shrinkage of other source milk.

Section 902.42. Shrinkage:

The market administrator shall allocate shrinkage at the pool plant(s) of each handler as follows:

(a) Compute the total shrinkage of skim milk and butterfat respectively; and

(b) Allocate the resulting amounts pro rata to skim milk and butterfat, respectively, in producer milk and other source milk.

Section 902.43. Responsibility of handlers and the reclassification of milk:

(a) All skim milk and butterfat shall be class I milk unless the handler who first receives such skim milk and butterfat proves to the market administrator that such skim milk or butterfat should be classified otherwise.

(b) Any skim milk or butterfat shall be reclassified if verification by the market administrator discloses that the original classification was incorrect.

Section 902.44. Transfers:

Skim milk or butterfat disposed of during the month from a pool plant shall be classified:

(a) As class I milk if transferred in the form of any products designated as class I milk pursuant to section 902.41(a)(1) to a pool plant of another handler unless utilization as class II milk is claimed by both handlers in their reports submitted for the month to the market administrator pursuant to section 902.30(a): *Provided,* That the skim milk or butterfat so assigned to class II milk shall be limited to the amount thereof remaining in class II milk in the plant of the transferee handler after the assignment of other source milk pursuant to section 902.46 and any additional amounts of such skim milk or butterfat shall be assigned to class I milk: *And provided further,* That if either or both handlers have received other source milk, the skim milk or butterfat so transferred shall be classified at both plants so as to allocate the greatest possible class I utilization to the producer milk at both plants.

(b) As class I milk if transferred in the form of any product designated as class I milk pursuant to section 902.41(a)(1) to a producer-handler.

(c) As class I milk if transferred or diverted in the form of any product designated as class I milk pursuant to section 902.41(a)(1) to an approved plant, other than a pool plant or the plant of a producer-handler, to the extent of such plants' disposition of skim milk and butterfat, respectively, as class I milk in the marketing area: *Provided,* That any remaining amount of such transfer or diversion shall be assigned to the highest remaining utilization in the transferee plant after the prior assignment of receipts at such plant from dairy farmers who the market administrator determines constitute its regular source of supply.

(d) As class I milk if transferred or diverted in bulk in the form of milk, skim milk, or cream, to a nonpool plant, other than an approved plant, located less than 300 miles from the zero milestone in Washington, D.C., unless (1) the handler claims class II utilization in his report submitted pursuant to section 902.30(a), (2) the operator of the transferee plant maintains books and records showing the utilization of all skim milk and butterfat at such plant which are made available if requested by the market administrator for the purpose of verification, and (3) not less than an equivalent amount of skim milk and butterfat was ac-

tually utilized in such plant during the month in the use indicated in such report: *Provided,* That if upon inspection of the records of such plant it is found that an equivalent amount of skim milk and butterfat was not actually used in such indicated use the remaining pounds shall be classified as class I milk.

(e) As class I milk if transferred or diverted in bulk in the form of milk, skim milk, or cream, to a nonpool plant other than an approved plant located 300 miles or more from the zero milestone in Washington, D.C.

Section 902.45. Computation of skim milk and butterfat in each class:

For each month, the market administrator shall correct for mathematical and for other obvious errors the reports of receipts and utilization submitted pursuant to section 902.30(a) for the pool plant(s) of each handler and shall compute the pounds of skim milk and butterfat in class I milk and class II milk for such handlers.

Section 902.46. Allocation of skim milk and butterfat classified:

After making the computations pursuant to section 902.45 the market administrator shall determine the classification of producer milk received at the pool plant(s) of each handler as follows:

(a) Skim milk shall be allocated in the following manner:

(1) Subtract from the total pounds of skim milk in class II milk the pounds of skim milk in producer milk classified pursuant to section 902.41(b)(5);

(2) Subtract from the remaining pounds of skim milk in each class, in series beginning with class II milk, the pounds of skim milk in other source milk received during the month in a form other than products specified in section 902.41(a)(1);

(3) Subtract from the remaining pounds of skim milk in each class, in series beginning with class II milk, the pounds of skim milk in other source milk received in the form of products specified in section 902.41(a)(1) from plants which are not fully subject to the pricing provisions of another order issued pursuant to the act;

(4) Subtract from the pounds of skim milk remaining in each class in series beginning with class II milk the pounds of skim milk in other source milk received in the form of products specified in section 902.41(a)(1) from a plant(s) which is fully subject to the pricing provisions of another order issued pursuant to the act;

(5) Subtract from the pounds of skim milk remaining in each class in series beginning with class II milk, the pounds of skim milk contained in inventory of products specified in section 902.41(a)(1) on hand at the beginning of the month;

(6) Subtract from the remaining pounds of skim milk in each class the pounds of skim milk received from the pool plants of other handlers in the form of products specified in section 902.41(a)(1) according to the classification thereof as determined pursuant to section 902.44(a).

(7) Add to the remaining pounds of skim milk in class II the pounds of skim milk subtracted pursuant to subparagraph (1) of this paragraph; and

(8) If the remaining pounds of skim milk in both classes exceed the pounds of skim milk contained in producer milk, subtract such excess from the remaining pounds of skim milk in each class in series beginning with class II milk. Any amounts so subtracted shall be known as "overage."

(b) Butterfat shall be allocated in accordance with the same procedure outlined for skim milk in paragraph (a) of this section; and

(c) Add the pounds of skim milk and the pounds of butterfat allocated to the producer milk in each class computed pursuant to paragraphs (a) and (b) of this section, and determine the weighted average butterfat content of each class.

MINIMUM PRICES

Section 902.50. Class prices:

Subject to the provisions of sections 902.51 and 902.52 each handler shall pay, at the time and in the manner set forth in section 902.80 for each hundredweight of milk containing 3.5 percent butterfat received at his pool plant(s) during the month from producers or a cooperative association not less than the following prices per hundredweight for the respective quantities of milk in each class computed pursuant to section 902.46.

(a) Class I price: During the first 18 months after the effective date of this part the price for class I milk shall be $5.55 for the months of July through February and $5.10 for the months of March through June: *Provided,* That such price in any month shall be adjusted to reflect the deviation of the average of the Federal order class I prices for the Philadelphia, New York, and Chicago markets for such month from such average price in the corresponding month of 1958, as follows:

Washington price adjustment

3-market deviation from corresponding month of 1958 (cents), plus or minus:	
0–15	0
15.1–35	20
35.1–55	40
55.1–75	60
75.1–95	80

(b) Class II price: The price for class II milk shall be the sum of the values of butterfat and skim milk computed as follows:

(1) Butterfat: Add all weekly quotations per 40-quart can of 40 percent sweet cream approved for Pennsylvania and New Jersey in the Philadelphia market as reported each week ending within the month by the U.S. Department of Agriculture, divide by the number of quotations, subtract $2, divide by 33.48, multiply by 3.5: *Provided,* That such butterfat value shall not be less than 3.5 times 120 percent of the average grade A (92-score) butter price at New York as reported by the U.S. Department of Agriculture for the month for which payment is to be made less 17 cents.

(2) Skim milk: The average of carlot prices per pound for nonfat dry milk, spray and roller process, respectively, for human consumption, f.o.b. manufacturing plants in the Chicago area, as reported for the period from the 26th day of the preceding month through the 25th day of the current month by the Department of Agriculture shall determine the skim values, as follows:

Average price per pound of nonfat solid-spray and roller process:	*Skim value*
$0.065 or below	$0.075
$0.066 to $0.075	.15
$0.076 to $0.085	.225
$0.096 to $0.105	.30
$0.106 to $0.115	.375
$0.116 to $0.125	.45
$0.126 to $0.135	.525
$0.136 to $0.145	.60
$0.146 to $0.155	.675
$0.156 to $0.165	.75
$0.166 to $0.175	.825
$0.176 to $0.185	.90
$0.186 to $0.195	.975

Section 902.51. Butterfat differentials to handlers:

For milk containing more or less than 3.5 percent butterfat, the class prices pursuant to section 902.50 shall be increased or decreased, respectively, for each one-tenth of 1 percent butterfat by the appropriate rate, rounded in each case to the nearest one-tenth cent, determined as follows:

(a) Class I milk: Add all weekly quotations per 40-quart can of 40 percent sweet cream approved for Pennsylvania and New Jersey in the Philadelphia market as reported each week ending within the month by the U.S. Department of Agriculture, divide by the number of quotations and divide the resulting value by 334.8: *Provided,* That if the result is less than the class II differential determined pursuant to paragraph (b) of this section, such class II differential shall also be applicable to class I milk; and

(b) Class II milk: Divide by 35 the butterfat value determined pursuant to section 902.50(b)(1).

Section 902.52. Location differentials to handlers:

For that milk which is received from producers at a pool plant located 75 miles or more from the milestone in Washington, D.C., by the shortest hard-surfaced highway distance as determined by the market administrator, and which is assigned to class I milk, the class I price as specified in section 902.50(a) shall be reduced at the rate set forth in the following schedule:

Distance (miles):	*Rate per hundredweight (cents)*
75	12.0
For each additional 10 miles or fraction thereof	1.5

Provided, That for the purpose of calculating such location differential, products designated as class I milk which are transferred between pool plants shall first be assigned to any remainder of class II milk in the transferee plant after making the calculations prescribed in section 902.46 (a)(1) to (5), and the comparable steps in section 92.46(b) for such plant, such assignment to the transferring plant to be made in sequence according to the location differential applicable at each plant, beginning with the plant having the largest differential.

Section 902.53. Use of equivalent prices or indexes.

If for any reason a price quotation or index required by this part for computing class prices or for other purposes is not available in the manner described, the market administrator shall use a price or index determined by the Secretary to be equivalent to the price or index which is required.

APPLICATION OF PROVISIONS

Section 902.60. Producer-handler:

Sections 902.40 to 902.46, 902.50 to 902.52, 902.62, 902.70 to 902.71 and 902.80 to 902.89 shall not apply to a producer-handler.

Section 902.61. Plants subject to other Federal orders:

A plant specified in paragraph (a) or (b) of this section shall be considered as a nonpool plant except that the operator of such plant shall, with respect to the total receipts and utilization or disposition of skim milk and butterfat at the plant, make reports to the market administrator at such time and in such manner as the market administrator may require (in lieu of the reports required pursuant to section 902.30) and allow verification of such reports by the market administrator.

(a) Any plant qualified pursuant to section 902.9(a)(1) which would be subject to the classification and pricing provisions of another order issued pursuant to the act unless the Secretary determines that a greater volume of class I milk is disposed of from such plant on routes in the Washington marketing area than in a marketing area regulated pursuant to such other order.

(b) Any plant qualified pursuant to section 902.9 (a)(2) or (b) which would be subject to the classification and pricing provisions of another order issued pursuant to the act unless such plant has qualified as a pool plant pursuant to the first proviso of section 902.9(a)(2) for each month during the preceding October through February.

Section 902.62. Payments on other source milk:

Within 11 days after the end of each month handlers shall make payments to producers through the producer-settlement fund as follows:

(a) Each pool handler who received other source milk which is allocated to class I pursuant to section 902.46 (a)(2) and (b) shall make payment on the quantity so allocated at the difference between the class I price and the class II price applicable at the location of his pool plant qualified pursuant to section 902.9(a).

(b) Each pool handler who received other source milk which is allocated to class I pursuant to section 902.46 (a)(3) and (b) shall make payment on the quantity so allocated at the difference between the class I price and the class II price applicable at the zone location of the nearest nonpool plant(s) from which an equivalent amount of such other source milk was received; and

(c) Each handler operating an approved plant, other than a pool plant, which is not subject to the classification and pricing provisions of another order issued pursuant to the act and from which class I products are disposed of on routes in the marketing area during the month shall make payment on the total hundredweight of skim milk and butterfat so disposed of which is in excess of his receipts of skim milk and butterfat, respectively, from pool plants at the difference between the class I price and the class II price applicable for the zone location of such plant.

DETERMINATION OF UNIFORM PRICE

Section 902.70. Computation of the value of producer milk for each handler:

For each delivery period, the market administrator shall compute the value of milk for each pool handler as follows:

(a) Multiply the pounds of producer milk in each class computed pursuant to section 902.46 by the applicable class price and total the resulting amounts;

(b) Add the amount of any payments due from such handler pursuant to section 902.62 (a) or (b);

(c) Add the amounts computed by multiplying the pounds of "overage" deducted from each class pursuant to section 902.46 (a)(8) and (b) by the applicable class price;

(d) Add the amount computed by multiplying the difference between the appropriate class II price for the preceding month and the appropriate class I price for the current month by the hundredweight of producer milk classified in class II during the preceding month less allowable shrinkage allocated pursuant to section 902.46(a)(1) in such month, or the hundredweight of milk subtracted from class I pursuant to section 902.46 (a)(5) and (b) for the current month, whichever is less;

(e) Add the amount computed by multiplying the difference between the appropriate class II price for the preceding month and the appropriate class I price for the current month by the hundredweight of milk allocated to class I pursuant to section 902.46 (a)(5) and (b) for the current month which is in excess of (1) the hundredweight of milk for which an adjustment was made pursuant to subparagraph (d) of this paragraph and (2) the hundredweight of milk assigned to class II pursuant to section 902.46 (a)(4) and (b) for the previous month and which was classified and priced as class I under the other Federal order; and

(f) Add or subtract, as the case may be, an amount necessary to correct errors discovered by the market administrator in the verification of reports of such handler of his receipts and utilization of skim milk and butterfat for previous months.

Section 902.71. Computation of the uniform price:

For each month the market administrator shall compute the uniform price per hundredweight of producer milk of 3.5 percent butterfat content, f.o.b. market as follows:

(a) Combine into one total the net obligations computed pursuant to section 902.70 for all handlers who made reports prescribed in section 902.30(a) for the month and who were not in default of payments pursuant to section 902.84 for the preceding month.

(b) Subtract, if the weighted average butterfat content of producer milk included under paragraph (a) of this section is greater than 3.5 percent, or add, if such average butterfat content is less than 3.5 percent, an amount computed as follows: Multiply the amount by which the average butterfat content of such milk varies from 3.5 percent by the producer butterfat differential computed pursuant to section 902.81 and multiply the resulting figure by the total hundredweight of such milk;

(c) Add an amount equal to the sum of deductions to be made from producer payments for location differentials pursuant to section 902.82;

(d) Add an amount equal to not less than one-half of the unobligated balance on hand in the producer-settlement fund;

(e) Divide the resulting amount by the total hundredweight of producer milk included under paragraph (a) of this section; and

(f) Subtract not less than 4 nor more than 5 cents from the amount computed pursuant to paragraph (e) of this section.

PAYMENTS

Section 902.80. Time and method of payment:

(a) Except as provided in paragraph (b) of this section, each pool handler on or before the 15th day after the end of each month shall make payment to each producer from whom milk is received during the month for the quantity of milk so received at not less than the uniform price per hundredweight computed pursuant to section 902.71 adjusted by the butterfat differential computed pursuant to section 902.81 and by the location differential computed pursuant to section 902.82 less proper deductions authorized in writing by the producer: *Provided,* That if by such date such handler has not received full payment from the market administrator pursuant to section 902.85 for such month, he may reduce pro rata his payments to producers by not more than the amount of such underpayment. Payment to producers shall be completed thereafter not later than the date for making payments pursuant to this paragraph next following after receipt of the balance due from the market administrator;

(b) In the case of a cooperative association which the market administrator determines is authorized by its producer-members to collect payment for their milk and which has so requested any handler in writing, such handler shall on or before the second day prior to the date on which payments are due individual producers, pay the cooperative association for milk received during the month from the producer-members of such association as determined by the market administrator, an amount equal to not less than the total due such producer-members as determined pursuant to paragraph (a) of this section; and

(c) In the case of milk received by a handler from a cooperative association in its capacity as a handler such handler shall on or before the second day prior to the date on which payments are due individual producers, pay to such cooperative association for milk so received during the month, an amount not less than the value of such milk computed at the applicable class prices for the location of the plant of the buying handler.

Section 902.81. Producer butterfat differential:

In making payments pursuant to section 902.80 (a) or (b) the uniform price shall be adjusted for each one-tenth of 1 percent of butterfat content in the milk of each producer above or below 3.5 percent, as the case may be, by a butterfat differential equal to the average of the butterfat differentials determined pursuant to section 902.51 (a) and (b) weighted by the pounds of butterfat in producer milk in each class and rounded to the nearest full cent.

Section 902.82. Location differential to producers:

In making payments to producers or to a cooperative association pursuant to section 902.80 (a) or (b) a handler shall deduct with respect to all milk received at his pool plant(s) located 75 miles by shortest highway distance from the zero milestone in the District of Columbia, as determined by the market administrator, 12 cents per hundredweight plus 1.5 cents for each 10-mile additional distance, or fraction thereof, which such plant is located from such milestone.

Section 902.83. Producer-settlement funds:

The market administrator shall establish and maintain a separate fund known as the "producer-settlement fund" into which he shall deposit all payments made by handlers pursuant to sections 902.62(c), 902.84, and 902.86 and out of which he shall make all payments pursuant to sections 902.85 and 902.86: *Provided,* That the market administrator shall offset any such payment due to any handler against payment due from such handler.

Section 902.84. Payments to the producer-settlement fund:

On or before the 11th day after the end of each month, each handler, including a cooperative association which is a handler, shall pay to the market administrator for payment to producers through the producer-settlement fund the amount by which the net pool obligation of such handler is greater than the sum required to be paid producers by such handler pursuant to section 902.80 (a) and (b).

Section 902.85. Payments out of the producer-settlement fund:

On or before the 12th day after the end of the month, the market administrator shall pay to each handler for payment to producers the amount by which the sum required to be paid producers by such handler pursuant to section 902.80 (a) and (b) is greater than the net pool obligations of such handler: *Provided,* That if the balance in the producer-settlement fund is insufficient to make all payments pursuant to this section, the market administrator shall reduce uniformly such payments and shall complete such payments as soon as the necessary funds are available.

Section 902.86. Adjustment of accounts:

Whenever verification by the market administrator of reports or payments of any handler discloses errors resulting in money due (a) the market administrator from such handler, (b) such handler from the market administrator, or (c) any producer or cooperative association from such handler, the marketing administrator shall promptly notify such handler of any amount so due and payment thereof shall be made on or before the next date for making payments set forth in the provisions under which such error occurred.

Section 902.87. Marketing services:

(a) Except as set forth in paragraph (b) of this section, each handler, in making payments directly to producers for milk (other than milk of his own production) pursuant to section 902.80(a) shall deduct 5 cents per hundredweight or such lesser amount as the Secretary may prescribe and shall pay such deductions to the market administrator on or before the 18th day after the end of the month. Such money shall be expended by the market administrator to provide market information and to verify the weights, samples, and tests of milk of producers who are not receiving such service from a cooperative association; and

(b) In the case of producers for whom the Secretary determines a cooperative association is actually performing the services set forth in paragraph (a) of this section, each handler shall make, in lieu of the deduction specified in paragraph (a) of this section, such deductions from the payments to be made directly to such producers pursuant to section 902.80(a) as are authorized by such producers on or before the 18th day after the end of each month and pay such deductions to the cooperative rendering such services.

Section 902.88. Expense of administration:

As his pro rata share of the expense of administration of this part, each handler, including any cooperative association which is a handler, shall pay to the market administrator on or before the 18th day after the end of the month, 4 cents per hundredweight or such lesser amount as the Secretary may prescribe, for each hundredweight of skim milk and butterfat contained in (a) producer milk (including such handler's own farm production), (b) other source milk allocated to class I milk pursuant to section 902.46(a)(2), (3), and (b), or (c) class I milk for which a payment is due pursuant to section 902.62(c).

Section 902.89. Termination of obligations:

The provisions of this section shall apply to any obligation under this part for the payment of money.

(a) The obligation of any handler to pay money required to be paid under the terms of this part shall, except as provided in paragraphs (b) and (c) of this section, terminate 2 years after the last day of the month during which the market administrator receives the handler's utilization report on the milk involved in such obligation, unless within such 2-year period the market administrator notifies the handler that such money is due and payable. Service of such notice shall be complete upon mailing to the handler's last known address, and it shall contain but need not be limited to, the following information:

(1) The amount of the obligation;

(2) The month(s) during which the milk, with respect to which the obligation exists, was received or handled; and

(3) If the obligation is payable to one or more producers or to an association of producers, the name of such producer(s) or association of producers, or if the obligation is payable to the market administrator, the account for which it is to be paid;

(b) If a handler fails or refuses, with respect to any obligation under this part, to make available to the market administrator or his representatives all books and records required by this part to be made available, the market administrator may, within the 2-year period provided for in paragraph (a) of this section, notify the handler in writing of such failure or refusal. If the market administrator so notifies a handler, the said 2-year period with respect to such obligation shall not begin until the first day of the month following the month during which all such books and records pertaining to such obligations are made available to the market administrator or his representatives;

(c) Notwithstanding the provisions of paragraphs (a) and (b) of this section, a handler's obligation under this part to pay money shall not be terminated with respect to any transaction involving fraud or willful concealment of a fact, material to the obligation, on the part of the handler against whom the obligation is sought to be imposed; and

(d) Any obligation on the part of the market administrator to pay a handler any money which such handler claims to be due him under the terms of this part shall terminate 2 years after the end of the month during which the milk involved in the claim was received if an underpayment is claimed, or 2 years after the end of the month during which the payment (including deduction or setoff by the market administrator) was made by the handler if a refund on such payment is claimed, unless such handler, within the applicable period of time files, pursuant to section 8c(15)(A) of the act, a petition claiming such money.

EFFECTIVE TIME, SUSPENSION, OR TERMINATION

Sec. 902.90. Effective time:

The provisions of this part, or any amendment to this part, shall become effective at such time as the Secretary may declare and shall continue in force until suspended or terminated, pursuant to § 902.91.

Sec. 902.91. Suspension or termination:

The Secretary may suspend or terminate this part or any provision of this part, whenever he finds that this part or any provisions of this part, obstructs, or does not tend to effectuate the declared policy of the act. This part shall terminate, in any event, whenever the provisions of the act authorizig it cease to be in effect.

Sec. 902.92. Continuing obligations:

If under the suspension or termination of any or all provisions of this part, there are any obligations thereunder, the final accrual or ascertainment of which requires further acts by any person (including the market administrator), such further acts shall be performed notwithstanding such suspension or termination.

Section 902.93. Liquidation.

Upon the suspension or termination of the provisions of this part, except this section, the market administrator, or such liquidating agent as the Secretary may designate, shall, if so directed by the Secretary, liquidate the business of the market administrator's office, dispose of all property in his possession or control, including accounts receivable, and execute and deliver all assignment or other instruments necessary or appropriate to effectuate any such disposition. If the liquidating agent is so designated, all assets, books, and records of the market administrator shall be transferred promptly to such liquidating agent. If, upon such liquidation, the funds on hand exceed the amounts required to pay outstanding obligations of the office of the market administrator and to pay necessary expenses of liquidation and distribution, such excess shall be distributed to contributing handlers and producers in an equitable manner.

MISCELLANEOUS PROVISIONS

Section 902.100. Agents:

The Secretary may by designation in writing, name any officer or employee of the United States to act as his agent or representative in connection with any of the provisions of this part.

Section 902.101. Separability of provisions:

If any provision of this part, or its application to any person or circumstances is held invalid, the application of such provision and of the remaining provisions of this part, to other persons or circumstances shall not be affected thereby.

Issued at Washington, D.C., the 30th day of January 1959.

[SEAL] ORIS V. WELLS,
Administrator.

[F.R. Doc. 59-957; Filed, Feb. 3, 1959; 8:51 a.m.]

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows:

To Mr. FRELINGHUYSEN, for the week, on account of death of his father.

To Mr. ROBERTS (at the request of Mr. RAINS), for today, on account of illness in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. JOHNSON of Wisconsin, for 15 minutes today, to revise and extend his remarks and include extraneous matter.

Mr. STRATTON, for 30 minutes, on March 18.

Mr. VANIK, for 15 minutes, on March 17.

Mr. FLOOD, for 20 minutes today, and to include extraneous matter.

Mr. BECKER (at the request of Mr. SMITH of California), to vacate the special order he had for today and Monday and that he be permitted to address the House for 1 hour on Wednesday, March 18.

Mrs. ROGERS of Massachusetts, for 5 minutes, on Monday.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mrs. BOLTON (at the request of Mr. ARENDS) in two instances and to include extraneous matter.

Mr. REUSS.

Mr. YATES, his remarks in Committee of the Whole today on H.R. 1, and to include extraneous matter.

Mr. VAN ZANDT and to include extraneous matter.

Mr. MEADER, his remarks in Committee of the Whole today on H.R. 1 and to include extraneous matter.

Mr. MICHEL, his remarks in Committee of the Whole today; and in two instances and to include editorials.

Mr. HALPERN and to include extraneous matter.

Mr. BYRNES of Wisconsin, his remarks in Committee of the Whole today and to include extraneous matter.

Mr. METCALF in three instances.

Mr. KEOGH and to include the proceedings of the annual banquet of the National Conference of Christians and Jews, held in Brooklyn, notwithstanding it will exceed two pages of the RECORD and is estimated by the Public Printer to cost $189.

Mr. MCDONOUGH in three instances, in each to include extraneous matter.

Mr. BROOMFIELD (at the request of Mr. SMITH of California) was given permission to revise and extend the remarks he made in the Committee of the Whole on H.R. 1.

Mr. WESTLAND (at the request of Mr. SMITH of California).

(At the request of Mr. BURDICK, and to include extraneous matter, the following:)

Mr. DANIELS.

Mr. GEORGE P. MILLER.

Mr. DINGELL.

Mr. MULTER.

Mr. BREWSTER.

SENATE JOINT RESOLUTION REFERRED

A joint resolution of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S.J. Res. 47. Joint resolution providing that certain communication activities at the IX Plenary Assembly of the International

Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934 or any other law; to the Committee on Interstate and Foreign Commerce.

ENROLLED BILLS SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 2260. An act to extend the induction provisions of the Universal Military Training and Service Act, and for other purposes.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 50. An act to provide for the admission of the State of Hawaii into the Union.

BILLS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill of the House of the following title:

H.R. 2260. An act to extend the induction provision of the Universal Training and Service Act, and for other purposes.

ADJOURNMENT

Mr. BURDICK. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 1 minute p.m.), under its previous order, the House adjourned until Monday, March 16, 1959, at 12 o'clock noon.

REPORT OF COMMITTEES ON USE OF COUNTERPART FUNDS

Mr. BURLESON. Mr. Speaker, pursuant to the provisions of the Mutual Security Act of 1958, chapter IV, section 401(a), there is submitted herewith the report of use of foreign currencies by the House Committee on Agriculture:

MARCH 8, 1959.

Counterpart Funds

REPORT OF SUBCOMMITTEE ON TOBACCO

(Foreign currency and U.S. dollar equivalents expended between Sept. 28 and Oct. 13, 1958)

Country	Name of currency	Total	
		Foreign currency	U.S. dollars
France	Francs	1,368,934	$2,702.00
Germany	Deutsche mark.	2,240	2,110.00
Switzerland	Francs	2,000	500.00
Belgium	do	41,844	825.00
United Kingdom	Pounds	1,211.12	3,391.14
Denmark	Kroners	2,600	376.00
Italy	Lire	648,000	1,036.80
Spain	Pesetas	18,400	334.50
Greece	Drachma	11,880	600.00
Portugal	Escudos	20,171	700.00
Total			14,335.44

HAROLD D. COOLEY,
Chairman, Committee on Agriculture.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

706. A letter from the Assistant Secretary of Agriculture, transmitting a report for the month of February relating to the cooperative program of the United States with Mexico for the control and the eradication of foot-and-mouth disease, pursuant to Public Law 8, 80th Congress; to the Committee on Agriculture.

707. A letter from the Assistant Secretary of the Navy (Material), relative to a proposal by the Department of the Navy to transfer a 64-foot work boat, hull No. C–104362 and engine No. C–14611 to the Chelsea Yatch Club, Chelsea, Mass., pursuant to title 10, United States Code, section 7308; to the Committee on Armed Services.

708. A letter from the Chairman, National Labor Relations Board, transmitting the 23d Annual Report of the National Labor Relations Board for the fiscal year ended June 30, 1958, pursuant to the Labor Management Relations Act of 1947; to the Committee on Education and Labor.

709. A letter from the Director, Bureau of the Budget, Executive Office of the President, transmitting a draft of proposed legislation entitled "A bill to amend the Government Corporation Control Act, as amended"; to the Committee on Government Operations.

710. A letter from the Chairman, Federal Communications Commission, transmitting a draft of proposed legislation entitled "A bill to amend the Communications Act of 1934, as amended, by eliminating the requirement of an oath or affirmation on certain documents filed with the Federal Communications Commission"; to the Committee on Interstate and Foreign Commerce.

711. A letter from the Chief Commissioner, Indian Claims Commission, transmitting a report that proceedings have been concluded with respect to the following claim: *The Kiowa, Comanche and Apache Tribes of Indians, Petitioners,* v. *The United States of America, Defendant.* (Docket No. 32), pursuant to the Indian Claims Commission act of August 13, 1946 (60 Stat. 1055; 25 U.S.C. 70t); to the Committee on Interior and Insular Affairs.

712. A letter from the Acting Secretary of the Interior, transmitting a report covering all tort claims paid by this Department in the fiscal year 1958, pursuant to the Federal Tort Claims Act (28 U.S.C. 2673); to the Committee on the Judiciary.

713. A letter from the Chairman, Federal Power Commission, transmitting a copy of each of the following: "Statistics of Natural Gas Companies, 1957", "Steam-Electric Plant Construction Cost and Annual Production Expenses, 1957", "Statistics of Electric Utilities, 1957", "Privately Owned, Statistics of Electric Utilities, 1957", "Publicly Owned, and Typical Residential Electric Bills, 1958"; to the Committee on Interstate and Foreign Commerce.

714. A letter from the Chairman of the Board, Tennessee Valley Authority, transmitting a report entitled "A Program for Reducing the National Flood Damage Potential", pursuant to section 22 of the TVA Act and Executive Order No. 6161 (June 8, 1933); to the Committee on Public Works.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FRIEDEL: Committee on House Administration. House Resolution 156. Resolution to provide funds for the expense of the studies and investigations authorized by House Resolution 93; without amendment (Rept. No. 201). Ordered to be printed.

Mr. FRIEDEL: Committee on House Administration. House Resolution 197. Resolution fixing the basic compensation of the eight expert transcribers, office of the official committee reporters, and the seven expert transcribers, office of the official reporters of debates, House of Representatives; without amendment (Rept. No. 202). Ordered to be printed.

Mr. FRIEDEL: Committee on House Administration. House Resolution 198. Resolution to provide funds for necessary expenses of the Committee on Banking and Currency; without amendment (Rept. No. 203). Ordered to be printed.

Mr. FRIEDEL: Committee on House Administration. House Resolution 206. Resolution providing for expenses of studies and investigations authorized by House Resolution 182; without amendment (Rept. No. 204). Ordered to be printed.

Mr. HAYS: Committee on House Administration: House Concurrent Resolution 15. Concurrent resolution providing for the printing of the "Code of Ethics for Government Service" as a House document; without amendment (Rept. No. 205). Ordered to be printed.

Mr. HAYS: Committee on House Administration: House Resolution 187. Resolution authorizing the printing of additional copies of House Report No. 41, current session; without amendment (Rept. No. 206). Ordered to be printed.

Mr. HAYS: Committee on House Administration. House Resolution 175. Resolution authorizing the printing of additional copies with minor editorial, grammatical, and typographical changes of House Report No. 2712, 85th Congress, entitled "Government Programs in International Education"; without amendment (Rept. No. 207). Ordered to be printed.

Mr. SMITH of Mississippi: Committee on House Administration. House Joint Resolution 115. Joint resolution to reserve a site in the District of Columbia for the erection of a memorial to Franklin Delano Roosevelt, to provide for a competition for the design of such memorial, and to provide additional funds for holding the competition; with amendment (Rept. No. 208). Referred to the Committee of the Whole House on the State of the Union.

Mr. HARRIS: Committee on Interstate and Foreign Commerce. House Joint Resolution 257. Joint resolution providing that certain communication activities at the IX Plenary Assembly of the International Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934 or any other law; without amendment (Rept. 209). Referred to the House Calendar.

Mr. COOLEY: Committee on Agriculture. H.R. 306. A bill to amend the Federal Crop Insurance Act; with amendment (Rept. No. 210). Referred to the Committee of the Whole House on the State of the Union.

Mr. RABAUT: Committee on Appropriations. H.R. 5676. A bill making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending June 30, 1960, and for other purposes; without amendment (Rept. No. 211). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLS: Committee on Ways and Means. H.R. 5640. A bill to extend the time during which certain individuals may continue to receive temporary unemployment compensation; without amendment (Rept. No. 212). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ALGER:

H.R. 5655. A bill to authorize the Federal Government to guard strategic defense facilities against individuals believed to be disposed to commit acts of sabotage, espionage, or other subversion; to the Committee on the Judiciary.

By Mr. ASHMORE:

H.R. 5656. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. BAKER:

H.R. 5657. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. BENNETT of Florida:

H.R. 5658. A bill to amend the Employment Act of 1946 to make the maintenance of a reasonable stable price level an explicit aim of Federal economic policy; to the Committee on Government Operations.

By Mr. BONNER:

H.R. 5659. A bill to amend title 14, United States Code, entitled "Coast Guard," to authorize the Coast Guard to sell supplies and furnish services not available from local sources to vessels and other watercraft to meet the necessities of such vessels and watercraft; to the Committee on Merchant Marine and Fisheries.

By Mr. CHIPERFIELD:

H.R. 5660. A bill granting the consent and approval of Congress to the Wabash Valley compact, and for related purposes; to the Committee on the Judiciary.

By Mr. DELANEY:

H.R. 5661. A bill to protect the public health by amending the Federal Food, Drug, and Cosmetic Act so as to provide for the safety of chemicals in cosmetics; to the Committee on Interstate and Foreign Commerce.

By Mr. DENT:

H.R. 5662. A bill to amend section 1077 of title 10, United States Code, to provide dental care for dependents of any member of a uniformed service residing with the member at or near his duty station; to the Committee on Armed Services.

By Mr. FARBSTEIN:

H.R. 5663. A bill to amend title II of the Social Security Act to provide that a fully insured individual may qualify for the disability freeze and for disability insurance benefits with 20 quarters of coverage, regardless of when such quarters occurred; to the Committee on Ways and Means.

By Mr. HALPERN:

H.R. 5664. A bill to amend the Internal Revenue Code of 1954 to exempt from income tax the first $2,400 received each year as civil service salary or compensation; to the Committee on Ways and Means.

By Mr. HIESTAND:

H.R. 5665. A bill to establish a Firefighting Air Corps in the Forest Service; to the Committee on Agriculture.

By Mrs. ROGERS of Massachusetts (by request):

H.R. 5666. A bill to provide chiropractic treatment when requested for veterans eligible for outpatient medical care; to the Committee on Veterans' Affairs.

By Mr. PORTER:

H.R. 5667. A bill to amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits, and for other purposes; to the Committee on Ways and Means.

H.R. 5668. A bill to promote mining and development research for beryl, chromite, and columbium-tantalum from domestic mines; to the Committee on Interior and Insular Affairs.

By Mr. SMITH of Iowa:

H.R. 5669. A bill to amend section 105(b) of the Agricultural Act of 1949, as amended, relating to price support for oats, rye, barley, and grain sorghums; to the Committee on Agriculture.

By Mr. SPRINGER:

H.R. 5670. A bill granting the consent and approval of Congress to the Wabash Valley compact, and for related purposes; to the Committee on the Judiciary.

By Mr. TELLER:

H.R. 5671. A bill to provide financial assistance for the support of public schools by appropriating funds to the States to be used for constructing school facilities and for teachers' salaries; to the Committee on Education and Labor.

By Mr. TOLL:

H.R. 5672. A bill to amend title II of the Social Security Act so as to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits thereunder; to the Committee on Ways and Means.

By Mr. UTT:

H.R. 5673. A bill to protect the right of the blind to self-expression through organizations of the blind; to the Committee on Education and Labor.

By Mr. VINSON:

H.R. 5674. A bill to authorize certain construction at military installations, and for other purposes; to the Committee on Armed Services.

By Mr. YOUNGER:

H.R. 5675. A bill to amend the Communications Act of 1934 to provide that "equal time" provisions shall not apply to news programs; to the Committee on Interstate and Foreign Commerce.

By Mr. RABAUT:

H.R. 5676. A bill making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending June 30, 1960, and for other purposes.

By Mr. BOYLE:

H.R. 5677. A bill to provide for the District of Columbia an appointed Governor and secretary, and an elected legislative assembly and nonvoting Delegate to the House of Representatives, and for other purposes; to the Committee on the District of Columbia.

By Mr. BYRNE of Pennsylvania:

H.R. 5678. A bill to grant a pension of $100 per month to all honorably discharged veterans of World War I who are over 62 years of age; to the Committee on Veterans' Affairs.

By Mr. DENT:

H.R. 5679. A bill to amend title III of the act of March 3, 1933, with respect to the acquisition by the United States of articles, materials, and supplies for public use; to the Committee on Public Works.

By Mr. FLOOD:

H.R. 5680. A bill to establish a temporary Presidential commission to study and report on the problems relating to blindness and the needs of blind persons, and for other purposes; to the Committee on Education and Labor.

By Mr. HAGEN:

H.R. 5681. A bill to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. HOSMER:

H.R. 5682. A bill to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. JOHNSON of Colorado:

H.R. 5683. A bill to amend the Federal Water Pollution Control Act to increase grants for construction of sewage treatment works, to establish the Office of Water Pollution Control; and for other purposes; to the Committee on Public Works.

By Mr. JOHNSON of California:

H.R. 5684. A bill to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. MOULDER:

H.R. 5685. A bill to provide for the preservation of historical and archeological data (including relics and specimens) which might otherwise be lost as the result of the contruction of a dam; to the Committee on Interior and Insular Affairs.

By Mr. SILER:

H.R. 5686. A bill providing for the establishment, equipment, and maintenance of a nuclear energy-coal experiment station in the coal regions of eastern Kentucky; to the Committee on Interior and Insular Affairs.

By Mr. SISK:

H.R. 5687. A bill to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. SMITH of Iowa:

H.R. 5688. A bill to modify Reorganization Plan No. II of 1939 and Reorganization Plan No. 2 of 1953; to the Committee on Government Operations.

By Mr. SPENCE:

H.R. 5689. A bill to repeal obsolete provisions of law relating to the mints and assay offices; to the Committee on Banking and Currency.

By Mr. WESTLAND:

H.R. 5690. A bill to amend the United States Housing Act of 1937 to reduce from 65 to 62 the age at which a single woman can qualify for admission to a low-rent housing project and the age at which a woman can qualify her family for admission to a project designed specifically for elderly families; to the Committee on Banking and Currency.

H.R. 5691. A bill to authorize adjustments in accounts of outstanding old series currency, and for other purposes; to the Committee on Banking and Currency.

By Mr. DOWDY:

H.J. Res. 308. Joint resolution proposing an amendment to the Constitution of the United States providing for the election of President and Vice President; to the Committee on the Judiciary.

By Mr. SCHERER:

H.J. Res. 309. Joint resolution designating November 19, the anniversary of Lincoln's Gettyburg Address, as Dedication Day; to the Committee on the Judiciary.

By Mr. KEARNS:

H. Res. 209. Resolution creating a select committee to conduct an investigation and study of the feasibility of relating the office allowances of Members to the workload of their offices; to the Committee on Rules.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of Montana, memorializing the President and the Congress of the United States to take such action as may be required to place the Absaroke-Yankee Jim

project under construction at the earliest possible time; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of North Dakota, memorializing the President and the Congress of the United States to oppose any change or proposed change in the law which would effect an increase in the interest rate on loans to rural electrical cooperative associations or corporations; to the Committee on Agriculture.

Also, memorial of the Legislature of the State of Oregon, memorializing the President and the Congress of the United States to repeal the excise tax levied upon telephone and telegraph services; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BARR:

H.R. 5692. A bill for the relief of Kuo Ning Yau; to the Committee on the Judiciary.

By Mr. BERRY:

H.R. 5693. A bill to provide for the issuance of a patent-in-fee-simple to Bartley M. Mills covering certain real property now held in trust for the Rosebud Sioux Tribe; to the Committee on Interior and Insular Affairs.

By Mr. CURTIS of Massachusetts:

H.R. 5694. A bill providing for the application for letters patent on behalf of the estate of the late Dr. Saul Hertz concerning a medical process for the use of radioactive iodine; to the Committee on the Judiciary.

By Mr. DOOLEY:

H.R. 5695. A bill for the relief of Fleischmann Distilling Corp. and others; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H.R. 5696. A bill for the relief of Eulalia Fernandez; to the Committee on the Judiciary.

By Mr. FOGARTY:

H.R. 5697. A bill for the relief of Francis Conlon; to the Committee on the Judiciary.

By Mr. HOSMER (by request):

H.R. 5698. A bill for the relief of Heh Ik Chang (Harry Glover); to the Committee on the Judiciary.

By Mr. LIPSCOMB:

H.R. 5699. A bill for the relief of Mrs. Anastasia Miljkovic and her minor son, Serbolub Miljkovic; to the Committee on the Judiciary.

By Mr. MARSHALL:

H.R. 5700. A bill for the relief of Parker E. Dragoo; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

108. By the SPEAKER: Petition of the chairman, Conference of Americans of Central-Eastern-European Descent, New York, N.Y., petitioning consideration of their resolution with reference to proposing a policy of full inclusion of naturalized citizens in claim settlements in accordance with the concepts of Public Law 857, 81st Congress; to the Committee on Interstate and Foreign Commerce.

109. Also petition of Eugene G. Evans, Jr., M.D., Hendersonville, N.C., relative to a redress of grievance relating to Executive Order No. 10730, dated September 24, 1957; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Statement in Opposition to H.R. 1, Lake Michigan Diversion Bill

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks I include herewith a statement I presented to the Committee on Public Works on February 17 in opposition to H.R. 1, the Lake Michigan water diversion bill.

STATEMENT BY HON. FRANCES P. BOLTON, BEFORE COMMITTEE ON PUBLIC WORKS, HOUSE OF REPRESENTATIVES, IN OPPOSITION TO H.R. 1 AND OTHER BILLS TO REQUIRE A STUDY TO BE CONDUCTED OF THE EFFECT OF INCREASING THE DIVERSION OF WATER FROM LAKE MICHIGAN, ON FEBRUARY 17, 1959

Mr. Chairman, members of the committee, thank you for giving me an opportunity to present a statement in opposition to H.R. 1, a bill to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway.

As you know, this subject has been debated in practically every session of Congress since 1937. The Great Lakes Harbors Association, the port cities of the Great Lakes, the Lake Carriers' Association, and the governments of the States bordering the Great Lakes have always been united in opposition to the demands of Chicago for permission to divert additional water from Lake Michigan.

While we realize that the measure presently under consideration (H.R. 1) is deemed to be a study bill, we feel that its enactment will be a detriment to the best interest of all areas in the Great Lakes other than Chicago. In Ohio our industries have a great need for additional water for industrial use, however we oppose diversion of water where there is no means provided for returning water to the lakes.

The diversion of water from Lake Michigan will lower the natural level of that lake and the other Great Lakes, their connecting and tributary waters and the St. Lawrence River, thereby reducing the carrying capacity of ships and leading to higher transportation costs. At this time we in the Midwest are anticipating the opening of the St. Lawrence Seaway to large oceangoing vessels. When the Federal Government is spending large sums to deepen the Great Lakes connecting channels and improve the harbors on the Great Lakes to accommodate these deep-draft vessels, it would be most inconsistent to permit this measure to pass which will eventually result in lowering the lake levels.

It is my hope that the committee will table H.R. 1 and all other bills which would permit additional diversion of water into the Illinois Waterway.

Dr. Flemming's Formula

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. METCALF. Mr. Speaker, the Secretary of Health, Education, and Welfare, Dr. Flemming, has recently applied his talent to the development of a formula which he states would solve the classroom shortage.

Under the Flemming formula, the Federal aid will be supplied to the States which will enable the building of an additional 75,000 classrooms over the next 5 years. In order for this formula to work, however, it will be necessary for the States and local districts to repeal debt limitations, for many States to amend their constitutions, and for others to completely revamp the system of State aid which they and the local districts have worked out over the years. To Dr. Flemming, these are only minor obstacles.

Dr. Flemming has expressed great concern over the problem of supplying an adequate number of competent teachers for the public schools but, as yet, his administration has not seen fit to take any action in this field. He has not made sufficient application of his own ingenious formula.

He should consider applying the Flemming formula to other education problems—teaching the English language, for instance. Under the Flemming formula, all he would have to do is change the basic rules of grammar.

Then a noun does not have to agree with a verb. And there would not be nothing wrong with a double negative. It would be all right to mispel words and use a preposition to end a sentence with.

This application of the Flemming formula might help solve the classroom and teacher shortage. Children would not have to spend so much time learning English. Fewer English teachers and fewer classrooms would be needed. Of course, this is an absurd application of Dr. Flemming's formula but no more absurd than his contention that the classroom shortage can be overcome by changing State constitutions and taxing concepts.

March 15, 1959: Anniversary of Hungarian Independence Day

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. REUSS. Mr. Speaker, on March 15, 1848, the Hungarian people under the leadership of the famed Louis Kossuth, won freedom from Hapsburg rule. The freedom movement led to the aboli-

tion of serfdom and to enlarged public representation in political affairs. A charter of freedom also proclaimed the right to create a national government. This victory over tyranny, although short-lived, will never be forgotten by the people of Hungary.

It was the spirit of 1848, for example, that guided the October 1956 revolution against the rule of Communist Russia. Certainly no people have struggled more valiantly for freedom than the people of Hungary. I am sure that these people shall always rank freedom and independence as the highest goals that man may seek.

I salute the people of Hungary on the anniversary of their independence from the Hapsburgs 111 years ago. I am proud that many Hungarians have come to this country where they have enriched our own democracy with their high concept of freedom. I am proud of their traditions, proud of their remarkable past, and look forward with them to the day when this great heritage may come to its full fruition in Hungary.

Hungarian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. DINGELL. Mr. Speaker, the bloody events of October-November days of 1956 in Hungary were the result of an outward manifestation on the part of tough and tenacious Hungarians held down by the most powerful totalitarian dictatorship. There in their homeland they were being oppressed by their taskmasters. Hating and detesting these alien overlords, and yearning for freedom, the people staged a sudden uprising, thereby hoping to expel Russian Communists and the Red army detachments, and thus regain their freedom. Unfortunately, the helpless and brave Hungarians were alone in this unequal struggle against the massive and monolithic might of the Soviet Union. The valiant efforts of the brave Hungarians ended in a tragic blood-bath. But such events are not new or rare in Hungary's long history. Such an epochmaking event took place a little over 100 years ago which began on the 15th of March 1848.

In that year, when revolutionary waves were sweeping all over Europe, all oppressed peoples under autocratic regimes were stirred and became restive. Hungarian people showed their resentment against the Austrian government. Their great spokesman, Louis Kossuth, presented their grievances to the government early in March. But, before the government had given serious considerations to these grievances, demonstrations were held in various parts of the country, demanding freedom. Fortunately the government was not in position to suppress the people and ignore their demands. Finally on March 15, on the "Ides of March," their demands were granted; the people regained their freedom. Since then, for more than 110 years, March 15 has been celebrated as one of the chief national holidays of Hungary. The events of that day proved that however ruthless and heartless autocracies may seem, and often are, they are bound to lose out in the end against the will and tenacity of a sturdy and stout-hearted people. Perhaps the best way to revive the spirit of those days is to celebrate the anniversary of that great event, even when today Hungary is suffering under Communist tyranny. I therefore take pleasure in associating myself with Hungarian Freedom Day, and with those Americans of Hungarian descent who mark this day.

Reuniting of Families

EXTENSION OF REMARKS
OF
HON. DOMINICK V. DANIELS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. DANIELS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include my statement issued in connection with a bill I introduced on March 11, 1959, to amend the Immigration and Nationality Act to facilitate the reuniting of families:

TO FACILITATE REUNITING OF FAMILIES

On March 11, 1959, I introduced a bill to amend the Immigration and Nationality Act to grant nonquota status to certain immigrants who are brothers, sisters, sons, or daughters of American citizens. These close of kin are classified under the fourth preference quota section of the act, and it is unjust and inhumane to prevent them from being reunited with their families. One of the cardinal principles of our immigration laws should be to facilitate the reuniting of families.

Fourth preference visas can be issued only when deficiencies occur in the first, second, and third preferences, which are allotted 100 percent of the quota. It is unjust to permit American citizens to file petitions for their brothers, sisters, sons, or daughters, granting them approval and then let them pile up in a huge backlog at the American consulates abroad without the hope of any visas being issued.

There are approximately 100,000 petitions on file and many of these were filed as far back as 10 years ago. The petitioners have been waiting hopelessly for many years to be reunited with their parents, brothers, or sisters. In Italy, for example, there isn't a single available quota for the fourth preference group nor is it contemplated that there will be one for many, many years to come. This is true of Poland, Hungary, Spain, Greece, Portugal, and many other countries. The consulate in Iraq is now processing applications filed in 1946 and applications from Turkey are presently being processed which were first filed in 1945. It is estimated that there is a backlog of some 100,000 people who daily crowd the offices of our consulates abroad and unless this conversion is made from quota to nonquota, the number will grow and the pressure will increase.

This backlog is due primarily to our national origin quota system which gives such pitifully small quotas to the countries of southern Europe and Asia and gives to Great Britain 65,360 of our total annual quota of 152,000. Yet Britain uses only 10 percent of this alloted quota and the rest is wasted.

To rectify this inequity of opportunity, I therefore introduced a bill which, following the precedent established by the act of September 11, 1957, will provide for the conversion of the fourth preference category registered up to July 1, 1959 to nonquota immigrant status. It is my considered opinion that this is the just and humane thing to do in the interest of the United States.

Good Hearing Is as Essential as Good Sight for Automobile Driving

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. McDONOUGH. Mr. Speaker, no one can drive an automobile in any State or Territory of the United States who suffers from any serious type of vision impairment. Thanks to the American Safety Council all motor vehicle bureaus in every State and Territory have made it mandatory that all applicants for operators' licenses submit to rigorous sight tests. Where it is found that the applicant suffers from any type of visual difficulties of a nature which might impair his own or the safety of others, he is obliged to wear corrective lenses and his need of such lenses while operating a motor vehicle is clearly imprinted upon the face of each such license.

However, up to now nothing has been done about taking into account the important fact that there are some 15 million or more Americans who suffer from hearing defects of a minor or major nature. There is no hearing test required of anyone seeking an operator's license nor is any cognizance given to applicants suffering from such deficiencies. This, in spite of the fact that deficient hearing, equally as much as poor eyesight, can endanger lives and property.

Of some 15 million Americans suffering from impaired hearing, only about 1 million use hearing aids as a corrective measure. This is due mainly to two things: First, many hard-of-hearing persons of all ages are totally unaware of such defects, and second, many who do know of it refuse to wear hearing aids because the majority of such instruments are cumbersome and conspicuous.

The reluctance of the hard-of-hearing to wear a hearing aid which draws attention to their affliction is understandable. But it does not alter the fact that a hard-of-hearing person driving an automobile can endanger lives and property.

Three men in the United States are currently doing something about this situation. They have petitioned the National Safety Council to help. They are also appealing to the legislators of every State in the Union to enact laws requiring motor vehicle bureaus to take legal

steps to prevent persons with poor hearing from operating a motor vehicle unless they use an adequate hearing aid.

These men are Paul B. H. Smith, who has devoted his life to audiology and is president of one of the Nation's foremost hearing aid manufacturing companies; Dr. James A. DePew, Jr., chief audiologist of the world famous New York Eye and Ear Infirmary; and William R. Hutchins, electronics engineer, presently a key figure in the U.S. guided missiles program.

These three men are requesting that all motor vehicle bureaus require a hearing test of every applicant for a driver's license just as they now require a vision test.

Dr. DePew and Mr. Hutchins are inventors of a drastically sensitive audiometer which can accurately measure the extent of human hearing in fractions of a second.

To date, thousands of students in schools of every level throughout the Nation who had previously been labeled by their teachers as backward, indifferent, or below normal intellectually, have been subjected to audiometer tests. In a great number of cases, it was discovered that these boys and girls were neither poor scholars nor indifferent ones, but victims of some hearing impairment. Steps were at once undertaken to provide them with corrective materiel and when this was accomplished their classroom interests became enlivened and their marks shot up, equally as good as their fellow students.

Because so many sufferers from deafness are unaware of their affliction, Dr. DePew, Paul B. H. Smith, and Mr. Hutchins are waging this campaign to make it mandatory that a hearing test be required for all applicants for drivers' licenses.

Inspired by this campaign, hundreds of leading industrial firms are arranging for their own workers in plants, offices, and factories to take audiometer tests as a measure of safety as well as to increase worker efficiency where it is discovered that employees suffer from hearing deficiencies.

In some cities across the Nation, steps are being taken to offer free audiometer tests under civic sponsorship via mobile audiology laboratories.

In the case of those who need a hearing aid, but do not want to use one because of vanity or sensitivity, hearing aids are being made available which are no longer visual to others. These can be adriotly concealed as they no longer require wires or a volume control box because they are manufactured on transistor principles.

The people of the United States are indebted to Dr. James A. DePew, Jr., Engineer William R. Hutchins, and Paul B. H. Smith for their long and now successful fight to bring a normal way of life to persons suffering from hearing deficiencies; to safeguard life and property by campaigning for legislation which will require a hearing test for applicants for drivers' licenses; and for directing the paths of thousands of children who are hard-of-hearing into progressive, useful, and productive channels.

DAV Services in Maryland

EXTENSION OF REMARKS
OF
HON. DANIEL B. BREWSTER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Friday, March 13, 1959

Mr. BREWSTER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I should like to insert the following speech which I made at the DAV installation of officers last night in Greenbelt, Md.

I believe that it speaks for itself.

An exceptional record of vital rehabilitation services freely extended to thousands of Maryland citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Maryland, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran. Its present National Commander is another judge, David B. Williams, of Concord, Mass. Its National Adjutant is John E. Feighner, of Cincinnati, Ohio. Its National League Director is Ellmer M. Freudenberger, its National Director of Claims is Cicero F. Hogan, and its National Director of Employment Relations is John W. Burris—all located at its national service headquarters, 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability-compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after it formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans, themselves, these service officers are sympathetic and alert as to the problems of other less well informed claimants.

Located in the Veterans' Administration regional office at St. Paul and Fayette Streets, Baltimore, Md., is the DAV National Service Officer, Mr. Frank Dubinskas, a fine friend of mine. Because of the financial inability of the DAV to pay salaries in competition with commercial enterprise and the Federal Government, Mr. Dubinskas is now doing the work that should ordinarily be done by two national service officers and he is doing a fine job.

The present Department Commander of the DAV in Maryland is another friend of mine, Mr. John Stubbs, and the Adjutant is Jake Finn. The DAV Department of Maryland has nationally appointed representatives to the Veterans Administration Voluntary Services Advisory Committees at each of the Veterans' Administration hospitals servicing Maryland veterans. These DAV representatives and the hospitals are as follows: Mr. John E. Kellam at the 291-bed Tuberculosis Hospital at Baltimore, Mr. Earl Vellaca at the 377-bed General Medical and Surgical Hospital at Fort Howard, Mr. Charles Kennedy at the 1,800-bed Neuropsychiatric Hospital at Perry Point, and Mr. Earl Rosensteel at the 1,340-bed VA Center at Martinsburg, W. Va.

During the last fiscal year, the VA paid out $67,498,000 for its veteran program in Maryland, including $20,506,324 disability benefits to its 27,041 service-disabled veterans. These Federal expenditures in Maryland furnish substantial purchasing power in all communities.

Only about 7 percent—1,756—are members of the 27 DAV chapters, ranging up to 510 members in the Baltimore Chapter No. 1.

This 7 percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Maryland's veterans and dependents during the last 10 fiscal years, as revealed by the folowing statistics:

Claimants contacted (estimate)	45,438
Claims folders reviewed	37,865
Appearances before rating boards	3,670
Compensation increases obtained	3,332
Service connections obtained	661
Nonservice pensions	456
Death benefits obtained	66

Total monetary benefits obtained were $1,082,193.72.

The above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32 and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Maryland's veterans, their dependents and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted these DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms, and businesses, etc. Helpful advice was also given as to counseling and placement into suitable useful employment (to utilize their remaining abilities), civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death, or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service-connection of a disability becomes extremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendent, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV Acting National Director of Claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others, at an aggregate loss to them of more than $28 million per year. About 1 percent (.013) of such discontinuances and reductions have probably occurred as to disabled veterans in Maryland, with a consequent loss of about $364,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Maryland to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag (miniature automobile license tags) project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project is thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1 million owners of sets of lost keys have received them back from the DAV's Idento-Tag Department, 13,555 of whom during the last 8 years, were Maryland residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000 exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the general support of all serviced claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first Perpetual Rehabilitation Fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Maryland by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100 ($50 to those born before January 1, 1902 or World War I veterans), payable in installments within two full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

I am proud to be a life member of the DAV.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mrs. BOLTON. Mr. Speaker, on Wednesday and Thursday when H.R. 4221, the Hawaii statehood bill, was before the House, I was unable to be present because of illness. Having been a supporter of such legislation for many years, I regret missing the two votes very much. Had I been able to be present, I would have voted "yea" on the rule for consideration and "yea" on passage of the bill.

I extend my congratulations to the people of Hawaii, and shall hope to visit our 50th State sometime in the not-too-distant future.

Construction of the 291-Mile Keystone Shortway in Pennsylvania Would Relieve the Unemployment Situation in 13 Labor Surplus Areas in 29 Counties of the State

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. VAN ZANDT. Mr. Speaker, with area development legislation occupying a prominent position on the legislative agenda of the 86th Congress, the significance of the 291-mile Keystone Shortway in relationship to Pennsylvania's acute unemployment problem is explained in the following letter I wrote on March 12, 1959, to the Honorable Lewis L. Strauss, Secretary of the U.S. Department of Commerce.

In a few words, the letter reveals that if the U.S. Department of Commerce and the Commonwealth of Pennsylvania agree to construct immediately the Keystone Shortway which cuts directly across Pennsylvania from Stroudsburg to Sharon, the unemployment in 13 labor surplus areas of the 29 counties traversed by the shortway will be alleviated. In my district alone, the construction will cost $1 million per mile, and it will provide employment for 1,200 persons for a 3-year period. In addition, the construction of this 70.2-mile stretch will provide additional employment in industries which manufacture and transport the material.

Mr. Speaker, here is a wonderful opportunity for the Department of Commerce and the Commonwealth to spend funds already allocated for highway construction in Pennsylvania on a project that will alleviate a lot of Pennsylvania's chronic unemployment.

The letter to Secretary Strauss follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 12, 1959.

Hon. LEWIS L. STRAUSS,
Secretary, U.S. Department of Commerce,
Washington, D.C.

DEAR SECRETARY STRAUSS: As you know, of the nearly 5 million unemployed in the United States, 508,000 of them are located in the State of Pennsylvania representing 10 percent of its labor force. Most of this unemployment in Pennsylvania has existed for years and is of great concern to the State and Federal Government. The result is that the problem has been attacked on the State and National level and at the present time this vexing unemployment problem in Pennsylvania is involved in the area redevelopment legislation now being considered by Congress.

The purpose of writing you on the subject of unemployment in Pennsylvania is due to the fact that included in the Department of Commerce is the Office of Area Development as well as the Bureau of Public Roads, with both agencies having a relationship to the proposed construction of the 291-mile Keystone Shortway in Pennsylvania. This shortway with dual lanes cuts directly across Pennsylvania.

According to the Pennsylvania Department of Labor and Industry, the Keystone Shortway traverses 13 labor market areas whose unemployment ranges from 8.6 percent to 16.6 percent. In these areas, there is a total of 115,800 unemployed workers, many of whom would find ready employment on construction of the shortway.

According to the Bureau of Public Roads, from a cost standpoint the national average shows 1 mile costing $1 million. Therefore, the immediate construction of the 291-mile Keystone Shortway in Pennsylvania would provide employment to most of the 115,800 unemployed persons in the 13 labor market areas previously mentioned. In addition, Pennsylvania's coal mines, cement plants, steel mills, and other industries including transportation will indirectly provide employment to many of Pennsylvania's 508,000 unemployed.

In my own congressional district in Pennsylvania comprising the counties of Blair, Centre and Clearfield, 70.2 miles of the shortway would be constructed. To give you some idea of the effect such construction would have on unemployment, it will require 3 years to build the shortway and meanwhile provide employment for 1,200 persons for each of the three 9-month years. In a few words, this employment and accelerated employment in related industries could have a tremendous and favorable impact on the unemployment in my congressional district. If this is the case in my congressional district, think of the benefits to be enjoyed by areas with pockets of unemployment throughout Pennsylvania.

According to the Bureau of Public Roads, the Federal Government has allocated to the Commonwealth of Pennsylvania for highway construction $117,103,237 for fiscal year 1959 and $101,440,250 for fiscal year 1960, making a total of $218,543,487. In general, this amount represents the Federal Government's contribution of 90 cents of every dollar spent by the Commonwealth of Pennsylvania on its Interstate System of Highways. While this fund will not entirely cover the entire Federal aid necessary in paying the overall cost of the Keystone Shortway, it represents roughly 75 percent of the amount needed.

From the information furnished, you will readily see that the Federal Government's financing of the Keystone Shortway in Pennsylvania could alleviate a lot of chronic unemployment in 13 labor market areas. Therefore, it is my thinking that the U.S. Department of Commerce should prevail upon the Commonwealth of Pennsylvania to construct the Keystone Shortway immediately as part of a Federal-State effort to alleviate chronic unemployment in the 13 areas of Pennsylvania affected.

Over a period of years, former Governor Leader of Pennsylvania advocated area redevelopment legislation and now his successor and present Governor, David Lawrence, is doing the same thing. While it is true that the construction of the Keystone Shortway is not the complete answer to the unemployment problem, it will have a favorable effect on wiping out unemployment in 13 labor markets in Pennsylvania. Therefore, a Federal-State program that would bring about immediate construction of the shortway should merit Governor Lawrence's undivided support.

In conclusion, may I point out that in the northern part of my congressional district and elsewhere throughout Pennsylvania the lack of adequate highway transportation is a handicap to the industries that we now have in that area and if we are to rehabilitate and diversify the economy of the area through an area redevelopment program, modern highways like the proposed Keystone Shortway are the answer to our problem. This is a compelling reason why the Keystone Shortway should be constructed before Congress approves an area redevelopment program because adequate transportation is vital to the development of any area.

Thanking you for the consideration of my proposal and with best wishes, I am,

Sincerely yours,

JAMES E. VAN ZANDT.

Dr. Flemming's Famous Formula

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. METCALF. Mr. Speaker, the Committee on Interstate and Foreign Commerce reported H.R. 1011 the other day to provide for amendments to the Federal Airport Act. This bill would authorize Federal aid for airports in the amount of $297 million over the next 4 years.

The hearings and the report on this legislation make out a good case for the bill, but I failed to find where the talents of the Secretary of Health, Education and Welfare have been utilized. Had he been consulted, perhaps we could save almost $300 million.

Secretary Flemming is the author of a formula for the construction of 75,000 of the 140,000 classrooms the children of the Nation need by a Federal program resting upon changes in the State constitutions of many of the States, changes in statutes and debt limits in other States and changes in the whole tax systems of many of the States and local districts. He anticipates this will be done in time to get some of the boys and girls in school next September even though the elections for the changes won't take place, if at all, until November 1960, and even though many of the State legislatures have completed their legislative sessions not to meet again for 2 years. But these minor obstacles of time and space do not bother Dr. Flemming.

An application of the Flemming formula to our airport problems would take care of the stacking up over airports by simply changing the aeronautical definition of a stall from "the loss of necessary airspeed to maintain altitude and control" to "a place for parking airplanes in midair." This would keep the planes waiting to land from having to circle the field and thus endangering other traffic. Long runways could be eliminated by passing legislation requiring planes to land and take off vertically and much valuable land that is now being used for runways could be used for storage or administration buildings or parking space for automobiles. All that the plane manufacturers have to do is equip their planes with antigravity stabilizers and vertical landing gear and all of our problems will be solved. Or better yet just repeal the law of gravity.

Lt. Gen. S. T. Williams, U.S. Army

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, the Secretary of Defense, the Honorable Neil McElroy, in his recent defense posture statements prepared for this Congress, paid a splendid tribute to the noteworthy progress being made by the armed forces of the Republic of Vietnam. The Secretary, while visiting Vietnam, learned that this nation is determined to remain a free Republic despite what faint hearts consider its precarious location on the edge of the Communist sphere of influence in southeast Asia and despite its exposure to Red military might which could come at any time by direct land routes and over short air and sea distances.

Certainly, the reassuring words of the Secretary were good to hear. I submit that he genuinely meant that Vietnam's armed forces were, to some degree, relatively exceptional. In the brief 4 years since the 1955 armistice terminating the French Indochina war and starting from less than nothing—indeed, from the ashes and ruins of the holocaust itself—the army, navy, and air force of Vietnam have come a long, long way toward fulfillment. To the point, in fact, where Mr. McElroy took special note of their capabilities.

Mr. Speaker, behind this mighty effort and achievement there must have been good counsel and leadership of the highest order of modern military times. For a fact, there was. This land could be saved by sound assistance and advice to its newly created armed forces. The emergency arose and we had the man for the job. On November 15, 1955, a great American and truly outstanding general officer was named Chief of the U.S. Military Assistance Advisory Group for Vietnam. That man was Lt. Gen. Samuel T. Williams, U.S. Army, in whom we can surely take abundant pride.

General Williams went out to far-off Vietnam in 1955 and brought to that war-torn nation his invaluable combat experience, his sagacity for planning, his indomitable spirit and vigor. Side-by-side with the Vietnamese, he organized, he trained, he built, and he stayed with the job and thus has struck a real blow for freedom.

Mr. Speaker, I know whereof I speak about Vietnam perhaps better than most. I had personally seen the situation in Vietnam in 1955. Then in October 1958, it was my great privilege to visit that country again to participate in ceremonies commemorating Vietnam's

third anniversary of the proclamation of the constitution of that country. The military took a prideful part in these ceremonies.

I could scarcely believe that so much could have been done so quickly.

But it was there for all to see, a magnificent modern military achievement, a testimonial to the tireless and unpublicized efforts of General Williams.

Mr. Speaker, I would like the House and our colleagues in the Senate to know of General Williams' unselfish and remarkable service in Vietnam. In a larger sense, I would like also for the Congress to note the long and honorable service of this fine officer and gentleman. In these days, we seldom see personal records of such devoted service to one's country. As times goes on, we shall see less and less. While we can, let us note this great soldier's record, a saga of over 40 years with the colors. It was a lifetime spent, and still being spent, all in America's name and in Freedom's name.

This is General Williams' outstanding service:

General Williams was born and raised in Denton, Tex. He attended the first officers' training camp at Leon Springs, Tex., in 1917 and was commissioned a second lieutenant of infantry with assignment to Company I, 359th Infantry 90th—Texas-Oklahoma—Division. He served with the 359th Infantry in the Toul sector and in the St. Mihiel and Meuse-Argonne battles and in the Army of Occupation.

Between 1920 and 1942 General Williams served in various infantry regiments as a company commander and regimental staff officer and graduated from the Infantry School, the Command and General Staff College, and the Army War College.

During World War II, General Williams held assignments as Assistant Chief of Staff, G–4, 95th Infantry Division; regimental commander of the 378th Infantry Regiment, 95th Division; G–3 XXII Corps, C/S XXII Corps; and assistant division commander of the 90th Infantry Division, participating in the Normany landing and five campaigns in Europe. From 1946 until 1950, General Williams commanded the First Military District in Germany, the 26th Infantry Regimental Combat Team, and was Acting C/S and Assistant Division Commander of the First Infantry Division.

Returning to the United States in 1950, General Williams served as Assistant G–3, Office, Chief Army Field Forces, until 1952. He then commanded the 25th—Tropic Lightning—Division in Korea during the last year of that war. During this period he also served as deputy corps commander of the II Republic of Korea Corps of the Republic of Korea Army during the last great Chinese offensive. After the armistice, he was sent to northern Japan to command the XVI Corps and was charged with the defensive plans of that part of Japan north of Tokyo.

In April 1954 General Williams returned to Korea to command the IX U.S. Corps and the V Republic of Korea Corps. During this period he also served as Deputy Army commander of the Eighth U.S. Army in addition to his duties as a corps commander. Returning to the United States, he assumed his duties as deputy Army commander of the Fourth Army, Fort Sam Houston, Tex., in January 1955. He assumed command of the Fourth Army on June 17, 1955, and retained that command until named Chief, Military Assistance Advisory Group, Vietnam, on November 15, 1955.

General Williams' decorations include the Distinguished Service Cross, Distinguished Service Medal, the Silver Star with oak leaf cluster, the Soldier's Medal, Bronze Star, Purple Heart with oak leaf cluster, French Legion of Honor, French Croix de Guerre with palm, the Korean Taeguk with silver star, and Ulchi Medal with gold star for his services to the Korean Army during the Kumsong Bulge battle in July 1953, and other high decorations of our allies.

Balance Budget for Bright Economy

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to enclose part of the transcript of a television program filed February 27, 1959, for presentation over KOMO–TV, Seattle, Wash., and KVOS–TV, Bellingham, Wash.

The program is an interview between myself and Dr. Raymond J. Saulnier, chairman of the President's Council of Economic Advisers. I believe Dr. Saulnier's remarks are of interest not only to the citizens of my own Second Congressional District of Washington, but also to all citizens of this land.

The transcript follows:

TRANSCRIPT OF INTERVIEW BETWEEN REPRESENTATIVE JACK WESTLAND AND DR. RAYMOND J. SAULNIER

Mr. WESTLAND. Practically everybody is interested in the future economy of the country and just what it holds for us in the way of economic development. I have been getting a lot of letters from people in my district and from people outside my district, talking about this budget we have, whether or not it should be balanced, and about our economy in general.

I believe that this subject is important and people all over the country are interested in it. In order to bring some discussion of this matter to you, I have as my guest today, Dr. Raymond J. Saulnier, better known among his friends as Steve. Steve is chairman of the Council of Economic Advisers to the President. Maybe, he'll be able to answer some of the questions that I'll ask here. Steve, it's good to have you on this program with me.

Mr. SAULNIER. Well, I'm delighted to be here. It's a flattering invitation.

Mr. WESTLAND. Tell me, just what is the Council of Economic Advisers, and what is its relationship to the President?

Mr. SAULNIER. The Council is a body set up by law—set up in the Employment Act of 1946. That means the Council has been in operation now for 12 years. Our job is to follow developments in the economy, to keep the President informed, and to work with the administration generally, appraising the impact of legislation and administrative actions on the economy and on jobs and income.

* * * * *

Mr. WESTLAND. The President has recently made a statement, Steve, that this last recession—the 1958 recession—was the sharpest and the shortest one we've ever had in history. Just how sharp was it and how long do you feel it lasted?

Mr. SAULNIER. Well, I think I'd want to correct that just a bit. We've had some sharper ones but we've had very few shorter ones. This is not to say that it wasn't a sharp recession, because it did fall off very quickly, beginning about the middle of 1957 and continuing through for about 9 months. We hit a boom, so to speak, in April. Now that's a very short recession by most of our historical experience.

* * * * *

Mr. WESTLAND. Well, do you feel that it is over now?

Mr. SAULNIER. I don't think that there is any question about that, in the sense that we are on a recovery path. The fact of the matter is we, certainly, in terms of production, have recovered by now the ground that was lost. In terms of employment we have recovered a bit less than the full amount of the ground that was lost.

Mr. WESTLAND. Well, that was one thing I want to discuss just a little bit later, Steve. But, now, this was one recession where we came out of it without any of these tremendous Federal programs. Remember, we had many recommendations or suggestions for sort of another WPA program, a tremendous building program which we avoided. We did do some things, but how do you account for this recovery without those other types of Government intervention?

Mr. SAULNIER. Well, I think fundamentally the most important feature of the recession and recovery was the fact that sales at retail stores through the country stayed up very well throughout the recession. There was a remarkably small drop in sales and that meant confidence was maintained and recovery came fairly quickly. Now, this is not to say that there weren't some industries that were badly hit—the automobile, for example.

Mr. WESTLAND. Yes, you're right. The lumber industry, for example, in the Pacific Northwest was hit quite badly, Steve, because the fact is, I think, that we only built about 900,000 homes in 1957.

Mr. SAULNIER. In 1957, but, I'm glad to say that's pretty much as, let us say, we expected. The building industry was one of the first to pick up and the pickup has been, as you know, very substantial. I certainly hope that we can continue a high level of building through the rest of this year and 1960.

Mr. WESTLAND. Well, actually, we've gotten off into home building and that's a real important thing in the Pacific Northwest, of course, to the lumber industry as a whole. I think we built pretty close to 1,200,000 homes, wasn't it, in 1958?

Mr. SAULNIER. That's correct, and we now are operating at a level a little bit better than 1,300,000.

Mr. WESTLAND. A million three hundred thousand?

Mr. SAULNIER. At the present time. And we are hopeful that that can be continued. I can assure you one of the things we have tried to do in Government has been to maintain a high rate of homebuilding and there

is hardly anything that has a more beneficial effect throughout the economy generally.

Mr. WESTLAND. That's right. The ramifications of it are tremendous. It gets not only into our lumber, of course, but also into all of the utilities and so many other things.

Mr. SAULNIER. That is correct. Then there is another aspect of it. And that is, we like to see homes being built.

Mr. WESTLAND. Yes, we like that, too. Steve, I think it was a week or so ago a professor at one of the universities, was talking about inflation. I believe he said that 3 percent inflation was creeping inflation, but that 5 percent inflation was galloping inflation. Now it is pretty hard for me to distinguish between these two. I'm basically opposed to any kind of inflation. But do you feel that we must have inflation if we're going to have this so-called full employment?

Mr. SAULNIER. No, I don't think so at all. I not only do not think that we need to have it in order to have full employment, but what is even more important, if we get into an inflationary period, we're just not going to have full employment. I feel very strongly about this. We can't sustain economic growth over a long period of higher levels if we are indulging in an inflationary spree.

Mr. WESTLAND. Why?

Mr. SAULNIER. Well, there isn't any such thing, really, you know as a moderate or creeping inflation. It starts at a low rate and that in itself will tend to pick up, feed on itself. This encourages all kinds of developments in the economy that at some point come to a crisis. Then you have disaster. What we want to do is to avoid that and have steady sustainable growth.

Mr. WESTLAND. What can we do here, say my job as Congressman, and others in the same area that you're in, to try to prevent inflation, Steve?

Mr. SAULNIER. There are a lot of things we can do, and as a government, many things. Now there's a program, that we think will promote steady growth and high employment and will avoid inflation, put forward by the President. It is spelled out in some detail in the Economic Report of the President which he sends to Congress every year, and sent in January. The cornerstone of that, I can tell you, for the Government, in my judgment, is a balanced budget.

Mr. WESTLAND. Just how important is a balanced budget?

Mr. SAULNIER. Well, I think it's vitally important, not only just for technical, economic reasons, the sort of reasons as economist can spell out for you in some detail. There's a psychological factor as well, and I think that at this time a balanced budget would do more for the psychology of Americans and for people around the world than any other single thing that government can do.

Mr. WESTLAND. Well, it's good to hear you say that, Steve, because that certainly repeats the feeling I've had for a long time. We're getting some brickbats thrown at us, such as you can't meet the enemy with a balanced budget. But it does seem to me that unless a country, as well as an individual, lives within its income it can go broke just as it happened in France or in Germany in the extreme. It could happen, I suppose, here.

Mr. SAULNIER. Of course, it could happen and we don't want that to happen. It is perfectly possible, as the President has shown, to have an adequate defensive budget within the framework of an overall balance, and that is the kind of budget which we have presented.

Mr. WESTLAND. Steve, the cost-of-living index has been remaining pretty stable for about the last 8 or 9 months. This is real important, Steve, to people who are retired or are trying to live on social security or their own pension plans. Is this balanced budget going to affect that or is it going to help keep it on a level keel?

Mr. SAULNIER. I think it will. I know it will. Of course, we're pretty grateful that it has been stable now for 8 or 9 months. I honestly believe that the outlook for some time ahead is for stable prices in general. On the other hand, we can upset this. One of the ways to upset it, in my judgment, is to engage in a level Federal spending that is not needed in terms of the needs of our country and is not matched by necessary revenues.

Mr. WESTLAND. Steve, in 30 seconds can you tell me what you see for the future economic wealth of this country?

Mr. SAULNIER. Well, I think the future is very good. Quite sincerely, I think the outlook for the rest of this year is good. We've had a good recovery so far and it is my own feeling that 1960 is even better.

Mr. WESTLAND. Thank you, Steve, that's good news and thanks very much for having been on this program with me.

Hungarian Freedom Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. MULTER. Mr. Speaker, March 15 will mark the anniversary of Hungarian Freedom Day.

More than 100 years ago Europe experienced one of its recurrent revolutions. That revolution, begun in 1848, marked the rise and spread of national feelings, national dreams and aspirations. As the movement swept from Paris to other capitals, suppressed and subjugated nationalities were encouraged. They saw the chance of realizing their dreams, and all were stirred by the new wave of freedom and liberty. A number of old guard reactionary despots and governments were shaken. Among these was the arch enemy of freedom in Europe, the dominant Chancellor Metternich, of Austria, who had set the pattern of autocratic government throughout Europe for almost half a century. In 1848 his supremacy came to an end.

On March 15 of that year a group of liberty-loving and patriotic Hungarians, in their irrepressible zeal for freedom and independence, staged a bloodless demonstration, presented their grievances to the government, and demanded reforms and freedom. The government, apparently aware of the spreading discontents and dangers, acquiesced in these demands, and allowed the Hungarians certain freedoms. That March 15, the day on which demonstrations were staged, is marked in Hungarian history as a national holiday. Annually it is being celebrated as their Freedom Day.

Today they once more find themselves under tyranny and unable to celebrate this holiday. I am glad to join Hungarians in the free world in the celebration of Hungarian Freedom Day, in the hope that liberty may soon be restored to their homeland.

Thirtieth Anniversary Testimonial Banquet of the National Conference of Christians and Jews

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following proceedings of the 30th anniversary testimonial banquet of the National Conference of Christians and Jews, in honor of the Honorable Maximilian Moss, Surrogate of Kings County, held at the Hotel St. George in Brooklyn on October 16, 1958. Mr. Andrew S. Roscoe, president of the Equitable Savings & Loan Association of Brooklyn, was the toastmaster.

Mr. ROSCOE. Distinguished officers, guests, and friends, this is the 30th annual award dinner of the Brooklyn region, National Conference of Christians and Jews.

Each of these 30 years has been significant in bringing men of faith together in common purpose, peace and freedom. But, this is very special, a very extraordinary gathering of men and women of good will, for it honors a very great person, a true leader, one who embodies all the ideals of brotherhood, one whose entire life represents just this—the promotion of good will and understanding among all the people—the Honorable Maximilian Moss, Surrogate, Kings County.

As you can see in this crowded ballroom, this is the largest assembly we have ever held. The success of our dinner is due to the selfless, infinite labors of our chairmen:

Mr. Chester A. Allen, treasurer; and Alexander Aldrich, Vincent Caristo, and Arthur Levitt, regional cochairmen. And there are others whose help has been strong and eager: The members of our executive dinner committee, and, as well, the workers of our general committee, who worked with unsparing time and labor.

There are many, many credits, many thanks to offer to many of you tonight. But let me mention just a few quite casually:

Mr. Joe Weinstein, who contributed great moral and substantial support and presented us with a gracious reception and gave us these beautiful flower arrangements.

Mr. Harry Aschkinasi, the spark plug of the professional staff.

Mr. Joseph L. Edwards, director, Brooklyn region, National Conference of Christians and Jews, and finally, each of our many sponsors, who really made this historical event possible by their good will and solid effort.

Cochairman of the Brooklyn division of the National Conference of Christians and Jews, and cabinet officer of the police commissioner in charge of youth welfare, deputy commissioner of the New York Police Department, the Honorable Alexander Aldrich.

Brooklyn philanthropist and banker, recipient of the 1957 Brotherhood Award, president of the Brooklyn Chamber of Commerce, the treasurer of this 30th anniversary testimonial dinner, Mr. Chester A. Allen.

Distinguished statesman, organizer of the Italian Board of Guardians; military leader and veteran; knighted by Pope Pius XII because of humanitarian service to all, especially children of unhappy homes, Hon. VICTOR L. ANFUSO.

A truly admirable public servant, a beaver in the municipal government, budget

director of the city of New York, Hon. Abraham Beame.

A philanthropic leader, honorary president of the Jewish Hospital of Brooklyn; and associate justice of the appellate division of the supreme court, the Honorable George J. Beldock.

A philanthropist and distinguished jurist who has provided strong, unfailing support for Brooklyn's effort in vigorous social progress, Hon. A. David Benjamin.

A philanthropist, and a dedicated public servant, justice of domestic relations court, Hon. Maurice Bernhardt.

A devoted leader of human understanding, vigorous leader in every effort to increase human tolerance among all classes and creeds, vice president of the National Conference, Dr. Sterling Brown.

Chaplain of the Italian Board of Guardians, whose service to troubled youth is of inestimable value, and rector of Our Lady of Grace Church, the Very Reverend Monsignor Salvator B. Cañero.

Distinguished philanthropist and builder, cochairman of the Brooklyn division of the National Conference of Christians and Jews, Mr. Vincent Caristo.

The first citizen of Brooklyn, and my dear friend, the borough president of Brooklyn, Hon. John Cashmore.

A distinguished lawyer and a philanthropist, vice president of the Flatbush Boys' Club, Hon. Daniel G. Connolly.

Executive director of the Brooklyn division of the Protestant Council, Dr. David M. Corey.

Vigorous, youthful, energetic community leader and responsible, devoted, public servant, builder of highest standards of civil and human justice, senior judge of the supreme court of New York, Hon. Anthony DiGiovanna.

Able, consistent worker for local progress and national security. Sturdy representative of human rights and honest government, and member of our Brooklyn team of representatives, Hon. FRANCIS E. DORN.

Participant in every worthy cause in our community, a worker of genuine sincerity and energy, and the hardest worker for this dinner, Mr. Joseph J. Dreyer.

Executive director of the National Conference of Christians and Jews, Brooklyn division, and the sparkplug of this dinner and of the conference all year around, Mr. Joseph V. Edwards.

The municipal court of the city of New York is the primary frontier of justice in our great frontier town, the welcoming harbor of our Nation.

We are privileged to have the president justice of this court, Hon. Harry Eppig.

A communal leader in manifold fields, chairman of the Brooklyn chapter of American National Red Cross, vice president and general manager of the New York Telephone Co., Mr. Walter A. Giles.

One who portrays the best of American womanhood and dedicated to the service of all worthy community endeavors, Miss Elizabeth A. Goodman.

An educator of international distinction; recipient of many deserved honors and awards, including the French Legion of Honor. A distinguished companion of our superintendent of schools, Dr. Jacob Greenberg.

Recipient of the 1957 Brotherhood Award, trustee of two great colleges, philanthropist, industrialist, and banker, Mr. John W. Hooper.

The "Horatio Alger" of Brooklyn, good friend of the conference, and member of the public service commission, Hon. Aaron L. Jacoby.

A former member of the American diplomatic corps, educator, philanthropist, and industrialist, president of the Navy Yard Boys' Club, Mr. Douglas James.

A distinguished leader in social welfare and public service, president of the Brooklyn Borough Gas Co., Mr. Walter M. Jeffords, Jr.

Back in darker days of the Nation's history our homeowners had a friend in the Halls of Congress, presently a guiding member of the House Ways and Means Committee, a distinguished Member of Congress, Hon. EUGENE J. KEOGH.

A distinguished, untiring leader in the field of social welfare and community effort, Mrs. Bertha Kirsch.

Distinguished young banker, chairman of the board of governors of the Brooklyn Academy of Music, unfailing leader in Brooklyn cultural education, Mr. Everett Livesey.

Philanthropist, industrialist, and former recipient of the brotherhood award of our conference, Mr. Lester Martin.

A generous, great-hearted citizen, public official, lawyer, and banker, immediate past cochairman of the Brooklyn division of the National Conference of Christians and Jews Hon. John P. McGrath.

Great champion of freedom of enterprise and the dual banking system, Superintendent of Banks Hon. George A. Mooney.

Distinguished Congressman, thorough student of economics and political science. Recognized leader of our national parliament and member of a grand and worthy team representing the Borough of Brooklyn, Hon. ABRAHAM J. MULTER.

Distinguished war veteran, aristocrat of merchants, and one who brings philanthropy and integrity to our community, Maj. Benjamin H. Namm.

A friend of our guest of honor from a distant land, human and compassionate American, esteemed by those who know him, former mayor of the city of New York and former U.S. Ambasador to Mexico, Hon. William O'Dwyer.

Ever kindly, sympathetic and understanding friend of humanity, a distinguished community leader, judge of the eastern district of the State of New York, Hon. Leo F. Rayfiel.

Our good and able friend, director of the National Conference of Christians and Jews, Dr. Allyn Robinson.

Dedicated community leader well in the vanguard in every movement for community improvement, leader of the city council, Hon. Joseph T. Sharkey.

A soldier, a lawyer, a corporate executive, and a philanthropist, president of May's Department Store's, and our host of this evening's reception, Maj. Max L. Shulman.

A distinguished leader in business, social welfare, and community effort, president of Abraham and Straus, Mr. Sidney L. Solomon.

Active in all worthy efforts and dedicated to community welfare, judge of the court of claims, Hon. Sidney Squire.

The businessman of our city administration, champion of human rights, and president of the city council, Hon. Abe Stark.

Poet laureate and spiritual leader of our guest of honor and rabbi of Temple Ahavath Sholom, Rabbi Alexander Steinbach.

A big heart whose warmth embraces everything worthwhile in human relations, outstanding industrialist and businessman, chairman of the board of May's Department Store, Mr. Joe Weinstein.

A devoted, consistent community servant, justice of the municipal court of the city of New York, and designated as an acting justice of the city court, Hon. Oliver D. Williams.

One who has dedicated himself to our community's welfare; a distinguished philanthropist and an outstanding businessman, president of Martin's Department Store, Mr. Harry Zeitz.

In introducing our speakers tonight, allow me, please, to limit my introduction to extraordinary phases of these distinguished careers, only referring to the peaks of their communal service, for it is community service and community conscience that bring them here with us tonight.

Distinguished statesman, our good friend, Col. Arthur Levitt, comptroller of the State of New York, is more than a great public official. He represents civic and communal life on its highest level here in our community of Brooklyn. He is our cochairman of the National Conference of Christians and Jews, Brooklyn region; cochairman for civil defense of Brooklyn; former vice chairman of the Brooklyn chapter of the American Red Cross; president and trustee of the Union Temple of Brooklyn, counsel and director of the Pride of Judea Children's Home, and past commander of the Sydney Rosenberg Post, American Legion, and former president of the Board of Education of the city of New York.

Fellow guests, it is a great honor to present to you a citizen of our community whose breadth of vision and intelligence is as great as his community service and sense of duty, The Honorable Arthur Levitt.

Mr. LEVITT. The sum total of activities of the National Conference of Christians and Jews is devoted to building brotherhood. There are a number of ways that this is being done in the Borough of Brooklyn.

Brooklyn high school students have attended the annual High School Youth Conference at Camp Lake Bryn Mawr in Pennsylvania and these students form a nucleus of a group actively working in the Brooklyn region.

Much is being done in educating Brooklyn teachers who are in direct touch with the adults of the future. Teams of teachers have attended workshops at colleges and universities throughout the Nation. Many more are taking courses in human relations, and a group of five has journeyed to Puerto Rico to better equip themselves to work with the Puerto Rican children in the Brooklyn school population.

A unique program is the National Conference of Christians and Jews training in human relations for the Police Department. High-ranking officers are attending these courses on their own time with the approval of the Commissioner of Police, Stephen P. Kennedy. Last year a similar program was conducted for members of the Bureau of Internal Revenue in Brooklyn.

Apart from these specific programs, the National Conference of Christians and Jews has rendered services to all types of schools, community, and religious organizations that wish to promote the idea of brotherhood.

The National Conference of Christians and Jews exists to create harmony and understanding among the many different groups that make up America. As much as any place in this country, Brooklyn has representatives of every race, religion, and national group in the world. Fortunately, we've been able to live together in harmony and understanding, but it is only because of organizations like the National Conference of Christians and Jews, which have taught us to appreciate the fundamental necessity of the brotherhood of man under the fatherhood of God.

Mr. ROSCOE. Distinguished jurist, justice of the supreme court of the State of New York—in introducing this good friend of ours, let me tell you some of his less known achievements because his major accomplishments in his distinguished career are part of the history of Brooklyn and the history of the State of New York.

Judge Keogh began his professional career as a teacher in Public School 183 in Brooklyn, N.Y. Apparently, Judge Keogh has dedicated himself to public service ever since those early days in 1924 when the young boys and girls of Brooklyn first knew him. For he has served the citizenry of youth of our community well and consistently ever

since as borough commissioner of the Boy Scouts of America, trustee of the Brooklyn Juvenile Guidance Center, Brooklyn Cancer Committee, New York Heart Campaign. He is now president of the Brooklyn Council of Boy Scouts of America and vice president of the Friends of the Brooklyn Public Library.

As teacher, community friend, author, distinguished jurist and scholar and, above all, able leader of the best in Brooklyn, we proudly introduce the Honorable J. Vincent Keogh.

Judge KEOGH. Mr. Toastmaster, reverend clergy, our guest of honor and his lovely family, Borough President John Cashmore, Dr. Jones, my colleagues on the bench, our friend, Ambassador O'Dwyer, distinguished guests, ladies and gentlemen, friends of the Conference and of Surrogate Moss:

When one as our guest of honor has been acclaimed in so many tangible ways with medals, plaques, loving cups, desk sets, and citations, it is appropriate to recall Keats' classical expression from Endymion, "A thing of beauty is a joy forever." The great artists were not only those of the dim past—there are some who are contemporary, and one of them is Leslie Huvos whom I should like to have join me. Mr. Huvos was kind enough to execute for the Conference of Christians and Jews the presentation I am about to make. His great artistry now joins the company of the Winged Victory of Samothrace, Venus de Milo, Michaelangelo's David and Moses and the other great works of art, even to those now exhibited in the Museum of Modern Art. Mr. Huvos, who did not always live in the United States, was considered the outstanding sculptor of middle Europe. His works are in the Paris Opera House and throughout Europe. Most of the statues in the public squares of Budapest are his creations. He created the St. Christoper monumental statue in the Salon des Artistes Francais in Paris and was complimented therefor by President Theodore Roosevelt at the unveiling. The statue was blessed by the Pope.

Among other works of art of this sculptor are the busts of Admiral Horthy in the royal castle in Hungary, Hector Berlioz in the opera houses of Budapest and Paris, Toscanini, Frantz Liszt, and Chopin. Surrogate Moss, an artist of such talent was chosen so that on this occasion we could tangibly present to you a creation that will live forever and is less expendable than even a car, that forever will reflect the talents, attributes and congenital humanity of one who stands out in our community as representing all that which is noble in American democracy. A lawyer, veteran of World War I, then for many years associated with an outstanding law firm in Brooklyn, president of the New York City Board of Education, our guest of honor has contributed to the interests not of any one particular group, but of our entire borough and city, not only president of the Jewish Community Council, but interested in the work of the Salvation Army and yes, even the defunct Dodgers' Knothole Club, not only a member of the executive committee of the Federation of Jewish Philanthropies, but active in our Boy Scout and Red Cross movements, not only past vice president of the Brooklyn Zionist region, but a member of the advisory council of the Sister Kenney Foundation, and on the Columbus Day Citizens Committee, and also Brooklyn Week for the Blind, elected a justice of the supreme court in 1951 and later as surrogate of Kings County in 1955, maintaining the dignity, high standards and sincere understanding of that long line of surrogates, Ketcham, Wingate, McGarey, and Rubenstein. We who work with and know our guest of honor take pride this evening in reminding him of his many unselfish community activities, all consonant with the philosophies and ideals of the Conference of Christians and Jews. Surrogate Moss, it is my heartfelt pleasure on behalf of all those assembled, to make this presentation.

Judge Moss. Revered members of the clergy, Mr. Chairman, Borough President Cashmore, President Jones, my brethren on the bench, distinguished guests, ladies and gentlemen, and my family, particularly Richard and Nikki, the eldest two of my seven grandchildren.

Although Judge Benjamin could have expressed it better than I, yet I would not be happy without paying my personal respects to that genuine lovable human being, our dynamic chairman, Andy Roscoe. Only those who worked closely with him know of the hard labor performed by him even until 3 in the morning; and always with patience and much charm.

But no man can stay out, day after day, until the early hours of the morning without an understanding wife, and therefore we owe much to Ethel, Andy's better half, and incidentally to my own dear wife, Grace. Both have our genuine gratitude.

Now, when a president of a bank gives his time to a community project, it cannot be done without the consent of its board of directors, and therefore we tender our thanks to the board of the Equitable Savings and Loan Association.

You will see that this is a chain reaction, for when the directors of a bank give leave to their president to engage in a communal endeavor, it is because this is agreeable to the superintendent of banks.

In this audience, we are privileged to have Mr. George Mooney, superintendent of banks of the State of New York, and, Mr. Mooney, I know I bespeak the voice of Brooklyn when I say that we appreciate deeply the policy which you pursue of encouraging presidents and officials of banks to become part of all worthwhile community endeavors. Your presence and their presence tonight attest to that.

My appreciation also goes to the dedicated sponsors, chairmen, and members of the various committees, and to Mr. Edwards and Mr. Aschkinasi of the professional staff; and, of course, to my own spiritual leader, Rabbi Steinbach for his kind words. But transcending all, we recognize that you in this ballroom are the dedicated persons who really made this dinner.

And I cannot restrain myself from singling out the man who first brought me into public life; one whose picture has always occupied the most conspicuous place in my chambers, one whom I have never deviated in my opinion, admiration and love, in storm as well as fair weather—our former Mayor Bill O'Dwyer.

To Mr. Leslie Huvos: I feel very humble to have merited the attention of such an outstanding sculptor. A thousand thanks for having recorded so faithfully my wrinkles and facial muscles; and my deep appreciation to the gentlemen who donated the bust to the conference without a penny's expense to the organization.

And finally my gratitude to my very dear friend, Judge Keogh for his laudatory, but undeserved remarks.

I would not be human if I were not profoundly touched by all of this; and I pledge to you that the events of this evening will seal within me that inspiration which guides men to devote their lives to their community.

The presence of so many people demonstrates clearly an essential aspect of the American way of life; that American culture is no abstract isolated concept but rather a living and growing force which has fed upon the established cultures and religions of all the faiths.

There is in this audience, Prof. Abraham Katsch of New York University, who said in a lecture that on close analysis, our practical democratic creed turns out to be merely an affirmation of the common basis of all the many faiths; that democracy is a masterful symphony, the mellowness and richness of which depend upon an amalgam of the traditions and cultures of all its peoples, brought into an harmonious accord.

The freedom of the human mind is a gift of God to man. But the distortion of the human mind is the act of man, which Dr. Jones has just described as "wicked and destructive," and which we hope can be changed by education. That is why so many of us of all faiths are behind the work of the National Conference of Christians and Jews.

History has a habit of repeating itself, for today we are witnessing a resurgence of hate. The ministers of God recognize it.

As an example, in a recent sermon at solemn Mass in St. Patrick's Cathedral, Father Francis X. Duffy declared, "God cannot be adequately loved by any person who harbors hate." He said that it "is a disease of the spirit." He called it, "Murder from the heart which can express itself in the sharp tongue, the heavy fist, and open war."

The instigators of the hate campaigns care little for the aftereffects of their poison, which by careful studies of the past, have proved beyond doubt that the person who, for example, today is antisemitic, tomorrow becomes anti-Negro, anti-Catholic or anti-Protestant, and vice versa; anti-everything outside his own particular group.

This is not mere surmise but stark past history. And to show you the truth of this assertion, I need only bring to your mind a few examples:

In 1826, an Anti-Masonic National Party was started in America. One history book said: "Anti-Masons were as thick as hornets in the rural Yankee Belt from Maine to Ohio."

The Anti-Masonic Party was the first American party (I hate to call it "American") to hold a presidential nominating convention, which it did in September of 1831 in Baltimore.

The party carried Vermont.

The party ran ahead of President Jackson in Massachusetts.

But, as I said before, prejudice and hatreds once engendered have habits of changing quickly from one scapegoat to another.

And so, a few years later in 1844, an anti-Catholic party was formed, called the "Native Americans." (Notice how all these anti forces always use the cherished name "American.")

As a result of the formation of this anti-Catholic party, many persons were killed and ancient Catholic churches here and elsewhere were burned.

This was the predecessor group to the Know-Nothings, which elected Governors in Kentucky, Maryland, Delaware, and four New England States. They also elected a mayor in New York City and even President Fillmore later became one of their party.

Today the world has made tremendous progress. Dr. Jones has touched on our rocket exploration as but one example. Man's brain has thus brought great scientific triumphs. But it seems that as man's mind becomes sharper in material things, the world becomes more hazardous. And because of that we must encourage every organization and group, whose purpose is to direct man's brain to the more important victories of spiritual triumphs. If the history of civilization proves anything, it proves that the flesh is endowed with something which lifts it above the material, and that something is the divine spirit in man.

Man's future and his progress throughout the ages have always been the history of his spirit. It is no different today, and happily there is a growing realization of this infinite power in both our young and old.

Oh, if the peddlers of hate could only learn in their lifetime, that regardless of

the extent of their hates and prejudices, in the republic of the grace, all men, at last, are equal. The tragedy of the world today is that this eternal truth is unfortunately learned by too many, only in death. If only the world would hearken back to the Book of Genesis, for then they would realize that all the people of the earth sprang from the same ancestry; that there is a unity of the human race; that God is the common Father, the creator of all; that it is His divine law which declares all men to be brothers.

Cooperative League of the U.S.A.

EXTENSION OF REMARKS
OF

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 13, 1959

Mr. HALPERN. Mr. Speaker, on Tuesday I was privileged, with Representative BYRON JOHNSON, of Colorado, to address a workshop session at the second national conference on cooperative housing being held this week at the Hotel Statler, here in Washington, under the auspices of the Cooperative League of the U.S.A. I would like to call the attention of the House to this splendid gathering which is searching out ways and means to improve, promote, and further the development of cooperative housing in America.

This excellent form of middle-income housing offers a practicable means of meeting a goodly share of America's housing needs.

The cooperative movement is a constant training ground in democracy, and cooperative housing projects in particular are instrumental in promoting the values most cherished in our traditions.

The housing cooperatives, however, are running into some difficulties in a period of rising costs. Two problems are of particular significance. The first is the maintenance of reasonable monthly carrying charges within the means of the middle-income owner occupants of existing cooperatives. The second is the encouragement of new cooperative housing construction with adequate sized units for today's middle-income families and for which the monthly carrying charges are bearable.

Those financed under section 213 of the National Housing Act will receive some relief under the provisions of S. 57 as reported from the Banking and Currency Committee. In my remarks at the Cooperative League workshop session I pointed out that I was not at all sure that the proposed measures would be adequate to do the job, and I offered several suggestions to strengthen and expand the legislation to meet the needs of the present and potential owners of cooperative housing.

Because of the importance of this vital housing program and the timeliness of the conference, I would like to present to this House the talk I gave at the league's session on Tuesday which in substance discusses the cooperative housing provisions of S. 57:

Ladies and gentlemen, it is my sincere pleasure to be with you today and to participate in this workshop on legislative proposals on cooperative housing pending before Congress. This is a field of great interest to me and I am pleased that I have secured membership on the House Banking and Currency Committee where I can, I hope, effectively carry the objectives of your league.

In my short capacity as a Member of Congress and of the committee I have worked since the start of the current session for legislation of assistance and benefit to the cooperative housing movement. In this regard I have received sound advice, counsel and background from my friends in the coordinating council of 213 cooperative, many of whose members are in my district; from its first president and counsel, Si Gallett whose aid has been invaluable; from Paul Golz, executive secretary of the council, with whom I have been in constant touch; from Gerry Meyers, president of the council who has contributed so much; and, I might add, the helpful background offered by Bernie Walpin; and from many groups and other individuals who are interested in cooperative housing. Now I feel I'm part of the co-op family and can earn the good counsel of the parent group, the Cooperative League of the U.S.A.

Cooperative housing is one of the finest ways to provide worthwhile and adequate homes for people in the middle income group. It offers the opportunity to secure attractive, durable homes at reasonable carrying charges. It provides an excellent solution to urban housing problems.

But, as your discussions have brought out, there seem to be two significant problems confronting cooperative housing in this period of rising costs. The first is the maintenance of reasonable monthly carrying charges within the means of the middle-income owner-occupants of existing cooperatives. The second is the encouragement of new cooperative housing construction with adequate sized units for today's middle-income families and for which the monthly carrying charges are bearable.

The pending legislation before Congress does include some provisions of benefit to new owners and of supposed benefit to existing owners. We all welcome these provisions which Congressman JOHNSON has described so well for us. But they do not, in my opinion, go far enough, particularly in helping existing owners to maintain reasonable monthly carrying charges.

I would like to discuss with you some other possibilities and perhaps amendments to a few of the provisions in the proposed legislation which, if enacted, would, together with most of the pending legislation, make up a portfolio of instant and real benefit to cooperative owners, present and potential.

At this point I would like permission to have included in the record at the conclusion of my statement a copy of the views on section 213 cooperative housing which Congressman FINO and I presented as supplemental views in the report on the omnibus housing bill from the House Banking and Currency Committee. I do not wish to take up too much of your time, and if the views could be included with these, it would save time all around.

Briefly, the report covers the various amendments I had offered in committee to fill what I feel to be obvious gaps in the omnibus housing bill.

First, for the benefit of owners of existing management-type cooperatives with commercial or community facilities, there is the proposal that such mortgages be open-ended to permit the inclusion of new commercial or community facilities. Cooperatives could utilize this provision to up-date their facilities and acquire the same facilities for their needs such as could be secured by new cooperatives after the passage of the pending legislation. Mortgages could be opened up in an amount which together with the original obligation would not exceed any principal obligation limits in effect after the passage of the Housing Act of 1959. The advantages which would flow to owners of existing management-type co-ops from this privilege are self-evident. They range all the way from the acquisition of needed new facilities to retardation of obsolescence.

Second, for new cooperatives, proposals would: (a) Authorize new sales-type and investor-sponsored co-ops to include both commercial and community facilities in their mortgages. This would provide income to both types to aid in keeping the monthly carrying charges at a reasonable level, and would provide a stimulus to construction because of the assurance that many of the needs of the owners could be provided for; (b) extend the amortization period of mortgages of new co-ops from 40 to 50 years. This is predicated on the supposition that present interest rates will not be changed. Although by stretching out the amortization period the eventual total cost to the owners will be greater, such an extension would help to reduce monthly carrying charges; and (c) increase the FNMA per unit limit on special assistance purchases to $20,000. This would be more in accord with provisions in the pending legislation which increase the per-room limits for FHA insured mortgages, and would help to meet the needs of today's middle-income families for adequate sized homes, particularly in high cost areas.

These were the amendments I offered to the so-called Rains housing bill when it came before the full House Banking and Currency Committee. They are contained in the supplemental report to which I referred and in separate legislation I sponsored. At the committee meeting I was given full assurance that they would be fully reviewed by the Housing Subcommittee and that ample opportunity will be given the proponents to present their case.

Since the publication of the report further consultation with counselors in the cooperative housing movement—and here again I want to point to the enlightened information provided by Si Gallett—has convinced me of the need to broaden the scope of the open-ending proposition. It should include authority for capital improvements and replacements. Costs such as $14,000 for the rewiring of air-conditioning systems, as was presented to one co-op, or costs for the resurfacing of sidewalks, among others, should be included in the open-ending suggestion. Legislation to cover this is now being prepared and will be introduced within a matter of days.

But, particularly I want to discuss two proposed changes in the pending legislation which, if adopted, would be of great benefit to owners of existing cooperatives.

One of these is discussed in the supplemental views referred to. It relates to extending the proposed one-quarter of 1 percent insurance premium minimum to existing cooperatives. I am happy to see the provision in the pending House bill which grants this benefit to new co-ops, but it should and can be extended to existing co-ops. If it were, occupants would be accorded a well-merited reduction in monthly carrying charges and they would obtain some relief in a period of rising costs.

It is my understanding that a surplus of between $7 and $10 million exists in the insurance fund. There is no reason why, if the proposed lower rate can be applied to new co-ops which will be built at higher costs, existing co-ops which have been paying at the one-half of 1 percent rate on lower mortgages cannot acquire the same privilege.

When this question comes up, the proponents have run into the argument that in

order for individual mortgages to benefit, the consent of the mortgagee banks would have to be obtained. This, it is argued, is because a stated insurance premium rate forms a part of the mortgage contract with the banks. A reluctance to open all the mortgages to renegotiation has prevented acceptance of the legislation. That is what others have been told; that is what I was faced with as I offered the proposal. My legislative aid, Bob Tienken, also has been faced with this reasoning and has been trying to effectuate an answer.

Here again, working together with your able brains in this field—I should mention Si Gallett again—sound basis has been found to refute this contention. We are convinced that this matter of contract renegotiation is a misunderstanding and that, in fact, the co-op mortgages, in the main, only refer to the mortgagors paying each month, one-twelfth of the annual premium. As a result, it is possible to enact legislation which does not refer to obtaining the consent of mortgagees, but which need only state that the rate of one-quarter of 1 percent will be applicable to existing cooperatives after the date of passage of the Housing Act of 1959. The rate is a matter of interest to the mortgagors and the FHA, and legislative change in the rate is all that should be required. It would not be made retroactive but only apply to premium payments by existing co-ops as of the passage of the 1959 act.

The second issue affecting carrying charges for owners of existing co-ops relates to the application to existing mortgages of the pending provisions for the establishment of mutual insurance funds. Under the pending legislation the excellent mortgage amortization experience of co-ops would be pooled, and return insurance premiums paid back to owners over a period of time. The proposed bill provides, however, that the consent of the mortgagees must be obtained if existing mortgages are to participate in the new funds. This might delay or prevent existing co-ops from sharing in the benefits of the mutual funds. On the reasoning which I have presented as to the relationship of the mortgagors and mortgagees concerning inclusion of references to the insurance fund in the mortgage contracts, I do not believe that consent of the mortgagees is necessary in this regard either. Again, the question of insurance would seem to be of interest to the mortgagors and the FHA, and thus, since contract renegotiation is not necessary, the requirement for consent of the mortgagees can be stricken from the pending legislation.

New legislation is being prepared (a) to provide for broadening the open-ending possibility; (b) for extending the one-quarter of 1 percent to existing co-ops, on which I am working closely with Congressmen HOLTZMAN and FINO, two of the pioneers in this field; and (c) for deleting any reference to the consent of mortgagees when existing co-ops join the mutual insurance funds. And I will continue to press the committee to consider the other legislation that I outlined earlier and which, I was assured, would be given full review.

If such additions can be made to the pending omnibus housing legislation I believe that the greatest benefit will accrue to both existing and future co-ops.

I thank you for this opportunity to discuss certain features of the pending legislation. It has been a real pleasure to me to be present with you. I want to again thank all my friends in the cooperative housing movement who have given me wise advice and counsel and who are helping me in my efforts, Paul Golz, Si Gallett, Gerry Meyers, Bernie Walpin. My appreciation and profound thanks to you, Wallace Campbell, for giving me this privilege to be with you.

I want you and all those who are interested in cooperative housing to know that my door in the House Office Building is always open to you, and that my aid, Bob Tienken, my staff, and myself are always ready to work with you in this good fight.

I assure you that it is a real pleasure to be with you, and I hope that the word "cooperative" will also be descriptive of my own endeavors in this extremely important field.

Dr. Flemming's Famous Formula

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. METCALF. Mr. Speaker, Dr. Flemming, Secretary of Health, Education, and Welfare, has brought to Congress a proposal which he says will help meet the current shortage of more than 140,000 classrooms. However, to build the 75,000 classrooms which Dr. Flemming says will be built under his formula, State constitutional and statutory debt limitations will have to be changed, basic tax concepts will have to be revised, and the States will have to match the Federal funds with money they do not have.

On this St. Patrick's Day, Dr. Flemming's famous formula can be modified slightly. Those fabled little rascals, the leprechauns, can be put to work. The Secretary could change the necessity for matching funds by the States to matching by the leprechauns. All each State would have to do would be to convince a leprechaun to come forward with his pot of gold. The Federal Government would match every pot with an equivalent one from the Federal Treasury. Those who disbelieve in the existence of the leprechauns may not have too much faith in the ability of this proposal to build classrooms but as many scoili—schools—could be built for the cailini—girls—and buachallai—boys—under this method as would be under Dr. Flemming's original formula.

SENATE

MONDAY, MARCH 16, 1959

Rev. Kenneth G. Phifer, minister, Old Presbyterian Meeting House, Alexandria, Va., offered the following prayer:

Almighty God, we pause in prayer amid the bustle and din of this workday. Refresh our hearts and renew our spirits. May the quiet grace of Thine eternal calm pervade us now. May we feel something of the still depths of Thine everlasting peace. All about us there is discord. All around are clamor and shrillness. We are buffeted by pressures from without, and we are strung tight by tensions within. At times it is difficult for us to fulfill our responsibilities and meet our obligations. Drop now Thy still dews of quietness upon our hearts, that we may be strengthened anew to meet this day's tasks.

Unto Thee would we commit ourselves now. Unto Thee would we commit the work of this day. May Thy blessing rest upon us, upon the Nation we desire to serve, upon all Thy children everywhere.

Unto Thee be all glory and honor, in Jesus Christ, our Lord. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Thursday, March 12, 1959, was dispensed with.

MESSAGE FROM HOUSE RECEIVED DURING ADJOURNMENT

Under authority of the order of the Senate of March 12, 1959, the Secretary of the Senate received the following message from the House of Representatives on March 13, 1959:

That the House had passed, without amendment, the bill (S. 79) to amend the Federal Food, Drug, and Cosmetic Act to permit the temporary listing and certification of citrus red No. 2 for coloring mature oranges under tolerances found safe by the Secretary of Health, Education, and Welfare, so as to permit continuance of established coloring practice in the orange industry pending congressional consideration of general legislation for the listing and certification of food color additives under safe tolerances.

ENROLLED BILLS SIGNED DURING ADJOURNMENT

Under authority of the order of the Senate of March 12, 1959, the Vice President, on March 13, 1959, signed the following enrolled bills, which had been previously signed by the Speaker of the House of Representatives:

S. 50. An act to provide for the admission of the State of Hawaii into the Union; and

H.R. 2260. An act to extend the induction provisions of the Universal Military Training and Service Act, and for other purposes.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on March 13, 1959, he presented to the President of the United States the enrolled bill (S. 50) to provide for the admission of the State of Hawaii into the Union.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries.

MUTUAL SECURITY PROGRAM—MESSAGE FROM THE PRESIDENT

The VICE PRESIDENT laid before the Senate a message from the President of the United States, which was referred to the Committee on Foreign Relations.

(For President's message, see CONGRESSIONAL RECORD for March 13, 1959, pp. 4097–4102.)

EXECUTIVE MESSAGES REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry

nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 1. An act to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation, and for other purposes;

H.R. 3293. An act to authorize the construction of modern naval vessels; and

H.R. 3368. An act to extend the special enlistment programs provided by section 262 of the Armed Forces Reserve Act of 1952, as amended.

The message also announced that the House had agreed to a concurrent resolution (H. Con. Res. 15) providing for the printing of the "Code of Ethics for Government Service" as a House document, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED

The message further announced that the Speaker had affixed his signature to the enrolled bill (S. 79) to amend the Federal Food, Drug, and Cosmetic Act to permit the temporary listing and certification of citrus red No. 2 for coloring mature oranges under tolerances found safe by the Secretary of Health, Education, and Welfare, so as to permit continuance of established coloring practice in the orange industry pending congressional consideration of general legislation for the listing and certification of food color additives under safe tolerances, and it was signed by the Vice President.

HOUSE BILLS REFERRED OR ORDERED TO LIE ON THE TABLE

The following bills were severally read twice by their titles and ordered to lie on the table or referred as indicated:

H.R. 1. An act to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation, and for other purposes; ordered to lie on the table.

H.R. 3293. An act to authorize the construction of modern naval vessels; and

H.R. 3368. An act to extend the special enlistment program provided by section 262 of the Armed Forces Reserve Act of 1952, as amended; to the Committee on Armed Services.

HOUSE CONCURRENT RESOLUTION REFERRED

The concurrent resolution (H. Con. Res. 15) providing for the printing of the Code of Ethics for Government Service as a House document, was referred to the Committee on Rules and Administration, as follows:

Resolved by the House of Representatives (the Senate concurring), That there shall be printed as a House document the "Code of Ethics for Government Service" as adopted by the Congress in H. Con. Res. 175, Eighty-fifth Congress. Such code shall be run in two colors and gold from letterpress plates reproducing engrossed artwork, hand lettered and appropriate for framing and office wall display. Stock for prints shall be one hundred and sixty pound white, size twelve and one-quarter inches by sixteen and one-quarter inches flat. Prints shall be inserted in white envelopes inside mailing brown envelopes of twenty-eight pound brown kraft, flaps sealed or tucked in with one corrugated board protector. In addition to the usual number, there shall be printed a sufficient number of extra copies to provide twenty-five copies for use and distribution by each Senator and each Representative. For the purposes of this resolution, the Delegate from Hawaii and the Resident Commissioner from Puerto Rico shall be considered as Representatives.

TRANSACTION OF ROUTINE BUSINESS

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour for the transaction of routine business. I ask unanimous consent that statements in that connection be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

TRIBUTES TO SENATOR MANSFIELD ON HIS BIRTHDAY ANNIVERSARY

Mr. JOHNSON of Texas. Mr. President, today is a very happy day for me. It is a little unusual to call the attention of the Senate to an individual's birthday.

I say to my friend, MIKE, do not leave the Chamber; I want you to hear this.

Mr. President, today is the birthday of the distinguished junior Senator from Montana [Mr. MANSFIELD]. I know that every Member of the Senate joins me in wishing him many happy returns of the day.

There is a reason for very sincerely feeling this way. Those of us who were privileged to serve with MIKE MANSFIELD in the House of Representatives, and who have served with him in the Senate, know there is no greater patriot in this country than MIKE MANSFIELD. He is a good man. He is a kind man. He is a fair man. He can be as aggressive as a tiger, and as mild and meek as a mother.

He is a tower of strength to the Senate leadership. Yesterday I saw him on television. I wish the Secretary of State could have heard what MIKE MANSFIELD said about him, because I know it would have improved his physical well-being. I wish the Commander in Chief, who is dealing with all the complex questions of a troubled world, could have heard MIKE MANSFIELD, because of the superb manner in which he answered the questions, which, answered in another way, could have been provocative and creative of differences that would divide the Nation.

MIKE MANSFIELD never loses his head or his heart, and he has the heels to carry into effect the program that constitutes the greatest good for the greatest number.

MIKE MANSFIELD did not have the benefits of a formal education. He came from very humble surroundings. He ran away from home, and became a marine—a fact he never lets us forget—when the Marines are concerned with any matter that is under consideration on this floor.

He went down into the bowels of the earth and worked in the mines and he worked as a day laborer. He reflects his early contacts in his judgments on public questions.

He loves the people—spelled "p-e-e-p-u-l"; and he always votes for them. He wears no man's collar. He is a rugged, independent, individual thinker.

Mr. President, if I had more than 3 minutes at my disposal, I should like to say some other things about MIKE MANSFIELD. But I am going to sum up all of it by saying that, although Mrs. Johnson and I have never had a boy, if we had a boy and if he grew to manhood, we would like to have him become the kind of man MIKE MANSFIELD is.

Mr. DIRKSEN. Mr. President, I suppose one of the greatest theological minds and one of the most eloquent persons was the noted preacher, Henry Drummond, of Scotland. Not only was he a magnificent preacher; he was also an eminent scientist. He left us a great legacy in the form of a sermon on the 13th chapter of 1st Corinthians. The title is "The Greatest Thing in the World." It has probably been reprinted more than any other sermon; and someone had the vision to have it printed in small book form, so one can carry it with him. It is by all odds one of the most stimulating things I have ever read. Of course everyone knows the great line the remarkable sales manager, the Disciple Paul, left us—"And now abideth faith, hope, charity, these three; but the greatest of these is charity."

When the translators get busy, one never knows whether they will catch the spirit of the words of the Scriptures. Drummond said they made a mistake, that the word Paul used, properly translated, was not "charity," at all, but should have been translated "love," and that love is the greatest thing in the world.

Mr. President, I have watched MIKE MANSFIELD, and he is the most disarming man in the world. That was emphasized to me, because when I campaigned against him, I lost all heart for what I was doing. The reason I lost all heart for it was that I knew MIKE so well.

Many of us served together in the House of Representatives, and now we meet here in the Senate, as graduates of the school of "Mr. Speaker" RAYBURN. MIKE MANSFIELD is one; the majority leader, Mr. JOHNSON of Texas, is another; the Vice President is another. So, from the great confraternity of spirit engendered when we were colleagues in the House, we got to know each other very well.

I have never heard MIKE MANSFIELD say a mean, unkindly, trivial, or vindictive thing about anyone, in season or out, regardless of whether a political campaign, with all its intensity, was in progress.

I come to one conclusion, and it is not difficult to state: It is that MIKE MANSFIELD's heart is filled with love for his fellow human beings. There is no other way

to express our opinion of him. So I testify to him. And humble as he is, I suppose he would be the first to abjure it.

But, MIKE, in a purely personal sense we reciprocate your love, and we love you. I know of no better thing I can say to you.

Mr. WILEY. Mr. President, I like the custom that has been inaugurated. I think it is wise on a friend's birthday, before he passes on, to say nice things about him.

The other day, as I was coming to the Chamber, MIKE MANSFIELD passed. A bystander said, "Well, there goes quite a guy." Another said, "Yes; but look at his wonderful wife."

I can agree with everything that has been said about MIKE MANSFIELD, but I can also agree that his fine wife, who has been his companion through the years, and has stood shoulder to shoulder with him, has been his urge and his inspiration. She, too, must be the object of a word of praise in the Senate on MIKE'S birthday.

Mr. BRIDGES. Mr. President, I wish to associate myself with the remarks of the distinguished majority leader, the distinguished minority leader, and the distinguished senior Senator from Wisconsin [Mr. WILEY], in the tributes they have paid to the junior Senator from Montana [Mr. MANSFIELD], the assistant majority leader, or whip of the Democratic majority in the Senate.

During the years I have known him, I have not only come to have deep affection for him, but to respect him greatly for his courage, his integrity, his forthrightness, and also his ability to work with others, which is a very essential quality in any man.

Mr. AIKEN. Mr. President, I shall not take up the time of the Senate in flowery testimony to the worth and fine attributes of the junior Senator from Montana [Mr. MANSFIELD]. He knows what I think of him without having the tribute printed in the CONGRESSIONAL RECORD. I should like to say, however, it is a good thing for the country that MIKE MANSFIELD was born.

Mr. GREEN. Mr. President, when the Democratic leader of the Senate spoke a few moments ago and paid tribute to our colleague, MIKE MANSFIELD, I felt that he expressed the sentiments of all of us so accurately that it was not necessary for an ordinary, garden-variety Member of the Senate to add to the statement. However, since certain members of the Republican Party have joined in the praise, I feel I should not let the occasion go unnoted, and that I, in behalf of the ordinary, garden-variety Democrat in the Senate, should add my bit to the words of praise given by our leader.

I am sure all of us join in the well-deserved words the majority leader has so eloquently spoken expressive of our own affection and respect for MIKE MANSFIELD.

Mr. GRUENING. Mr. President, I am very happy to join with my colleagues in words of congratulation and praise to our distinguished assistant majority leader, MIKE MANSFIELD. I wish to concur in the four-letter word tributes which the majority leader so correctly paid him—good, kind, and fair. In simple English, I think they describe the feeling all of us have about MIKE MANSFIELD.

Mr. KUCHEL. Mr. President, as time passes, we make alluring and lasting friendships with many of our colleagues, and it is highly appropriate to join in tributes paid to them on their birthdays. In the 6 years I have been privileged to serve in the Senate I have been enriched by my friendship with MIKE MANSFIELD, of Montana. So, with those who have just spoken, I say to our very able colleague, the junior Senator from Montana, "Happy birthday, and many, many happy returns of the day."

Mr. GORE. Mr. President, I wish to join in all the good things said about the distinguished junior Senator from Montana [Mr. MANSFIELD]. He deserves all of them and more.

I particularly wish to applaud the suggestion of the senior Senator from Wisconsin, that it is a good custom to pay tributes upon the occasion of birthdays of Members of the Senate. But I point out that the poor junior Senator from Tennessee is in the plight of having his birthday fall on December 26.

Mr. KUCHEL. Mr. President, there is nothing poor about the junior Senator from Tennessee except perhaps that his birthday does come so close to Christmas that in his past years he may have encountered some difficulties.

Mr. CARLSON. Mr. President, I wish to asociate myself with the other Members of the Senate who have extended congratulations to the assistant majority leader, MIKE MANSFIELD, on his birthday anniversary. Probably it is only natural for those of us who live in the Midwest to get closer together than is the case with those who live in other sections of the country. However, it has been particularly pleasing for me on several occasions to work with the distinguished Senator from Montana. I am particularly pleased that I shall have the opportunity of becoming even closer associated with him as I begin my service on the Committee on Foreign Relations. I have admired him especially when he has spoken on the floor of the Senate on questions dealing with foreign relations problems. Therefore I, too, wish to extend to him my congratulations and best wishes on his birthday anniversary.

Mr. DODD. Mr. President, I am happy to join our distinguished majority leader and my colleagues in noting the birthday anniversary of the great junior Senator from Montana [Mr. MANSFIELD]. I have known Senator MANSFIELD for a few years. While I was a Member of the House of Representatives and serving as a member of the Foreign Affairs Committee of that body and before I had met the able Senator from Montana, I took him as a model of what a legislator should be. I believe I have been, and surely without his knowledge, greatly influenced by his character, his work, and his personality.

With many others, I am grateful for MIKE MANSFIELD. He has enriched our generation and in a time of contention and bitterness, he has demonstrated that one can fight hard for great causes in which he believes without giving any intellectual quarter while always with patience, kindness, and understanding of others.

I am very thankful for the benefit of this splendid example and I hope he is given many more years of life in which to continue his great work in the interest of peace and justice.

Mr. NEUBERGER. Mr. President, I wish to join in the congratulations being offered to the distinguished junior Senator from Montana [Mr. MANSFIELD] upon his birthday anniversary. Those of us who come from the Pacific Northwest are very proud of the scholarly, dignified, and effective way in which MIKE MANSFIELD performs his duties in the Senate, not only as a Senator from the Pacific Northwest, but also as the majority whip of the Senate. I know I speak for many persons in my State of Oregon when I express the best of good wishes to MIKE MANSFIELD, who is one of the outstanding Senators of this era.

Mr. MANSFIELD. Mr. President, I find myself in a very embarrassing position. Naturally, I appreciate everything my colleagues on both sides of the aisle have said today. I do not know what to say in return, except "Thank you," and to express the regret that I was not born 4 hours later, because then I would have been born on St. Patrick's Day.

The VICE PRESIDENT. Routine morning business is now in order.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT ON REAPPORTIONMENT OF AN APPROPRIATION

A letter from the Director, Bureau of the Budget, Executive Office of the President, reporting, pursuant to law, that the appropriation to the Department of Health, Education, and Welfare for "Indian health activities, Public Health Service," for the fiscal year 1959, had been apportioned on a basis indicating a need for a supplemental estimate of appropriation for pay increases granted by Public Law 85-462; to the Committee on Appropriations.

REPORT ON REVIEW OF MANAGEMENT CONTROLS OF DISTRICT OF COLUMBIA GOVERNMENT

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on review of management controls of the District of Columbia Government, July 1958 (with an accompanying report); to the Committee on Government Operations.

NEWLY ISSUED PUBLICATIONS OF FEDERAL POWER COMMISSION

A letter from the chairman, Federal Power Commission, Washington, D.C., transmitting, for the information of the Senate, a copy of each of its newly issued publications, as follows:

"Statistics of Natural Gas Companies, 1957";

"Steam-Electric Plant Construction Cost and Annual Production Expenses, 1957";

"Statistics of Electric Utilities, 1957, Privately Owned";

"Statistics of Electric Utilities, 1957, Publicly Owned"; and

"Typical Residential Electric Bills, 1958" (with accompanying documents); to the Committee on Interstate and Foreign Commerce.

REPORT OF DEPARTMENT OF LABOR

A letter from the Secretary of Labor, transmitting, pursuant to law, a report of the Department of Labor, for the fiscal year 1958 (with an accompanying report); to the Committee on Labor and Public Welfare.

PROPOSED FEDERAL CIVILIAN EMPLOYEES COMPENSATION POLICY ACT OF 1959

A letter from the Director, Bureau of the Budget, Executive Office of the President, transmitting a draft of proposed legislation to improve the compensation policies and practices of the Federal Government with respect to civilian personnel thereof, to establish a temporary Commission on Federal Civilian Employees Compensation Policy, and for other purposes (with an accompanying paper); to the Committee on Post Office and Civil Service.

DISPOSITION OF EXECUTIVE PAPERS

A letter from the Administrator, General Services Administration, Washington, D.C., transmitting, pursuant to law, a report of the Archivist of the United States on records proposed for disposal under the law (with accompanying papers); to a Joint Select Committee on the Disposition of Papers in the Executive Departments.

The VICE PRESIDENT appointed Mr. JOHNSTON of South Carolina and Mr. CARLSON members of the committee on the part of the Senate.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A concurrent resolution of the Legislature of the State of Michigan; to the Committee on Finance:

"SENATE CONCURRENT RESOLUTION 11

"Concurrent resolution urging the Congress of the United States to repeal the Federal excise tax on motor vehicles

"Whereas this Nation is emerging from a business recession; and

"Whereas business analysts have counted upon strong public acceptance of 1959 automobiles as a major force in our economy, not only because of the thousands of persons employed directly in the manufacture of automobiles and parts therefor, but also because the automobile industry is a large user of steel, glass, rubber products, transportation and other goods and services; and

"Whereas it is important at this time that all measures possible be taken to stimulate and revitalize the American economy; and

"Whereas it is believed that the immediate repeal of the excise tax on motor vehicles would supply an important impetus to the sale of motor vehicles and to business activity and employment in automobile factories and related industries throughout Michigan and the rest of the United States; and

"Whereas the loss of revenue from the repeal of the excise tax on motor vehicles would be largely, if not wholly, offset through an increase in business activity and the resulting increase in income tax collections: Now therefore be it

"Resolved by the senate (the house of representatives concurring), That the Legislature of the State of Michigan, on behalf of the people of Michigan, respectfully urges the Congress of the United States to repeal the excise tax on motor vehicles; and be it further

"Resolved, That copies of this resolution be transmitted to the President of the United States, the Secretary of Labor, the President of the Senate, the Speaker of the House of Representatives, and the members of the Michigan delegation in the Congress.

"Adopted by the senate, February 19, 1959.

"Adopted by the house March 2, 1959.

"NORMAN E. PHILLE,
"Clerk of the House of Representatives.
"FRED I. CHASE,
"Secretary of the Senate."

A resolution of the Senate of the State of Maryland; to the Committee on Armed Services:

"SENATE RESOLUTION 5

"Senate resolution urging that the U.S. Naval Gun Factory continue operation as engineering center for the Bureau of Ordnance and that the same be modernized and expanded and its name be changed to reflect its current responsibilities.

"Whereas the trend in development, engineering, and manufacture of naval ordnance has resulted in a concentrated effort directed to advanced weapons and weapons systems; and

"Whereas the U.S. Naval Gun Factory is an essential and indispensable part of the naval ordnance defense establishment; and

"Whereas there is no other naval ordnance field establishment or private defense contractor capable of displaying the diversification in engineering, scientific, and industrial skills; and

"Whereas there is no other naval ordnance field establishment or private defense contractor capable of displaying the diversification in physical plant and industrial equipments; and

"Whereas there is no comparable naval ordnance field establishment or private defense contractor having the broad technical competence and diversified experience and the conception, engineering development, design, prototype manufacturing evaluation and product engineering of weapons and weapons systems equivalent to the Naval Gun Factory; and

"Whereas the Naval Gun Factory is the only naval ordnance establishment having the comprehensive technical competence and industrial ability in the field of structural fabrications, an area of vital importance in the development and manufacture of advanced weapons and weapons systems; and

"Whereas the Naval Gun Factory has a complete complement of technical skills in the basic fields of the physical sciences and engineering (physics, chemistry, metallurgy, materials, electrical, electronics, mechanical, structure) and superior technical abilities in optics, fire control, hydraulics, engineering management and contract administration supplemented by designers, draftsmen, technicians, engineering aids, technical writers and editors; and

"Whereas the Naval Gun Factory has a complete complement of industrial skills in metals processing, fabricating, metals finishing, electroplating, heat treating, molding, casting, forging, electronics, plastics; and

"Whereas the Naval Gun Factory has provided consulting services to nationally recognized corporations in the field of design, materials, and fabrication techniques taking the form of analyses, critiques, and advice in order to support programs in which these contractors are involved, thus facilitating the Navy Department's progress in varied projects; and

"Whereas it is believed that overall operational costs in the Naval Gun Factory are not in excess of those found in comparable industry operating under similar fiscal procedures; and

"Whereas the Naval Gun Factory has displayed outstanding proficiency in contributing to the progress of development of new scientific, engineering, industrial, and related techniques necessary for flexibility in conforming to the ever-changing weapons and weapons systems concept; and

"Whereas the citizens of Prince Georges County, and in fact, the people of the entire State of Maryland, are vitally affected in the premises aforementioned: Now, therefore, be it

"Resolved by the Senate of Maryland, That a change of name be effected for the Naval Gun Factory that more realistically reflects the establishment's current responsibility such as 'Naval Ordnance Development Center' or 'Naval Weapons Engineering Center,' and be it further

"Resolved, That the Navy Department provide the Naval Gun Factory with a definite mission based on vital engineering functions in lieu of the outmoded weapons and product concepts in order to continue the Naval Gun Factory as an essential link in the chain of national defense; and be it further

"Resolved, That the Naval Gun Factory continue to operate as an engineering center for the Bureau of Ordnance to maintain surveillance and provide adequate contract administration and field engineering service to contractors engaged in the fabrication of defense weapons and weapons systems, in order to prevent the Navy Department from relinquishing control over defense projects; and be it further

"Resolved, That the Navy Department Bureau of Ordnance provide adequate support for the Naval Gun Factory relating to continued modernization of physical plant, installation of necessary equipment, more favorable consideration of Naval Gun Factory proposals for the developmental and prototype manufacture of ordnance weapons and weapons systems, in order to insure Navy Department efficiency, and reduce costs in completion of defense projects; and be it further

"Resolved, That the Navy Department, Bureau of Ordnance, take cognizance of the potential capabilities and capacities of the Naval Gun Factory as an essential establishment for the defense of the Nation and thereby provide an adequate engineering and manufacturing workload in order to utilize the experience and versatility existing in this naval ordnance field establishment; and be it further

"Resolved, That the secretary of the senate be instructed to send copies of this resolution to the President of the United States; Vice President of the United States; Secretary of Defense; Rear Adm. Paul D. Stroup, Chief of Navy Bureau of Ordnance; Vice Adm. Edward W. Clexton, Bureau of Ordnance, O.N.M.; Rear Adm. T. A. Ahroon, Chief of Planning, Bureau of Ordnance; Capt. Charles E. Briner, Superintendent of the U.S. Navy Gun Factory; and all of the members of the congressional Armed Services Committee.

"Read and adopted by the senate, January 22, 1959.

"J. WATERS PARRISH,
"Secretary of the Senate.
"EUGENE DELLA,
"President of the Senate."

A concurrent resolution of the Legislature of the State of Oregon; ordered to lie on the table:

"HOUSE CONCURRENT RESOLUTION

"Whereas the Vice President of the United States, RICHARD M. NIXON, has taken time from his many and varied duties to visit the

State of Oregon on the occasion of the celebration of the 100th birthday of our State's admission to the Union; and

"Whereas despite inclement weather Vice President NIXON traveled to and participated in local celebrations of our centennial in Astoria, Portland, and Salem, without fear for his own personal safety and certainly at some personal inconvenience, thus contributing greatly to the success of such local celebrations; and

"Whereas the presence of such a high official of the Federal Government as Vice President NIXON added dignity and importance to our celebration and provided the impetus for a successful centennial year: Now, therefore, be it

"*Resolved by the House of Representatives of the State of Oregon (the Senate concurring therein)*, That this legislative body express its appreciation for the efforts of the Vice President of the United States, RICHARD M. NIXON, and for the contribution he has made to Oregon's centennial celebration; and be it further

"*Resolved*, That an authenticated copy of this resolution be transmitted to the Vice President NIXON as an expression of our esteem.

"Adopted by senate, February 25, 1959.

"WALTER J. PEARSON,
"President of Senate.

"Adopted by house, February 19, 1959.

"RUTH E. RENFROE,
"Chief Clerk.

"ROBERT B. DUNCAN,
"Speaker of House."

A resolution of the House of Representatives of the State of Missouri; to the Committee on Public Works:

"HOUSE RESOLUTION 51

"Memorializing Congress to initiate plans for the development of the Meramec River Basin.

"Whereas plans for the development of the Meramec River Basin were submitted to Congress some time ago; and

"Whereas these plans are urgently needed (1) to control almost yearly floods; (2) to increase suitable location for industries; (3) to reduce loss of crops, livestock, and dwellings; (4) to eliminate health hazards; and (5) to provide a recreational area within 30 miles of St. Louis: Now, therefore, be it

"*Resolved by the House of Representatives of the State of Missouri*, That the Congress of the United States be memorialized to initiate the plans for the development of the Meramec River Basin; and be it further

"*Resolved*, That Missouri Congressmen be urged to impel the activation of these plans; and be it further

"*Resolved*, That a duly attested copy of this memorial be immediately transmitted to the Secretary of the Senate of the United States, to the Clerk of the House of Representatives of the United States, and to each Member of the Congress from the State of Missouri."

The petition of Geo. Washington Williams, of Baltimore Md., relating to the implementation of so-called segregation cases; to the Committee on the Judiciary.

CHICAGO WATER DIVERSION—JOINT RESOLUTION OF WISCONSIN LEGISLATURE

Mr. WILEY. Mr. President, I have just received from Norman C. Anderson, chief clerk of the Assembly of Wisconsin, a joint resolution, concurred in by the Wisconsin Senate, memorializing Congress regarding the diversion of water from the Great Lakes.

This joint resolution opposes diversion of water from the Great Lakes.

This joint resolution is particularly timely in view of the passage by the House of Representatives of the United States on Friday, March 13, 1959, of H.R. 1, a bill which would authorize additional diversion at Chicago.

The joint resolution is signed by Philleo Nash, president of the senate; George Molinaro, speaker of the assembly; Lawrence R. Larsen, chief clerk of the senate; Norman C. Anderson, chief clerk of the assembly.

Mr. President, I ask unanimous consent that the joint resolution of the Wisconsin Legislature opposing the Chicago water diversion be printed at this point in my remarks.

There being no objection, the joint resolution was ordered to lie on the table, and, under the rule, ordered to be printed in the RECORD, as follows:

STATE OF WISCONSIN

JOINT RESOLUTION 11A

Joint resolution memorializing Congress regarding the diversion of water from the Great Lakes

Whereas the city of Chicago and its suburbs attempted, prior to 1900, to dispose of their sewage by digging the Chicago Sanitary Canal across the Continental Divide and diverting water from Lake Michigan to discharge the sewage into the Mississippi watershed; and

Whereas the U.S. Supreme Court restrained this diversion in 1930 and required the area to develop other means of sewage disposal, but since then a veritable parade of other reasons for directing water from the Great Lakes have been proposed including the desire to reduce the salty content of the lower Mississippi by diverting water from Lake Michigan; and

Whereas the program of the Great Lakes-St. Lawrence Basin is rapidly shaping up into a plan which will enhance the economic life of that area; and

Whereas the persistent efforts of the advocates of diversion to make inroads into the Great Lakes water supply are disrupting and in fact nullifying any long-range plan for the development of the waterways of the Great Lakes; and

Whereas the U.S. Supreme Court has provided an equitable plan for the allocation of the waters of the Great Lakes which is subject to modification whenever the advocates of diversion can provide the necessary data to cause the court to modify its order of 1930 and 1956: Now, therefore, be it

Resolved by the assembly (the senate concurring), That Congress be and it hereby is petitioned to refrain from disrupting the long standing order of the Supreme Court because:

1. The authorization of increased diversion of waters from the Great Lakes must of necessity affect the development of lake ports and lake shipping adversely;

2. The issue which involves engineering decisions and international considerations should be made by means of the judicial process; and

3. The valuable resources contained in the waters of the Great Lakes ought not to be disposed of without the consent of the States abutting thereon; and, be it further

Resolved, That copies of this resolution be transmitted to the President of the United States; to the Committee on Public Works, U.S. Senate, and to the appropriate committee of the House of Representatives; to Senators and Representatives from the State of Wisconsin; to the attorneys general of the Great Lakes States opposing water diversion; to the Great Lakes Harbors Association; to the Great Lakes Compact Commission; and to the Lake Carriers Association.

PHILLEO NASH,
President of the Senate.
LAWRENCE R. LARSEN,
Chief Clerk of the Senate.
GEORGE MOLINARO,
Speaker of the Assembly.
NORMAN C. ANDERSON,
Chief Clerk of the Assembly.

RESOLUTIONS OF SENATE AND HOUSE OF REPRESENTATIVES OF STATE OF UTAH

Mr. MOSS. Mr. President, I present, for appropriate reference, House Resolution 5, and Senate Resolution 5, both of which were adopted on the closing day of the 1959 Utah State Legislature, and were approved by Gov. George D. Clyde. I send these resolutions to the desk, and ask that they be printed in the RECORD.

The resolutions memoralize the Congress to pass my bill, S. 1032, which would amend Public Law 387, 83d Congress, to remove the 640 acre limitation now placed on the Secretary of the Interior on the transfer, in one calendar year, of Federal lands to the States for park purposes, and to provide for the conveyance without consideration.

At the present time the Bureau of Land Management has no program for the preservation of historic sites, or unique or scenic areas, on the millions of acres of land it is administering. Some of our most magnificent recreation and scenic wonders are being damaged or destroyed. We must do something about them now—or in a few years they will be beyond salvage.

My bill has wide support. These memorials reflect the unanimous desires of the members of the Utah Legislature and the Governor of the State that the measure be enacted.

There being no objection, the resolutions were referred to the Committee on Interior and Insular Affairs, and, under the rule, ordered to be printed in the RECORD, as follows:

SENATE RESOLUTION 5

Resolution objecting to limitation of public lands

Whereas under the Recreation Act of June 14, 1926, as now amended and in effect, the Secretary of the Interior is limited to not more than 640 acres of the public lands of the United States which may be conveyed to any one grantee in any one calenar year; and

Whereas this limitation is a severe handicap to the State of Utah and to the Utah State Park and Recreation Commission in the development of its planned State park system, and in the acquisition, preservation and protection of areas which should be incorporated into and protected by said State park system: Now, therefore, be it

Resolved by the Senate of the 33d Legislature of the State of Utah, That the President of the United States and the Congress of the United States be memorialized to amend the Recreation Act of June 14, 1926, as amended, to authorize the Secretary of the Interior to convey to a State, without

acreage or other limitation, any public lands within such State for State park and recreation purposes; and be it further

Resolved, That certified copies of this resolution be transmitted by the secretary of state to the President of the United States, to the Presiding Officer of the U.S. Senate, to the Speaker of the House of Representatives, and to the Senators and Representatives from the State of Utah.

HOUSE RESOLUTION 5

Resolution memorializing Congress and the President to remove the limitation on the number of acres of public lands which the State may acquire

Whereas under the Recreation Act of June 14, 1926, as now amended and in effect, the Secretary of the Interior is limited to not more than 640 acres of the public lands of the United States which may be conveyed to any one grantee in any one calendar year; and

Whereas this limitation is a severe handicap to the State of Utah and to the Utah State Park and Recreation Commission in the development of its planned State park system, and in the acquisition, preservation, and protection of areas which should be incorporated into and protected by said State park system: Now, therefore, be it

Resolved by the House of Representatives of the State of Utah, That the President of the United States and the Congress of the United States be memorialized to amend the Recreation Act of June 14, 1926, as amended, to authorize the Secretary of the Interior to convey to a State, without acreage or other limitation, any public lands within such State for State park and recreation purposes; and be it further

Resolved, That certified copies of this resolution be transmitted by the secretary of state to the President of the United States, to the Presiding Officer of the U.S. Senate, to the Speaker of the House of Representatives, and to the Senators and Representatives from the State of Utah.

By Mr. LANGER (for himself and Mr. YOUNG of North Dakota):

A concurrent resolution of the Legislature of the State of North Dakota; to the Committee on Agriculture and Forestry:

"HOUSE CONCURRENT RESOLUTION '0'

"Concurrent resolution urging Congress to retain the present 2-percent interest rate applying to loans made to rural electrical cooperative associations or corporations

"Whereas a number of proposals were presented to the 85th Congress proposing an increase in interest rates on loans to rural electrification associations; and

"Whereas the Congress, by enacting the Pace Act in 1944 and thereby fixing such interest rates at 2 percent, made a covenant with the rural electrical cooperatives to proceed with area coverage at reasonable retail rates; and

"Whereas the proposed increased interest rates would have a detrimental effect on rural electrical cooperative associations or corporations operating in sparsely settled areas; and

"Whereas we believe the continuance of the 2 percent interest rate is necessary to enable the rural electrical cooperative associations and corporations to complete the task of providing full, efficient, and reasonably priced electrical service on an area coverage basis: Now, therefore, be it

"Resolved by the House of Representatives of the State of North Dakota (the Senate concurring therein), That we urge the Congress of the United States to vigorously oppose any change or proposed change in the law which would effect an increase in the interest rate on loans to rural electrical cooperative associations or corporations; and be it further

"Resolved, That copies of this resolution be forwarded by the chief clerk of the house of representatives to the President of the U.S. Senate, and Speaker of the U.S. House of Representatives, and to each Member of the North Dakota congressional delegation.

"HJALMAR C. NYGAARD,
"Speaker of the House.
"GERALD L. STAIR,
"Chief Clerk of the House.
"C. P. DAHL,
"President of the Senate.
"VIC GILBREATH,
"Secretary of the Senate."

A concurrent resolution of the Legislature of the State of North Dakota; to the Committee on Appropriations:

"HOUSE CONCURRENT RESOLUTION 'E–1'

"Concurrent resolution memorializing Congress to make an adequate appropriation for school-lunch programs

"Whereas the abundance of farm produce produced by the farmers of our Nation should be used for the benefit of the citizens of our Nation; and

"Whereas our children should be kept healthy in order to maintain a strong and healthy Nation: Now, therefore, be it

"Resolved by the House of Representatives of the State of North Dakota, the Senate concurring therein, That the Congress of the United States be urged to appropriate a sufficient amount so as to adequately support the school-lunch programs carried on in the public schools of this Nation; and be it further

"Resolved, That the secretary of state transmit copies of this resolution to U.S. Senator WILLIAM LANGER, U.S. Senator MILTON R. YOUNG, Representative QUENTIN N. BURDICK, and Representative DON L. SHORT.

"HJALMAR NYGAARD,
"Speaker of the House.
"GERALD L. STAIR,
"Chief Clerk of the House.
"C. P. DAHL,
"President of the Senate.
"VIC GILBREATH,
"Secretary of the Senate."

A concurrent resolution of the Legislature of the State of North Dakota; to the Committee on Finance:

"HOUSE CONCURRENT RESOLUTION 'P–1'

"Concurrent resolution memorializing the Congress of the United States to increase the exemption on Federal income tax

"Whereas present provisions of the Federal income tax are causing hardships to many citizens of the Nation; and

"Whereas an increase in income tax exemptions would increase spending power of consumers, who in turn would increase their purchases, thereby reducing food surpluses; and

"Whereas an increase in income tax exemptions would increase the amount of sales of all other commodities, which in turn would increase labor hours and thereby strengthen our Nation's economy: Now, therefore, be it

"Resolved by the House of Representatives of the State of North Dakota, the Senate concurring therein, That the Congress of the United States is hereby urged and requested to pass legislation increasing Federal income tax exemptions as follows:

"1. Increase exemptions of married persons to a total of $2,000 per year.

"2. Increase exemptions of an unmarried person to $1,000 per year.

"3. Increase exemptions for each dependent to $800 per year; and be it further

"Resolved, That the secretary of state is hereby directed to mail copies of this resolution to each member of the North Dakota congressional delegation.

"HJALMAR C. NYGAARD,
"Speaker of the House.
"GERALD L. STAIR,
"Chief Clerk of the House.
"C. P. DAHL,
"President of the Senate.
"VIC GILBREATH,
"Secretary of the Senate."

Three concurrent resolutions of the Legislature of the State of North Dakota; to the Committee on Interior and Insular Affairs:

"SENATE CONCURRENT RESOLUTION I

"Concurrent resolution memorializing the Congress to establish as a national park a suitable area of land lying at the confluence of the Yellowstone and Missouri Rivers in northwestern North Dakota and northeastern Montana to include the sites of Fort Buford, Fort Union, and Mondak, and to preserve and develop this area of national historical significance as a historical memorial

"Whereas the area at the confluence of the Yellowstone and Missouri Rivers in northwesteren North Dakota and northeastern Montana played a large and significant part in the opening of the Pacific Northwest; and

"Whereas the area at the confluence of the Yellowstone and Missouri Rivers was known to the Governments of Spain, France, and England before the 19th century; and

"Whereas the area at the confluence of said rivers was a highlight in the exploration trip of Lewis and Clark and was by them designated as the place of rendezvous in the year 1806; and

"Whereas a trading post was established at the confluence of the Yellowstone and Missouri Rivers in the year 1822 by the Rocky Mountain Fur Co., with the support of William Ashley, later a United States Senator, Andrew Henry, Mike Fink, Jim Bridger, and other early explorers; which trading post in the year 1828–29, after acquisition by the American Fur Co., was developed by Kenneth McKenzie into the greatest fur trading post on the North American Continent and played a preeminent part in the opening of the Pacific Northwest for more than two decades; and

"Whereas Fort Union became a port of call for many world-famous personages, such as George Catlin in the year 1832, who arrived on the first steamer to reach the Yellowstone River; Prince Maximilian of Wied and party in the year 1833; John James Audubon in the summer of 1843; and the eminent frontier missionary Father Pierre Jean DeSmet in the year 1840; in addition to being a point of meeting for many years for bands of Indians from the Chippewa, Blackfeet, Crow, Sioux, Cree, Blood, Piegan, Assiniboine, Hidatsa, Mandan, Arikara, Cheyenne, Flathead, and Snake Nations; and

"Whereas Fort Buford was similarly established at the confluence of the two rivers in the year 1866; and

"Whereas said fort played a large and significant part in the regulation of the fur trade with the Indians and in the subsequent Indian campaigns, culminating in the Battle of the Little Big Horn in 1876; and

"Whereas such Indian prisoners as Chief Joseph and members of his Nez Perce Tribe and Chief Gall passed through Fort Buford; and

"Whereas it was at Fort Buford in the year 1881 that Sitting Bull surrendered, together with the remnants of his followers; and

"Whereas this area situated at the confluence of the Yellowstone and Missouri Rivers is an area of great historical significance to the people of the United States; and

"Whereas its historical significance has been lost largely by reason of its nondevelopment: Now, therefore, be it

"Resolved by the Senate of the 36th Legislative Assembly of the State of North Dakota, the House of Representatives concurring therein, That we do respectfully and earnestly request the Congress of the United States to authorize and establish sufficient of the area situated at the confluence of the Yellowstone and Missouri Rivers as a national park and that the sites of Fort Union, Fort Buford, and the early frontier town of Mondak and other historical sites be renovated, preserved, and maintained for the enjoyment and benefit of the people of the United States; and be it further

"Resolved, That the secretary of state of the State of North Dakota be authorized and he is hereby directed to forward certified copies of this memorial to the President of the United States, the Senate and House of Representatives of the United States, to the Senators and Representatives representing this State, to the Governor of the State of Montana, and to the Senate and House of Representatives of the State of Montana.

"C. P. DAHL,
"President of the Senate.
"VIC GILBREATH,
"Secretary of the Senate.
"HJALMAR C. NYGAARD,
"Speaker of the House.
"GERALD L. STAIR,
"Chief Clerk of the House."

(The VICE PRESIDENT laid before the Senate a concurrent resolution of the Legislature of the State of North Dakota, identical with the foregoing, which was referred to the Committee on Interior and Insular Affairs.)

"SENATE CONCURRENT RESOLUTION 'JJ'

"Concurrent resolution authorizing and directing the State historical society to accept the old Fort Totten site from the Federal Government if it is offered to the State

"Whereas, the site of old Fort Totten is one of the State's oldest historic sites, having been established in 1867; and

"Whereas old Fort Totten is presently being used as an Indian school but will be abandoned in the near future when a new Indian school is completed; and

"Whereas the United States Bureau of Indian Affairs has expressed a willingness to transfer the site and buildings at old Fort Totten to the State: Now, therefore, be it

"Resolved by the Senate of the State of North Dakota, the House of Representatives concurring therein, That the State historical society is hereby authorized and directed to accept the site and buildings at old Fort Totten if such property is offered to the State by the United States Bureau of Indian Affairs and to maintain and preserve the site of historic old Fort Totten as a tourist and recreational center; and be it further

"Resolved, That copies of this resolution be forwarded by the secretary of the senate to the State historical society, the Secretary of the Interior, the North Dakota congressional delegation, the superintendent of the Turtle Mountain Indian Reservation, and the President of the Pioneer Daughters of the State of North Dakota.

"C. P. DAHL,
"President of the Senate.
"VIC GILBREATH,
"Secretary of the Senate.
"HJALMAR C. NYGAARD,
"Speaker of the House.
"GERALD L. STAIR,
"Chief Clerk of the House."

"SENATE CONCURRENT RESOLUTION 'BB'

"Concurrent Resolution to the Congress urging the passage of a "point four program" to raise the standards of well-being of Indian citizens

"Whereas the Indian citizens of this State who reside on and adjacent to Federal Indian reservations do not enjoy a standard of living in any way approaching that found among the non-Indian citizens of this State, and in fact often suffer extreme hardships through inadequate diet, housing, and at times even hunger; and

"Whereas a continuation of the Federal reservation system with its ever-increasing population will result in even further hardships because of an almost total absence of employment opportunities on the reservation; and

"Whereas the social advancement of our Indian citizens is and will continue to be largely barred unless economic improvements are forthcoming; and

"Whereas legislation will be presented to the Congress to provide assistance similar to the "point four program" to the Indian citizens of this and other States through the provision of technical and financial assistance to aid in the development of natural resources on Indian lands; to develop the full capabilities of industrial and agricultural production; in improvements in housing, nutrition, clothing, sanitation and health; and the resettlement of individuals and families in other areas: Now therefore, be it

"Resolved by the Senate of the State of North Dakota, the House of Representatives concurring therein, That the Congress is respectfully urged to give favorable consideration to the passage of a "point four program" to aid the Indian citizens of this and other States to reach the level of well-being enjoyed by the great majority of the citizens of our country and to provide for the implementation of this program at the earliest possible date; and be it further,

"Resolved, That copies of this resolution be forwarded by the secretary of state to the Secretary of the Interior, the Commissioner of Indian Affairs, and to each member of the North Dakota congressional delegation.

"C. P. DAHL,
"President of the Senate.
"VIC GILBREATH,
"Secretary of the Senate.
"HJALMAR C. NYGAARD,
"Speaker of the House.
"GERALD L. STARR,
"Chief Clerk of the House."

Two concurrent resolutions of the Legislature of the State of North Dakota; to the Committee on Interstate and Foreign Commerce:

"HOUSE CONCURRENT RESOLUTION J–1

"Concurrent resolution memorializing Congress to establish and maintain the U.S. Maritime Service as a uniformed service

"Whereas the U.S. Maritime Service performs a highly valuable service to the United States in time of peace and is an integral part of our national defense in time of war; and

"Whereas a measure will be placed before Congress during its current session to recognize the status of the U.S. Maritime Service by making it one of the uniformed services of this country: Now, therefore, be it

"Resolved by the House of Representatives of the State of North Dakota, the Senate concurring therein, That Congress is respectfully urged to pass suitable legislation to establish and maintain the U.S. Maritime Service as one of the fully recognized uniformed services of this country, and that copies of this resolution be forwarded by the secretary of state to the Secretary of Commerce, and to each Member of the North Dakota congressional delegation.

"HJALMAR C. NYGAARD,
"Speakers of the House.
"GERALD L. STAIR,
"Chief Clerk of the House.
"C. P. DAHL,
"President of the Senate.
"VIC GILBREATH,
"Secretary of the Senate."

"SENATE CONCURRENT RESOLUTION Q

"Concurrent resolution requesting the Federal Communications Commission to permit television booster stations in North Dakota

"Whereas many of the people of the State of North Dakota are on the fringe or outside of the effective range of a television station; and

"Whereas because of the sparse population and the large area of this State it is not economically feasible to construct additional television stations in this State; and

"Whereas the cost to individual television viewers, on the fringe or outside the range of a television station, for the purchase of equipment to improve their television reception would be prohibitive in the event television booster stations are not permitted in this State: Now, therefore, be it

"Resolved by the Senate of the State of North Dakota, the House of Representatives concurring therein, That the 36th Legislative Assembly of the State of North Dakota requests the Federal Communications Commission to allow television booster stations in North Dakota under such rules and regulations as the commission may prescribe, and that the people of this State will be highly appreciative of any consideration that the Federal Communications Commission may give to the continued operation of booster stations; and be it further

"Resolved, That the secretary of state forward copies of this resolution to the Members of the Federal Communications Commission and to the Members of the North Dakota congressional delegation.

"C. P. DAHL,
"President of the Senate.
"VIC GILBREATH,
"Secretary of the Senate.
"HJALMAR C. NYGAARD,
"Speaker of the House.
"GERALD L. STAIR,
"Chief Clerk of the House."

A concurrent resolution of the Legislature of the State of North Dakota; to the Committee on Labor and Public Welfare:

"HOUSE CONCURRENT RESOLUTION 'W'

"Concurrent resolution lauding the sound development of organized labor in North Dakota, and memorializing Congress to vigorously legislate to stamp out racketeering in the labor and management fields, and to protect the democratic rights of member control within labor unions

"Whereas the growth of organized labor in North Dakota has taken place on a sound and democratic basis; and

"Whereas the leadership of organized labor in North Dakota has conducted the affairs of their organizations in a commendable manner; and

"Whereas the cause of organized labor has suffered because of racketeering and nondemocratic procedures followed by some labor leaders and some management in areas outside of this State: Now, therefore, be it

"Resolved by the House of Representatives of the State of North Dakota, the Senate concurring therein, That the cause of organized labor and of all citizens of North Dakota can best be served by a Federal statute which would:

"1. Prevent racketeering in the fields of organized labor, and management-labor relations.

"2. Assure the positive control of any and all labor organizations to the individual members through guaranteed democratic processes.

"3. Make management liable for any action to suppress democratic processes in labor organizations, or to encourage or abet in labor racketeering; and be it further

"Resolved, That copies hereof be mailed by the secretary of state to the President of the

Senate, the Speaker of the House of Representatives, and to the members of the North Dakota Congressional Delegation.

"HJALMAR C. NYGAARD,
"Speaker of the House.
"GERALD L. STAIR,
"Chief Clerk of the House.
"C. P. DAHL,
"President of the Senate.
"VIC GILBREATH,
"Secretary of the Senate."

A concurrent resolution of the Legislature of the State of North Dakota; to the Committee on Public Works:

"HOUSE CONCURRENT RESOLUTION V–1

"Concurrent resolution requesting the Corps of U.S. Army Engineers to study and investigate the most feasible means of protecting from erosion the banks of the Missouri River in the reaches thereof between the Oahe Reservoir and Garrison Dam

"Whereas a recent study was made by the North Dakota State Water Conservation Commission relative to the bank erosion occurring in the reach of the Missouri River between the Oahe and Garrison Reservoirs; and

"Whereas it was determined that 440 acres of valuable agricultural land was annually being destroyed through erosion; and

"Whereas the bottom land in this section of the river is the only sizable area lying adjacent to the Missouri River in North Dakota that has not been inundated by a federally constructed reservoir; and

"Whereas through the construction of the Garrison Reservoir the water now flowing in this reach of the river has silt carrying capacity only and no longer deposits silt to rebuild stream banks; and

"Whereas the lands adjacent to this entire part of the river will be subjected to total erosion unless remedies are undertaken to protect the banks from such erosion; and

"Whereas bank protection can be accomplished through the use of a series of low head dams, or through the use of the jetties and riprap; Now, therefore, be it

"Resolved by the House of Representatives of the State of North Dakota, the Senate concurring therein, That the U.S. Corps of Army Engineers be requested to investigate the most feasible means of protecting the banks of such reach of the Missouri River through the fund proposed in the President's budget for use in connection with a study of a low head dam in the vicinity of Bismarck; and, be it further

"Resolved, That the secretary of state mail a copy of this resolution to each of our Senators and Representatives in Congress, to the Chief of Engineers, U.S. Corps of Army Engineers, Washington, D.C.; Maj. Gen. Keith Barney, Missouri River Division Office, Omaha, Nebr.; Col. L. W. Pine, District Engineer, Riverdale, N. Dak.; and to the President of the United States.

"HJALMAR C. NYGAARD,
"Speaker of the House.
"GERALD L. STAIR,
"Chief Clerk of the House.
"C. P. DAHL,
"President of the Senate.
"VIC GILBREATH,
"Secretary of the Senate."

INTERFAITH MEDITATION ROOM IN KANSAS STATE CAPITOL BUILDING—CONCURRENT RESOLUTION OF KANSAS LEGISLATURE

Mr. CARLSON. Mr. President, there has been introduced in the Kansas Legislature Senate Concurrent Resolution 22, which was cosponsored by every member of the Kansas State Senate and was unanimously approved by that body.

This resolution authorizes and directs the State executive council to designate and provide an interfaith meditation room in our Kansas State Capitol Building.

Several years ago the Congress of the United States authorized the construction of a Prayer Room just off of the rotunda in our Nation's Capitol.

The location of the room is convenient for Members of Congress to drop in for prayer and meditation. The furnishings and decorations in the room are in keeping with an atmosphere that is conducive to worship.

The Kansas Legislature is to be commended for following the suggestion of the Congress in the construction of a Prayer Room in the State's capitol.

There being no objection, the concurrent resolution was ordered to lie on the table; and, under the rule, was ordered to be printed in the RECORD, as follows:

SENATE CONCURRENT RESOLUTION No. 22

Concurrent resolution authorizing and directing the State executive council to designate and provide an interfaith meditation room in the State capitol building

Whereas members of religious groups of different faiths have long felt that there should be a place for prayer and meditation in the State capitol building; and

Whereas the Capitol Prayer Room in Washington, D.C., and the meditation room in the United Nations Building in New York City, N.Y., are being increasingly used; and

Whereas space is available on the fifth floor of the statehouse which appears to be well suited for such a purpose; and

Whereas the executive council has the charge, care and management of the Statehouse: Now, therefore, be it

Resolved by the Senate of the State of Kansas (the House of Representatives concurring therein), That we hereby authorize and direct the State executive council to designate room 503 in the statehouse, or some other room deemed more suitable and available by the executive council, as an interfaith meditation room. The said executive council is further directed to redecorate and refurnish any room so designated and to provide for the care of such room and to pay the cost thereof out of any available appropriations. Any contract for redecorating or refurnishing a room shall be made in accordance with plans prepared by the State architect and the executive council. The designated room shall not be furnished in such manner as to remind anyone of any particular religion, and shall be open and available to all races and creeds; be it further;

Resolved, That the secretary of state be directed to send an enrolled copy of this resolution to each member of the State executive council and to the State architect.

REPORTS OF A COMMITTEE

The following reports of a committee were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary without amendment:

S. 947. A bill for the relief of the estate of Verentes Bent, deceased (Rept. No. 102).

By Mr. EASTLAND, from the Committee on the Judiciary, with an amendment:

S. 458. A bill for the relief of Maria Bogatkin Manea (Rept. No. 103); and

S. 758. A bill for the relief of Viktors Neimanis (Rept. No. 104).

By Mr. WILEY, from the Committee on the Judiciary, with amendments:

S. 1207. A bill for the relief of Rosette Sorge Saborgnan (Rept. No. 108).

By Mr. O'MAHONEY, from the Committee on the Judiciary, with amendments:

S. 355. A bill to amend title 18 of the United States Code so as to prohibit the misuse by collecting agencies of names, emblems, and insignia to indicate Federal agency (Rept. No. 107).

By Mr. LANGER, from the Committee on the Judiciary, without amendment:

S. 381. A bill for the relief of Peter E. Dietrich (Rept. No. 105).

By Mr. LANGER, from the Committee on the Judiciary, with an amendment:

S. 1075. A bill to provide for the reimbursement of Meadow School District No. 29, Upham, N. Dak., for loss of revenue resulting from the acquisition of certain lands within such school district by the Department of the Interior (Rept. No. 106).

REPORT ENTITLED "AN INVESTIGATION OF REFUGEES AND ESCAPEES" (S. REPT. NO. 101)

Mr. LANGER, from the Committee on the Judiciary, pursuant to Senate resolution 239, 85th Congress, 2d session, as extended, submitted a report entitled "An Investigation of Refugees and Escapees," which was ordered to be printed.

EXECUTIVE REPORT OF A COMMITTEE

As in executive session,

The following favorable report of a nomination was submitted:

By Mr. BIBLE, from the Committee on the District of Columbia:

Francis F. Healy, to be a member of the District of Columbia Redevelopment Land Agency.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. AIKEN (for himself and Mr. PROUTY):

S. 1399. A bill to provide for the conveyance of certain land comprising a part of Ethan Allen Air Force Base to the State of Vermont, and for other purposes; to the Committee on Armed Services.

S. 1400. A bill to provide for the erection of a Federal building in Montpelier, Vt.; to the Committee on Public Works.

(See the remarks of Mr. AIKEN when he introduced the first above-mentioned bill, which appear under a separate heading.)

By Mr. KUCHEL (for himself and Mr. ENGLE):

S. 1401. A bill to authorize an extension of the time for final proof under the desert land laws under certain conditions; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. KUCHEL when he introduced the above bill, which appear under a separate heading.)

By Mr. CLARK:

S. 1402. A bill to authorize the Secretary of the Interior to acquire certain additional property to be included within the Independence National Historical Park; to the Committee on Interior and Insular Affairs.

S. 1403. A bill to amend title IV of the Social Security Act so as to permit children

who are in need because of the unemployment of their parents to be eligible for assistance under the State plans for aid to dependent children established pursuant to such title; to the Committee on Finance.

(See the remarks of Mr. CLARK when he introduced the last above-mentioned bill, which appear under a separate heading.)

By Mr. ELLENDER (for himself and Mr. LONG) (by request):

S. 1404. A bill to permit certain real property heretofore conveyed to the Board of Supervisors of Louisiana State University and Agricultural and Mechanical College to be used for general educational purposes; to the Committee on Government Operations.

By Mr. JOHNSTON of South Carolina:

S. 1405. A bill for the relief of Panayiotis Michel Mavroyiannis; to the Committee on the Judiciary.

By Mr. HARTKE:

S. 1406. A bill to amend chapter 15 of title 38, United States Code, to grant a pension of $100 per month to all honorably discharged veterans of World War I; to the Committee on Finance.

S. 1407. A bill for the relief of Mrs. John M. Cica; to the Committee on the Judiciary.

By Mr. BARTLETT:

S. 1408. A bill for the relief of Ronald R. Dagon and Richard J. Hensel;

S. 1409. A bill for the relief of Donald B. Thurston and other employees of the Fish and Wildlife Service; and

S. 1410. A bill for the relief of Jay R. Melville and Peter E. K. Shepherd; to the Committee on the Judiciary.

My Mr. BARTLETT (for himself and Mr. GRUENING):

S. 1411. A bill to amend the act of August 1, 1956 (70 Stat. 898); and

S. 1412. A bill to amend the act of July 7, 1958, providing for the admission of the State of Alaska into the Union, relating to selection by the State of Alaska of certain lands made subject to lease, permit, license, or contract; to the Committee on Interior and Insular Affairs.

By Mr. TALMADGE:

S. 1413. A bill for the relief of Dr. Herbert H. Schafer and Dr. Irma Niemeyer Schafer; to the Committee on the Judiciary.

By Mr. YOUNG of North Dakota:

S. 1414. A bill to provide for wheat marketing quotas without acreage allotments; to the Committee on Agriculture and Forestry.

By Mr. CARLSON:

S. 1415. A bill to amend the Internal Revenue Code of 1954 to provide the same treatment for prepaid dues income received by a nonprofit motor club as is provided for prepaid subscription income; to the Committee on Finance.

By Mr. MOSS:

S. 1416. A bill to recognize the authority of the States relating to the control, appropriation, use, or distribution of water within their boundaries, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. Moss when he introduced the above bill, which appear under a separate heading.)

By Mr. MUNDT:

S. 1417. A bill to establish in the executive branch of the Government a temporary Commission on Federal Contributions to State and Local Governments; to the Committee on Government Operations.

(See the remarks of Mr. MUNDT when he introduced the above bill, which appear under a separate heading.)

By Mr. ELLENDER (by request):

S. 1418. A bill to amend section 377 of the Agricultural Adjustment Act of 1938, as amended, to provide for the extension of the automatic preservation of acreage history provision, with certain modifications; and

S. 1419. A bill to amend the Agricultural Adjustment Act of 1938, as amended, to eliminate the 30-acre limitation on the amount of wheat exempt from wheat marketing quotas where all the wheat produced on the farm is used on the farm for feed, food, and seed; to the Committee on Agriculture and Forestry.

By Mr. NEUBERGER:

S. 1420. A bill to promote the conservation of migratory fish and game by requiring certain approval by the Secretary of the Interior of licenses issued under the Federal Power Act; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. NEUBERGER when he introduced the above bill, which appear under a separate heading.)

By Mr. COTTON:

S. 1421. A bill for the relief of Dolly Daulette Roshan Pestonji; to the Committee on the Judiciary.

By Mr. CASE of South Dakota:

S. 1422. A bill to provide for the establishment of a Soil and Water Conservation Laboratory at the Federal land-grant college at Brookings, S. Dak.; to the Committee on Agriculture and Forestry.

By Mr. SCOTT:

S. 1423. A bill to extend by 6 months the period for which additional benefits may be paid under the Temporary Unemployment Compensation Act of 1958; to the Committee on Finance.

(See the remarks of Mr. SCOTT when he introduced the above bill, which appear under a separate heading.)

By Mr. MAGNUSON (for himself and Mr. ENGLE):

S. 1424. A bill to extend the provisions of title XI of the Merchant Marine Act, 1936, relating to mortgage insurance, to certain terminal facilities; to the Committee on Interstate and Foreign Commerce.

By Mr. MAGNUSON (for himself, Mr. CARROLL, Mr. CHAVEZ, Mr. CHURCH, Mr. COOPER, Mr. JACKSON, Mr. HART, Mr. KEFAUVER, Mr. LANGER, Mr. MCGEE, Mr. MCCARTHY, Mr. MCNAMARA, Mr. MORSE, Mr. MOSS, Mr. MURRAY, Mr. NEUBERGER, Mr. PROXMIRE, Mr. YOUNG of North Dakota, and Mr. HENNINGS):

S. 1425. A bill to amend the Interstate Commerce Act so as to provide for the protection of railroad employees by regulating the use of track motorcars, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. LANGER:

S. 1426. A bill for the relief of Capt. Emily M. Rudnick; to the Committee on the Judiciary.

S. 1427. A bill to provide chiropractic treatment when requested for veterans eligible for outpatient medical care; to the Committee on Labor and Public Welfare.

S. 1428. A bill to amend the Civil Service Retirement Act so as to provide for payment of annuities to widowers of female employees, and to surviving children, without regard to dependency; to the Committee on Post Office and Civil Service.

By Mr. KENNEDY:

S. 1429. A bill for the relief of Magdaleno V. del Rosario; and

S. 1430. A bill for the relief of Agostino Aresco; to the Committee on the Judiciary.

By Mr. CLARK:

S. 1431. A bill to provide for the establishment of a Commission on Metropolitan Problems; to the Committee on Government Operations.

By Mr. THURMOND:

S. 1432. A bill to prevent the service or consumption of alcoholic beverages aboard commercial passenger aircraft and military aircraft; to the Committee on Interstate and Foreign Commerce.

By Mr. JACKSON:

S. 1433. A bill for the relief of John Axel Arvidson; to the Committee on the Judiciary.

By Mr. MAGNUSON (by request):

S. 1434. A bill to amend title XI of the Merchant Marine Act, as amended, with respect to insurance of ship mortgages, and for other purposes; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bill, which appear under a separate heading.)

By Mr. MAGNUSON:

S. 1435. A bill to legalize maritime and building trades hiring halls; to the Committee on Labor and Public Welfare.

By Mr. BENNETT:

S. 1436. A bill to amend section 1 of the act of June 14, 1926, as amended by the act of June 4, 1954 (68 Stat. 173; 43 U.S.C., sec. 869); to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. BENNETT when he introduced the above bill, which appear under a separate heading.)

By Mr. RANDOLPH (for himself and Mr. BYRD of West Virginia):

S. 1437. A bill for the establishment of a temporary National Advisory Committee for the Blind; to the Committee on Labor and Public Welfare.

By Mr. KUCHEL (for himself Mr. DIRKSEN, Mr. LAUSCHE, Mr. WILEY, Mr. SCHOEPPEL, Mr. GRUENING, Mr. RANDOLPH, and Mr. CARLSON):

S.J. Res. 78. Joint resolution authorizing the President of the United States of America to proclaim September 17 of each year General Von Steuben Memorial Day for the observance and commemoration of the birth of Gen. Friedrich Wilhelm von Steuben; to the Committee on the Judiciary.

By Mr. MANSFIELD:

S.J. Res. 79. Joint resolution providing for a study of the possibility and desirability of establishing a University of the Americas; to the Committee on Foreign Relations.

(See the remarks of Mr. MANSFIELD when he introduced the above joint resolution, which appear under a separate hearing.)

RESOLUTION

Mr. MORSE submitted a resolution (S. Res. 92) favoring an advisory opinion by the International Court of Justice concerning the rights of the United States to maintain Armed Forces in, and to have unrestricted access to, and from Berlin, which was referred to the Committee on Foreign Relations.

(See the remarks of Mr. MORSE when he submitted the above resolution, which appear under a separate heading.)

CONVEYANCE OF CERTAIN LAND TO STATE OF VERMONT

Mr. AIKEN. Mr. President, on behalf of myself, and the junior Senator from Vermont [Mr. PROUTY], I introduce, for appropriate reference, a bill to provide for the conveyance of certain land comprising a part of Ethan Allen Air Force Base to the State of Vermont, and for other purposes. I ask unanimous consent that the bill, together with a statement prepared by me be printed in the RECORD.

The PRESIDING OFFICER (Mr. GRUENING in the chair). The bill will be received and appropriately referred; and, without objection, the bill and statement will be printed in the RECORD.

The bill (S. 1399) to provide for the conveyance of certain land comprising a part of Ethan Allen Air Force Base to the State of Vermont, and for other purposes, introduced by Mr. AIKEN (for himself and Mr. PROUTY), was received, read twice by its title, referred to the Committee on Armed Services, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Air Force is authorized and directed to convey to the State of Vermont all right, title, and interest of the United States in and to certain land comprising a part of the Ethan Allen Air Force Base, together with improvements thereon, and appurtenances thereto belonging; such property being more particularly described as follows:

Beginning at the northeasterly corner of land described as parcel No. 2 in the Department of the Air Force license to the State of Vermont for National Guard purposes, dated May 12, 1953, said point of beginning, indicated by iron stake, being located easterly of Feigle Street at or near the existing fire hydrant line; thence running north forty-nine (49) degrees forty-five (45) minutes west a distance of two thousand three hundred nineteen point zero (2,319.0) feet; thence turning an exterior angle of two hundred seventy (270) degrees to run a line north forty-five (45) degrees twenty (20) minutes east, a distance of three hundred forty-nine point four (349.4) feet; thence turning an exterior angle of two hundred seventy-one (271) degrees to run a line south one hundred thirty-two (132) degrees five (5) minutes east a distance of one thousand eight hundred thirty-eight point zero (1,838.0) feet; thence turning an exterior angle of two hundred fourteen (214) degrees to run a line south five (5) degrees twelve (12) minutes east a distance of five hundred sixty-four point zero (564.0) feet; thence turning an exterior angle of two hundred seventy-four (274) degrees to run a line south eighty-two (82) degrees and three (3) minutes west a distance of one hundred seventy-nine point sixty-seven (179.67) feet to the place of beginning. Meaning hereby to enclose an area consisting of twenty point four three seven (20.437) acres of land be the same, more or less.

SEC. 2. The property authorized to be conveyed by the first section of this Act shall be used for the training of the National Guard of Vermont and for other military purposes, and the conveyance authorized herein shall be made without monetary consideration therefor, the right of reentry and use by the United States in the event of need therefor during a national emergency declared by the President or the Congress; and the condition and limitation that if the property shall fail or cease to be used for the training of the National Guard of Vermont or for other military purposes, the title to the property so conveyed shall revert to and revest in the United States, and all improvements made thereon during its occupancy by the State of Vermont shall vest in the United States without payment of compensation therefor.

SEC. 3. The costs of any surveys necessary as an incident of the conveyance authorized herein shall be borne by the State of Vermont.

The statement presented by Mr. AIKEN is as follows:

STATEMENT BY SENATOR AIKEN

This bill would provide for the conveyance of approximately 20 acres of Federal land, now comprising a part of the Ethan Allen Air Force Base, located at Winooski, Vt., to the State of Vermont for use by the State for National Guard purposes.

Three years ago a similar measure was passed by the Congress to provide land for an access road to Camp Johnson, Vermont National Guard, through the Ethan Allen Air Force Base. This land changed title and the access road was built to the mutual satisfaction of the Air Force and National Guard.

Recently, however, Maj. Gen. Francis W. Billado, the Adjutant General of the State of Vermont, was advised by the Vermont Highway Department that it will be necessary to construct an access road to the new interstate highway across a portion of the access road to Camp Johnson.

I am assured that this new highway construction project is essential, and further that the Vermont National Guard needs an additional strip of land bordering on the Camp Johnson access road. The land which this bill would convey to the State of Vermont is presently being used by the National Guard for the winter storage of some 500 military vehicles. In addition, I am told that there are three frame buildings on the land—two being used for storage and the third for an organizational maintenance shop servicing the vehicles of all the military units in the area. These buildings are presently being maintained by the National Guard.

I am further advised that these 20 acres are in excess to the requirements of the Air Force at Ethan Allen Air Force Base.

The costs of any surveys incident to the conveyance of this land would be borne by the State of Vermont, the land would only be used for the training of the National Guard of Vermont and for other military purposes, and the United States would reserve the right to reentry and use in the event of a national emergency. No monetary consideration would be involved in this conveyance.

Finally, I would like to say that the working relationship between our Air Force and National Guard units has been a thoroughly cooperative and efficient one. I am convinced, from the information brought to my attention, that this is a conveyance which the Congress could authorize with the full assurance that it would be in the national interest.

EQUITABLE RELIEF FOR CALIFORNIA ENTRYMEN

Mr. KUCHEL. Mr. President, on behalf of myself and my colleague, the junior Senator from California [Mr. ENGLE], I introduce, for appropriate reference, a bill "to authorize an extension of the time for final proof under the desert land laws under certain conditions."

This bill pertains exclusively to a limited situation of only local application in the southwestern portion of my State; namely, the Palo Verde Mesa in Imperial County, Calif. The purpose of the bill is to afford temporary relief and protection to a group of about 125 or so small desert land entrymen who are now subject to unjustified deprivation of their homestead entries.

Under the public land laws, these entrymen have proceeded over the past 15 years to qualify for final patent. In the face of extreme difficulties they have been making the required improvements to suit the land for cultivation under irrigation with water from the Colorado River, for which they have one of the highest priority rights under State law and under the Federal Boulder Canyon Act. About the time that they had progressed to the point that they were ready to begin construction of the irrigation system that must be completed before the lands can be actually cultivated, the State of Arizona instituted in the Supreme Court of the United States a suit against the State of California relative to the whole system of water rights of the two States. One unforeseeable result of this litigation has been to raise questions about the water supply for this group of entrymen that had never previously been in question. This in turn has caused great difficulty to them in securing the necessary financing for the construction of those irrigation works.

I have given this quick summary of the background, in order to make clear that the delays in completing the necessary improvements for irrigation farming on these desert land entries is the result of the action of parties other than the desert land entrymen; and because they are the actions of sovereign States, they are wholly beyond the control of the entrymen.

To complete my brief account, I point out that the delay in completion of the required improvements results in expiration of the statuatory period within which the improvements must be made. As a consequence, under the existing law, a substantial number of these entrymen who have been working on their project for about 15 years are about to lose all of their entry rights, and their tracks are about to revert to public domain status.

The purpose of bill is solely to suspend such adverse action and the loss of the entrymen's rights until completion of the Supreme Court suit. At that time, I am confident that they will be able to complete the necessary irrigation facilities and qualify for patent under the existing law. I wish to make clear that my bill will make no change whatsoever in the existing public land laws, other than to afford a temporary extension of time during the pendency of the Supreme Court litigation.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1401) to authorize an extension of the time for final proof under the desert land laws under certain conditions, introduced by Mr. KUCHEL (for himself and Mr. ENGLE), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

AMENDMENT OF TITLE IV OF SOCIAL SECURITY ACT, RELATING TO CERTAIN DEPENDENT CHILDREN

Mr. CLARK. Mr. President, I send to the desk for appropriate reference a bill to amend title IV of the Social Security Act so as to permit children who are in need because of the unemployment of their parents to be eligible for assistance under State plans for aid to dependent children established pursuant to such title.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1403) to amend title IV of the Social Security Act so as to permit children who are in need because of the unemployment of their parents to be eligible for assistance under the State plans for aid to dependent children established pursuant to such title, introduced by Mr. CLARK, was received, read twice by its title, and referred to the Committee on Finance.

Mr. CLARK. Mr. President, the bill is another measure intended as a part of a unified legislative program to help alleviate the effects of the very serious unemployment situation which continues to affect the Nation.

Mr. President, an article published in the New York Times of this morning, entitled "People Behind Statistics: A Study of Unemployed," graphically brings this fact before us. As a part of that article is a dispatch from Pittsburgh entitled "Pennsylvania Puzzle," written by Stanley Levey.

Mr. President, I ask unanimous consent that excerpts from the major article written by A. H. Raskin, and the article on Pennsylvania, be printed in the RECORD.

There being no objection, the excerpts and article were ordered to be printed in the RECORD, as follows:

PEOPLE BEHIND STATISTICS: A STUDY OF UNEMPLOYED—VICTIMS IN FIVE STATES PUZZLED BY PLIGHT—FAMILY DEBTS INCREASE AMID GAINS IN OUTPUT AT MECHANIZED PLANTS

(By A. H. Raskin)

Unemployment is a figure in a Government report, as dreary and lifeless as the Federal debt or the death rate.

Unemployment is people—the individual hardship and heartache of 4,749,000 Americans, willing and able to work but unable to find suitable jobs.

Unemployment is the husky, fresh-faced college graduate, with 3 years of Air Force duty behind him, being told he is too old for a job with a future—at age 26.

Unemployment is the breezy, blustery executive, accustomed to an income of $50,000 a year, trying to pay his bills on a State job insurance check of $40 a week—an amount he once spent on taxis and cigars.

Unemployment is the head shipping clerk, stranded when his textile plant moved from New York to North Carolina, subsisting on odd jobs of heavy cleaning and reading an inspirational pamphlet. Its title, "Get Rich in Spite of Yourself."

Unemployment is the rhinestone setter, with all her State and Federal benefits drawn, watching a give-away show on television and murmuring "It makes me feel bad to see people getting all these nice things."

Unemployment is the electrical worker, fearful that automation has permanently wiped out his chances for reemployment, wondering whether he can volunteer for a space flight to the moon.

To put faces on figures, correspondents of the New York Times have spent the last week talking to idle workers and their families in States where unemployment has remained high despite the general pickup in business.

Their story makes a gray backdrop for reports of higher production, higher sales, higher profits, higher wages and other indexes of returning prosperity. It is a story told without bitterness—almost apologetically—even by those who have gone through the last anguishing turn of the wringer and been forced to turn to public relief.

Puzzlement is more apparent than anger in the attitude of men and women who have tramped the streets, month after weary month, with nothing to show for their efforts but holes in their shoes and a growing pile of debts.

In Detroit, capital of the automobile industry, one worker in seven is jobless and cutbacks in the output of some 1959 models threaten to add thousands to the idle lists in the next few weeks. Pittsburgh, crossroads of steel and coal production, is worried that large-scale unemployment will become a chronic drag on its economic well-being.

In the mine regions of West Virginia the specter of permanent pools of idle workers is even more tragically present. Mechanization has cut the need for manpower so drastically that 68,000 men now dig more coal than 125,000 did 10 years ago. The displaced, returning from futile job-seeking expeditions to Cleveland, Columbus, or Detroit, are less disposed to be philosophical about their plight than most of the country's uncomplaining unemployed.

Surplus food—"mollygrub" is what they call it in the Kanawha Valley coal fields—has become a mainstay in the diets of tens of thousands of families, not only in West Virginia but also in every other State. In December, 5,230,000 persons benefited from the Federal dole of butter, flour, cornmeal, and other surplus commodities. The food lines were almost twice as long as they had been a year earlier.

Yet, by the standards of mass misery that prevailed in the great depression of the thirties privation is a minor problem. What bears most raspingly on today's jobless is the sense of uselessness that comes with being unwanted and unneeded in the world's richest and most productive nation.

The corrosive effect has been acute among youngsters—high school and college graduates, ex-G.I.'s, and others in the 20- to 35-age group—locked in their first real bout with hard times and deprived of the community of suffering that helped preserve the fabric of self-respect in the depression years when everyone was in trouble.

YOUNG MAN'S RECESSION

In many ways this was a young man's recession, especially in factory industries operating under rigid seniority systems. The most recently hired were the first to feel the layoff ax. Now science, moving with the same breathtaking speed in the improvement of industrial technology as it is in the conquest of the atom and of outer space, is making the day of recall to work more remote.

The harnessing of electronic brains to mechanical muscles has made it possible to produce more goods with fewer workers. Men with 10, 12, and even 15 years of seniority remain on the surplus list while their companies climb past the production peaks they set in preautomation days.

To make the outlook gloomier, other employers hesitate to hire them for fear that their desire to safeguard their pension equities and priority status in their old jobs will cause them to quit when and if the recall whistle sounds.

For men and women of more advanced age among the unemployed, the calendar is an enemy. The piling up in New York and other States of statutory prohibitions against discrimination based on age has brought no abatement in the conviction of those past 35—and even a good many under that age—that their biggest handicap is the years in which they acquired their maturity and skill.

There is little tendency to clutch for the comforts of the welfare state. Confronted with the necessity for going on relief, most workers will grab a job at half or less than the standard they used to enjoy. And there are plenty of employers ready to capitalize on this preference for staying independent of a government handout.

RELIEF LOAD UP 3 PERCENT

In small machine shops, dry goods warehouses, and other small businesses, the calls are for work at only a few cents above the legal minimum of $1 an hour. Only in the large standardized industries and those under stringent union policing is there no move to pull down pay scales or trim fringe benefits. There the movement is still up—in both prices and wages.

In this city, where 50,000 workers have drawn all the Federal and State unemployment insurance they could get in the last 14 months, fewer than 100 a month have turned to the department of welfare for relief after their insurance ran out. The total public assistance case load here has gone up less than 3 percent in the last year, and not all of this slight rise is attributable to unemployment.

In contrast to the economic trough of the thirties, when one-fifth of the city's population was on home or work relief, the ratio now is 1 in 23. And many of the family heads now on the rolls are unemployable even by the relaxed tests that would apply in the rosiest flush of full employment.

In Detroit and other centers of productivity unemployment, the relief rolls have risen more rapidly. But everywhere the idle, without insurance or other sources of support, echo the remark of the Detroit mother of five who told a reporter:

"Accepting money from welfare, I feel we're down to the last notch. I don't want the children to grow up with the idea of welfare aid. My parents back in Arkansas raised me never to lean on welfare."

Here are some reports on what unemployment has meant to workers and their families.

PENNSYLVANIA PUZZLE

(By Stanley Levey)

PITTSBURGH, March 13.—Up and down the river valleys of western Pennsylvania smoke is shooting once again from steel mill stacks. After 2 years of recession and unemployment, it is a signal read in various ways by various persons.

"Look at that smoke," says the owner of a shoe store in Homestead. "Isn't it beautiful?"

"Went back to the mill last week," says a laborer in Ambridge. "First day's work in 14 months. I never thought I'd be so glad to see the lousy place. But after looking at all that television, I really was."

"The recession is over," says a steel company official.

"I don't know," says a forgeman in New Castle. "I hear the recession's over and I know a lotta guys have gone back, so I guess maybe it is. But not me, they don't call me back, and sometimes, mister, I don't think they ever will."

ELEVEN PERCENT IDLE IN JANUARY

Halfway across the State in Harrisburg, the capital, in the new sleek building of the department of labor and industry, analysts have compiled statistics and drawn graphs and curves. This is the story they tell:

At the end of January, 508,000 Pennsylvanians (or about 11 percent of the work force) were idle. The figure for the country was 6 percent. At the bottom of the recession last June, 520,000 persons were jobless in the State. This was 10.9 percent of the work force. The comparable national figure then was slightly more than 7.5 percent.

What worries the analysts (and workers, union leaders, merchants, and businessmen) is that increased production has not been accompanied by a corresponding increase in employment. Does this tendency mean, they

wonder, that new pools of chronic unemployment are in the making—in the steel areas, for example?

"Is Pittsburgh in danger of becoming another Scranton?" asked an economist in the bureau of employment security.

Thirty years ago Pennsylvania's heavily populated hard coal regions about Scranton and Wilkes-Barre employed 150,000 miners. By 1937 the total was 32,000. Today it is probably even lower. Scranton has tried desperately and effectively to attract new industry, but the area's economic base has been almost completely destroyed. Ten thousand new jobs have been provided but the rate of unemployment is about the same.

"Scranton has been running like hell to stand still," said the economist.

The basic cause of high production with fewer workers is automation—the use of machinery to run machines. During the recession many mills have introduced new equipment, discontinued using inefficient plants, and eliminated jobs.

Bruce Alexander, district staff member of the United Steelworkers of America in McKeesport, predicted that many workers would never regain their jobs.

"This fellow comes in to see me," Mr. Alexander recalled last week, "He's got his kids with him—three of the cutest kids you ever saw. And he says, 'I'm down to nothing. I got no family to help me. I'm on public assistance and I don't think I'm ever going to get my job back. What's going to become of me?'"

Mr. Alexander lifted his palms in a gesture of helplessness. "What could I tell him?" he asked. "I didn't have any answers. It's rough. Oh, we don't let him hurt. We help him, we get him food and like that. But we can't mislead him and tell him we can get his job back for him."

Actually while the recession has resulted in distress, it has not produced disaster. A reporter looking for signs of political protest or starvation in Pennsylvania would come away with an empty notebook. Tom Leslie, a 42-year-old hammer operator from Beaver Falls with 20 years in the industry, illustrates the reasons why this is so.

In the good days he made as much as $200 a week and averaged $6,000 a year. He saved some money, but not much. He bought a home and has $4,000 still to pay on it. He installed storm windows last year but owes a substantial balance. He still drinks a bottle of beer when he feels like it but not so often as formerly. His wife and three children eat regularly.

WIFE'S WORK IS KEY

"How do you manage it?" he is asked.

"My wife works as a bookkeeper," he says a little sheepishly.

This answer is heard in various forms throughout the steel area:

"My wife does day work."

"My wife got a job as a nurse's aid."

"My son brings home a little money."

"My wife and I moved in with my mother."

"My folks help us out."

Tom Leslie has got by for several other reasons. He has worked occasionally with a friend who owns a truck. He has picked up odd carpentry and repair jobs. He has drawn $35 a week in State unemployment compensation. Under the State-Federal program he is entitled to 45 weeks of payments.

Finally under the supplementary unemployment benefits program negotiated 3 years ago with the steel industry by the union, he has been receiving benefits that started at about $20 a week. They will run for a year. He has only one major complaint.

"Too damn much housework," he said.

Tom Leslie is joined by others who think the benefits may have saved the day. These include merchants in steel towns who were lukewarm about the welfare program when it was broached back in 1956.

A member of the Beaver County Public Assistance Commission reported that in 2 year only 10 steelworkers had applied for relief.

"Without SUB," he said, "there would have been relief lines all over the country."

In the union's district 15 area, Bruce Alexander and Paul Hilbert, the district director, organized a community services program to help steel workers in distress. Banks were asked to grant moratoriums on mortgage payment, and 150 agreed. Members were told how to obtain public assistance and surplus food. Medical and hospital service were obtained for men whose benefits had lapsed because of prolonged idleness.

But the picture has its shadowy corners, too. George Combs, a burner in the Clairton plant of United States Steel, has been out of work for 13 months. He says he has not had "8 hours work since I was laid off." His benefits will run out in a few weeks. He owes a $400 furniture bill. The store is waiting. He has not been able to pay his $42-a-month rent for an apartment in a county housing project. The project is waiting.

He receives a relief check for $4 every 2 weeks. He sought surplus food and was told he was ineligible. Now he finds other men with his seniority called back to work. He is getting uneasy about providing for his wife and three children.

TAKE JOB ANY PLACE

"I'll take a job any place," he said. "After more than a year this place don't look so good to me."

In that judgment, George Combs is not typical. Despite unemployment, steel workers are reluctant to strike out to new frontiers. Their homes, their families, their roots keep them clustered about the mills. In Beaver Valley, Wilbert Berarducci, 22 years old and unemployed since July 23, 1957, drove West a few weeks ago with his wife in his 1946 automobile.

Almost as soon as he arrived in California, he received a telegram from his mother, summoning him back home. He had been called back to the mill, she said. Without funds and unable to rely on the old automobile for another trip across the continent, he hitchhiked home in 5 days, only to find there had been a mixup and no job awaited him.

"Why did you come back?" he was asked. "Why didn't you stay out in California and look for a job?"

"Why," he said without hesitation, "this is my home and I'm a steel worker."

WEST VIRGINIA GRIM

(By Homer Bigart)

CHARLESTON, W. Va., March 10.—Thousands of unemployed coal miners have used up their "rockin' chair money" and are living on "mollygrub" in the coal fields of West Virginia.

"Rockin' chair money" is the miners' term for unemployment compensation. "Mollygrub" is the monthly dole of Federal surplus foods.

With about 15 percent of its work force idle, West Virginia is the blackest spot among the Nation's areas of economic distress.

The statistics are grim enough: 45,000 workers have exhausted their unemployment benefits.

ONE IN EVERY FOURTEEN IDLE, U.S. JOB SURVEY REVEALS

One worker in every fourteen was jobless last month. The regular joint report of the Federal Labor and Commerce Departments showed 4,749,000 unemployed and 62,722,000 employed. The total of idle was 424,000 below the figure for the recession month of February 1958, but 1,628,000 above that for the prerecession month of February 1957.

In the last 14 months of slump and recovery, more than 3 million workers have exhausted all the unemployment insurance to which they were entitled under regular State programs. Nine hundred thousand of these long-term unemployed went on to use up all the extended protection available to them under the temporary Federal program, which went into effect 9 months ago. No official estimate has been made of how many of these workers are still jobless.

The Federal program is scheduled to expire March 31, but Congress is expected to authorize a 3-month tapering-off period. This would prevent an abrupt cutoff in payments to the 300,000 who will still be on the emergency benefit rolls at the end of this month. In addition to this group, 2,375,000 workers are registered for regular State insurance checks.

Mr. CLARK. Mr. President, there are other badly needed pieces of legislation which I hope will be enacted by the 86th Congress to help deal with the serious national unemployment situation, which affects my State perhaps more than any other State but which also deeply affects many other States. Among those measures which I have cosponsored are S. 791, introduced by the Senator from Massachusetts [Mr. KENNEDY], to provide permanent minimum standards for unemployment compensation; S. 1323, introduced by the Senator from Michigan [Mr. MCNAMARA], to provide 16 weeks of benefits for unemployed persons whose unemployment compensation benefits have expired or who were not eligible for such benefits; S. 489, introduced by the Senator from Kentucky [Mr. COOPER], to facilitate the distribution of surplus food products to needy families in the United States; and, most important of all, the area redevelopment bill, S. 722, introduced by the Senator from Illinois [Mr. DOUGLAS] and many cosponsors, which has been ordered reported by the Banking and Currency Committee and which will come to the Senate for consideration, I hope, before the end of this week.

Mr. President, all of these measures make up a comprehensive and coherent program to help us deal with the critical unemployment situation.

AUTHORITY OF STATES TO CONTROL WATER WITHIN THEIR BOUNDARIES

Mr. MOSS. Mr. President, during the 84th and 85th Congresses, efforts were made to enact legislation designed to end the controversy between the States and certain agencies of the Federal Government with respect to the protection of established water rights in the Western States.

Hearings were held, but nothing beyond that was accomplished toward ending this controversy. Several of the Federal agencies that deal with western public lands agreed on a bill of their own which was presented to the Senate Committee on Interior and Insular Affairs in May of 1958. That bill, with several amendments, was introduced as Senate bill 851, on February 2 of this year, under the sponsorship of Senator O'MAHONEY, of Wyoming. I was 1 of 15 cosponsors of S. 851.

At the time of introduction it was understood that S. 851 did not go as far as many advocates of western water rights

wanted to go, and that its language failed to give complete protection from Federal preemption. It was necessary, however, that a legislative proposal be presented to Congress that moved in the right direction. And S. 851, though limited, accomplishes that objective.

Many individuals and organizations over the entire Nation are interested in legislation to do the complete job of protecting State and individual water rights from Federal preemption. It is my belief that these interests should be heard and that the entire water rights problem should have full consideration by the Congress.

Mr. President, I introduce for appropriate reference a bill to provide for recognition of the authority of all States relative to the control, appropriation, use, or distribution of water and ask that it be held at the desk until the end of the day, Friday, March 20, to accept additional sponsors.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will lie on the desk, as requested by the Senator from Utah.

The bill (S. 1416) to recognize the authority of the States relating to the control, appropriation, use, or distribution of water within their boundaries, and for other purposes, introduced by Mr. Moss, was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

TEMPORARY COMMISSION ON FEDERAL CONTRIBUTIONS TO STATE AND LOCAL GOVERNMENTS

Mr. MUNDT. Mr. President, during the past quarter century, the continuing expansion and growth of the Federal Government has created some very real problems insofar as State and local governments are concerned. As the Federal Government increasingly has come to own and control pieces of property formerly considered to be owned by individuals, some very genuine tax problems have crept into the picture. In connection with this problem, Congress has had bills before it for many years. Two or three years ago, at one time, a bill was before the Senate which the senior Senator from South Dakota was instrumental in stopping because he opposed its passage in that form at a time so late in the session. The bill was finally withdrawn. New proposed legislation has now been introduced in this field this year. It raises a large family of problems: What kind of Federal property is to be compelled to make payments in lieu of taxes, and to whom? What areas of Federal ownership or operation are to be taxed, as it were, to make payments for community or State activities? If the Federal Government enters into this field, what shall be its limitations? Here, indeed, are a possibility and a potentiality for vast, multi-billion-dollar expenditures, newly assumed by the Federal Government, to assist local governments in support of local projects and local functions. Payments in lieu of taxes could open up a vast Pandora's box of limitless new Federal costs.

If the Federal Government is to enter upon this uncharted sea, what will be the date of beginning? What Solomon is to decide at what date it shall be determined that the Federal Government shall make payments to a local community in lieu of taxes and that a neighboring local community, removed a few short miles from the first one, is to receive no payment from the Federal Government in lieu of taxes for similar installations or operations. In other words who is to be taxed additionally to make payments in lieu of taxes to whom?

The entire problem is very complex. At the same time, I recognize that it is a very compelling recommendation. Senators and Representatives who feel that their communities, localities, or States will benefit from it are eager for the passage of such legislation. Other Members of Congress, who feel that their communities will be shut out because of the definition of the particular type of property to be considered, or because of the charmed calendar date which may be chosen, look with a jaundiced eye upon proposed legislation which would impose upon their constitutents heavy new expenditures for the benefit of other communities.

This is a most complicated and complex problem. It comes before us very often. Its solution is most difficult. It should be of great concern to every Senator and Congressman and to every State and local government. Therefore, I am today introducing a bill, for appropriate reference, for the purpose of establishing in the executive branch of the Government a Temporary Commission on Federal Contributions to State and local governments. The purpose of the bill is to make a prompt but thorough study of the whole difficult problem and to make recommendations to Congress which will be complete, comprehensive, and completely equitable as among the various types of Federal activities in our many and varied communities.

Mr. President, I also ask unanimous consent that the text of the bill be printed at this point in my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1417) to establish in the executive branch of the Government a temporary Commission on Federal Contributions to State and Local Governments, introduced by Mr. MUNDT, was received, read twice by its title, referred to the Committee on Government Operations, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Contributions to State and Local Governments Act."

DECLARATION OF PURPOSE

SEC. 2. (a) Although the United States is under no constitutional obligation to pay taxes, or to make financial contributions in lieu of taxes, to any State or to any political subdivision or instrumentality thereof with respect to any property of the Federal Government, the Congress has recognized that the exemption of Federal property from taxation by State and local governments has worked hardship upon such governments in a number of instances, and heretofore has enacted a number of legislative measures providing relief in varying forms for such governments.

(b) It is the purpose of this Act to provide for a comprehensive study of the nature and effect of such previous enactments, and for an investigation to determine the nature and effect of any further legislation which may be required for the relief of State and local governments from such hardship.

(c) It is hereby declared to be the policy of the Congress that no such additional relief shall be made to any State or local government with respect to any Federal property devoted to any Federal activity the establishment or retention of which within the territorial jurisdiction of such State or local government at any time has been solicited by such State or local government.

COMMISSION ESTABLISHED

SEC. 3. (a) There is hereby established within the executive branch of the Government a Commission on Federal Contributions to State and Local Governments (referred to hereinafter as the "Commission").

(b) The Commission shall be composed of—

(1) the Director of the Bureau of the Budget, who shall serve as chairman thereof;

(2) one representative of each of the following departments and agencies of the U.S. Government, each of whom shall be designated by the head of the department or agency represented by him from officers or employees of such department or agency: the Department of Defense; the Department of Justice; the Department of the Interior; the Department of Agriculture; the Office of Defense Mobilization; the General Services Administration; and the Veterans' Administration; and

(3) one representative of each other department or agency of the U.S. Government named by the President, each of whom shall be designated by the head of such department or agency from officers or employees of such department or agency.

(3) The Commission shall select a vice chairman from among its members. A majority of the members of the Commission shall constitute a quorum. Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

(d) Members of the Commission shall serve without compensation in addition to that received for their services as officers or employees of departments and agencies of the Government, but shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties of the Commission.

STAFF OF THE COMMISSION

SEC. 4 (a) The Commission may appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of the civil-service laws and the Classification Act of 1949, as amended.

(b) The Commission may procure, without regard to the civil-service laws and the classification laws, temporary and intermittent services to the same extent as is authorized for the departments by section 15 of the act of August 2, 1946 (60 Stat. 810; 5 U.S.C. 55a), but at rates not to exceed $50 per diem for individuals.

DUTIES OF THE COMMISSION

SEC. 5. (a) The Commission shall conduct a comprehensive study of the nature and effect of all previous enactments of the Congress providing for—

(1) the payment to any State or local government of any tax or special assessment with

respect to any Federal real or personal property;

(2) the making of any payment to any such government in lieu of the payment of any tax or special assessment with respect to any such property; or

(3) the rendition of assistance to any State or local government through the making of grants-in-aid, the sharing of revenues derived from properties of the United States, or through the furnishing of services or facilities by the United States.

(b) The Commission shall conduct a comprehensive study and investigation of the extent to which State and local governments derive benefits directly or indirectly through payments made to them (1) by persons residing or employed upon Federal property, and (2) for or in connection with any property, trade, business, occupation, or transaction situated or occurring upon Federal property.

(c) The Commission shall conduct a comprehensive investigation to determine the extent, if any, to which there is need for legislation by the Congress to provide additional financial assistance for State and local governments to relieve hardship incident to the tax-exempt status of Federal property. Such investigation shall include inquiry to determine—

(1) the classes of Federal property, if any, with respect to which any such additional assistance should be granted;

(2) the nature and extent of any such additional assistance;

(3) the conditions, if any, under which such additional assistance should be granted;

(4) the annual cost to the United States of providing such financial assistance with respect to each such class of Federal property and with respect to all such classes of Federal property; and

(5) ways and means whereby State and local governments may be accorded effective right to apply property taxes in effect within their several jurisdictions to industrial plant equipment, materials, supplies, and inventories owned by private parties and used by them for commercial purposes within plant facilities owned or controlled by departments and agencies of the U.S. Government.

(d) On or before March 1, 1960, the Commission shall submit to the President, for transmittal to the Congress, a comprehensive report containing—

(1) the text of all provisions of law referred to in subsection (a), together with an analysis of the purpose and effect of each such provision;

(2) the findings of the Commission as to the facts disclosed by its studies and investigations made under subsections (b) and (c) of this section;

(3) its recommendations, consistent with the policy prescribed by section 2(c), as to any additional legislation the need for which has been disclosed by its investigation under subsection (c) of this section; and

(4) a detailed analysis of the relationship between any recommendations so made and the provisions of existing law set forth in compliance with paragraph (1) of this subsection.

(e) Upon the transmittal of such report to the Congress, the Commission shall cease to exist.

POWERS OF THE COMMISSION

SEC. 6. (a) To carry out the provisions of this act, the Commission, or any duly authorized member or employee thereof, may hold such hearings, sit and act at such times and places, administer such oaths, and require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memoranda, papers, and documents as the Commission, or such member or employee, may deem advisable. Subpenas may be issued under the signature of the Chairman of the Commission or any duly designated member or employee, and may be served by any person designated by such chairman or member. The provisions of sections 102 to 104, inclusive, of the Revised Statutes (2 U.S.C. 192–194) shall apply in the case of any failure of any witness to comply with any subpena or to testify when summoned under authority of this section.

(b) The Commission is authorized to secure directly from any executive department, bureau, agency, board, commission, office, independent establishment, or instrumentality of the United States information, suggestions, estimates, and statistics for the purpose of this act. Each such department, bureau, agency, board, commission, office, establishment, or instrumentality is authorized and directed to furnish such information, suggestions, estimates, and statistics directly to the Commission, upon request made by the chairman or vice chairman.

EXPENSES OF THE COMMISSION

SEC. 7. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the provisions of this act.

TETHERING THE FEDERAL POWER COMMISSION WHEN DAMS IMPAIR FISH AND WILDLIFE

Mr. NEUBERGER. Mr. President, I introduce a bill which is designed to restrain the Federal Power Commission from issuing licenses for hydroelectric power development in areas where dams will impair fish and wildlife values. Such legislative action is necessary, in my opinion, to assure survival of the greatest fish runs in our Nation—the fabulous Chinook salmon migrations of the Columbia River Basin.

Without this legislation, there is little doubt in my mind that the Federal Power Commission will be free to license a dam or series of dams on the Snake and Salmon Rivers which would blockade forever the vast spawning areas that lie at the source of the Salmon River, the Snake's turbulent wilderness tributary.

This conclusion is the result of two developments. The first is the declaration of the Federal Power Commission staff, in a report issued last year, that either Government or private agencies could feasibly construct a high dam at the Nez Perce site on the Snake River. Construction of this project below the confluence of the Salmon with the Snake would doom fish passage beyond that point, especially in view of the present state of technical knowledge for passing fish back and forth over high dams.

Second, a combine of four privately owned power companies operating in Pacific Northwest States has filed with the Federal Power Commission an application to develop the middle reach of the Snake River. This proposal includes dams at the Mountain Sheep site, on the Snake, and eventual construction of another high dam at the Lower Canyon site on the Salmon. The high Mountain Sheep-Lower Canyon dams would be no less damaging to the fishery resources of the Columbia Basin than the Nez Perce project. The fact that this proposal is pending before the Federal Power Commission adds urgency to congressional action on the bill I am now introducing. I ask consent to have printed at this point in my remarks the bill to promote conservation of migratory fish and game by requiring approval of Federal Power Commission licenses by the Secretary of the Interior, with limitation through provisions for congressional review on any veto action he might take.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1420) to promote the conservation of migratory fish and game by requiring certain approval by the Secretary of the Interior of licenses issued under the Federal Power Act, introduced by Mr. NEUBERGER, was received, read twice by its title, referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first sentence of subsection (e) of section 4 of the Federal Power Act is amended by inserting before the period at the end thereof a colon and the following: *"And provided further,* That no license shall be issued until the plans for the project have been approved by the Secretary of the Interior, after consultation with the Fish and Wildlife Service of the Department of the Interior, as not being detrimental to the conservation of migratory fish and game. If the Secretary of the Interior should deny such approval, he shall prepare a statement citing his reasons for denial and such statement shall be transmitted to the Congress. The delivery to both Houses shall be on the same day and shall be made to each House while it is in session. Following such denial the Commission may grant such license only if during the sixty-day period following the transmittal of such statement to the Congress there is passed by the Congress a concurrent resolution stating in substance that the Congress does not support the Secretary of the Interior's denial. The procedure in the Congress with respect to any such resolution shall be as provided in title II of the Reorganization Act of 1949.".

CHECKREIN OF FPC IS NECESSARY

Mr. NEUBERGER. Mr. President, the purpose of this bill is to make it impossible for the Federal Power Commission to license projects without at least requiring that the fish-passage facilities at the dam be studied and approved by the one Federal agency most qualified to appraise the worth of such facilities—namely, the U.S. Fish and Wildlife Service. The bill is intended to put a tether on the Federal Power Commission, which has been running rampant in the Pacific Northwest, licensing dams on mountain rivers, without any real regard for the valuable fish pilgrimages in those rivers.

The bill will give the Fish and Wildlife Service some tangible authority in these situations, by requiring that the Secretary of the Interior sanction the fish ladders, fishways, fish staircases, skimmer devices, and other apparatus designed to make it possible for adult salmon to pass the dam en route to spawn, and for fingerling salmon to traverse the dam safely downstream, on their tempestuous and perilous journey to the sea.

Mr. President, after I introduced a similar bill (S. 3185) at the last session of Congress, objections were raised that

too much veto power was being given to the Secretary of the Interior in the issuance of waterpower project licenses. It must be remembered that the Secretary of the Army has absolute authority, under the existing statutes, to reject licenses for projects which might impair the navigability of interstate streams. I think that fish and wildlife deserve equal consideration with ships and barges in the management of our water resources. Despite this belief on my part, the bill I have introduced today somewhat tempers the authority of the Secretary of the Interior in passing judgment on project licenses. The bill provides that Congress, by concurrent resolution, can overrule the Secretary, after which the Federal Power Commission may grant the license in question. Thus, the Secretary's veto authority is not complete nor irreversible. I trust that this modified approach will find support among true conservationists.

SECRETARY ALREADY RECOMMENDS, BUT FPC IGNORES

Other objections voiced against Senate bill 3185, of the 85th Congress urged amendment of the bill to require that the Federal Power Commission merely give consideration to recommendations from the Secretary of the Interior on fish and wildlife problems involved in a project. This proposal would mean nothing more than reaffirmation of the status quo. The Commission presently does give consideration to the Secretary's recommendation. But this has not stopped the earlier granting of licenses on the Deschutes River, of Oregon, nor the Cowlitz River, in Washington, for dams impairing the migration of fish. I have been advised by Mr. Jerome K. Kuykendall, Chairman of the Federal Power Commission, that the following paragraph presently appears in all Commission letters to the Secretary of the Interior, transmitting copies of applications for licenses, and requesting his comments thereon:

> It is requested that you give the Commission your views as to the measure which should be taken to protect wildlife resources in connection with the project in accordance with the provisions of the act of August 14, 1946 (60 Stat. 1080). Your advice concerning fishways is also requested pursuant to the provisions of section 18 of the Federal Power Act, 16 U.S.C. 811.

It is clear, therefore, that the Commission does obtain the views of the Secretary of the Interior on fishery matters. But I emphasize again that the receipt of this information from the experts of the Department of the Interior has not prevented the staff of the Commission from recommending dams, such as the high Nez Perce project, as feasible for construction. Obviously, more forceful control over the Federal Power Commission's decision-making power is needed, in order to preserve fish and wildlife values. The bill I have introduced will provide this control.

I was particularly grateful last year when the able chairman of the Senate Interstate and Foreign Commerce Committee, the senior Senator from Washington [Mr. MAGNUSON], reported Senate bill 3185 to the Senate for action. The Senator from Washington knows more about salmon fisheries than does any other Member of this body. He represents a State in which thousands of people earn their livelihood as commercial fishermen and packers. He himself has many times taken the lead in seeking to safeguard our salmon fisheries at sea from the depredations of unrestrained trolling and netting by boats flying the flags of Japan or the Soviet Union. On numerous occasions he has demonstrated his knowledge and deep concern in this vital field, and this is another such occasion today.

JUDGMENT ON FISHERY VALUES

Exercise of judgment on fishery values, outside the Federal Power Commission, was necessary after the Commission on January 20, 1958, ruled that a high dam at the Nez Perce site would be feasible for construction, either by the Government or by private interests. The Commission's decision contended that fishery experts have made great strides in enabling migratory fish to survive high dams like the proposed 700-foot Nez Perce project. Yet, Mr. President, conclusive evidence from testimony of fishery experts and biologists fails to substantiate this contention of the Commission. For instance, the regional director of the Bureau of Commercial Fisheries for the Pacific region, Mr. Samuel J. Hutchinson, stated on January 21, 1958:

> The state of our knowledge of fish passage over high dams is much too meager at this time to risk the survival of these runs at high dams incorporating plans for untried fish passage facilities.

This view is affirmed by the eminent fish biologist and naturalist, Dr. Ira Noel Gabrielson, Director of the National Wildlife Management Institute and formerly Chief of the Fish and Wildlife Service. He wrote to me on November 6, 1957:

> Regardless of statements that have appeared from time to time, there simply is not enough know-how to get anadromous fish over such high dams. They would be a barrier to the adult fish on the upstream migration and to the young fish on their move to the sea.

In view of this wide difference in the status of passing fish over high dams, I introduced Senate bill 3185 on January 29, 1958, to provide that no license shall be issued by the Commission until the plans for the project had been approved by the Secretary of the Interior, after consultation with the Fish and Wildlife Service, as not being detrimental to the conservation of migratory fish and game.

During hearings conducted on Senate bill 3185 by the distinguished chairman of the Senate Interstate and Foreign Commerce Committee [Mr. MAGNUSON], Mr. Ted Stevens, of the office of the Secretary of Interior, pointed out that "There are few water-resource projects proposed for construction under Federal license which do not have some detrimental effects on fish and wildlife values." The Department proposed modification of the language of the bill I had introduced, so as to require approval by the Secretary of Interior of plans for dams and other structures before the issuance of licenses.

The modified language proposed by the Secretary's office was acceptable to me, and I so advised the chairman of the Interstate and Foreign Commerce Committee. The report of the committee emphasizes that this amendment to the Federal Power Act "cannot be considered as the establishment of a new precedent." The bill amends the section which also provides that no license for a water power project shall be issued until the plans of the dam or other structures affecting navigation have been approved by the Chief of Engineers and the Secretary of the Army.

ARMY ALREADY HAS SIMILAR VETO POWER

The requirement for approval of dam plans by the Corps of Engineers was put into the Federal Water Power Act to assure unimpeded navigation for river traffic. Surely, Mr. President, the vast migratory fish runs which contribute to our Nation's food supply and provide important outdoor recreation are also deserving of unimpeded progress during spawning cycles. Otherwise, there is grave danger that major fish runs of the Columbia will not survive.

Fishery experts should be given parallel participation with the Army engineers in Federal Power Commission verdicts which concern dam projects. Enactment of my bill will assure that major fisheries of the Nation receive protection equal to that afforded the requirements of navigation. In my opinion, this will greatly enhance sound management of our Nation's water resources for their full multiple-purpose benefits.

As an independent arm of Congress, the Federal Power Commission has great discretionary authority in weighing the various resource values affected by waterpower projects. But nothing in the Federal Power Act prohibits the Commission or its staff from making mistakes of judgment. The checkrein provisions of this new legislation will greatly reduce the opportunities or possibilities of erroneous judgments by the Commission.

Mr. President, I am gratified by the support which this bill has received from leading conservation and sportsmen's organizations throughout the Nation. Much valuable counsel and advice about the bill has come to me personally from these sources. Enactment of the bill has in the past been recommended by the Izaak Walton League of America, the National Audubon Society, the National Fisheries Institute, the National Parks Association, the National Wildlife Federation, the North American Wildlife Federation, the Sport Fishing Institute, the Columbia River Fishermen's Protective Union, the Pacific Marine Fisheries Commission, the Columbia River Salmon and Tuna Packers Association, and a great many other groups and organizations.

Mr. President, I ask unanimous consent to have printed in the RECORD in connection with my remarks an article describing the importance of the Columbia River salmon fishery, from the Oregon Journal of February 8, 1959; and an article entitled "Conservation: Prospects for 1959." I wrote the latter article for the New York Times issue of Sunday,

January 4, 1959. The article lists preservation of migratory fisheries as a major conservation goal for 1959 and the years ahead.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Oregon Journal, Feb. 8, 1959]

SALMON PACKED IN 1829—CANNERY SET UP IN 1866

(By Tom Humphrey)

Oregon's commercial fish-processing industry, with a pack valued at approximately $35 million a year, started in a very small way 130 years ago—more or less accidentally.

Capt. John Dominis came into the Columbia River on the brig *Owyhee* out of Boston in 1829 to trade with the Indians. Impressed by the great salmon runs, he filled 58 empty rum hogsheads with salmon, pickled in brine, and sold it in Boston for 10 cents a pound.

That was the beginning of the commercial salmon industry in the Oregon country. By 1860 the salting and barreling of Columbia River salmon had grown to 15,000 hogsheads annually.

Before that it was estimated that the Indians were taking around 18 million pounds of salmon along the Columbia and its tributaries.

The first salmon cannery was established in 1866 at Eagle Cliff, Wash., by William Hume, who built the first salmon cannery in the world on the Sacramento River in California, canning 4,000 cases the first year.

By 1883 there were 39 salmon canneries on the Columbia, but their combined production was no greater than the 7 major canneries in operation today, headed by the Columbia River Packers Association of Astoria which packs under the famous Bumble Bee brand and accounts for approximately half of the State's fish canning volume.

Other major fish processors are Portland Fish Co. of Portland; Chinook Packing Co., Chinook, Wash.; Keystone Packing Co., Ilwaco, Wash.; Barbey Packing Co. and Union Fishermen's Cooperative Packing Co. of Astoria, and Point Adams Packing Co. at Hammond, Oreg.

In addition there are a number of custom canners, freezers, and packers. In this group are the New England Fishing Co. of Oregon, Sebastian-Stewart Fish Co., Astoria Seafood Co., and San Juan Fishing & Packing Co. of Hammond.

Altogether they do between $30 million and $40 million worth of busines annually.

Columbia River Packers Association, Inc., biggest operator in the Pacific Northwest, was organized in 1899 by a group of independent fish packers and was first known as "the combine."

Some of the combined plants were closed, and one of them, the Hanthorne cannery in Astoria, was converted into a cold storage plant, now the largest privately owned cold storage plant on the Pacific coast. Salmon canneries were operated at Rooster Rock, Oreg.; Eagle Cliff, Wash.; and at the Kinney and Elmore plants in Astoria.

Canning operations today are centered at the great Elmore cannery on the Astoria waterfront, one of the largest and most modern plants on the coast. CRPA also operates two canneries in Alaska and one at Bellingham, Wash., plus a tuna cannery at Honolulu.

CRPA's total pack in 1958 was approximately 1,500,000 cases, grossing approximately $21 million. Of this total, 400,000 cases were salmon, more than 1 million cases were tuna and the balance mixed varieties.

The company has an annual payroll of $2,900,000, averaging $2 million in Oregon. Its work force, now employed about 11 months of the year, ranges from a minimum of 700 to a peak of 1,300. Fishermen operating out of Oregon ports are paid at least $2 million for their catch.

Between 16,000 and 19,000 tons of frozen tuna are imported from Japan and processed in Oregon plants.

In the long range, the salmon deal has fallen off in recent years and the tuna deal has leaped forward, starting in 1939 when the first albacore runs were discovered off the Oregon coast. The volume increased until 1944 when 33 million pounds of tuna were landed at Astoria, but by 1950 it dropped to virtually nothing. Some tuna have been caught in the past 3 years, but Oregon packers have become more and more dependent on frozen tuna imports and some tonnage from as far south as San Francisco.

Columbia River salmon runs have declined since 1943, with minor variations, thanks to the dam building program, shorter commercial fishing seasons and the heavy take of salmon by sports fishermen. Annual take of Chinook, silver, and steelhead in Oregon and Washington waters is running more than 1 million fish and is still heading upward.

CRPA and other Columbia River processors are not too discouraged over the future of the commercial salmon industry. They are trying to hold the line in the spawning grounds of the middle Snake, especially the Salmon and Imnaha Rivers, and hoping that the dam problem can be solved, particularly the downstream movement, before salmon runs are further depleted.

Meanwhile the commercial fishing industry of Oregon (once in third place) still ranks about 10th among principal industries of the State.

[From the New York Times, Jan. 4, 1959]

CONSERVATION: PROSPECTS FOR 1959—A ROSTER OF THE ISSUES WHICH FACE CONGRESS IN THE NEW YEAR

(By Hon. RICHARD L. NEUBERGER, of Oregon)

(Mr. NEUBERGER, the junior U.S. Senator from Oregon, serves on the two major Senate committees dealing with conservation questions, Interior and Public Works. He recently was appointed by the Vice President as one of the Senate members of the Outdoor Recreation Resources Review Commission.)

Conservation issues will loom larger than ever in the public mind when Congress and the 49 State legislatures go into their sessions some time during the month of January. The lawmaking arenas are vital to the destiny of America's recreational and scenic values.

All of our conservation achievements are heavily reliant on the public opinion mobilized by the great conservation organizations. These include the Izaak Walton League of America, the National Wildlife Federation, Wildlife Management Institute, the Garden Clubs, the Audubon Society, the Sierra Club, the Wilderness Society, the Roadside Councils, the Boy Scouts and Girl Scouts, Campfire Girls, the Federated Women's Clubs and many others.

MAJOR CHALLENGES

Without their vigilance, we would have few national parks or national forests; much of our wildlife and fisheries might have been destroyed and our scenery despoiled.

What will be the principal causes undertaken by these useful organizations during 1959, at both the national and local levels? I would enumerate the major challenges in the conservation field as follows:

1. Extensive inquiries must look into the impact of lethal chemical sprays on fish, birds, and game. The use of pesticides has become widespread. These substances protect orchards and crops by destroying insect marauders. Unfortunately, they also kill our wild friends of air, stream, and forest. Whole valleys have lost their robins because of poisoning by pesticides. Congress authorized the sum of $280,000 for research in this realm last year, but many times this amount is needed to do the job right.

2. Hearings were held throughout the Western States this past autumn on the national wilderness preservation bill. Recreation groups mainly supported the proposal, while opposition came from such user segments of industry as lumber, mining, grazing, and power. The bill concerned seeks to give legal status to wilderness and primitive areas which must be kept free of human exploitation. In these areas there can be no permanent structures or roads and airfields. While the legislation requires some modification—such as the exemption from its scope of Indian lands—it does seem that Congress should not allow our relatively few outdoor museums of the past to be reduced in size or abolished by purely administrative fiat.

3. The Fish and Wildlife Service must be given some collateral jurisdiction over Federal Power Commission licenses permitting dams on rivers inhabited by valuable migratory fish runs. On numerous occasions the FPC has disregarded the advice of biologists—for example, on the Cowlitz River of Washington State and the Deschutes River of Oregon. Priceless fisheries have been imperiled as a result. Now the FPC has indicated its willingness to approve the 730-foot Nez Perce project, which would blockade off from their mountain spawning grounds over 60 percent of the prodigious Chinook salmon of the Columbia River watershed. The Army engineers have had for 37 years the right to veto FPC dams which endangered navigation. Surely the Fish and Wildlife Service is entitled to put the same protective umbrella over our dwindling fishery resources.

4. Congress must provide additional appropriations for the Outdoor Recreation Resources Review Commission, which was established last summer to inventory the recreational opportunities for our expanding population. Only $50,000 was made available to get the Commission started. It will report in September of 1961, thus providing ample time for a study long and urgently needed. President Eisenhower has made an excellent choice as chairman of Laurance S. Rockefeller, who has been such a moving spirit in the national parks among the Grand Tetons and in the Virgin Islands. Two new Senate Members of the Commission must be appointed by Vice President NIXON before the review of outdoor resources can actively commence.

5. Federal standards for billboard control along the 42,000-mile Interstate Highway System must be accepted by the legislatures of all our States. Congress has done this with the carrot rather than the stick, for any State accepting such Federal standards will receive 90½ percent of the funds for interstate roads from the U.S. Treasury instead of a straight 90 percent. When Senator THOMAS H. KUCHEL, of California, and I sponsored this provision, we felt that protection of roadside scenery was essential to the ultimate success of the biggest highway-building program in American history.

6. A new national park should be created along the historic Chesapeake and Ohio towpath, where it threads through the valley of the Potomac River. Legislation for this purpose passed the Senate in the last Congress, but bogged down in House committee. The only C. & O. Canal bisects one of the loveliest woodland realms remaining in the Eastern States. Opposition has come principally from groups which prefer reservoirs for water storage to retention of the area's sylvan grandeur.

7. Federal matching funds must be increased from $50 million to $100 million, as authorized in the Blatnik bill, to encourage States and local communities to eliminate filth from our rivers. In the United States today there are more than 20,000 sources of pollution, tainting our water supplies with

offal and chemical wastes. The Nation needs at least 6,000 more municipal sewage plants or improvements and 3,500 more plants to eliminate industrial wasts. Eventually our most serious shortage may be that of pure water. The National Government should have the authority to penalize States or cities which pollute rivers or lakes flowing across State boundaries.

8. Appropriations must be kept on schedule to assure Federal purchase of the great Klamath waterfowl marsh in southeastern Oregon, and also to safeguard the 4 billion board feet of magnificent Ponderosa pine timber in the Indian forest of that upland area. Legislation authorizing such a goal was enacted by the 85th Congress—mainly through the active assistance of conservation spokesmen in the press and leaders of organizations like the Izaak Walton League.

9. Funds will be required from Congress to continue Mission 66 in the national parks and Operation Outdoors is the national forests. These are programs to expand the recreational opportunities in the greatest such amphitheaters belonging to the American people. The funds are required for roads, trails, campgrounds and similar facilities. Not since the era of the Civilian Conservation Corps, during the 1930's, has there been a genuine program of rehabilitation in the national parks and national forests.

10. Conservationists must continue to oppose the Bruces Eddy and Penny Cliffs Dams of the Clearwater River in Idaho, which would endanger the steelhead trout migrations of that region and also would threaten the winter forage grounds of the largest elk herd surviving in the United States. This challenge to lovers of wildlife was made triply difficult when the last session of Congress appropriated $1,200,000 for planning the Bruces Eddy project, even though the dam has never been formally authorized by law.

IN DEFENSE OF NATURE

Some of my recommendations may seem somewhat slanted in favor of wilderness as against commercial exploitation. While I realize that man must have bread for sustenance, still he cannot live by bread alone. Somewhere in this vast land of ours, we ought to retain a few valleys or uplands just as they were when Lewis and Clark carried our flag across a virgin and untrammeled region. Exploitation is not everything. After all, Central Park might be worth countless millions to the New York City coffers if it were subdivided for apartment houses and skyscrapers. Yet what New Yorker, in his right mind, would think of sacrificing this island of trees and grass for a few more piles of masonry?

The roster which I have presented here of goals confronting conservationists during 1959 is by no means final or complete. There are other tasks of equal magnitude—such as adding wetlands to some of our cramped wildlife refuges, or furnishing national-park status through the Allott bill to the Dinosaur National Monument, where the epic struggle over Echo Park Dam was waged several years ago. But if only a portion of the objectives listed in this article is achieved, America's conservationists will be justified in citing 1959 as a busy and highly successful 12-month period.

EXTENSION OF TIME FOR PAYMENTS OF BENEFITS UNDER TEMPORARY UNEMPLOYMENT COMPENSATION ACT OF 1958

Mr. SCOTT. Mr. President, during January 1959, the average weekly number of persons receiving unemployment benefits were as follows: Under the regular State program, 257,000 weekly; under the temporary unemployment compensation program, 59,700 weekly.

Continued unemployment in many areas throughout the country, and particularly in the Commonwealth of Pennsylvania, presents the problems as to whether the temporary unemployment compensation program shall be permitted to expire on March 31, 1959, or extended for a further period of time.

On Friday of last week, the House Ways and Means Committee reported a bill which would provide a running-out period for the existing program.

It would deny any new applications for benefits beyond March 31, but those who were eligible, and receiving benefits as of the cutoff date, could continue to receive benefits through June 30, 1959.

The Department of Labor estimates that this runout period for benefits would provide payments for some 405,000 individuals, and involve additional costs of $78 million.

Appropriations in the amount of $665,700,000 were made to cover benefit payments and administration under the program, in fiscal 1959. As of March 30, 1959, the total expenses under the program will be about $447 million, leaving an unexpended balance of about $218 million. There will be no need for additional appropriations to continue this program, as proposed by the House bill.

Mr. President, according to the latest figures I have been able to obtain, there are 508,000 unemployed persons in the Commonwealth of Pennsylvania. This figure is admittedly seasonally high, but unemployment in Pennsylvania has averaged for some time around 470,000—or 10 percent of the national unemployment figure.

Mr. President, I do not mean to imply that I believe the chronic unemployment in certain areas in Pennsylvania can be solved by temporary unemployment compensation. We have other legislative proposals about to be brought before the Senate, which it is hoped will attack persistent unemployment and underemployment due to a variety of economic ills.

Nor do I favor the continuation of heavy Federal contributions to unemployment compensation, or the dislocation of the present Federal-State relationship in the administration of the employment security program.

My immediate concern is the family breadwinner in Pennsylvania, and in other States, participating under the temporary unemployment compensation program, whose benefits will be cut off, or nonexistent as of March 31, 1959—or, who will, at best, receive about 6 weeks more of payments.

We do not know whether new employment will start to curve upward within the next 6 weeks, or 6 months. We do not know whether such an upturn will take place in time to prevent hardship and suffering to those who need assistance beyond the running-out period of the present program.

Therefore, Mr. President, I introduce for appropriate reference a bill that proposes to increase the existing temporary unemployment compensation program for a period of 6 months, to October 1, 1959.

I do not close my mind to the fact that a longer period of time may be needed should the tide of unemployment not be checked in the months immediately ahead.

The cost of extending the present program for 6 months is estimated at a total of $210 million.

This means that for the quarter, April through June 1959, the estimated cost will be $105 million, which will be chargeable to the 1959 fiscal appropriation.

The remaining $105 million will have to come under the 1960 budget. By this I do not mean it will have to push through the President's budget ceiling, but it can be met by reducing other Government programs, which do not have the same urgency or demand.

Mr. President, I realize that we do not know what the final outcome will be on the House temporary unemployment compensation extension bill, or what the Senate Finance Committee will decide to recommend. It is my intention to ask the Senate committee to consider my bill as an amendment to the House measure, should it reach the Senate substantially as reported.

Mr. President, I ask unanimous consent to have printed in the RECORD that part of an article entitled "Survey of the Unemployed: People Behind the Statistics in Five Major Job Areas" published in the New York Times of today, which is titled "Pennsylvania Puzzle," and also that part which is captioned "One in Every 14 Idle, U.S. Job Survey Reveals."

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

PENNSYLVANIA PUZZLE

(By Stanley Levey)

PITTSBURGH, March 13.—Up and down the river valleys of western Pennsylvania smoke is shooting once again from steelmill stacks. After 2 years of recession and unemployment, it is a signal read in various ways by various persons.

"Look at that smoke," says the owner of a shoe store in Homestead. "Isn't it beautiful?"

"Went back to the mill last week," says a laborer in Ambridge. "First day's work in 14 months. I never thought I'd be so glad to see the lousy place. But after looking at all that television, I really was."

"The recession is over," says a steel company official.

"I don't know," says a forge man in New Castle. "I hear the recession's over and I know a lotta guys have gone back, so I guess maybe it is. But not me, they don't call me back, and sometimes, mister, I don't think they ever will."

ELEVEN PERCENT IDLE IN JANUARY

Halfway across the State in Harrisburg, the capital, in the new sleek building of the department of labor and industry, analysts have compiled statistics and drawn graphs and curves. This is the story they tell:

At the end of January, 508,000 Pennsylvanians (or about 11 percent of the work force) were idle. The figure for the country was 6 percent. At the bottom of the recession last June, 520,000 persons were jobless in the State. This was 10.9 percent of the work force. The comparable national figure then was slightly more than 7.5 percent.

What worries the analysts (and workers, union leaders, merchants, and businessmen) is that increased production has not been accompanied by a corresponding increase in employment. Does this tendency mean, they

wonder, that new pools of chronic unemployment are in the making—in the steel areas, for example?

"Is Pittsburgh in danger of becoming another Scranton?" asked an economist in the bureau of employment security.

Thirty years ago Pennsylvania's heavily populated hard-coal regions about Scranton and Wilkes-Barre employed 150,000 miners. By 1937 the total was 32,000. Today it is probably even lower. Scranton has tried desperately and effectively to attract new industry, but the area's economic base has been almost completely destroyed. Ten thousand new jobs have been provided, but the rate of unemployment is about the same.

"Scranton has been running like hell to stand still," said the economist.

The basic cause of high production with fewer workers is automation—the use of machinery to run machines. During the recession many mills have introduced new equipment, discontinued using inefficient plants and eliminated jobs.

Bruce Alexander, district staff member of the United Steelworkers of America in McKeesport, predicted that many workers would never regain their jobs.

"This fellow comes in to see me," Mr. Alexander recalled last week. "He's got his kids with him—three of the cutest kids you ever saw. And he says, 'I'm down to nothing. I got no family to help me. I'm on public assistance and I don't think I'm ever going to get my job back. What's going to become of me?' "

Mr. Alexander lifted his palms in a gesture of helplessness. "What could I tell him?" he asked. "I didn't have any answers. It's rough. Oh, we don't let him hurt. We help him, we get him food and like that. But we can't mislead him and tell him we can get his job back for him."

Actually while the recession has resulted in distress, it has not produced disaster. A reporter looking for signs of political protest or starvation in Pennsylvania would come away with an empty notebook. Tom Leslie, a 42-year-old hammer operator from Beaver Falls with 20 years in the industry, illustrates the reasons why this is so.

In the good days he made as much as $200 a week and averaged $6,000 a year. He saved some money, but not much. He bought a home and has $4,000 still to pay on it. He installed storm windows last year but owes a substantial balance. He still drinks a bottle of beer when he feels like it but not so often as formerly. His wife and three children eat regularly.

WIFE'S WORK IS KEY

"How do you manage it?" he is asked.

"My wife works as a bookkeeper," he says a little sheepishly.

This answer is heard in various forms throughout the steel area:

"My wife does day work."

"My wife got a job as a nurse's aid."

"My son brings home a little money."

"My wife and I moved in with my mother."

"My folks help us out."

Tom Leslie has "got by" for several other reasons. He has worked occasionally with a friend who owns a truck. He has picked up odd carpentry and repair jobs. He has drawn $35 a week in State unemployment compensation. Under the State-Federal program he is entitled to 45 weeks of payments.

Finally under the supplementary unemployment benefits program negotiated 3 years ago with the steel industry by the union, he has been receiving benefits that started at about $20 a week. They will run for a year. He has only one major complaint.

"Too damn much housework," he said.

Tom Leslie is joined by others who think the benefits may have saved the day. These include merchants in steel towns who were lukewarm about the welfare program when it was broached back in 1956.

A member of the Beaver County Public Assistance Commission reported that in 2 years only 10 steelworkers had applied for relief.

"Without supplemental unemployment benefits," he said, "there would have been relief lines all over the country."

In the union's district 15 area, Bruce Alexander and Paul Hilbert, the district director, organized a community services program to help steelworkers in distress. Banks were asked to grant moratoriums on mortgage payment, and 150 agreed. Members were told how to obtain public assistance and surplus food. Medical and hospital service were obtained for men whose benefits had lapsed because of prolonged idleness.

But the picture has its shadowy corners, too. George Combs, a burner in the Clairton plant of United States Steel, has been out of work for 13 months. He says he has not had "8 hours work since I was laid off." His benefits will run out in a few weeks. He owes a $400 furniture bill. The store is waiting. He has not been able to pay his $42-a-month rent for an apartment in a county housing project. The project is waiting.

He receives a relief check for $4 every 2 weeks. He sought surplus food and was told he was ineligible. Now he finds other men with his seniority called back to work. He is getting uneasy about providing for his wife and three children.

TAKE JOB ANY PLACE

"I'll take a job any place," he said. "After more than a year this place don't look so good to me."

In that judgment, George Combs is not typical. Despite unemployment, steelworkers are reluctant to strike out to new frontiers. Their homes, their families, their roots keep them clustered about the mills. In Beaver Valley, Wilbert Berarducci, 22 years old and unemployed since July 23, 1957, drove west a few weeks ago with his wife in his 1946 automobile.

Almost as soon as he arrived in California, he received a telegram from his mother, summoning him back home. He had been called back to the mill, she said. Without funds and unable to rely on the old automobile for another trip across the continent, he hitchhiked home in 5 days only to find there had been a mixup and no job awaited him.

"Why did you come back?" he was asked. "Why didn't you stay out in California and look for a job?"

"Why," he said without hesitation, "this is my home and I'm a steelworker."

ONE IN EVERY FOURTEEN IDLE, U.S. JOB SURVEY REVEALS

One worker in every fourteen was jobless last month. The regular joint report of the Federal Labor and Commerce Departments showed 4,749,000 unemployed and 62,702,000 employed. The total of idle was 424,000 below the figure for the recession month of February 1958, but 1,628,000 above that for the prerecession month of February 1957.

In the last 14 months of slump and recovery, more than 3 million workers have exhausted all the unemployment insurance to which they were entitled under regular State programs. Nine hundred thousand of these long-term unemployed went on to use up all the extended protection available to them under the temporary Federal program, which went into effect 9 months ago. No official estimate has been made of how many of these workers are still jobless.

The Federal program is scheduled to expire March 31, but Congress is expected to authorize a 3-month tapering-off period. This would prevent an abrupt cutoff in payments to the 300,000 who will still be on the emergency benefit rolls at the end of this month. In addition to this group, 2,375,000 workers are registered for regular State insurance checks.

The PRESIDING OFFICER. The bill be received and appropriately referred.

The bill (S. 1423) to extend by 6 months the period for which additional benefits to be paid under the Temporary Unemployment Compensation Act of 1958, introduced by Mr. SCOTT, was received, read twice by its title, and referred to the Committee on Finance.

AMENDMENT OF TITLE XI OF MERCHANT MARINE ACT, RELATING TO SHIP MORTGAGES

Mr. MAGNUSON. Mr. President, at the request of the Secretary of Commerce, I introduce, for appropriate reference, a bill to amend title XI of the Merchant Marine Act, as amended, with respect to insurance of ship mortgages, and for other purposes. I ask unanimous consent that a letter from the Secretary of Commerce requesting the proposed legislation be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 1434) to amend title XI of the Merchant Marine Act, as amended, with respect to insurance of ship mortgages, and for other purposes, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

THE SECRETARY OF COMMERCE,
Washington, D.C., March 11, 1959.

Hon. RICHARD M. NIXON,
The President of the Senate, U.S. Senate, Washington, D.C.

DEAR MR. PRESIDENT: There are submitted herewith four copies of a draft bill, together with a statement of purpose and provisions, to amend title XI of the Merchant Marine Act, 1936, as amended, with respect to insurance of ship mortgages.

The draft bill would authorize a delay in placing a mortgage on a newly constructed vessel, if the loan secured by the mortgage is to be used to make the downpayment on other vessels to be constructed, without depriving the owner of the privilege of obtaining Government insurance of the mortgage. Under existing law a vessel mortgage is not insurable unless it is placed on the vessel before the vessel is delivered by the shipbuilder. Under the draft bill, if the loan is to be used for the foregoing purpose and the mortgagor obtains a commitment before the keel of the vessel to be mortgaged is laid, the mortgage would be insurable if placed on the vessel at any time during the vessel's economic life. All restrictions under existing law would be applicable in addition to new restrictions which would keep the substance of the insurance transaction the same as it is under existing law, except that the Government would not be under risk for so long a time.

The draft bill would make it possible for an operator who plans to replace a fleet of vessels to pay in full for the first vessel and to mortgage the vessel subsequently (and obtain Government insurance of the mortgage) to obtain the downpayment on other vessels, rather than mortgaging each new vessel as it is delivered by the shipbuilder as he must under existing law if his mortgages are to be insurable.

The draft bill would thus enable the operator to arrange his financing in a more flexible way, would save him interest, and would reduce the period of time during which the Government would be under risk with respect to the vessel mortgage.

We have been advised by the Bureau of the Budget that there would be no objection to the submission of this report to the Congress.

Sincerely yours,

LEWIS L. STRAUSS,
Secretary of Commerce.

STATEMENT OF PURPOSE AND PROVISIONS OF DRAFT BILL TO AMEND TITLE XI OF THE MERCHANT MARINE ACT, 1936, AS AMENDED, WITH RESPECT TO INSURANCE OF SHIP MORTGAGES, AND FOR OTHER PURPOSES

The purpose of the draft bill is to amend the Merchant Marine Act, 1936, as amended, by inserting in title XI (Federal ship mortgage insurance) of that act a new section 1107, which would permit the prospective owner of a vessel that is to be constructed to delay placing a mortgage on the vessel until some time after the vessel has been delivered by the shipbuilder, without losing his privilege of having the mortgage insured by the Secretary of Commerce.

The purpose of the new section is to permit the prospective owner to save interest, and to reduce the period of time during which the Secretary of Commerce is under risk with respect to the mortgage.

The new section would be available both to subsidized and to unsubsidized operators.

An operator who plans to replace his existing fleet by new construction that will be built at staggered intervals over a period of years may have sufficient money on hand to pay in full for the first ship. Under existing law, however, if he does this, he will not later be able to mortgage the vessel and obtain Government insurance of the mortgage in order to obtain the downpayment on future vessels.

If, for example, an operator who has (1) a fleet of four ships, (2) plans to replace one each at 3-year intervals at a cost of $10 million each, and (3) a fund of $10 million to finance such replacement, spends the entire fund to pay for the first ship, he cannot under existing law, later obtain an insurable mortgage on the vessel to finance the downpayment on the other three vessels, because under existing law a vessel mortgage is not insurable unless it is placed on the vessel before the vessel is delivered by the shipbuilder. Under existing law, therefore, to finance his replacement program, the operator cannot use his fund to pay in full for the first ship, but must use his fund to make the minimum downpayment on each ship ($2½ million if he receives construction-differential subsidy) and must mortgage each ship as it is delivered so that the mortgage will be eligible for Government insurance.

The existing law thus unduly restricts the operator in arranging his financing, makes the financing more expensive to the operator than is necessary, and keeps the United States under risk on the mortgages for a longer period than is necessary.

The draft bill would remedy this situation by authorizing the Secretary of Commerce to make a commitment to the vessel operator before the keel on the first vessel is laid, to insure any eligible mortgages such operator, as mortgagor, may place on the vessel at any time to obtain the downpayment on other vessels. The foregoing authorization is subject to conditions which will keep the substance of the mortgage insurance transaction the same as it is under existing law, except that the placing on the vessel of the mortgage that is to be insured would be delayed until such time as the operator needs the money to make the downpayment on other vessels.

Under provisions of the existing law, the Secretary of Commerce is authorized to insure a mortgage on a vessel if he finds that the vessel or the project with respect to which the vessel is to be operated is in his opinion economically sound and if the mortgage (1) secures a loan made to finance construction of the vessel; (2) involves a principal obligation not exceeding 87½ percent of the actual cost of the vessel, if the vessel complies with the requirements of section 509 of the act, or 75 percent of the actual cost of the vessel if the vessel does not comply with these requirements; (3) has a mortgagee who is responsible and able to service the mortgage, and a mortgagor who possesses the ability, experience, financial resources, and other qualifications necessary to the adequate operation and maintenance of the mortgaged property; (4) secures bonds, notes, or other obligations having maturity dates satisfactory to the Secretary of Commerce but not exceeding 20 years; (5) contains amortization provisions satisfactory to the Secretary of Commerce requiring periodic payments by the mortgagor; (6) secures bonds, notes, or other obligations bearing interest at a rate not exceeding 5 percent per annum, or, if the Secretary of Commerce finds the lending market demands it, not exceeding 6 percent per annum; (7) provides in a manner satisfactory to the Secretary of Commerce for the application of the mortgagor's periodic payments (except interest payments) to amortization of the principal of the mortgage; (8) contains such terms and provisions with respect to construction, maintenance, and operation of the vessel and with respect to repairs, alterations, payment of taxes, insurance, delinquency charges, revisions, foreclosure proceedings, anticipation of maturity, additional and secondary liens and other matters pertinent to the security as the Secretary of Commerce may prescribe; and (9) provides that the mortgagor shall pay mortgagee the amount of each mortgage insurance premium at least 60 days before payment of such charge to the Secretary of Commerce is due.

Under the draft bill, all of the foregoing requirements would have to be met at the time the mortgage is to be insured except (1), (2), and (4), and in addition the following requirements would have to be met: (1) The vessel is not subject to a mortgage that has not been insured by the Secretary of Commerce; (2) the principal obligation of the mortgage to be insured shall not exceed an amount which when added to the unpaid balance of the principal obligations of prior mortgages will exceed 87½ percent or 75 percent, as the case may be, of the actual cost of the vessel depreciated at the rate of 5 percent per annum from the date the vessel was delivered by the shipbuilder to the date the mortgage is executed; (3) the mortgage has maturity dates which do not exceed a period of 20 years from the date the vessel was delivered by the shipbuilder; (4) the purpose of the loan secured by the mortgage is to finance the construction of other vessels or both to refinance a mortgage on the vessel which is insured by the Secretary of Commerce and to finance the construction of other vessels; (5) the loan agreement for the making of the loan secured by the mortgage, or the mortgage provides that the loan, except such portion as it has been agreed will be used to refinance a mortgage on the vessel which has been insured by the Secretary of Commerce, will be disbursed by the mortgagee to a shipbuilder in payment, on behalf of the mortgagor, of part of the contract price for the construction of a vessel contracted for by the mortgagor which has not yet been delivered; and (6) the vessel is in as good condition as it would have been in, if it had been mortgaged immediately upon delivery of the vessel by the shipbuilder and such mortgage had been insured by the Secretary of Commerce, and the mortgagor had complied with all of the requirements of the Secretary of Commerce with respect to a vessel on which he has insured the mortgage.

Under the draft bill, therefore, the risk to the United States under the insured mortgage is the same as it is under existing law, except that under the draft bill the United States would not be under risk for as long as it is under existing law.

Under existing law if an operator has (1) a fleet of four vessels, (2) plans to replace one each at 3-year intervals at a cost of $10 million each, and (3) a fund of $10 million to finance such replacement, he must mortgage each vessel as it is delivered by the shipbuilder if he wishes to obtain Government mortgage insurance. Each vessel, therefore, would be subject to an insured mortgage for a period of 20 years.

Under the draft bill, the operator could pay for the first vessel in full, obtain a mortgage commitment from the Secretary of Commerce, and mortgage the vessel later on to obtain all or part of the down payment on the other three vessels. If he mortgages the vessel in the amount of $2½ million at the end of 3 years to obtain the downpayment on the second vessel, and again at the end of 6 years in the amount of $2½ million to obtain the downpayment on the third vessel, then at the end of 9 years he will be able to mortgage the vessel only in the amount of $250,000, because 75 percent of the depreciated actual cost of the vessel at the end of 9 years would be $4,125,000, and the unpaid principal balance of prior mortgages would be $3,875,000.

The foregoing example is not the only way in which the draft bill could be used. Under the draft bill, an operator who pays for his first vessel in full and, before the keel is laid, obtains a commitment from the Secretary of Commerce to insure mortgages on the vessel, could, at any time during the 20-year life of the vessel, obtain Government mortgage insurance on eligible mortgages on the vessel in the aggregate amount of 75 percent or 87½ percent, as the case may be, of the depreciated actual cost of the vessel for the purpose of financing the construction of other vessels.

NEED FOR BETTER STATE PARK SYSTEMS IN PUBLIC LAND STATES

Mr. BENNETT. Mr. President, I introduce for appropriate reference a bill which would materially assist our public land States in their efforts to conserve and develop long-neglected State park and recreation areas. The bill would amend section 1 of the act of June 14, 1926, as amended by the act of June 4, 1954 (68 Stat. 173), to permit the conveyance of public lands to a State for public park purposes without any limitation as to acreage. At the present time a State or other political subdivision may acquire only 640 acres yearly.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1436) to amend section 1 of the act of June 14, 1926, as amended by the act of June 4, 1954 (68 Stat. 173; 43 U.S.C., sec. 869), introduced by Mr. BENNETT was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

Mr. BENNETT. To a State such as Utah, which is more than 70 percent federally owned, the present law has proved completely inadequate because most of our potential park and recreation areas are on Federal lands and many are of large size. It should be noted that my

bill would for the most part merely restore the situation as it existed under the 1926 act prior to its amendment in 1954. The 1926 act contained no limitation as to the acreage which could be conveyed to any one applicant for public recreational purposes. When the scope of the act was expanded in 1954 to permit disposal of public lands for all public purposes and to allow nonprofit organizations to acquire the lands as well as local governments, the 640-acre limitation was imposed. However, this new limitation on State and local government acquisitions has proved to be unduly restrictive on laudable State efforts to conserve and develop our great park and recreation potential.

Under the 1954 act, the authority of the Secretary of the Interior is discretionary, and he would permit conveyances for State park and recreation purposes only where the State could produce a satisfactory plan for use and development of the land. The existing repayment provisions would remain unchanged. It should be emphasized that the traditional multiple-use doctrine will continue to prevail on the lands acquired by the States.

HALT VANDALISM

My proposed amendment of the law would do much to halt growing vandalism, negligence and dissipation of priceless and irreplaceable national resources. In Utah, our great petrified forests have been hauled away by the truckload. Indian writings, dwellings and other artifacts left by a now vanished people are being seriously damaged by an uninformed, thoughtless few. One of the most tragic losses was the destruction near Blanding, Utah, of the striking Goblet of Venus which had been the marvel of viewers for decades as it stood precariously on its delicate pedestal. Evidently vandals threw a rope over it, tied the rope to car and wantonly pulled it over, a total loss to future generations. Great damage has occurred in other such unprotected areas as Goblin Valley and Dead Horse Point.

Unfortunately, the Bureau of Land Management has neither the men nor the money to protect the 24 million acres of public lands under its jurisdiction in Utah or the vast acreage in other public land States. The fine BLM Director, Edward Woozley, and his public lands aid, Harold Hochmuth, have been unfailingly cooperative and helpful, but they are the first to admit that they cannot police the vast area under their jurisdiction.

UTAH PARK AND RECREATION COMMISSION

Two years ago, the Utah State Legislature approved Governor Clyde's recommendation that a park and recreation commission be created. Since that time, the five appointed commissioners, their director, and staff have done an excellent job to get this important program under way. I have been privileged to work with them for over a year, particularly with Chairman Harold P. Fabian and Director C. J. Olsen. The State legislature has just approved $1 million for the new commission to continue its activities and to buy Federal and other lands for park and recreation purposes.

While Federal holdings in Utah include two national parks, eight national monuments, and seven national forests, many of the State's finest scenic, geologic, archeologic, and historic sites are on BLM lands. The Bureau of Land Management has no recreation funds or programs. The National Park Service is struggling to secure adequate funds just to complete the Mission 66 program for our existing national parks and monuments to bring these areas up to a minimum stage of development. The State of Utah has clearly demonstrated that it is prepared to carry out and maintain a program to protect and develop park and recreation areas in the State, but it is handicapped by the 640-acre limitation. The acreage for a State park varies greatly in size. Frequently such parks cannot be properly developed if a State cannot acquire all the necessary acreage at one time or have some assurance that it can obtain the acreage in the future.

In its magnificent report for 1959, the Utah Park and Recreation Commission listed 118 different locations for future park or recreational areas. Of the total potential, the Federal Government owns 1.7 million acres, the State 339,000 acres, private owners control 169,000 acres and local communities own 1,400 acres. Similar situations exist in other public land States. I ask unanimous consent to insert letters from State parks officials in eight Western States expressing support or great interest in the objectives of my bill.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

WYOMING STATE PARK COMMISSION,
Shoshoni, Wyo., June 23, 1958.

Mr. C. J. OLSEN,
Director, Utah State Park and Recreation Commission, Salt Lake City, Utah.

DEAR MR. OLSEN: Your letter of June 10, 1958, in reference to possible amendments to Public Law 387, whereby acquisition of lands for State park and recreation areas might be made without its present limitations, does interest me.

I don't have a copy of the law available just now, but I am familiar with its general content. The vast acreages of land controlled by the Federal Government in many of our Western States makes it patent that greater cooperation be exercised between State and Federal agencies in any type of development on such lands.

In answer to your questions, I feel that we, as a State, are interested in the amendments to the law you have suggested. It is difficult to anticipate just when we may want an area for recreational development under this law, but I am sure that should the time come and the area exceed 640 acres, we would hate to be bound by that limitation.

Legislation which will open the way for additional Federal cooperation in the development of recreational areas within the State would certainly be of interest.

I hope this will reach you before your planned trip. The letter was somewhat late in its arrival, since it was forwarded on to me.

Your progress in the matter will be of interest to us.

Sincerely,

HAROLD S. ODDE,
Director.

ARIZONA STATE PARKS BOARD,
Phoenix, June 23, 1958.

Mr. C. J. OLSEN,
Director, Utah State Park and Recreation Commission, Salt Lake City, Utah.

DEAR MR. OLSEN: I would be personally interested in having the law amended to make it possible for States to acquire, without acreage limitations and cost, potential sites now administered by the Bureau of Land Management. However, since the Arizona State Parks Board is a policymaking board, my interest and feeling in this matter cannot be considered official. The Arizona State Parks Board does not meet again until August 12 and 13, 1958. At that time I will get this matter on the agenda for board consideration.

I will also research the Clark-McNary Act and the McNary-McSweeney Act, and place this matter also on the agenda for the August meeting.

I am sure that the Arizona State Parks Board will give sympathetic consideration to any recommendations which might further the cause of the State park and recreation movement.

Ernie Allen, who has been visiting with us during the past week and a half, will be in the State again from July 16 until July 25. At that time we will attempt to meet with you when we will be in the vicinity of the Utah-Arizona boundary. I will let you know as far in advance as possible when we will be in the area.

I am sorry that I was unable to answer your letters sooner. Travel and other reasons caused the delay. I will be interested in hearing from you on the outcome of your Washington meeting.

Sincerely yours,

DENNIS MCCARTHY,
State Parks Director.

STATE PARK COMMISSION,
Carson City, Nev., June 17, 1958.

Mr. C. J. OLSEN,
Director, State Park and Recreation Commission of Utah, Salt Lake City, Utah

DEAR MR. OLSEN: In reply to your letter of June 10, 1958, Col. Thomas W. Miller, chairman of the Nevada State Park Commission, is absent from the State; however, he will be advised of your inquiry upon his return.

Regarding your question No. 1; the Nevada State Park Commission is definitely interested in having Public Law 387 amended to make it possible for State parks to acquire acreage without limitation and cost. The present limitation of 640 acres which may be conveyed to any one grantee in any one calendar year seems to be an arbitrary figure inasmuch as at present we have application in to the Bureau of Land Management in the amount of approximately 5,000 acres, more or less. We have had to take advantage of the lease provisions of Public Law 387 in order to have set aside outstanding scenic, historic, and recreational areas which are in danger of being lost or destroyed, and as you can see, it will take many years under the limitation of 640 acres per year to eventually receive conveyance of title from the United States.

In reply to your question No. 2, Chairman Miller is thoroughly familiar with the problems of needed Federal legislation related to State parks, and will no doubt forward to you a prompt reply regarding this matter upon his return to the State.

Very truly yours,

HOWARD W. SQUIRES,
Director.

STATE OF COLORADO,
STATE PARK AND RECREATION BOARD,
Denver, Colo., June 16, 1958.

Mr. C. J. OLSEN,
Director, State Park and Recreation Commission, Salt Lake City, Utah

DEAR CHET: Your nice letter of June 10 is acknowledged and very much appreciated.

Naturally, we are very much interested in the limitations which Public Law 387 makes upon any acquisitions for State park purposes, with which our board might be confronted. We will probably have numerous occasions whereby the lands now under the control of the Bureau of Land Management might well be incorporated into potential State parks or State recreation areas, and, certainly, we are very sympathetic with your views on the need for some changes in the law.

I am certain that our board would be very much in favor of cosponsoring any Federal legislation, which would provide for more leniency in the amount of acreage which the State might acquire in any given calendar year. Certainly, our States, which have few State parks, or, in our case, none at all, will have need to acquire much more than the 640 acres in a calendar year. Our board has plans to establish at least two areas each year, and to develop one. I hope that none of them will have to be less than 1,000 acres in extent, and would like to see even greater acreages.

Please advise me when and where we can be of service, if action is taken to amend the present law, and I shall advise our Members of Congress accordingly.

Assuring you of my cooperation and support, I am

Sincerely yours,

HAROLD W. LATHROP,
Director.

STATE OF MONTANA,
HIGHWAY COMMISSION,
Helena, June 16, 1958.

Mr. C. J. OLSEN,
Director, State Park and Recreation Commission, Salt Lake City, Utah.

DEAR MR. OLSEN: This will be with reference to your letter concerning acquiring title to potential State park sites from the Bureau of Land Management.

We are very much interested in this problem and answer your questions as follows: (1) We are interested in having the law amended to make it possible for States to acquire, without acreage limitations and cost, potential sites now administered by the Bureau of Land Management; (2) we are interested in assisting to sponsor Federal legislation which would, if enacted, make it possible for State parks to cooperate in a manner similar to the Clark-McNary Act and the McNary-McSweeney Act.

Montana has the same problem as Utah and other Western States in acquiring such acreages of public domain that have outstanding scenic and recreational value, and we are very anxious to acquire them. Under existing law, however, we are definitely handicapped.

Since you have been authorized to go back to Washington, D.C., to help prepare the necessary legislation, may we suggest that you check on Senate bill 1318 introduced by Senators MURRAY and MANSFIELD of Montana and House Bill 3121. These bills are now before the Senate Committee on Government Operations and the House Committee on Government Operations. It may be that this pending legislation incorporates what we are looking for with regard to public domain land.

We very much appreciate your interest in this problem and please be assured of our support.

Very truly yours,

ASHLEY C. ROBERTS,
Director, State Parks Division.

NEW MEXICO
STATE PARK COMMISSION,
Santa Fe, June 12, 1958.

Mr. C. J. OLSEN,
Director, State Parks and Recreation Commission, Salt Lake City, Utah.

DEAR MR. OLSEN: We are definitely interested in the proposals in your letter of June 9, 1958. Recently we received a memorandum from James F. Evans, Director of Parks of the State of New York, calling our attention to Senate bill 1318 and House of Representative bill 3121. These are to be presented as amendments to bills now before Congress. These would authorize the Federal Government to turn over surplus land to the State for recreational use without monetary consideration.

You no doubt received from the Department of Interior, Bureau of Land Management, a copy of information release, dated April 16, 1958. This simply reiterates policies expressed in the past which have not been carried out at State levels. The acquisition of land for States is still a cumbersome limited procedure. We have a case of ours which is almost too ridiculous to relate. In a park created about 1934 there were included eleven 40-acre tracts of BLM land. This was during the CCC days and apparently the transfer of the Federal land to the State of New Mexico was never completed. It was fenced in and always considered as part of the park. We have been trying for over 2 years now to obtain title to this land. A first appraisal was figured at a higher price than land sells for in the immediate area. We asked for a second appraisal. The second appraisal was almost twice as high as the first one. I agree with you that the 640-acre limitation is not consistent with State park developments or the conservation of land for future public recreational use.

It is our thought that these lands which have little or no value, in comparison with their recreational use, should be transferred to the State without cost and without limitation as to the number of acres to be acquired in one year. We further agree that there should be Federal aid for the basic improvements of certain areas within the tracks obtained for the development of public recreational use.

We also feel that there should be legislation introduced that would permit States to acquire from the Corps of Engineers any or all land around a reservoir project except that which is actually needed for the administration area of the Corps of Engineers. We very definitely feel that there should be a closer relationship between National Park Services and the various States in protecting and acquiring areas to be used in the future. You have no doubt noted that already there are indications that the National Park Service Mission 66 will not meet the future requirements of their areas. One of the most practical ways of meeting annual increases of people going to recreational areas, is Federal aid to the State for developing new areas, which the States will further improve and administer, after using a reasonable amount of Federal funds for basic improvement.

I think it is very desirable for Western States, particularly the four States that join at a common corner, to combine their efforts in a realistic program for future development of areas that are necessary to accomodate the tourist travelers.

I could go on indefinitely on this subject but I assure you we are interested in any bills that will approach the particular solution that we have.

Yours truly,

DON LA NOUE,
Administrative Assistant.

STATE OF OREGON,
STATE HIGHWAY DEPARTMENT,
Salem, June 13, 1958.

Mr. C. J. OLSEN,
Director, State Park and Recreation Commission, Salt Lake City, Utah.

DEAR MR. OLSEN: I have your letter of June 10, relative to your request in the changing of the Federal requirements to limit State acquisition to 640 acres of Federal land during any 1 calendar year.

For your information, I am attaching a copy of a resolution prepared by the Columbia Basin Interagency Subcommittee on Recreation on this subject, together with some other subjects which may be of interest to you. We are definitely opposed to the 640-acre limitation and will go along a considerable way on this matter. I might tell you that I discussed this matter with the Oregon delegation in Congress last January and it seemed they were all very much in favor of it. There is some opposition in the Bureau of Land Management; however, they did advise me that there was some possibility of getting that changed. I hope that you are successful in getting some action on this.

Very truly yours,

C. H. ARMSTRONG,
State Parks Superintendent.

DEPARTMENT OF PUBLIC LANDS,
Boise, Idaho, June 23, 1958.

Mr. C. J. OLSEN,
Director of State Parks,
Salt Lake City, Utah.

DEAR CHET: Your letter addressed to Jack Emmert has been referred to me to reply to that part pertaining to the sponsoring of Federal legislation which would provide for cooperation with the States in developing State parks and recreation areas.

I believe that Idaho would be willing to participate in sponsoring legislation of this kind, particularly since there is but one Federal monument wholly within the State of Idaho. This is a matter for the land board to resolve and I shall bring the question before the board at the next regular meeting, which will be the early part of July. The board may be willing to cooperate, even though there are not sufficient funds to send a man to Washington. Perhaps we could join you in our efforts and you be the representative of the State.

I am very much in favor of the Federal law's being amended to permit the States to acquire potential recreation sites without limitation. By the time we could acquire those desired, it is more than likely that other interests would have absorbed the areas and our State would be without those sites that would be a valuable asset to our park program.

Thank you for writing Mr. Emmert in this matter and I hope that he will be able to have a visit with you in the near future, which should be of benefit to both States.

With personal regards,

Sincerely,

ARTHUR WILSON,
State Land Commissioner.

MANY STATES HAVE A SIMILAR NEED

Mr. BENNETT. I also ask unanimous consent to include a resolution adopted by the national conference on State parks at its annual meeting held at Itasca State Park, Minn., in 1957, which urges revocation of the 640-acre limit, together with 2 tables showing the amount of Federal lands in each State and the amount under jurisdiction of the Bureau of Land Management.

The Utah State Senate and House passed resolutions in the waning moments of the recently concluded session of the legislature, recommending removal of the 640-acre limitation, and I ask unanimous consent that they also be included in the RECORD at this point.

There being no objection, the resolutions were ordered to be printed in the RECORD.

RESOLUTION ADOPTED BY THE NATIONAL CONFERENCE ON STATE PARKS AT ITS ANNUAL MEETING HELD AT ITASCA STATE PARK, MINN., ON SEPTEMBER 18–21,1957

Whereas the act of June 4, 1954 (68 Stat. 178 43 U.S.C. 1952 ed., supp. III, sec. 869), amends the Recreation Act of June 14, 1926 (44 Stat. 741), to limit conveyances of land by the Bureau of Land Management to State and local agencies for public park and recreation purposes to 640 acres in any 1 year; and

Whereas this limitation prevents many of the State park agencies for acquiring needed park lands; and

Whereas the need for additional State park lands is increasing so rapidly that the States are unable to keep pace with their needs: Now, therefore, be it

Resolved, That the Recreation Act should be further amended to revoke the 640-acre limitation so far as it is applicable to State park agencies, it is further

Resolved, That copies of this resolution shall be forwarded to the chairman of the Senate and House Interior and Insular Affairs Committees, to the Secretary of the Interior, to the Director, Bureau of Land Management, and to the Director, Bureau of the Budget.

HOUSE RESOLUTION 5

Resolution memorializing Congress and the President to remove the limitation on the number of acres of public lands which the State may acquire

Be it resolved by the House of Representatives of the State of Utah—

Whereas under the Recreation Act of June 14, 1926, as now amended and in effect, the Secretary of the Interior is limited to not more than 640 acres of the public lands of the United States which may be conveyed to any one grantee in any one calendar year; and

Whereas this limitation is a severe handicap to the State of Utah and to the Utah State Park and Recreation Commission in the development of its planned State park system, and in the acquisition, preservation, and protection of areas which should be incorporated into and protected by said State park system: Now, therefore, be it

Resolved by the House of Representatives of the State of Utah, That the President of the United States and the Congress of the United States be memorialized to amend the Recreation Act of June 14, 1926, as amended, to authorize the Secretary of the Interior to convey to a State, without acreage or other limitation, any public lands within such State for State park and recreation purposes; be it further

Resolved, That certified copies of this resolution be transmitted by the Secretary of State to the President of the United States, to the Presiding Officer of the U.S. Senate, to the Speaker of the House of Representatives, and to the Senators and Representatives from the State of Utah.

SENATE RESOLUTION 5

Resolution objecting to limitation of public lands

Be it resolved by the Senate of the 33d Legislature of the State of Utah—

Whereas under the Recreation Act of June 14, 1926, as now amended and in effect, the Secretary of the Interior is limited to not more than 640 acres of the public lands of the United States which may be conveyed to any one grantee in any one calendar year; and

Whereas this limitation is a severe handicap to the State of Utah and to the Utah State Park and Recreation Commission in the development of its planned State park system, and in the acquisition, preservation, and protection of areas which should be incorporated into and protected by said State park system: Now, therefore, be it

Resolved by the Senate of the 33d Legislature of the State of Utah, That the President of the United States and the Congress of the United States be memorialized to amend the Recreation Act of June 14, 1926, as amended, to authorize the Secretary of the Interior to convey to a State, without acreage or other limitation, any public lands within such State for State park and recreation purposes; be it further

Resolved, That certified copies of this resolution be transmitted by the Secretary of State to the President of the United States, to the Presiding Officer of the U.S. Senate, to the Speaker of the House of Representatives, and to the Senators and Representatives from the State of Utah.

OTHER PURPOSES OF THE BILL

Mr. BENNETT. Inadvertently the 1954 act establishing acreage limitations has led to unequal treatment for the various States and other governmental entities. The 1954 act refers to the disposition of public lands to a "State, Territory, county, municipality, or other State, Territorial, or Federal instrumentality or political subdivision." The word "instrumentality" has been construed by the Department in its usual sense, and, therefore, a State agency must have the authority to hold lands in its own name if it is to qualify as an instrumentality within the meaning of the 1954 act.

If a State agency cannot qualify as an instrumentality, any land which it accepts under the 1954 act must be charged against the sum of 640 acres which the State is permitted to accept within the year. This means that a State the agencies of which cannot qualify as instrumentalities can take only 640 acres annually, while a State the agencies of which are able to qualify as instrumentalities can acquire 640 acres annually for each of those qualifying agencies in addition to 640 acres annually for itself as a State. Thus, instead of the acreage which each State may receive being determined by the 1954 act, the amount that a State may receive depends, in reality, to a very large extent upon the State law.

The bill is intended to make the act uniform in its practical application by applying the limitation against each of the programs of a State rather than by applying the limitation to a State and to each of its instrumentalities. For example, under the proposed bill the highway, forestry, police, and other departments and agencies of a State, whether or not they qualify as instrumentalities, would be permitted to secure up to 640 acres each. A similar case of unequal treatment may sometimes arise because projects which in some States are undertaken at the county or other subordinate level may in certain States be undertaken at the State level. The proposed amendment would help to rectify this matter.
